> For the purposes of this Schedule the chargeable amount in relation to a [sch4B] transfer of value shall be reduced by the amount of any chargeable gains arising by virtue of that transfer of value that—
> (a) are by virtue of section 86(4) treated as accruing to the settlor,

The wording is based on the s.87 rules.[35]

Para 6(1)(b) deals with a temporary non-resident settlor:

> or
> (b) where section 1M applies, are treated by virtue of that section (as it has effect subject to paragraph 12 below) as accruing to the settlor in the period of return.

For the s.87 equivalent rules, see 62.28.1 (Trust within s.86 TCGA).

62.21.6 *Loss set against s.86 gain*

Para 6(2) sch 4C TCGA provides:

> In determining for the purposes of sub-paragraph (1)(a) the amount of chargeable gains arising by virtue of a [sch4B] transfer of value that are treated as accruing to the settlor, there shall be disregarded any losses which arise otherwise than by virtue of Schedule 4B.

This applies where a trust within s.86 has losses and then realises gains on a sch4B-disposal. The losses are set against the gains, so net gains are treated as accruing to the settlor. This provision is needed to ensure that those gains are not added to the sch4C pool.

62.21.7 *Loss on sch4B-disposal*

Para 7 sch 4C TCGA provides:

[34] See 61.38 (Dual resident trust: s.88 TCGA).

[35] See 61.6 (Section 1(3) amount).

> (1) An allowable loss arising under Schedule 4B in relation to a [sch4B] transfer of value by the trustees of a settlement may be taken into account in accordance with this paragraph to reduce for the purposes of this Schedule the chargeable amount in relation to another transfer of value by those trustees.
> (2) Any such allowable loss goes first to reduce chargeable amounts arising from other transfers of value made in the same year of assessment.
> If there is more than one chargeable amount and the aggregate amount of the allowable losses is less than the aggregate of the chargeable amounts, each of the chargeable amounts is reduced proportionately.
> (3) If in any year of assessment the aggregate amount of the allowable losses exceeds the aggregate of the chargeable amounts, the excess shall be carried forward to the next year of assessment and treated for the purposes of this paragraph as if it were an allowable loss arising in relation to a [sch4B] transfer of value made in that year.
> (4) Any reduction of a chargeable amount under this paragraph is made after any deduction under paragraph 6.

62.22 Restriction on losses

It is necessary to distinguish between losses accruing on a sch4B-disposal and other losses accruing to trustees.

Section 85A(3) TCGA provides:

> When calculating the section 1(3) amount for a settlement for a tax year (within the meaning of section 87), no account is to be taken of any chargeable gains or allowable losses accruing by virtue of Schedule 4B....

Thus losses on a sch4B-disposal cannot be set against gains in computing the s.1(3) amount for s.87 purposes.

Section 85A(4) TCGA provides:

> No account shall be taken of any chargeable gains or allowable losses to which sections 87 to 89 apply in computing the gains or losses accruing by virtue of Schedule 4B.

Thus losses on a non-sch4B-disposal cannot be set against gains accruing on a sch4B-disposal, in computing the sch4C pool.

I cannot see the reason for these rules, but complication was not of concern to the drafter of sch4C, who seems to have regarded loss relief with suspicion.

62.23 Second sch4B-disposal

Para 7B sch 4C TCGA provides:

> (1) This paragraph applies if the trustees of the transferor settlement make a further transfer of value to which Schedule 4B applies in a tax year ("the year of the transfer") after the tax year mentioned in paragraph 1(3).[36]
> (2) If the settlement has a Schedule 4C pool at the beginning of the year of the transfer—
> (a) the section 1(3) amounts in the Schedule 4C pool are increased by the section 1(3) amounts for the settlement that are outstanding at the end of the year of the transfer, and
> (b) the section 1(3) amount in the pool for the year of transfer is increased (or further increased) by the amount of Schedule 4B trust gains accruing by virtue of the further transfer.
> (3) If the settlement does not have a Schedule 4C pool at the beginning of the year of the transfer, this Schedule applies in relation to the further transfer as it applied in relation to the original [Sch 4B-]transfer.
> (4) For the purposes of this paragraph a settlement has a Schedule 4C pool until the end of the tax year in which all section 1(3) amounts in the pool have been reduced to nil.

For a transitional rule for pre-2008 sch4C pools, see 62.36 (Pre-2008 sch 4C pool).

62.24 Sch4C s.87 regime

62.24.1 *Standard s.87 regime excluded*

Section 85A(2A) TCGA provides:

> For the purposes of sections 87 to 89, no account is to be taken of any section 1(3) amount in a Schedule 4C pool (see paragraph 1 of Schedule 4C).

I refer to the s.1(3) amounts in a sch 4C pool as **"Sch4C pool gains"**. This provision takes sch4C pool gains out of the standard s.87 regime. Instead they fall within what I call the "**Sch4C s.87 regime**".

Trustees therefore need to keep two sets of computations:

(1) s.1(3) amounts (trust gains) for the standard s.87 regime

[36] "The tax year mentioned in para 1(3)" (sch 4C TCGA) is the tax year in which the original sch 4B-transfer is made; see 62.20 (Schedule 4C pool).

(2) Sch4C pool gains

62.24.2 *Schedule 4C s.87 charge*

This is best understood if set side by side with the usual s.87 rule and highlighting the changes:

Para 8(1) sch 4C TCGA	**s.87(2) TCGA**
Chargeable gains are treated as accruing in a tax year ("the relevant tax year") to a beneficiary who has received[37] a capital payment from the trustees of a relevant settlement in the relevant tax year or any earlier tax year if all or part of the capital payment is matched (under section 87A as it applies for the relevant tax year) with the section 1(3) amount in the Schedule 4C pool for the relevant tax year or any earlier tax year.	Chargeable gains are treated as accruing in the relevant tax year to a beneficiary of the settlement who has received a capital payment from the trustees in the relevant tax year or any earlier tax year if all or part of the capital payment is matched (under section 87A as it applies for the relevant tax year) with the section 1(3) amount for the relevant tax year or any earlier tax year.

Para 8(2) sch 4C TCGA provides:

> The amount of chargeable gains treated as accruing is equal to—
> (a) the amount of the capital payment, or
> (b) if only part of the payment is matched, the amount of that part.

This is the sch 4C equivalent of s.87(3) TCGA.

62.24.3 *Sch4C matching rules*

Para 8(3) sch 4C TCGA provides:

> Section 87A [matching rules] applies for a tax year for the purposes of matching capital payments received from the trustees of a relevant settlement with section 1(3) amounts in the Schedule 4C pool as if—
> (a) references to section 1(3) amounts were to section 1(3) amounts in the Schedule 4C pool,

[37] Para 8(6) sch 4C TCGA provides: "Sections 87G(2), 87K(2) and 87L(2) (capital payment treated for purposes of sections 87 and 87A as received by someone other than actual recipient) apply also for the purposes of this paragraph, but this is subject to paragraph 9." This incorporates the close-family rules: see 61.29.3 (s.87 settor-attribution rule); 61.33 (s.87 onward-gift rule); 61.34 (Onward-gift to close-family: s.87 settlor-attribution rule).

(b) references to a capital payment received from the trustees by a beneficiary were to a capital payment received from the trustees of a relevant settlement by a beneficiary who is chargeable to tax for that year, and

(c) for section 87A(3)(b) there were substituted—

“(b) all section 1(3) amounts in the Schedule 4C pool have been reduced to nil.”

Amended as para 8(3) directs, s.87A TCGA provides:

(1) This section supplements s.87.

(2) The following steps are to be taken for the purposes of matching capital payments with s.1(3) amounts in the Schedule 4C pool.

Step 1

Find the s.1(3) amount in the Schedule 4C pool for the relevant tax year.

Step 2

Find the total amount of capital payments received by the beneficiaries who are chargeable to tax for that year from the trustees of a relevant settlement in the relevant tax year.

Step 3

The s.1(3) amount in the Schedule 4C pool for the relevant tax year is matched with—

(a) if the total amount of capital payments received in the relevant tax year does not exceed the s.1(3) amount in the Schedule 4C pool for the relevant tax year, each capital payment so received by the beneficiaries who are chargeable to tax for that year from the trustees of a relevant settlement, and

(b) otherwise, the relevant proportion of each of those capital payments.

“The relevant proportion” is the s.1(3) amount in the Schedule 4C pool for the relevant tax year divided by the total amount of capital payments received in the relevant tax year.

Step 4

[1] If para (a) of Step 3 applies—

(a) reduce the s.1(3) amount in the Schedule 4C pool for the relevant tax year by the total amount of capital payments referred to there, and

(b) reduce the amount of those capital payments to nil.

[2] If para (b) of that Step applies—

(a) reduce the s.1(3) amount in the Schedule 4C pool for the relevant tax year to nil, and

(b) reduce the amount of each of the capital payments referred to there by the relevant proportion of that capital payment.

Step 5

[1] Start again at Step 1 (unless subs.(3) applies).

[2] If the s.1(3) amount in the Schedule 4C pool for the relevant tax year (as reduced under Step 4) is not nil, read references to capital payments received

> in the relevant tax year as references to capital payments received in the latest tax year which—
>
> (a) is before the last tax year for which Steps 1 to 4 have been undertaken, and
>
> (b) is a tax year in which capital payments (the amounts of which have not been reduced to nil) were received by beneficiaries.
>
> (3) This subsection applies if—
>
> (a) all of the capital payments received by beneficiaries who are chargeable to tax for that year from the trustees of a relevant settlement in the relevant tax year or any earlier tax year have been reduced to nil, or
>
> (b) all section 1(3) amounts in the Schedule 4C pool have been reduced to nil. ~~the section 1(3) amounts for the relevant tax year and all earlier tax years have been reduced to nil~~.
>
> (4) The effect of any reduction under Step 4 of subsection (2) is to be taken into account in any subsequent application of this section.

Para 1A(3) sch 4C TCGA defines “chargeable to tax”:

> For the purposes of this Schedule a beneficiary is “chargeable to tax” for a tax year if, as respects that year, the beneficiary is UK resident for the tax year (as determined in accordance with Chapter 1 of Part 1 of this Act).

Para 8(3)(b) is wider than the non-resident disregard in s.87D TCGA which applies to the standard s.87 regime, as there is no exemption for the final tax year, and it applies in tax years before s.87D took effect.

62.24.4 *Sch 4C/standard s.87: Priority*

Para 8(4) sch 4C provides:

> Section 87A applies for a tax year by virtue of this paragraph before it applies for that year otherwise than by virtue of this paragraph; but this is subject to sub-paragraph (5).

Thus the sch4C regime has priority over the standard s.87 regime where a trust has:

(1) a sch4C pool of gains within sch 4C, and

(2) standard s.1(3) amounts (trust gains) within s.87

62.24.5 *Sch 4C/standard s.87 OIG: Priority*

Para 8(5) sch 4C provides:

> If section 87A applies for a tax year by virtue of section 762(3) of the

> Taxes Act[38] (offshore income gains), it applies for that year by virtue of that provision before it applies for that year by virtue of this paragraph.

Thus the standard OIG s. 87 regime has priority over the sch4C regime where a trust has:
(1) a sch4C pool of gains within sch 4C, and
(2) OIG amounts within OIG s.87.

62.25 "Relevant settlement"

"Relevant settlement" matters because a capital payment from any relevant settlement is matched to the sch 4C pool.

Para 8A(1) sch 4C TCGA provides:

> This paragraph specifies what settlements are relevant settlements in relation to a Schedule 4C pool.

62.25.1 *Transferor/transferee settlements*

Para 8A(2) sch 4C TCGA provides:

> The transferor and transferee settlements in relation to the original [Sch 4B-]transfer of value are relevant settlements.

Para 14(2) sch 4C TCGA defines "transferor" and "transferee settlement":

> In this Schedule, in relation to a [sch4B] transfer of value—
> (a) references to the transferor settlement are to the settlement the trustees of which made the [sch4B] transfer of value; and
> (b) references to a transferee settlement are to any settlement of which the settled property includes property representing, directly or indirectly, the proceeds of the [sch4B] transfer of value.

62.25.2 *Subsequent transfer*

Para 8A sch 4C TCGA provides:

> (3) If the trustees of any settlement that is a relevant settlement in relation to a Schedule 4C pool—
> (a) make a transfer of value to which Schedule 4B applies, or
> (b) make a transfer of settled property to which section 90 applies,

[38] The reference to ICTA is obsolete. However the legislation still works, because the continuity of law provisions in (for example) para 5 sch 2 CTA 2010 require old references to take effect as references to the rewritten provisions.

> any settlement that is a transferee settlement in relation to that transfer is also a relevant settlement in relation to that pool.
> (4) If the trustees of a settlement that is a relevant settlement in relation to a Schedule 4C pool make a transfer of value to which Schedule 4B applies, any other settlement that is a relevant settlement in relation to that pool is also a relevant settlement in relation to the Schedule 4C pool arising from the further transfer.

62.26 Capital payment disregards

Para 9(1) sch 4C TCGA provides:

> For the purposes of
> [i] paragraph 8 [sch 4C s.87 charge]
> [ii] (and section 87A as it applies for the purposes of that paragraph),
> no account is to be taken of a capital payment to which any of sub-paragraphs (2) to (4) applies (or a part of a capital payment to which sub-paragraph (4) applies).

There are three disregards:

Para	**Disregard**
9(2)	Capital payment made before a sch4B-transfer
9(3)	Capital payment from UK resident trust
9(4)	Capital payment to non-resident close company

62.26.1 *Payment pre-4B-transfer*

Para 9(2) sch 4C TCGA provides:

> This sub-paragraph applies to a capital payment received before the tax year preceding the tax year in which the original [Sch 4B-]transfer is made.

That is relatively straightforward.

For a transitional rule for pre-2008 sch4C pools, see 62.36 (Pre-2008 sch 4C pool).

62.26.2 *Payment from UK resident trust*

Para 9(3) sch 4C TCGA provides:

> This sub-paragraph applies to a capital payment that—
> (a) is received by a beneficiary of a settlement from the trustees in a tax year during the whole of which the trustees—
> (i) are resident in the UK, and
> (ii) are not Treaty non-resident,

> (b) was made before any transfer of value to which Schedule 4B applies was made, and
> (c) was not made in anticipation of the making of any such [sch4B] transfer of value or of chargeable gains accruing under that Schedule.

This is a rare case but it can happen.

62.26.3 *Payment to non-resident co*

Para 9(4) sch 4C TCGA provides:

> This sub-paragraph applies to a capital payment if (and to the extent that) it is received (or treated as received) in a tax year from the trustees by a company that—
> (a) is not resident in the UK in that year, and
> (b) would be a close company if it were resident in the UK,
> (and is not treated under any of subsections (3) to (5) of section 96 as received by another person).

This is the sch4C equivalent of s.87C TCGA.[39]

62.27 Remittance basis

Para 8AA sch 4C TCGA provides:

> Section 87B (remittance basis) applies in relation to chargeable gains treated under paragraph 8 as accruing as it applies in relation to chargeable gains treated under section 87 as accruing.

This incorporates the s.87 remittance basis.[40]

62.28 Temporary non-resident

62.28.1 *Trust within s.86 TCGA*

Para 12 sch 4C TCGA provides:

> (1) This paragraph applies if—
> (a) by virtue of section 1M,[41] an amount of chargeable gains within section 86(1)(e) that accrued in a tax year ("year A") to the trustees of a settlement would be treated as accruing to a person ("the settlor") in the period of return, and

[39] See 61.11.4 (Disregard of payment to co: s.87C).

[40] See 61.19 (s.87 remittance basis).

[41] See 11.6 (TNR gain/loss).

> (b) after paragraph 8 has applied for the year of return, the section 1(3) amount for year A that is in the Schedule 4C pool for the settlement is less than the amount mentioned in paragraph (a).
>
> (2) The amount of chargeable gains treated as mentioned in sub-paragraph (1)(a) as accruing to the settlor in the period of return is limited to the section 1(3) amount referred to in sub-paragraph (1)(b).
>
> (4) Where the property comprised in the transferor settlement has at any time included property not originating from the settlor, only so much (if any) of any capital payment taken into account for the purposes of paragraph 8 above as, on a just and reasonable apportionment, is properly referable to property originating from the settlor shall be taken into account in computing the amount charged to beneficiaries.
>
> (5) Expressions used in this paragraph and section 1M have the same meanings in this paragraph as in that section; and paragraph 8 of Schedule 5 shall apply for the construction of the references in sub-paragraph (4) above to property originating from the settlor as it applies for the purposes of that Schedule.

62.28.2 *Trust within s.87*

Para 12A sch 4C TCGA provides:

> (1) This paragraph applies where by virtue of section 1M[42] an amount of gains would (apart from this Schedule) be treated under section 87 as accruing to a person ("the beneficiary") in the period of return by virtue of a capital payment made to him in the temporary period of non-residence.
>
> (2) Where this paragraph applies, a capital payment equal to so much of that capital payment as exceeds the amount otherwise charged shall be deemed for the purposes of this Schedule to be made to the beneficiary in the year of return.
>
> (3) The "amount otherwise charged" means the total of any chargeable gains attributed to the beneficiary under section 87(2) or 89(2) by virtue of the capital payment.
>
> (4) For the purposes of paragraph 13(5)(b) a deemed capital payment under this paragraph shall be treated as made when the actual capital payment mentioned in sub-paragraph (1) above was made.
>
> (5) Expressions used in this paragraph and section 1M have the same meanings in this paragraph as in that section.

[42] See 11.6 (TNR gains/loss).

62.29 Interest surcharge

Para 13 sch 4C TCGA provides:

> (1) This paragraph applies if—
> (a) chargeable gains are treated under paragraph 8 as accruing to a beneficiary by virtue of the matching (under section 87A) of all or part of a capital payment with the section 1(3) amount for a tax year ("the relevant tax year"), and
> (b) the beneficiary is charged to tax by virtue of the matching.
> (1A) Where part of a capital payment is matched, references in sub-paragraphs (2) and (3) to the capital payment are to the part matched.
> (2) The tax payable by the beneficiary in respect of the payment shall be increased by the amount found under sub-paragraph (3) below, except that it shall not be increased beyond the amount of the payment; and an assessment may charge tax accordingly.
> (3) The amount is one equal to the interest that would be yielded if an amount equal to the tax which would be payable by the beneficiary in respect of the payment (apart from this paragraph) carried interest for the chargeable period at the specified rate.
> The "specified rate" means the rate for the time being specified in section 91(3).
> (4) The chargeable period is the period which—
> (a) begins with the later of the 2 days specified in sub-paragraph (5) below, and
> (b) ends with 30th November in the year of assessment following that in which the capital payment is made.
> (5) The 2 days are—
> (a) 1st December in the tax year immediately after the relevant tax year, and
> (b) 1st December falling 6 years before 1st December in the year of assessment following that in which the capital payment is made.

This is the sch4C equivalent of the s.87 interest surcharge: see 61.17 (Interest surcharge).

62.30 Residence of trustees

Para 10(1) sch 4C TCGA provides:

> Subject to paragraph 9(3),[43] it is immaterial for the purposes of

[43] See 58.21.2 (Payment from UK resident trust).

> paragraph 8 that the trustees of any relevant settlement are or have at any time been resident in the UK.

Why is this needed?

62.31 Trust ends after sch4B-disposal

Para 13A sch 4C TCGA provides:

> Where a settlement ceases to exist after the trustees have made a transfer of value to which Schedule 4B applies, this Schedule has effect as if a year of assessment had ended immediately before the settlement ceased to exist.

Why is this needed?

62.32 OIG sch 4C

Regulation 20(3) OFTR incorporates sch 4C TCGA rules. So far as relevant, this provides:

> ... Schedule 4C to, TCGA 1992 apply in relation to OIG amounts as if—
> (a) references to section 1(3) amounts (except those in paragraph 7B(2)(b) and (4) of Schedule 4C) were to OIG amounts,
> (b) references to chargeable gains (except the one in paragraph 1(5) of Schedule 4C) were to offshore income gains,
> (c) references to anything accruing were to it arising[44] (and similar references, except the one in paragraph 1(5) of Schedule 4C, were read accordingly),
> (d) ... paragraphs 1(3A), 3 to 7 and 12 of Schedule 4C were omitted ...

For the application of s.87-98 TCGA to OIGs, see 67.13 (OIG s.87 charge).

It is necessary to distinguish the CGT sch 4C rules and the OIG sch 4C rules because the rules are not identical. It might be helpful to use the following terminology:

(1) "**CGT sch 4C**", the provisions of sch 4C TCGA.
(2) "**OIG sch 4C**", the provisions of sch4C as amended, which apply when the trust has "**OIG amounts**".

[44] The terminology of the Taxes Acts is that CGT chargeable gains *accrue;* but OIGs *arise.* There is no difference in meaning so it seems somewhat pedantic to make the change of terminology when incorporating sch 4C for OIGs; but it does no harm.

The omission of para 1(3A) and paras 3-7 sch 4C makes sense as sch 4B does not apply to OIGs. It would have been logical to omit para 7B; instead the drafter neutralises it by not amending references to it.

The omission of para 12 sch 4C makes sense, as s.86 TCGA does not apply to OIGs.

62.33 Definitions

There are different sets of definitions for sch 4B and sch 4C.

62.33.1 *"Settlement" and "trustee"*

"Settlement" in sch 4C means settlement-arrangement (and "trustee" has a similarly extended meaning).[45] Whereas "settlement" in sch 4B has the standard CGT/IT definition. This reflects the difference between s.87 and s.86.[46] But sch 4C only applies if the trustees make a sch4B-disposal,[47] so sch 4C can only apply where there is a settlement within the standard CGT/IT meaning.

62.33.2 *Misc sch 4C definitions*

Para 14(1) sch 4C TCGA provides:

> In this Schedule—
> (a) "transfer of value" has the same meaning as in Schedule 4B; and
> (b) references to the time at which a transfer of value was made are to the time which is the material time for the purposes of that Schedule.

62.33.3 *"Beneficiaries"*

Para 14(3) sch 4C TCGA provides:

> References in this Schedule to beneficiaries of a settlement include—
> (a) persons who have ceased to be beneficiaries by the time the chargeable gains accrue, and
> (b) persons who were beneficiaries of the settlement before it ceased to exist,
>
> but who were beneficiaries of the settlement at a time in a previous year of assessment when a capital payment was made to them.

[45] See 61.2 ("Settlement"/"settled property").

[46] See 60.4.1 ("Settlement" and "settlor").

[47] See 62.19 (Schedule 4C: Introduction).

62.34 Schedule 4B/4C: Examples

Suppose:
(1) The settlor lends to a trust.
(2) The trust repays the loan.

The trust does not make a sch4B-transfer, so it does not make a sch4B-disposal, and sch 4C does not apply.

Suppose:
(1) The settlor lends to a trust ("trust 1").
(2) The settlor assigns the debt to another trust ("trust 2").
(3) Trust 1 repays the loan to trust 2.
(4) Trust 2 makes a payment to the settlor or another beneficiary.

Trust 1 does not make a sch4B-transfer, so it does not make a sch4B-disposal.
Trust 2 does not borrow, so it also does not make a sch4B-disposal.

Suppose:
(1) The settlor lends to a trust.
(2) The trustees lend to an underlying company.

Schedule 4B and 4C apply.

Suppose:
(1) The settlor gives to a trust ("trust 1").
(2) Trust 1 lends to trust 2.
(3) Trust 2 transfers an asset to the settlor.

Trust 1 does not borrow, so it does not make a sch4B-disposal.
Trust 2 does make a sch4B-disposal. But trust 1 is not a relevant settlement.

62.35 Transitional rules

Sch 4B and 4C were introduced in 2000 and revised in 2003 and 2008. I refer to the sch 4B/4C regime in the form they took before 2008 as the **"pre-2008 sch 4B/4C regimes"**. There are about a dozen transitional rules. Two of these are considered elsewhere:
61.42 (computing s.1(3) amount at 6/4/2007)
61.45 (Pre-2008 inter-trust transfer)

62.35.1 *Pre-2008 sch4B-disposal*

Para 147 sch 7 FA 2008 provides:

> The amendments made by paragraphs 128 to 146 have effect in relation to transfers of value to which Schedule 4B to TCGA 1992 applies that are made on or after 6 April 2008.

Pre-2008 transfers of value are governed by the pre-2008 sch4B rules.

62.35.2 *Pre-21 Mar 2000 capital payment*

Para 148 sch 7 FA 2008 provides:

> For the purposes of
> [i] paragraph 8 of Schedule 4C to TCGA 1992 [sch 4C s.87 charge][48]
> [ii] (and section 87A of that Act [matching rules] as it applies for the purposes of that paragraph),
> no account is to be taken of any capital payment received before 21 March 2000.

62.35.3 *Pre-2008 payment to company*

Para 149 FA 2008 provides:

> A capital payment received before 6 April 2008 is not within paragraph 9(4) of Schedule 4C to TCGA 1992 (if it otherwise would be).

This concerns a capital payment to a non-resident close company: see 62.26.3 (Payment to non-resident co).

62.35.4 *Pre-2008 cap. payment/trust gain matched post 2008*

Para 150 sch 7 FA 2008 provides:

> Paragraph 124 applies in relation to chargeable gains treated under paragraph 8 of Schedule 4C to TCGA 1992 as accruing as it applies in relation to chargeable gains treated under section 87 as accruing.

In other words, para 124 applies for the sch 4C s.87 charge as it applies for the standard s.87 charge. See 61.44 (Pre-2008 capital payment/trust gain, matched post 2008). So there is no charge on non-UK domiciled beneficiaries who:

(1) receive pre-2008 capital payments that are matched to a sch4C pool

[48] See 62.24 (Sch4C s.87 regime).

after 6 April 2008; or

(2) receive post-2008 capital payments that are matched to a pre-2008 sch4C pool.

62.35.5 *Payment 12 Mar-5 Apr 2008*

Para 151 sch 7 FA 2008 provides:

> (1) This paragraph applies for the tax year 2008–09 or any subsequent tax year ("the relevant tax year") if—
>
> (a) an individual who was resident or ordinarily resident, but not domiciled, in the UK in the tax year 2007–08 received a capital payment from the trustees of a settlement on or after 12 March 2008 but before 6 April 2008, and
>
> (b) the individual is resident or ordinarily resident, but not domiciled, in the UK in the relevant tax year.
>
> (2) For the purposes of
>
> [i] paragraph 8 of Schedule 4C to TCGA 1992 [sch 4C s.87 charge] as it applies for the relevant tax year
>
> [ii] (and section 87A of that Act [matching rules] as it applies for those purposes),
>
> no account is to be taken of the capital payment.

This is the equivalent of para 125 sch 7 FA 2008: see 61.44.2 (Payment 12 Mar - 5 Apr 2008).

62.36 Pre-2008 sch 4C pool

Para 152 FA 2008 provides:

> [1] Schedule 4C to TCGA 1992 (as it has effect without the amendments made by paragraphs 128 to 146)
>
> [2] applies for the tax year 2008–09 and subsequent tax years in relation to Schedule 4C pools created before 6 April 2008 ("existing Schedule 4C pools")
>
> [3] as if paragraphs 7B and 9(2) were omitted.

The pre FA 2008 sch 4C regime applies when matching post 5 April 2008 capital payments to gains in the pre 6 April 2008 schedule 4C TCGA pool.

The omitted paragraphs listed at [3] are provisions in the pre-2008 sch 4C replaced by provisions in the post-2008 sch 4C:

Para	**Topic**	**See now**
7B	Gains on 2nd sch4C-disposal	62.23 (2nd sch4B-disposal)
9(2)	When capital payment is available	62.36.2 (Matched capital payment)

62.36.1 *Pre-2008 sch 4C regime*

An important feature of the pre-2008 sch4C regime was that capital payments to UK resident non-doms did not reduce the sch4C pool. That rule changed in 2008 for post-2008 sch4C pools. From 2003-2008, para 8 sch 4C provided:

> *(1) The gains in a settlement's Schedule 4C pool at the end of any year of assessment are treated as chargeable gains accruing in that year to beneficiaries who receive in that year, or have received in an earlier year, capital payments from the trustees of any settlement that is a relevant settlement in relation to the pool.*
>
> *Paragraph 8A defines "relevant settlement" for this purpose.*
>
> *(2) The attribution of chargeable gains to beneficiaries under this paragraph shall be made in proportion to, but shall not exceed, the amounts of the capital payments made to them.*
>
> *Paragraphs 8B and 8C provide for the matching of gains with available capital payments.*
>
> *(3) A chargeable gain shall not be treated as accruing to a beneficiary under this Schedule unless he is chargeable to tax for that year of assessment.*
>
> *(4) For the purposes of this Schedule a beneficiary is "chargeable to tax" for a year of assessment if, and only if—*
>
> *(a) he is resident in the United Kingdom for any part of that year or is ordinarily resident in the United Kingdom for that year, and*
>
> *(b) he is domiciled in the United Kingdom for any part of that year.*[49]
>
> *(5) Any gains in a settlement's Schedule 4C pool that are not attributed to beneficiaries in a year of assessment are carried forward to the following year of assessment, when this paragraph applies again.*

The former para 8B sch 4C TCGA provided:

> *(1) The following rules apply as regards the attribution of the gains in a settlement's Schedule 4C pool to beneficiaries of relevant settlements. This paragraph has effect subject to paragraph 8C (order of attribution as between gains in Schedule 4C pool and other trust gains).*
>
> *(2) Gains of earlier years are attributed to beneficiaries before gains of later years.*

[49] A non-domiciled beneficiary was not within the scope of the s.87 or sch4C charge before 2008.

> *(3) For the purposes of this Schedule the year of a gain is determined as follows—*
>
> *(a) a Schedule 4B trust gain is a gain of the year of assessment in which the transfer of value in question takes place;*
>
> *(b) a section 87/89 gain is a gain of the year of assessment in which it first forms part of a settlement's trust gains in accordance with section 87(2).*
>
> *(4) Gains of the same year are matched with available capital payments made at any time by trustees of any relevant settlement.*
>
> *(5) If gains of one year are wholly matched, gains of the next year are then matched, and so on.*
>
> *(6) The gains are attributed to beneficiaries in proportion to, but not so as to exceed, the amount of available capital payments received by them.*

The former para 8C sch 4C TCGA dealt with the priority of the pre-2008 sch 4C charge and the standard s.87 charge:

> *(1) Where in a year of assessment—*
>
> *(a) gains in a settlement's Schedule 4C pool fall to be attributed to beneficiaries of relevant settlements, and*
>
> *(b) one or more of those settlements also have gains that fall to be attributed to beneficiaries under section 87(4) or 89(2),*
>
> *the provisions of paragraph 8B have effect as follows.*
>
> *(2) The rules in that paragraph apply in relation to all the gains falling to be so attributed.*
>
> *(3) As between gains of the same year, Schedule 4C gains are attributed to beneficiaries before other gains.*

Thus sch 4C has priority over the standard s.87 charge.

62.36.2 *Matched capital payment*

Para 153 sch 7 FA 2008 provides:

> Any reduction in the amount of a capital payment has effect for the purposes of Schedule 4C to TCGA 1992 as it applies in relation to existing Schedule 4C pools (as well as for other purposes).

"Existing sch 4C pool" means a pre-2008 sch4C pool.[50]

Para 154 sch 7 FA 2008 provides:

[50] See 62.36 (Pre-2008 sch 4C pool).

> (1) If all of a capital payment ceases (in the tax year 2008–09 or any subsequent tax year) to be available, the amount of the capital payment is reduced to nil.
>
> (2) If part of a capital payment ceases (in the tax year 2008–09 or any subsequent tax year) to be available, the amount of the capital payment is reduced by the amount of that part.
>
> (3) A capital payment "ceases to be available" in a tax year if and to the extent that, by reason of the capital payment, chargeable gains are treated under paragraph 8 of Schedule 4C to TCGA 1992 (as it has effect in relation to existing Schedule 4C pools) as accruing in that year to the recipient.
>
> (4) If—
>
> (a) chargeable gains are treated under paragraph 8 of Schedule 4C to TCGA 1992 (as it has effect in relation to existing Schedule 4C pools) as accruing in a tax year,
>
> (b) more than one capital payment that the beneficiary has received is taken into account for the purposes of determining the amount of chargeable gains treated as accruing to the beneficiary, and
>
> (c) the amount of the chargeable gains is less than the total amount of capital payments taken into account,
>
> sub-paragraph (3) applies in relation to earlier capital payments before later ones.

62.36.3 *Pre/post-2008 sch 4C regimes: priority*

Para 155 sch 7 FA 2008 provides:

> In any tax year—
>
> (a) Schedule 4C to TCGA 1992 (as amended by paragraphs 128 to 146) applies in relation to a settlement before that Schedule (as it has effect without those amendments) applies in relation to the settlement, and
>
> (b) that Schedule (as it has effect without those amendments) applies in relation to the settlement before section 87 or 89(2) of that Act applies in relation to the settlement.

Thus the post-2008 sch4C regime has priority over the pre-2008 sch 4C regime where a trust has:

(1) a pre-2008 sch4C pool, and

(2) a post -2008 sch4C pool

62.36.4 *Example: post 2008 sch4C pool*

Example 30 HMRC s.87 guidance illustrates:

(1) The disregard for a capital payment to a non-resident beneficiary

(2) Transitional relief for pre-2008 gains matched to a post-2008 capital payment

Example 30[51]

New last in first out (LIFO) rules for allocating capital payments against gains in post 5 April 2008 Schedule 4C pools.

Application of remittance basis to gains treated as accruing to beneficiaries who are non-UK domiciled remittance basis users.

A Schedule 4C TCGA pool of gains was created in 2008-09 as a result of a transfer of value linked with trustee borrowing. The transfer was between two non-UK resident settlements. The Schedule 4C TCGA pool consists of the following gains:

2004-05	Trustees' gains (section 2(2) amount)	£20,000
2005-06	Trustees' gains (section 2(2) amount)	£30,000
2008-09	Trustees' gains (section 2(2) amount) on transfer	£35,000
Total schedule 4C pool		£85,000

No capital payments have been made out of either settlement prior to 2009-10. The following capital payments are made subsequently out of the transferee settlement:

2009-10 Payment to non-UK resident and non-UK domiciled beneficiary[52]	£90,000
2010-11 Payment to UK resident but non-UK domiciled beneficiary	£21,000
2010-11 Payment to UK resident and domiciled beneficiary	£42,000

The HMRC analysis is as follows.

2009/10 [Payment to non-resident]

The 2009-10 £90,000 capital payment to a non-UK resident and non-UK domiciled beneficiary is not matched with any of the gains (section 2(2) amounts) in the post 6 April 2008 Schedule 4C TCGA pool. This comes from the wording of the new paragraph 8(3)(b) Schedule 4C TCGA.[53]

The capital payment is still available to carry forward to be matched with future gains under section 87 or 89(2) TCGA.

2010/11 [Payment to UK resident dom/non-dom]

The 2010-11 capital payments total £63,000 (£21,000 + £42,000). As this is less than the £85,000 gains in the post 6 April 2008 Schedule 4C TCGA pool then all the capital payments can be matched. The restriction [in the pre-2008 sch 4C regime] that does not allow capital payments to a UK resident but non-UK domiciled beneficiary to be matched with gains in a pre 6 April 2008 Schedule 4C TCGA pool does not apply to a post 5 April

[51] I altered the layout slightly for added clarity.

[52] Author's footnote: The domicile of the non-resident beneficiary is irrelevant.

[53] See 62.24.3 (Sch4C matching rules).

2008 Schedule 4C TCGA pool.

The new last in first out (LIFO) rules for matching capital payments with gains in the post 5 April 2008 Schedule 4C TCGA pool apply. These are applied by paragraph 138 Schedule 7 which introduces a new paragraph 8 Schedule 4C TCGA which applies the LIFO rules in section 87A TCGA.

So we look first at the latest gain (section 2(2) amount) in the post 5 April 2008 Schedule 4C TCGA pool. That is the 2008-09 gain of £35,000. This is all matched with capital payments. Gains of £11,667 (£35,000 × £21,000 / [£21,000 + £42,000]) are attributed to the UK resident but non-UK domiciled beneficiary in 2010-11. Gains of £23,333 (£35,000 × £42,000 / [£21,000 + £42,000]) are attributed to the UK resident and domiciled beneficiary in 2010-11.

Next we look at the 2005-06 gain (section 2(2) amount) of £30,000. There are only capital payments left of £28,000 (£63,000 − £35,000) to match with this. Gains of £9,333 (£28,000 × £21,000 / [£21,000 + £42,000]) are attributed to the UK resident but non-UK domiciled beneficiary in 2010-11. Gains of £18,667 (£28,000 × £42,000 / [£21,000 + £42,000]) are attributed to the UK resident and domiciled beneficiary in 2010-11.

What remains in the post 5 April 2008 Schedule 4C TCGA pool are

2004-05	Trustees' gains (section 2(2) amount)	£20,000
2005-06	Trustees' gains (section 2(2) amount)	£2,000

The UK resident and domiciled beneficiary has attributed to them gains of £42,000 (£23,333 + £18,667). These are all chargeable to tax on the beneficiary for 2010-11.

The UK resident but non-UK domiciled beneficiary has attributed to them gains of £21,000 (£11,667 + £9,333). £9,333 of these are not chargeable to tax because they result from a matching with trustees' gains (section 2(2) amount) of a year before 2008-09 – paragraph 150 Schedule 7.[54]

The remaining £11,667 are chargeable to tax on the beneficiary in 2010-11 subject to the remittance basis. Paragraph 139 Schedule 7 introduces a new paragraph 8AA Schedule 4C TCGA which applies the section 87B remittance basis rules.

62.37 Example: pre-2008 Sch 4C pool

HMRC s.87 guidance provides:

123. Schedule 4C pools created before 6 April 2008 are dealt with differently from those created after 5 April 2008. In broad terms Schedule 4C pools created before 6 April 2008 continue to be dealt with under Schedule 4C as it applied before Schedule 7 changes – paragraph 152 of Schedule 7. See example 28. It is not possible for post 5 April 2008 trust gains to be added to a pre 6 April 2008 Schedule 4C pool.

124. There are ordering rules for matching capital payments made after 5 April 2008. They are matched in the following order under paragraph 155 of Schedule 7: See example 29.

- First against gains in a Schedule 4C pool created after 5 April 2008
- Second against gains in a Schedule 4C pool created before 6 April 2008
- Third against gains not in a Schedule 4C pool

[54] See 62.35.4 (Pre-2008 cap. payment/trust gain matched post 2008).

125. Where capital payments are matched against gains in a Schedule 4C pool created before 6 April 2008 earlier gains continue to be matched with earlier capital payments. In other words FIFO (first in, first out) rules continue to apply rather than the general new LIFO (last in, first out) rules. This is relevant for calculating the "increase in tax" charge under paragraph 13 of Schedule 4C.

HMRC example 28 illustrates the treatment of a pre-2008 sch4C pool:

Example 28[55]
Pre 6 April 2008 Schedule 4C TCGA pool
Capital payments made post 5 April 2008 to UK domiciled and non-UK domiciled beneficiaries

A Schedule 4C TCGA pool of gains was created in 2006-07 as a result of a transfer of value linked with trustee borrowing. The transfer was between two non-UK resident settlements. The Schedule 4C TCGA pool consists of the following gains:

2004-05	Trustees' gains (section 2(2) amount)	£20,000
2005-06	Trustees' gains (section 2(2) amount)	£30,000
2006-07	Trustees' gains (section 2(2) amount) on transfer	£70,000
Total sch4C pool		£120,000

No capital payments have been made out of either settlement prior to 2008-09. The following capital payments are made subsequently out of the transferee settlement:

2008-09	Payment to non-UK domiciled beneficiary	£90,000
2009-10	Payment to UK resident and domiciled beneficiary	£60,000

The HMRC analysis is as follows.

Paragraph 152 Schedule 7 confirms that you apply the pre FA 2008 version of Schedule 4C TCGA when matching post 5 April 2008 capital payments to gains in the pre 6 April 2008 Schedule 4C TCGA pool.

2008/09 [Payment to non-dom]

The 2008-09 £90,000 capital payment to a non-UK domiciled beneficiary is not matched with any of the gains (section 2(2) amounts) in the pre 6 April 2008 Schedule 4C TCGA pool. This comes from the pre FA 2008 wording of paragraph 8(3) Schedule 4C TCGA.[56] The capital payment is still available to carry forward to be matched with future gains under section 87 or 89(2) TCGA or gains in a post 5 April 2008 Schedule 4C TCGA pool.[57]

2009/10 [Payment to UK dom]

The 2009-10 £60,000 capital payment to a UK resident and domiciled beneficiary is matched with £60,000 of the gains (section 2(2) amounts) in the pre 6 April 2008

[55] I altered the layout slightly for added clarity.

[56] See 62.36.1 (Pre-2008 sch 4C regime).

[57] Author's footnote: the capital payment is however not matched to the pre-2008 gains, so it is taxable on the non-dom beneficiary.

Schedule 4C TCGA pool. This results in £60,000 gains being treated as accruing to the beneficiary in 2009-10. The capital payment is matched against gains (section 2(2) amounts) on a first in first out (FIFO) basis. This comes from the pre FA 2008 wording of paragraph 8B(2) Schedule 4C TCGA.[58] So for the purpose of the "increase in tax" charge under paragraph 13 Schedule 4C TCGA the £60,000 capital payment is matched against gains (section 2(2) amounts) in the following order:

- First against the 2004-05 £20,000 gains (section 2(2) amounts)
- Second against the 2005-06 £30,000 gains (section 2(2) amounts)
- Third the remaining £10,000 (£60,000 −[£20,000 + £30,000]) of the capital payment against £10,000 of the 2006-07 gains (section 2(2) amounts)

This leaves £60,000 gains in the Schedule 4C TCGA pool which are all gains (section 2(2) amounts) from 2006-07.

HMRC example 29 concerns a trust with pre- and post-2008 sch4C pools:

Example 29
Ordering rules for allocating capital payments between different Schedule 4C pools and gains dealt with under section 87 or 89(2)

A pre 6 April 2008 Schedule 4C TCGA pool of gains was created in 2006-07 as a result of a transfer of value linked with trustee borrowing.

A post 5 April 2008 Schedule 4C TCGA pool of gains was created in 2008-09 as a result of a further transfer of value linked with trustee borrowing.

Paragraph 152 of Schedule 7 applies to keep the Schedule 4C TCGA pools separate. Both transfers were between the same two non-UK resident settlements. Additionally there are unmatched gains (section 2(2) amounts) in the transferee settlement. In summary the gains are:

2004-05	Trustees' gains (section 2(2) amount) in transferee settlement	£10,000
2006-07	Pre 6 April 2008 Schedule 4C pool - gains	£50,000
2008-09	Post 6 April 2008 Schedule 4C pool - gains	£30,000
2009-10	Trustees' gains (section 2(2) amount) in transferee settlement	£20,000

In 2010-11 a capital payment of £95,000 is made from the transferee settlement to a UK resident and domiciled beneficiary.

The HMRC analysis is as follows.

The rules in paragraph 155 Schedule 7[59] say that the capital payment is allocated against gains in the following order:

- First against the £30,000 gains in the post 5 April 2008 Schedule 4C TCGA pool
- Second against the £50,000 gains in the pre 6 April 2008 Schedule 4C TCGA pool
- Third the remaining £15,000 (£95,000 − [£30,000 + £50,000]) of the capital payment against £15,000 trustees' gains (section 2(2) amount) in the transferee settlement.

Next you go to the new section 87A TCGA matching rules to decide which trustees' gains these £15,000 capital payments are matched with. The last in first out (LIFO) rule there

[58] See 62.36.1 (Pre-2008 sch 4C regime).

[59] See 62.36.3 (Priority of post-2008 sch 4C regime).

matches it all with £15,000 of the 2009-10 £20,000 trustees' gains (section 2(2) amount). This leaves unmatched trustees' gains (section 2(2) amount) of:

2004-05	Trustees' gains (section 2(2) amount) in transferee settlement	£10,000
2009-10	Trustees' gains (section 2(2) amount) in transferee settlement	£5,000

62.38 Critique

In accordance with the usual policy, there was no consultation or discussion on the enactment, or multiple amendments, of sch 4B /4C, but it is worth looking back now to assess them.

HMRC would regard sch 4B and 4C (in their current form) as successful, as they successfully stopped the schemes at which they are addressed.

Measured by any other criteria they are a failure. They are too wide (applying to arrangements where there is no avoidance). They are so complicated and counterintuitive that one could not expect even conscientious trustees to comply, except some of the largest trusts with a large budget for UK professional advice. A full analysis - which would be several times the length of this long chapter - will never be written.

I expect that the drafter only expected HMRC, and taxpayers, to look at the rules in cases of "abuse"; an attitude HMRC have expressed in relation to other unworkable anti-avoidance legislation.[60] They are in practice generally ignored, by HMRC and by taxpayers. They remain like unexploded ammunition from a forgotten war: exceptionally careful taxpayers avoid it; others disregard it, generally with impunity as HMRC will rarely know and may not care. While never satisfactory, the problems were made much worse by the extension of the scope of the s.87 charge in 2008. In all these respects, of course, schedules 4B and 4C are not very different from other anti-avoidance legislation of their time.

If a serious attempt is ever made to rationalise the UK taxation of offshore trusts, something much better can be devised. The easiest course would be to restrict the rules with a focussed motive test, ie they only apply where there is a purpose specifically to avoid s.87 or s.86. The schemes at which they are aimed are complex and artificial ones where the avoidance intention is hardly to be denied. The 2013 amendments to (what is now) s.3 TCGA offer a precedent.[61]

The professional bodies raised a similar proposal, with a more ambitious

[60] The former substantial donor rules are an example, see Kessler & Marre, *Taxation of Charities and Nonprofit Organisations* (9th ed., 2013), para 3.15 (Can bona fide charities safely ignore the substantial donor rules?) (The rules are now repealed).

[61] See 64.16 (s.3 motive defence).

ambit:

> **Schedules 4B and 4C should be removed**
> This should be accompanied by (panel approved) GAAR guidance saying that any arrangements designed along flip-flop lines would be considered to be caught by the GAAR.[62]

One of the selling points of the GAAR was said to be that some anti-avoidance provisions would become unnecessary.[63] If this is not suitable then what is?

No-one took any notice of that, but lobbying continues.[64]b

[62] Taxrep 59/15 Reforms to the Taxation of Non Domiciles *https://icaew.access.preservica.com/index.php/IO_92e162f4-7550-4854-9986-c44f874c466c*

[63] See 1.12.3 (Alternatives to Framework).

[64] STEP consultation response "OTS review of its approach to simplification and its aims, approach and priorities" (Apr 2022): "There are highly complicated rules for creating new pools of gains on certain transfers by offshore trusts. In some cases, they can be manipulated to the advantage of beneficiaries to avoid the supplemental charge or by using personal losses. Given recent case law, there is no particular need for these provisions in the majority of cases anyway. Alternatively, they could be much simplified without the need to keep separate pools of gains." *https://www.step.org/sites/default/files/2022-04/step-response-to-ots-review-of-simplification.pdf*

CHAPTER SIXTY THREE

SUB-FUNDS

63.1 Position outside sub-fund regime
63.1.1 Separate sub-fund trustees
63.2 Sub-Fund regime
63.2.1 Date election takes effect
63.3 Sub-Fund election: Conditions
63.4 Condition 1: No sub-subfund
63.5 Condition 2: At least 2 Sub-Funds
63.6 Condition 3: No co-ownership
63.7 Cond. 4: Distinct beneficiaries
63.8 Procedure for election
63.9 Effect of sub-fund election
63.9.1 Separate settlement
63.9.2 Trustees of Sub-Funds
63.9.3 Disposal and acquisition
63.9.4 Transfer to Sub-Fund
63.9.5 Sub-Funds connected persons
63.10 Planning
63.11 Sub-Funds: Critique

Cross references

The following topics are considered elsewhere:

Topic	**See para**
Sub-fund trustees relevant persons for remittance basis	18.7
Sub-fund rebasing on death	88.6.2
Sub-fund trustees connected persons	104.14.1

63.1 Position outside sub-fund regime

It is common for one trust to hold separate funds ("sub-funds") on distinct terms.[1]

The existence of sub-funds within one trust causes various difficulties, because the trustees of the trust are one person for CGT and IT: the sub-funds constitute one taxable unit. In particular:

Rule	**See para**
There is one tax return, and one assessment to CGT/IT	
Any trustee could be liable for all the tax	63.1.1
Allowable losses accrue to the trust as a whole	
The trust has one residence for tax purposes	7.10
Non-resident trust sub-funds share s.1(3) amounts (one trust gain pool)	

[1] For the distinction between (1) separate trusts and (2) sub-funds of one trust, see 99.22.2 (Variation or resettlement?).

The trust has one registration under TRS	130.23.5
CGT share pooling/matching rules apply to the trust as a whole	56.12

There are also advantages:

The creation of a sub-fund, or a transfer between sub-funds, is:

(a) not a disposal for CGT, so no gain arises
(b) not a transfer between trusts (which raises IHT and CGT issues)
(c) not a disposition for IHT purposes

A payment between sub-funds cannot constitute income for IT purposes

These points could matter for resident and non-resident trusts.

63.1.1 *Separate sub-fund trustees*

It is possible (though not common) for sub-funds to have separate trustees. Section 474(2)(3) ITA and s.69(3) TCGA address this. They are effectively identical, and are conveniently read side by side:

s.474(2)(3) ITA	**s.69(3) TCGA**
	For the purposes of this section, [*Note 3*] and of sections 71(1) and 72(1), where
(2) If different parts of the settled property in relation to a settlement are vested in different bodies of trustees, [*Note 1*]	[a] part of the property comprised in a settlement is vested in one trustee or set of trustees and part in another
subsection (1) and sections 475 and 476 [*Note 2*] apply in relation to the different bodies as if they were all one body.	
(3) The cases covered by subsection (2) include cases where	[b] (and in particular where
[a] settled land (within the meaning of the Settled Land Act 1925) is vested in the tenant for life and [b] investments representing capital money are vested in the trustees of the settlement.	[i] settled land within the meaning of the Settled Land Act 1925 is vested in the tenant for life and [ii] investments representing capital money are vested in the trustees of the settlement),
	they shall be treated as together constituting and, in so far as they act separately, as acting on behalf of a single body of trustees.

Note 1 The drafter has here retained the expression "body of trustees" which has elsewhere been deleted from the legislation, but it does not matter.

Note 2 As s.474(1) applies for the purposes of ITA, so does the rule in s.474(2); the references to ss.475, 476 are not actually necessary, but they do no harm.

Note 3 As s.69(1) applies for the purposes of TCGA, so does the rule in s.69(3); the references to ss.72, 72 are not actually necessary, but they do no harm.

Thus trustees of one sub-fund may be subject to tax on income or gains of the other.[2] On the appointment of separate trustees, an indemnity is required to deal with this (and to deal with the issue of capital losses). In *Roome v Edwards*:[3]

> Persons, whether professional men or not, who accept appointment as trustees of settlements such as these, are clearly at risk under the [TCGA] and have only themselves to blame if they accept the obligations of trustees in these circumstances without ensuring that they are sufficiently and effectively protected whether by their beneficiaries or otherwise for fiscal or other liabilities which may fall upon them personally as a result of the obligations which they had felt able to assume.

63.2 Sub-Fund regime

FA 2006 introduced a regime for sub-funds which applies where there has been a sub-fund election. I refer to this as the **"Sub-Fund regime"** (with initial capitals to distinguish it from sub-funds outside the regime). The legislation is written out twice, once in TCGA and again in ITA.

Para 1 sch 4ZA TCGA	**s.477 ITA**
The trustees of a settlement (the "principal settlement") may elect that a fund or other specified portion of the settled property (the "sub-fund") be treated, unless the context otherwise requires, as a separate settlement (the "sub-fund settlement") for the purposes of this Act, and the election shall have effect.	(1) This section applies for the purposes of the Income Tax Acts (except so far as, in those Acts, the context otherwise requires) if the trustees of a settlement have made a sub-fund election under paragraph 1 of Schedule 4ZA to TCGA 1992. (2) The sub-fund settlement is treated as a settlement that is created at the relevant time.

The requirements of an election are set out in TCGA, but making the election also has IT consequences.

[2] This was confirmed in *Roome v Edwards* 54 TC 359.

[3] 54 TC 359 at p.395.

Section 477(7) ITA incorporates some definitions by reference:

> In this section—
> "principal settlement" has the meaning given by paragraph 1 of Schedule 4ZA to TCGA 1992,
> "the relevant time" means the time when the sub-fund election is treated as having taken effect under paragraph 2 of that Schedule,
> "sub-fund election" has the meaning given by paragraph 2 of that Schedule, and
> "sub-fund settlement" has the meaning given by paragraph 1 of that Schedule.

The TSE provides:

> **TSEM3510: Sub-fund elections - conditions for making an election** [Mar 2017]
> ... Where the reality before the election is made is that there are two separate funds which together contain all the property in the settlement the trustees must decide which is to be the sub-fund settlement and which the principal settlement. The principal settlement is for Income Tax and CGT purposes a continuation of the settlement before the election. In appropriate cases a further sub-fund settlement election could be made in respect of the principal settlement.

The TSE Manual provides:

> **TSEM3515 Sub-Fund Elections - Time Limits** [Mar 2017]
> The time limit for making an election is the first anniversary of 31 January following the tax year in which the specified date falls. So, for an election to be treated as having taken effect on a date falling in the year 2006-07 it must be made no later than 31 January 2009.
> Sub-Fund Elections

63.2.1 *Date election takes effect*

Para 2 sch 4ZA TCGA provides:

> (1) An election under paragraph 1 (a "sub-fund election") must specify the date on which it is to be treated as having taken effect, which must not be later than the date on which it is made.
> (2) The election shall be treated as having taken effect—
> (a) at the beginning of the specified date, or
> (b) if there is a deemed disposal of an asset by the trustees of the principal settlement under section 71(1) (by virtue of

> paragraph 19) or section 80(2) (by virtue of paragraph 18(2)), on the specified date immediately after the deemed disposal.

63.3 Sub-Fund election: Conditions

Para 3 sch 4ZA TCGA provides:

> Trustees may make a sub-fund election only if—
>
> (a) Conditions 1 to 4 are satisfied when the election is made, and
>
> (b) Conditions 2 to 4 were satisfied throughout the period beginning with the time when the election is to be treated as having taken effect and ending immediately before the election is made.

63.4 Condition 1: No sub-subfund

Para 4 sch 4ZA TCGA provides:

> Condition 1 is that the principal settlement is not itself a sub-fund settlement.

63.5 Condition 2: At least 2 Sub-Funds

Para 5 sch 4ZA TCGA provides:

> Condition 2 is that the sub-fund is not the whole of the property comprised in the principal settlement.

This did not need to be said, but it does no harm.

63.6 Condition 3: No co-ownership

Para 6 sch 4ZA TCGA provides:

> Condition 3 is that, if the sub-fund election had taken effect, the sub-fund settlement would not consist of or include an interest in an asset any other interest in which would be comprised in the principal settlement.

Para 7 sch 4ZA TCGA provides:

> For the purpose of Condition 3—
>
> (a) section 104(1) shall not have effect, and
>
> (b) "interest", in relation to any asset, means an interest as a co-owner of the asset (whether the asset is owned jointly or in common and whether or not the interests of the co- owners are equal).

63.7 Cond. 4: Distinct beneficiaries

Para 8 sch 4ZA TCGA provides:

> Condition 4 is that, if the sub-fund election had taken effect, no person would be a beneficiary under both the sub-fund settlement and the principal settlement.

Para 9(1) sch 4ZA TCGA provides a commonsense definition of "beneficiary":

> For the purpose of Condition 4 a person is a beneficiary under a settlement—
>
> (a) if—
>
> (i) any property which is or may at any time be comprised in the settlement, or
>
> (ii) any derived property,
>
> is, or will or may become, payable to him or applicable for his benefit in any circumstances whatsoever, or
>
> (b) if he enjoys a benefit deriving directly or indirectly from—
>
> (i) any property which is comprised in the settlement, or
>
> (ii) any derived property.

Para 9(2) sch 4ZA TCGA provides some limited exceptions to the rule that there must be no common beneficiaries. It does this by the clumsy but effective technique of limiting the definition of "beneficiary":

> But for the purpose of Condition 4 a person is not to be regarded as a beneficiary under a settlement if property comprised in the settlement, or any derived property,[4] will or may become payable to him or applicable for his benefit by reason only of—
>
> (a) his marrying, or entering into a civil partnership with, a beneficiary under the settlement,
>
> (b) the death of a beneficiary under the settlement,
>
> (c) the exercise by the trustees of the settlement of—
>
> (i) a power conferred by section 32 of the Trustee Act 1925 or

[4] Defined para 9(3): In this paragraph "derived property", in relation to any property, means—
(a) income from that property,
(b) property directly or indirectly representing—
(i) proceeds of that property, or
(ii) proceeds of income from that property, or
(c) income from property which is derived property by virtue of paragraph (b)."

> section 33 of the Trustee Act (Northern Ireland) 1958 (powers of advancement),
>
> (ii) a power conferred by the law of a jurisdiction other than England and Wales or Northern Ireland which makes provision similar to the provisions specified in sub-paragraph (i), or
>
> (iii) a power of advancement which is conferred by the instrument creating the principal settlement, or by another instrument made in accordance with the terms of the principal settlement, and which is subject to the same restrictions as those specified in section 32(1)(a) and (c) of the Trustee Act 1925, or
>
> (d) the failure or determination of trusts of the kind described in section 33 of the Trustee Act 1925 (protective trusts).

There are some puzzles here, but the points are not worth pursuing.

63.8 Procedure for election

Para 10 sch 4ZA TCGA provides:

> A sub-fund election must be made—
>
> (a) by notice to an officer of Revenue and Customs, and
>
> (b) in such form as the Commissioners for Her Majesty's Revenue and Customs may require.

Para 11 sch 4ZA TCGA provides:

> A sub-fund election may not be made after the second 31st January after the year of assessment in which the date on which the election is to be treated as having taken effect falls.

Para 12 sch 4ZA TCGA provides

> A sub-fund election must contain—
>
> (a) a declaration by each trustee of the principal settlement that he consents to the election,
>
> (b) a statement by the trustees of the principal settlement that the requirement in paragraph 3 is satisfied, [in short, that all sub-fund conditions are satisfied][5]
>
> (c) such information as the Commissioners for Her Majesty's Revenue and Customs may require in relation to the principal settlement (which may, in particular, include information

[5] See 63.3 (Sub-Fund election: Conditions).

relating to the trustees, the trusts, property which is or has been comprised in the settlement, the settlors or the beneficiaries),

(d) a declaration by the trustees of the principal settlement that the information given in the election is correct, to the best of their knowledge and belief, and

(e) such other declarations as the Commissioners for Her Majesty's Revenue and Customs may require.

Para 13 sch 4ZA TCGA provides:

> A sub-fund election may not be revoked.

63.9 Effect of sub-fund election

63.9.1 *Separate settlement*

Para 1, 17 sch 4ZA TCGA	s.477(2) ITA
Para 1 The trustees of a settlement (the "principal settlement") may elect that a fund or other specified portion of the settled property (the "sub-fund") be treated, unless the context otherwise requires, as a separate settlement (the "sub-fund settlement") for the purposes of this Act, and the election shall have effect. **Para 17** The sub-fund settlement shall be treated, for the purposes of this Act, as having been created at the time when the sub-fund election is treated as having taken effect.	The sub-fund settlement is treated as a settlement that is created at the relevant time.

So the Sub-Fund is treated as a separate settlement for CGT/IT.

The phrase "unless the context otherwise requires" echoes the phrase in the in the standard IT/CGT definition of "settlement" and makes room for cases where the settlement-arrangement definition of settlement applies.[6] But in general a Sub-Fund and the principal settlement should constitute two separate settlement-arrangements.

[6] See 87.3 (Settlement: Standard IT/CGT definition); 87.4 (Settlement-arrangement definition of settlement).

The CG Manual provides:

> **CG33331 Sub-Fund Settlements: Basic Effects For CGT: Deemed Disposal** [Jul 2019]
> Except for the purposes of the annual exempt amount (see CG18115) the sub-fund becomes a new separate settlement on "the specified date" (see the end of TSEM3510). Otherwise the basic principle is that the tax consequences should be the same as those which would apply if the trustees had exercised their powers to transfer assets to the trustees of a separate settlement. The legislation provides the same possibilities in the case where such powers are not available to them. ...

63.9.2 *Trustees of Sub-Funds*

Para 18 sch 4ZA TCGA	**Section 477 ITA**
(1) Each trustee of the trusts on which the property comprised in the sub-fund settlement is held shall be treated as a trustee of the sub-fund settlement for the purposes of this Act.	(3) Each trustee of the trusts on which property comprised in the sub-fund settlement is held is treated as a trustee of the sub-fund settlement.
(2) A person who is a trustee of the sub-fund settlement shall be treated for the purposes of this Act, from the time when the election is treated as having taken effect, as having ceased to be a trustee of the principal settlement unless he is also a trustee of trusts on which property comprised in the principal settlement is held.	(4) A person ("T") who is a trustee of the sub-fund settlement is treated, from the relevant time, as having ceased to be a trustee of the principal settlement unless T is also a trustee of trusts on which property comprised in the principal settlement is held.
(3) A person who is a trustee of the principal settlement shall not be treated for the purposes of this Act as a trustee of the sub-fund settlement unless he is also a trustee of trusts on which property comprised in the sub-fund settlement is held.	(5) A person ("T") who is a trustee of the principal settlement is not to be treated as a trustee of the sub-fund settlement unless T is also a trustee of trusts on which property comprised in the sub-fund settlement is held.

63.9.3 *Disposal and acquisition*

Para 19 sch 4ZA TCGA

The trustees of the sub-fund settlement shall be treated for the purposes of this Act as having become absolutely entitled, at the time when the sub-fund election is treated as having taken effect, to the property comprised in that settlement as against the trustees of the principal settlement.

s.477(6) ITA

The trustees of the sub-fund settlement are treated as having become, at the relevant time, absolutely entitled to the property comprised in that settlement as against the trustees of the principal settlement.

The point of this deeming is to trigger the CGT charge on termination of a settlement.[7] Thus an election may have a significant CGT cost, unless the trust fund does not give rise to a gain, or is in the form of cash on which no gain can arise. A good time to consider an election may be when trust property has been or is about to be sold. There is no disposal of property in the principal fund, so careful selection of what property goes into the Sub-Fund may make a difference.

Para 20 sch 4ZA TCGA provides:

> (1) A deemed disposal by the trustees of the principal settlement of an asset under
>
> [a] section 71(1) (by virtue of paragraph 19) or
>
> [b] section 80(2) (by virtue of paragraph 18(2))[8]
>
> shall be treated as having been made at the beginning of the date on which the sub-fund election is treated as having taken effect.
>
> (2) If the trustees of the sub-fund settlement have acquired an asset of which the trustees of the principal settlement are deemed to have disposed under section 71(1) (by virtue of paragraph 19), they shall be deemed to have acquired it at the time when the election is treated as having taken effect.
>
> (3) The trustees of the principal settlement shall not be treated as having disposed of an asset under section 80(2) by virtue of paragraph 18(2) if they are treated as having disposed of the same asset under section 71(1) by virtue of paragraph 19.

The CG Manual provides:

[7] See 56.21.5 (Disposal on trust termination).

[8] See 12.4 (Charge on emigration of trust).

> **CG33331 Sub-Fund Settlements: Basic Effects For CGT: Deemed Disposal** [Jul 2019]
> If however a particular asset meets the business asset test or agricultural property test "gifts hold-over relief" may be available under TCGA section 165 or TCGA Schedule 7 paragraphs 1 to 4. See CG66940+. It is also accepted that if the transaction creating the sub-fund settlement is a chargeable transfer for Inheritance Tax, and the specified date is the same day, the conditions of TCGA92/S260(2)(a) can be met. For example one might have a will trust where currently there is an immediate post-death interest for A, the son of the testator, see CG36542. The trustees exercise a power to declare discretionary trusts for A's children, B,C and D, in respect of part of the settled property. This is a chargeable transfer for IHT. Assuming the property held on discretionary trusts meets the conditions for there to be a sub-fund, an election might be made under which the specified date is the date of the exercise of the power. In this situation section 260(2)(a) could apply unless any of B,C and D are under 18.

Para 21 sch 4ZA TCGA provides:

> If the trustees of the sub-fund settlement are treated by virtue of paragraph 19 as having become absolutely entitled to money expressed in sterling, for the purposes of this Act—
> (a) the trustees of the principal settlement shall be treated as having disposed of the money at the beginning of the day on which the sub-fund election is treated as having taken effect, and
> (b) the trustees of the sub-fund settlement shall be treated as having acquired the money at the time when the election is treated as having taken effect.

Why is this needed? The CG Manual provides:

> **CG33332 Sub-Fund Settlements: Basic Effects For CGT: Other Effects** [Jul 2019]
> This would be relevant for the purposes of identifying the settlor of the sub-fund settlement, which is determined by section 68B, see CG33247.

63.9.4 *Transfer to Sub-Fund*

Para 22 sch 4ZA TCGA provides:

> (1) If the trustees of the principal settlement are deemed to have disposed of an asset under section 71(1) (by virtue of paragraph 19), the

> trustees of the principal settlement shall be treated for the purposes of sections 90 and 94[9] as having transferred the asset to the trustees of the sub-fund settlement.
>
> (2) Sub-paragraph (1) also applies where the trustees of the principal settlement would be deemed to have disposed of money expressed in sterling under subsection (1) of section 71 if in that subsection—
>
> (a) the reference to "assets" were a reference to "property", and
>
> (b) for "their" there were substituted "its".

This brings into effect the rules on transfers between settlements.

63.9.5 *Sub-Funds connected persons*

s.268(3) TCGA	**s.993(3)(g) ITA/s.1112(3)(g) CTA 2010**
A person who is the trustee of a settlement is connected with ...	A person, in the capacity as trustee of a settlement, is connected with...
(e) if the settlement is a sub-fund settlement in relation to a principal settlement, a person in the capacity as trustee of any other sub-fund settlements in relation to the principal settlement.	(g) [identical to s.268(3)(e) TCGA]

63.10 Planning

If it is not desired to have one settlement with sub-funds governed by the general rules, the choice usually lies between:

(1) A Sub-Fund election
(2) To create separate settlements

The latter is usually better, as:

(1) It is simpler.
(2) It is not necessary to comply with the Sub-Fund election conditions (in particular, condition 4 (no common beneficiaries) may be inconvenient).

It is possible to think of cases where a Sub-Fund election will be useful, but they are rare. Examples are:

(1) To create separate settlements for CGT purposes but to preserve an

[9] Section 94 TCGA has been repealed, but the need to amend the provision here seems to have been overlooked.

pre-2006 estate IIP for IHT purposes.

(2) If trustees do not have power to create separate settlements (and do not want to go to court to obtain that power). But modern trusts generally confer the necessary power.

The HMRC Manual (correctly) warns against giving advice:

> **CG33334 Giving Advice** [Jul 2019]
> It is important that HMRC officers should avoid giving specific guidance to trustees on the question whether an election should be made. Advice should be limited to telling them what is actually said in CGM and TSEM and the legislation. This is because although the long-term consequences, in particular the removal of the four points in the bullets in CG33330, are greater fairness between different funds, and considerably greater convenience where there are discrete trustees, the short-term tax effects may be very complicated. In particular one has to consider the effects of there being a deemed disposal for CGT purposes on the prescribed date, in particular on the base costs of various assets (if appropriate after hold-over relief) and the position for CGT taper relief.

63.11 Sub-Funds: Critique

The Sub-Fund regime illustrates a general problem, that sensible tax reforms are often enacted so hedged with anti-avoidance provisions as to become unworkable. The lengthy and complex provisions are dead letter tax law. In the first year of the Sub-Fund regime, only *eight* Sub-Fund elections were made.[10]

The best course would be to abolish the Sub-Fund regime altogether - we do not need it - which would be a simplification. There would need to be protection for existing Sub-Funds, until the last of them is wound up.

[10] Private correspondence. In 2019 HMRC informed the author that they were unable to ascertain the number of Sub-Fund elections, but the author's experience continues to be that they are not made.

CHAPTER SIXTY FOUR

GAINS OF NON-RESIDENT COMPANIES

64.1 Section 3 TCGA: Introduction
64.1.1 Pre-2019 rewrite provisions
64.1.2 2013 changes
64.2 Non-resident close company
64.3 s.3 gain attributed to participator
64.4 Computing gains: CT rules
64.5 Gain from loan relationship
64.5.1 "Loan relationship"
64.5.2 Money debt
64.5.3 Transaction of lending money
64.5.4 Deemed loan relationships
64.5.5 Derivatives and intangibles
64.6 Amount attributed to participator
64.6.1 Resident/non-resident shareholders
64.6.2 Two share classes
64.7 Participators overlap
64.8 Participators overlap: Loan creditors
64.8.1 HMRC examples: loan creditors
64.9 Participators overlap: Trustees/beneficiaries
64.10 Co chain: Indirect participator
64.11 Co chain not wholly-owned
64.12 s.3 gains of split year
64.12.1 Split year: Individual
64.12.2 Split year: trustee
64.13 25% minimum holding
64.14 Loss accruing to non-resident co
64.14.1 Arising basis participator
64.14.2 Remittance basis participator
64.14.3 Non resident trust participator
64.14.4 s.3 losses: Policy and reform
64.15 Negligible value claim
64.16 s.3 motive defence
64.16.1 Identify the arrangement
64.16.2 Purpose of arrangement
64.16.3 Offshore co holds residence
64.16.4 Motive defence claim
64.16.5 Pre-2012 gains
64.16.6 ToA/s.3 motive defence compared
64.17 Foreign trade exemption
64.17.1 Furnished holiday letting
64.18 Economically significant activity
64.18.1 Staff/premises/economic value
64.18.2 Activities "outside UK"
64.19 Partnership holds non-resident co
64.20 s.3 distribution relief
64.20.1 Amount of distribution tax
64.20.2 HMRC examples
64.20.3 Relevant period
64.20.4 Remittance basis taxpayer
64.20.5 Distribution relief/s.87/86: Interaction
64.21 Deduction relief
64.22 Reimbursement by non-resident co
64.23 Section 3 remittance basis
64.24 CG group reliefs
64.25 Group/principal co of group
64.26 "51/75/90 % subsidiary"
64.26.1 Ownership
64.26.2 Indirect ownership
64.26.3 Effective subsidiary rule
64.26.4 Principal company
64.26.5 Which group?
64.26.6 Change of principal company
64.26.7 Winding up
64.26.8 "Company"
64.27 UK-group relief
64.28 Dividend in specie
64.29 Disposal + acquisition needed
64.29.1 Disposal without acquisition

64.29.2 Acquisition without disposal
64.30 Exceptions to group relief
64.30.1 Charge on branch/agency asset
64.30.2 Debts
64.30.3 Redeemable shares
64.30.4 Exempt transferee company
64.30.5 Options
64.30.6 Reorganisations
64.31 Non-resident group relief
64.31.1 "Non-resident group"
64.31.2 s.3 group relief
64.32 De-grouping charge
64.32.1 Associated cos leave together
64.32.2 Exceptions: Chargeable assets
64.32.3 Principal co joins other group
64.32.4 "Associated"
64.33 QCB: Non-resident co
64.34 Private residence relief
64.35 BAD relief: Trade group
64.36 Foundations
64.37 Pension scheme
64.38 Administration and appeals
64.39 Tax return: s.3 gain
64.40 DT relief: s.3 gain
64.40.1 Individual treaty non-resident; company simple non-resident
64.40.2 Company treaty non-resident
64.40.3 Chain of companies
64.41 Trust participator: No DT relief
64.41.1 Critique of s.79B
64.42 Foreign tax credit relief: s.3

Cross references

The following topics are considered elsewhere:

Topic	**See**
TNR s.3 gains	11.6.2
Trust holding company	61.55
Gain accruing to unit trust	69.8
Carried interest	73.25.1

For s.3 gains accruing to charities, see Kessler, Wong & Shah, *Taxation of Charities and Nonprofit Organisations*, (14th ed., 2024-25), para 5.6 (Section 3 TCGA) online version *https://www.taxationofcharities.co.uk*

64.1 Section 3 TCGA: Introduction

Non-resident companies generally pay no UK tax on chargeable gains. This presents an obvious means of CGT avoidance. HMRC's first answer to this is s.3 TCGA.

The same problems arise for income of non-resident companies and for income/gains of non-resident trusts, but the statutory solutions are entirely different.

I refer to gains treated as accruing to a participator under s.3 TCGA as "**s.3 gains**".

64.1.1 *Pre-2019 rewrite provisions*

Until the 2019 CGT rewrite,[1] the rule was in s.13 TCGA. It will take a

[1] See 56.1 (2019 CGT rewrite: Navigation).

decade before the CG Manual is (mostly) updated, and statutory instruments will not be updated at all; so readers will need to keep the old section numbers in mind:

TCGA	**Topic**	**Formerly**
s.3	Charge	s.13(1) - (3A), (5)(b)(c)(cb)(d), (8) , (9), (10)
s.3A	Motive defences	s.13(5)(b), (ca)(cb), s13A
s.3B	Participators	s.13(10B), (12), (13), (14)
s.3C	Double charge reliefs	s.13(5A), (5B), (7), (7A)
s.3D	Remittance basis	s.14A
s.3E	Temporary non-residents	s.10A(3), (4), (10); s10AA(4); s13(5); s13(3A)
s.3F	Group relief	s.14
s.3G	Supplemental	s.13(11), (11A)

64.1.2 *2013 changes*

FA 2013 made four changes (retrospective to 2012):

Change	**See**
Minimum holding requirement: increased from 10% to 25%	64.13
Motive defence	64.16
Defence for foreign trading companies - holiday accommodation	64.17.1
Defence for economically significant activities	64.18

This was done for EU-law compliance reasons. As the 2013 rules are statutory, they are not directly affected by Brexit, though it would now be possible for Parliament to reverse them. The background is discussed in the 2022/23 edition of this work para 63.13 (EU-law compliance), but I omit that now, as it is mainly of historical interest.

64.2 Non-resident close company

Section 3(1) TCGA provides:

> This section applies if—

A set of four conditions then follow:

> (a) a chargeable gain accrues at any time to a non-UK resident close company,[2]

[2] Section 3(11) TCGA provides the standard definition:
"In this section "a non-UK resident close company" means a company-
(a) which is not resident in the UK, and
(b) which would be a close company if it were resident in the UK."

In this chapter I assume the company to which the gain accrues is a non-UK resident close company.

Next, s.3(1) TCGA provides:

> This section applies if ...
> (b) the gain is connected to avoidance (see section 3A),
> (c) the gain is not connected to
> [i] a foreign trade or
> [ii] other economically significant foreign activities...

This signposts 3 exceptions considered below.

Lastly, s3(1) TCGA provides:

> This section applies if ...
> (d) apart from this section, some or all of the gain would not be chargeable to corporation tax on the company.

Thus the CT charge payable by non-resident companies has priority over the s.3 charge.

64.3 s.3 gain attributed to participator

Section 3(2) TCGA provides:

> So much of the gain as would not otherwise be so chargeable is apportioned among participators, or indirect participators, in the company—
> (a) who are resident in the UK at that time, or
> (b) who are trustees of a settlement and are not resident in the UK at that time.

Section 3(4) TCGA provides:

> The amount apportioned to each person is treated as a chargeable gain accruing to the person.

The sidenote to s.3 calls this *attribution* of gains.[3] Section 3 TCGA refers to gains *apportioned* to participators. Elsewhere the company's gain is said to be *treated as accruing* to a person under s.3.[4] These expressions are interchangeable.

For the definition of close company see 104.26 (Close company: Introduction).

[3] The sidenote reads: "Gains attributed to UK resident individuals etc".

[4] See 19.37.8 (Relief for gain on sale).

64.4 Computing gains: CT rules

It is necessary to ascertain the amount of chargeable gains accruing to the non-resident company.

Section 3 applies to chargeable gains, so reliefs which prevent a gain from being a chargeable gain apply for the purposes of s.3.

Section 3G(3) TCGA provides:

> For the purposes of section 3 the amount of a gain or loss accruing to a company is calculated as if the company were a company resident in the UK chargeable to corporation tax on the gain.

There are two distinct statutory assumptions here:

(1) Corporation tax principles apply to compute the gain ("**s.3 CT principles assumption**")

(2) Assume the company is UK resident ("**s.3 residence assumption**")[5]

The statutory assumptions may be regarded as deeming provisions, or at least, like deeming provisions, they are construed purposively.[6]

Applying these assumptions, in computing s.3 gains:

(1) indexation relief is applicable (though the amount is now frozen), because a company within the charge to CT qualifies for that relief when computing its gains.

(2) The substantial shareholding exemption can apply. Although it is a requirement of that relief that the gain accrues to a UK resident company,[7] that requirement is deemed to be met because of the s.3 residence assumption.

(3) UK land rebasing does not apply, because it is a requirement of that relief that the company is non-resident, and that condition is deemed not to be met, because of the s.3 residence assumption.[8]

64.5 Gain from loan relationship

Section 295(1) CTA 2009 provides:

> The general rule for corporation tax purposes is that all profits arising to a company from its loan relationships are chargeable to tax as income in accordance with this Part.

[5] For statutory residence assumptions, see 61.6.1 (s.87 residence assumption).

[6] See App 8.1.2 (Statutory assumptions).

[7] See para 3 sch 7AC TCGA.

[8] See 57.16 (General rebasing conditions).

Gains on debts and other loan relationships (including life policies and foreign exchange gains) are not within s.3. Applying the s.3 CT principles assumption, these gains are chargeable to tax as income, so no chargeable gain accrues on the disposal.[9]

For a participator who is an individual or a trust, this seems too good to be true, which raises the question whether a court should construe the statutory assumption purposively so as to avoid that result.[10] However, s.3 also applies to a participator which is a company. It would be anomalous if a corporate participator did *not* obtain indexation relief, and somewhat surprising if loan relationship (etc) gains were treated as chargeable gains. The battle of the anomalies does not give a clear result, and the provision should be given its natural meaning.

HMRC accept this reasoning:

> As a consequence of the application of the loan relationship rules, a gain which accrues to a non-UK resident company on disposal of a debt represented by a balance in a non-sterling bank account will not be a chargeable gain. If the company has no chargeable gain, section 13 is not engaged, and therefore UK resident participators cannot be liable to tax in respect of such disposals. This difference in treatment between non-sterling bank accounts held directly and those held indirectly via a non-UK resident company is long standing ....[11]

The foreign currency CGT reform which followed in 2012 was enacted on the basis of this view of the law.[12]

Debts and policies often qualify for other CGT reliefs, so the question whether such gains could fall within s.3 may not often arise.

64.5.1 *"Loan relationship"*

The definition is intricate and a full discussion would need a chapter to itself.

[9] See s.37 TCGA, discussed at 56.4.12 (Interaction of IT/CGT).

[10] See App 8.1 (Deeming/statutory assumptions).

[11] HMRC, "The remittance basis and foreign currency bank accounts" (2009) *https://www.gov.uk/government/publications/the-remittance-basis-and-foreign-currency-bank-accounts* The website records that "This publication was withdrawn on 29 May 2015" but there is no reason to think that HMRC practice has changed on this point.

[12] The relief on disposals of foreign currency bank accounts applies to individuals, trustees and PRs but not to companies, because companies do not need the relief: see 95.10 (Foreign currency bank account: CGT).

The starting point is s.302(1) CTA 2009:

> For the purposes of the Corporation Tax Acts a company has a loan relationship if—
>
> (a) the company stands in the position of a creditor or debtor as respects any money debt (whether by reference to a security or otherwise), and
>
> (b) the debt arises from a transaction for the lending of money.[13]

In short, the requirements are:

(1) money debt and

(2) lending of money.

64.5.2 *Money debt*

Section 303 CTA 2009 defines "money debt":

> (1) For the purposes of this Part a money debt is a debt which—
>
> (a) falls to be settled—
>
> (i) by the payment of money,
>
> (ii) by the transfer of a right to settlement under a debt which is itself a money debt, or
>
> (iii) by the issue or transfer of any share in any company,
>
> (b) has at any time fallen to be so settled, or
>
> (c) may at the option of the debtor or the creditor fall to be so settled.
>
> (2) For the purposes of subsection (1) any option exercisable by either party to settle the debt in any other way than is mentioned in subsection (1)(a) is ignored.

64.5.3 *Transaction of lending money*

Section 303(3) CTA 2009 defines "transaction for the lending of money":

> A money debt is a debt arising from a transaction for the lending of money for the purposes of this Part if an instrument is issued by any person for the purpose of representing—
>
> (a) security for the debt, or
>
> (b) the rights of a creditor in respect of the debt.

Section 303(4) CTA 2009 excludes shares:

> A debt does not arise from a transaction for the lending of money for the

[13] In the case of a money debt which does not arise from a loan relationship, the provisions apply but only as respects *interest* payable to or by a company.

> purposes of this Part so far as it arises from rights conferred by shares in a company.

Why is this needed?

64.5.4 *Deemed loan relationships*

Section 302(4) signposts 8 sets of special rules in part 6 CTA 2009 (not considered here) which may be treated as loan relationships, so that gains likewise fall out of s.3:

Chapter	**Topic**
3	OEICs, unit trusts and offshore funds
4	Building societies
5	Registered societies
6	Alternative finance arrangements
7	Shares with guaranteed returns
8	Returns from partnerships
9	Manufactured interest
10	Repos
11	Investment life insurance contracts

64.5.5 *Derivatives and intangibles*

The same applies to gains on:

(1) Derivative contracts, charged to CT as income: Part 7 CTA 2009
(2) Intangible fixed assets, charged to CT as income: Part 8 CTA 2009

These gains are likewise taken out of the scope of s.3.

64.6 Amount attributed to participator

Once one has identified the participators, one asks how much of the company's gain is attributed to each of them.

Section 3(3) TCGA provides:

> The proportion of the amount of the gain to be apportioned to each person corresponds to the extent of the person's interest in the company as a participator or indirect participator.

Section 3B(2) TCGA provides:

> Any reference to a person's interest as a participator in a company is to the interest in it represented by all the factors by reference to which the person is a participator.

That is, "interest" in s.3 is not construed in a narrow or technical manner.

Section 3B(3) TCGA provides:

> Any reference to the extent of a person's interest as a participator in a company is to such proportion of the interests as participators of all of the company's participators as, on a just and reasonable basis, is represented by that interest.

What is just and reasonable? The CG Manual starts with general comments:

> **CG57260 participators' fractional interests** [Nov 2019]
> ...
> **The just and reasonable requirement**
> It is quite possible for the different criteria by which persons are participators to produce different percentages for one person's interest in a company. So
> [1] under one test, for example entitlement to income, A may have 60% and B have 40% and
> [2] under another test, for example entitlement to capital, A have 36%, B have 54% and C have 10%.
> This can happen even with relatively simple company structures, for example where there are preference shares, or loans. The total amount of gains apportioned cannot exceed the chargeable gain of the non-resident company. In this situation the gain has to be apportioned as is just and reasonable. This includes taking into account the interests of non-residents.
> In considering a just and reasonable apportionment you should take into account all relevant factors, and not simply make an arithmetical adjustment. It would not usually be correct merely to average out the interests using the different factors. The aim of the provisions is to ensure that the gain is attributed to the participators who have the real economic interest in the non-resident company and who will derive the benefit of the gain however indirectly. The just and reasonable apportionment prevents an inappropriate part of the gain being attributed to persons without real economic interests, for example commercial loan creditors, see below.

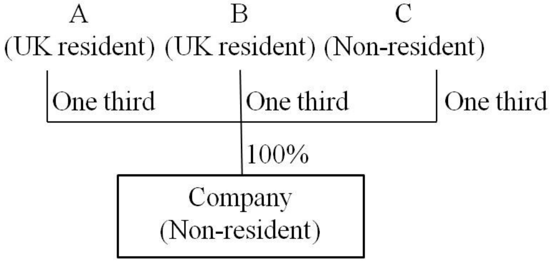
64.6.1 *Resident/non-resident shareholders*

The CG Manual starts with a very simple example:

> **CG57275 amount assessable** [Nov 2019]
> **Example 1**
> • a non-resident company has issued share capital of 150 Ordinary

shares

- A, B and C own 50 shares
- A and B are all resident in the UK. C has never been resident in the UK
- the non-resident company realises a gain of 300,000.



You compute the gains to attribute as follows.

Step 1

Calculate the gain that would have arisen if the non-resident company had been resident in the UK. This is 300,000.

Step 2

Determine the interests of all participators, including any who are not resident in the UK, by applying the tests of participation appropriate to the circumstances. In this case each of the three participators has a 33⅓ per cent interest.

Step 3

Calculate the proportion of the gain apportionable to the interests of each participator. Calculate the interests of all participators, including any who are not resident in the UK. In this case the proportion for each participator is 33⅓% of 300,000 = 100,000.

Step 4

Consider whether the gains calculated in Step 3 represent a just and reasonable apportionment. In this case the apportionment is just and reasonable. Gains of 100,000 are attributed to each of A and B and treated as gains accruing to them on the date on which the gain actually accrued to the company.

C is not liable to UK taxation. But it would not be just and reasonable to reapportion C's gain of 100,000 to A and B as C has a real economic interest in the non-resident company.

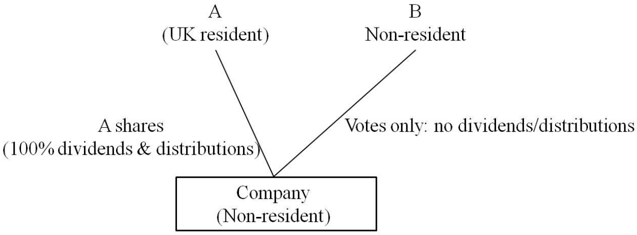
64.6.2 *Two share classes*

The CG Manual's next example concerns a company with two classes of shares:

CG57275 amount assessable [Nov 2019]

Example 4

- a non-resident company has issued share capital of 100 A shares and 100 B shares.
- both classes of shares carry equal voting rights but the B shares carry no entitlement to dividends or distributions in a winding-up.
- the A shares are owned by X who is resident in the UK
- the B shares are owned by Y who has never been resident in the UK
- the non-resident company realises a gain of 200,000.



A
(UK resident)
B
Non-resident
A shares
(100% dividends & distributions)
Votes only: no dividends/distributions
Company
(Non-resident)

You compute the gains to be attributed charge as follows.

Step 1

Calculate the gain that would have arisen if the non-resident company had been resident in the UK. This is 200,000.

Step 2

Determine the interests of all participators, including any who are not resident in the UK, by applying the tests of participation appropriate to the circumstances.

Participator	Voting rights	Distributions
X	50%	100%
Y	50%	0%

X is a 50% participator by reference to voting rights attached to the shareholding in A shares.

Y is a 50% participator by reference to voting rights attached to the shareholding in B shares.

X is a 100% participator by reference to rights to dividends and distributions attached to the shareholding in A shares.

Step 3

Calculate the proportion of the gain apportionable to the interests of each participator.

X (rights to income and capital)	200,000 × 100% = 200,000
Y (voting rights)	200,000 × 50% = 100,000

Step 4

Consider whether the gains calculated in Step 3 represent a just and reasonable apportionment. In this case the apportionment is not just and

> reasonable as the total of the gains under the initial apportionment exceeds the actual gain. A full review of all of the circumstances would be necessary. It appears that the true economic interest in the non-resident company is held solely by X. Y's entitlement should be ignored, and the whole of the gain apportioned to X.

64.7 Participators overlap

It is necessary to identify the participators in the non-resident company. Section 3B(1) TCGA incorporates the standard definition.[14] That was not drafted with s.3 in mind. One company can have too many participators for s.3 to cope with easily. I refer to this as the problem of "**overlapping participators**".

The problem may arise in the context of trusts,[15] loan creditors[16] and chains of companies.[17] The problem is solved in different ways in each case.

64.8 Participators overlap: Loan creditors

This section considers the position where a company has participators who are loan creditors. To whom are the company's gains apportioned, the loan creditors, or the shareholders (or partly one and partly the other)? What, in these circumstances, is the just and reasonable apportionment?

The CG Manual provides:

> **CG57260 participators' fractional interests** [Nov 2019]
> **Loan creditors**
> ... There will be cases where a loan creditor will be a person or institution (such as a bank[18] or similar financial institution) which has loaned money to the non-resident company as a matter of business on commercial terms. The interest of such a loan creditor acting at arms length will be limited to an expectation of repayment of the amount loaned together with payments of interest at a commercial rate. There will be no expectation that the loan creditor can or will benefit from the profits or gains of the non-resident company. In such a case it would not

[14] Section 3B(1) TCGA provides: ""Participator" has the meaning given by section 454 of CTA 2010." See 104.22 (Definitions of participator).

[15] See 64.9 (Participators overlap: Trustees/beneficiaries).

[16] See 64.8 (Participators overlap: Loan creditors).

[17] See 64.10 (Co chain: Indirect participator).

[18] Author's footnote: the author has overlooked that a bank is not a loan creditor: see 104.25.11 (Bank creditor). But this does not affect the point made here.

> be just and reasonable to apportion any of the gain to a loan creditor of this type. The attribution should be made to those participators who have a real economic interest in the capital gains.
>
> Where there are participators who are loan creditors it will be necessary to review all of the circumstances to satisfy yourself that the interests of the loan creditors can be excluded for the reasons in the preceding paragraph.
>
> In some cases the persons with the real economic interest in the non-resident company will be loan creditors whether or not they are participators under one or more of the other tests. In such cases, where there is participation in more than one way, it may be appropriate, depending on the facts of the case, to aggregate the interests of those persons in reaching an apportionment that is just and reasonable.
>
> In other cases the persons with the real economic interest in the non-resident company may be providing the funds which the loan creditor has loaned to the company, and may be persons who are entitled to secure that income or assets (whether present or future) of the company will be applied directly or indirectly for their benefit, and may be participators in their own right by virtue of that test.

If a creditor does not have an economic interest in the company's gains, that is, if the gains do not benefit the creditor, then the gains should not be apportioned to the creditor. I refer to that as the "economic-interest test." One asks: At the time the gain accrued, and on the assumption that the asset which realised a gain had been disposed of at base cost, giving rise to no gain or loss, could the company have repaid the debt? If so then no gain should be apportioned to the loan creditor. That seems relatively clear.

The position is less clear when the economic-interest test is not satisfied. For instance, suppose:

(1) An unconnected, commercial lender (not a bank) lent £100 on commercial terms to a company with assets worth £200

(2) The assets of the company fell to £50

(3) The asset value rose and company realised a gain which left the company with £100

Under the economic-interest test, the lender does have an economic interest in the gain. But it is suggested that one should still not apportion the gain to the commercial lender. Otherwise no well informed UK resident, (other than a bank), and no non-resident trust, would lend to a non-resident close company.

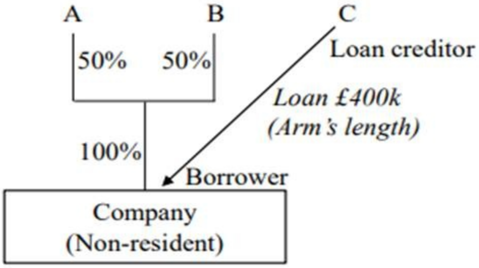
It is suggested that the position is the same with a lender who is a connected person, provided the loan is on commercial terms.

In principle, apportionment to the loan creditor would only seem appropriate if the loan was not on commercial terms and the economic-interest test was met. However, in the context of a tax avoidance scheme, an apportionment which prevents the tax advantages would be just and reasonable.

64.8.1 *HMRC examples: loan creditors*

The CG Manual gives two examples involving loan creditors. The first involves a loan on commercial terms:

> **CG57275 amount assessable** [Nov 2019]
>
> **Example 2**
>
> - A and B each own 50 shares
> - A and B are both resident in the UK
> - C is a loan creditor for 400,000. The loan is an arm's length commercial transaction and interest is payable at a fully commercial rate on the loan
> - the non-resident company realises a gain of 500,000
> - the total capital[19] of the non-resident company after the gain is 1,000,000.



The solution is to disregard the loan creditor, and attribute only to the shareholders; though the Manual takes many lines to reach this conclusion:

> You compute the gains to attribute as follows.
>
> *Step 1*
>
> Calculate the gain that would have arisen if the non-resident company had been resident in the UK. This is 500,000.

[19] Author's footnote: "Total capital" here means net asset value, not share capital.

> *Step 2*
> Determine the interests of all participators, including any who are not resident in the UK, by applying the tests of participation appropriate to the circumstances.
> A is a 50% participator by reference to the shareholding of 50 shares
> B is a 50% participator by reference to the shareholding of 50 shares
> C is a participator as a loan creditor, being entitled to an amount of 400,000 out of the total capital of 1,000,000
> *Step 3*
> Calculate the proportion of the gain apportionable to the interests of each participator. In this case the proportion for each participator is
> A (as shareholder) 500,000 × 50% = 250,000
> B (as shareholder) 500,000 × 50% = 250,000
> C (as loan creditor) 500,000 × 40% = 200,000
> *Step 4*
> Consider whether the gains calculated in Step 3 represent a just and reasonable apportionment. In this case the apportionment is not just and reasonable as the total of the gains under the initial apportionment exceeds the actual gain.

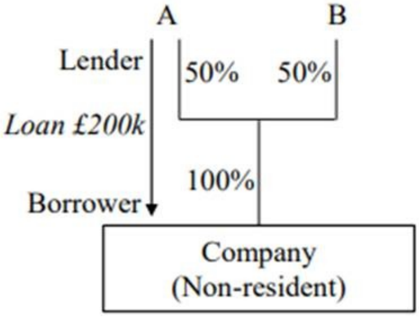
I would have thought that was not an apportionment at all, as one cannot apportion more than the amount of the gain. But whatever the reason, this is not the method used.

> C is a participator only by virtue of being a commercial loan creditor, see CG57220. C's entitlement as loan creditor should be ignored, subject to a review of the circumstances to establish that C is indeed merely a commercial loan creditor and has no entitlement to a share of profits or gains, and that there are no other arrangements. In this example it is assumed that there are no other arrangements and therefore the whole of the gain should be apportioned by reference to the interests in shares. The final apportionment becomes
> A (as shareholder) 500,000 × 50% = 250,000
> B (as shareholder) 500,000 × 50% = 250,000

The second example is the same but the loan is interest-free and from a shareholder:

> **CG57275 amount assessable** [Nov 2019]
> **Example 3**
>
> - a non-resident company has issued share capital of 100 Ordinary shares
> - A and B each own 50 shares
> - A and B are both resident in the UK

- A is a loan creditor for 200,000. No interest is payable on the loan
- the non-resident company realises a gain of 500,000.
- the total capital[20] of the non-resident company after the gain is 1,000,000.



The solution is *still* to disregard A's interest as loan creditor, though the Manual is not so confident in its answer:

> You compute the gains to be attributed as follows.
> *Step 1*
> Calculate the gain that would have arisen if the non-resident company had been resident in the UK. This is 500,000.
> *Step 2*
> Determine the interests of all participators, including any who are not resident in the UK, by applying the tests of participation appropriate to the circumstances.
> A is a 50% participator by reference to the shareholding of 50 shares
> B is a 50% participator by reference to the shareholding of 50 shares
> A is also a participator as a loan creditor, being entitled to an amount of 200,000 out of the total capital of 1,000,000. If all of the assets of the company were to be distributed immediately after the accrual of the gain the entitlements of A and B would be:
> A: 200,000 (as loan creditor) plus 50% of the balance of 800,000 (as shareholder), a total of 600,000 or 60% of the assets.
> B: 400,000, 50% of the balance of 800,000 (as shareholder), or 40 % of the assets.
> *Step 3*
> Calculate the proportion of the gain apportionable to the interests of each participator. In this case there are two possible apportionments.

[20] Author's footnote: "Total capital" here means net asset value, not share capital.

> A: 500,000 × 50% = 250,000
> B: 500,000 × 50% = 250,000
> or
> A: 500,000 × 60% = 300,000
> B: 500,000 × 40% = 200,000
>
> *Step 4*
>
> Consider whether the gains calculated in Step 3 represent a just and reasonable apportionment. As there are at least two possible apportionments we must consider all of the facts relating to the arrangements under which A's loan was made and the arrangements regarding profits and gains of the company. For instance:
>
> - Does the loan agreement give A any preferential rights to profits or gains, or simply to a repayment of the capital?
> - Is B entitled to an equal share of profits or gains?
>
> In such cases there is no easy answer and a full consideration of all of the relevant circumstances is necessary. On the bare facts of this example A has no preferential rights and consequently an apportionment by reference to the shareholdings, effectively excluding A's participation as loan creditor, may be just and reasonable. If so, the gain would be attributed
> A: 500,000 × 50% = 250,000
> B: 500,000 × 50% = 250,000

This is a case where the company could have repaid the debt even if there had been no gain. So the gain did not significantly increase the value of the debt. The loan creditor does not have an economic interest in the gain. The outcome would be different if that were not the case.

64.9 Participators overlap: Trustees/beneficiaries

Suppose a company is owned by a trust. The trustees are participators. The beneficiaries are in general participators since in general they have an interest in trust property.[21]

The difficulty this would cause for s.3 TCGA was recognised, and beneficiaries are taken out of s.3. Section 3B(4) TCGA provides:

> If-
>
> (a) the interest of a person in a company is wholly or partly represented by an interest under a settlement ("the beneficial interest"), and

[21] See 104.23.4 (Trustees and beneficiaries).

> (b) the beneficial interest is the factor (or one of them) by reference to which the person would, apart from this subsection, have an interest as a participator in the company,
>
> that interest as a participator is, so far as represented by the beneficial interest, to be treated instead as the interest of the trustees of the settlement.

The CG Manual provides:

> **CG57220 basic conditions for [s.3 TCGA]: the company** [Nov 2023]
> **Beneficiaries**
> Where the trustees of a settlement, whether resident in the UK or not, are participators in a non-resident company then in certain circumstances a beneficiary of the settlement will also be within the definition of participator. The effect of [s.3B(4)] is that once you reach shares or other interests held by trustees, except in the case of a bare trust, see CG34300, you stop there. In deciding how the chargeable gain of the company should be apportioned, you treat the trustees as if they were the beneficial owners of their shares or other interests and apportion the gain to them as appropriate, ignoring the interests of the beneficiaries. If the trustees are resident then their share of the gain is assessed on them. If the trustees are non-resident then the gain is subject to TCGA92/S86 and TCGA92/S87, see CG57395. Any interest as a participator in the non-resident company which the beneficiary holds in their own right, for example by a personal holding of shares in the non-resident company, will remain within [s.3].

64.10 Co chain: Indirect participator

Section 3(7) TCGA provides:

> A person ("P") is an "indirect participator" in a company ("A") if-
>
> (a) another company ("B") which is a non-UK resident close company is a participator in A, and
>
> (b) P is a participator in B or P is a participator in a third non-UK resident close company which is participator in B,
>
> and so on through any number of non-UK resident close companies that are participators in other non-UK resident close companies.

Section 3(8) TCGA provides:

> P's interest as an indirect participator in A in the case of any gain is determined by-

(a) apportioning the gain among the participators in A according to the extent of their respective interests as participators, and

(b) then further apportioning the gain apportioned to B among the participators in B according to the extent of their respective interests as participators, and so on through other companies.

The CG Manual provides:

> **CG57290 indirect interests: introduction** [Nov 2019]
> Without special rules UK resident shareholders or participators could avoid the [s.3 CGA] charge by placing another non-resident company between themselves and the company making the gain. TCGA92/S13(9) prevents this by allowing us to look through a chain of non-resident companies. The gain is apportioned to the first tier of UK residents or non-resident trusts in the chain of interests. For TCGA92/S13(9)to apply each company in the chain must itself satisfy the basic conditions outlined in CG57220.
> Therefore each company must be
> • a company that is not resident in the UK
> and
> • a company that would be a close company if it was resident in the UK.

The CG Manual begins with a straightforward example:

> Example 1[22]
> Mr A UK resident shareholder owns 100% of
> B Ltd non-resident close company which owns 100% of
> C Ltd non-resident close company which owns 100% of
> D Ltd non-resident close company.

Gains accruing to D Ltd are not attributed to C under s.3 because C is not UK resident. But the CG Manual correctly notes:

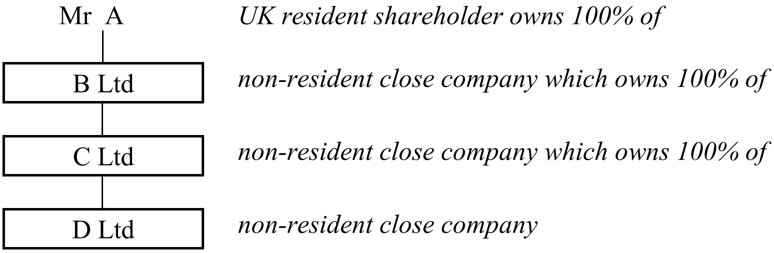
> Any gains of D Ltd can be apportioned to Mr A because TCGA92/S13(9) allows you to look through the chain of non-resident closely controlled[23] companies.

Diagrammatically:

[22] I have added the diagrams to increase clarity.

[23] The Manual (somewhat unhelpfully) uses the expression “closely controlled” as a synonym of “close”.

Example 1



Mr A
UK resident shareholder owns 100% of
B Ltd
non-resident close company which owns 100% of
C Ltd
non-resident close company which owns 100% of
D Ltd
non-resident close company

The next example concerns a chain including a resident company:

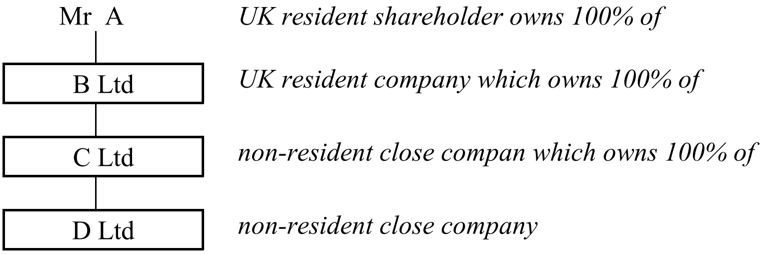
> Example 2
> Mr A UK resident shareholder owns 100% of
> B Ltd UK resident company which owns 100% of
> C Ltd non-resident close company which owns 100% of
> D Ltd non-resident close company.

The Manual analyses this as follows:

> Any gains of D Ltd can be apportioned to B Ltd but not Mr A. This is because B Ltd is the first UK resident shareholder in the chain.

Diagrammatically:

Example 2



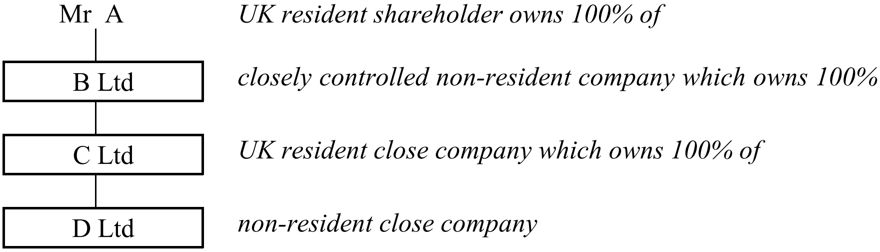
Mr A
UK resident shareholder owns 100% of
B Ltd
UK resident company which owns 100% of
C Ltd
non-resident close compan which owns 100% of
D Ltd
non-resident close company

This was correct before 1995, when the former s.13(2) and (9) TCGA only apportioned gains to a *shareholder* in a non-resident company. A is not a shareholder of D Ltd. But why can't A be assessed now? A *is* a participator in D Ltd. Perhaps this rule is implied by s.3(7) TCGA. Or perhaps it would be just and reasonable to apportion under s.3B(3) to company B and to no-one else. One way or the other, the problem of overlapping participators in chains of companies is solved by stopping at the first UK resident company.

> Example 3
> Mr A UK resident shareholder owns 100% of
> B Ltd closely controlled non-resident company which owns 100% of
> C Ltd UK resident close company which owns 100% of
> D Ltd non-resident close company.
> Any gains of D Ltd can be apportioned to C Ltd but not Mr A even though Mr A owns shares in B Ltd which is a closely controlled non-resident company. (Gains which accrue to B Ltd in its own right on disposal of its own assets can be apportioned to Mr A.)

Diagrammatically:

Example 3



Mr A
UK resident shareholder owns 100% of
B Ltd
closely controlled non-resident company which owns 100%
C Ltd
UK resident close company which owns 100% of
D Ltd
non-resident close company

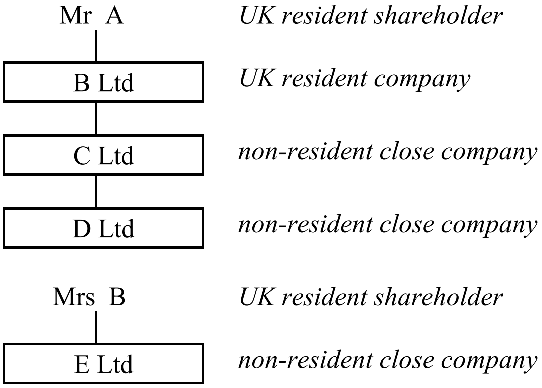
The next Manual example is a straightforward variation on the above:

> Example 4
> Mr and Mrs A are both UK resident. Mr A holds shares in B Limited, a UK resident close company. B Ltd holds shares in C, a non-UK resident close company, which holds shares in D, also a non-UK resident close company. Mrs A holds shares in E, a non-UK resident close company which also holds shares in D.
> The gains of D Ltd can be apportioned to Mrs A because she is the first UK resident shareholder in the chain of shareholdings which runs from E to her. The gains of D Ltd [E Ltd][24] cannot be apportioned to Mr A because B Ltd is the first UK resident shareholder in his chain of shareholdings.
> You calculate the extent of a person's indirect interest on a particular test of participation by multiplying the proportional interest in the assets of each company in the chain.

Diagrammatically:

[24] The original reads "D Ltd" which must be a slip for "E Ltd", if the diagram is correct.

Example 4



Mr A
UK resident shareholder
B Ltd
UK resident company
C Ltd
non-resident close company
D Ltd
non-resident close company
Mrs B
UK resident shareholder
E Ltd
non-resident close company

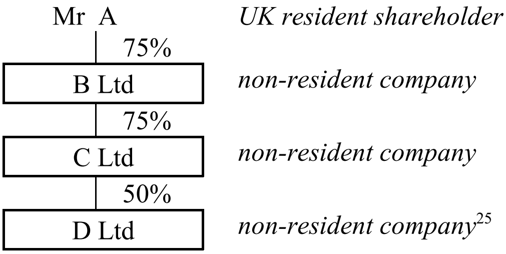
64.11 Co chain not wholly-owned

We have so far considered simple chains of wholly-owned companies. The CG Manual continues with an example of a less than 100% chain:

> **CG57290 indirect interests: introduction** [Nov 2019]
> ... You calculate the extent of a person's indirect interest on a particular test of participation by multiplying the proportional interest in the assets of each company in the chain.
> Example 5
> Mr A is a UK resident. He is a 75% participator in B, which is a 75% participator in C, which is a 50% participator in D. B, C and D are non-UK resident close companies.
> If D Ltd makes gains of 100,000 the [s.3 TCGA] the gain attributed to Mr A is £100,000 × 50% × 75% × 75% = £28,125.

Diagrammatically:

Example 5



Mr A
UK resident shareholder
75%
B Ltd
non-resident company
75%
C Ltd
non-resident company
50%
D Ltd
non-resident company[25]

[25] It is assumed in the example that D Ltd is close, which is not necessarily the case; that depends on the other shareholdings, which are not specified in the example.

Mr A is not a participator in D Ltd but that does not matter because:
(1) Mr A is a participator in B Ltd
(2) B Ltd is a participator in C Ltd
(3) C Ltd is a participator in D Ltd

So gains of D Ltd are attributed to Mr A.

64.12 s.3 gains of split year

64.12.1 *Split year: Individual*

Section 3(5) TCGA provides the standard split-year rule:

> No apportionment of any part of a gain is made to an individual if-
> (a) the gain accrues in a tax year which, as respects the individual, is a split year, and
> (b) the gain accrues in the overseas part of the year.

64.12.2 *Split year: trustee*

Section 3 TCGA provides (so far as relevant):

> (1) This section applies if—
> (a) a chargeable gain accrues at any time to a non-UK resident close company ...
> (2) So much of the gain as would not otherwise be so chargeable is apportioned among participators ... in the company—
> (a) who are resident in the UK at that time, or
> (b) who are trustees of a settlement and are not resident in the UK at that time.

Trustees may become UK resident (or cease to be UK resident) during a tax year, eg if a non-resident trustee retires in favour of a UK trustee, or a UK trustee retires in favour of a non-resident trustee. All the s.3 gains of the year are treated as accruing to the trustee, and therefore are within the charge to tax. Thus there is no split year rule.

64.13 25% minimum holding

Section 3(6) TCGA provides:

> No apportionment of any part of a gain is made to a person if the total amount that would, apart from this subsection, be apportioned to-
> (a) the person, and

(b) persons connected to[26] the person,

is 25% or less of the amount of the gain falling to be apportioned.

I refer to this as the **“25% minimum condition”** and para (b) is the **“aggregation rule”**.

In order know whether a participator (“A”) in a non-resident company (“OC”) meets the 25% minimum condition, it is necessary to identify and aggregate the interests of other persons if two conditions are satisfied:

(1) The other person (“C”) is connected with A

(2) Gains are apportioned to C

One does not aggregate the interests in OC of

(1) A and

(2) *all* persons connected with A

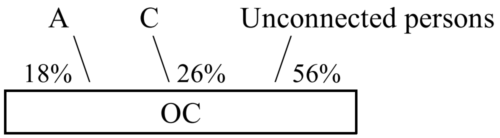
One only counts connected persons to whom gains are apportioned. One ignores connected persons if gains are not apportioned to them (apart from s.3(6)).

For example, assume OC is a non-resident company and:

(1) A owns 18% of the shares in OC. (Unless the aggregation rule applies, A does not meet the 25% minimum condition.)

(2) C (the only participator in OC who is connected with A) owns 26% of the shares in OC. (So if the aggregation rule applies, the interest of C is aggregated with the interest of A, and A does meet the 25% minimum condition.)

Diagrammatically:



The aggregation rule applies if C is:

(1) a UK resident[27]

(2) a non-resident trust[28]

[26] The correct expression is connected *with* (not connected *to*); see 104.12 (Connected person). But it does not matter.

[27] Further consideration would be needed if C were a remittance basis taxpayer who did not remit the s.3 gain.

[28] Prior to 2019/20 the aggregation rule probably did not apply to a non-resident trust.

In all these cases the gains of OC do fall to be apportioned to C under s.3.

The aggregation rule does not apply if C is a *non-resident individual*. In this case, gains cannot be apportioned to C under s.3. This is the case even if C is within the temporary non-residence rules.

The aggregation rule does not apply if C is a non-resident *company*. In this case, gains of OC may be apportioned to participators in C, but that does not cause A to meet the 25% minimum condition unless those participators are themselves connected with A.

It will always not be possible for a participator to know whether the 25% minimum condition is satisfied, but one must do the best one can.

Interests held by pension funds are not aggregated for the 25% minimum condition.[29]

The figure was raised from 10% to 25% as one of the 2013 changes.[30]

64.14 Loss accruing to non-resident co

A participator may deduct losses which accrue to them personally against s.3 gains, in accordance with the usual rules.

Different rules apply to losses accruing to the non-resident company which I call "**s.3 losses**".

64.14.1 *Arising basis participator*

Section 3 TCGA only attributes the company's gains (not losses) to a participator, so in the absence of further provision a participator would have no relief for losses accruing to the company. Section 3 TCGA provides some relief for these losses:

> (9) So far as it would go to reduce or extinguish chargeable gains accruing, as a result of this section, to a person in a chargeable period, this section applies to a loss accruing to the company on the disposal of an asset in that period as it would apply if there had been a gain.
> (10) But-
> (a) this only applies in relation to that person,[31] and

[29] See 64.37 (Pension scheme).

[30] See 64.1.2 (2013 changes).

[31] What is the purpose of the rule that loss relief shall only so apply in relation to that person? Perhaps it is intended to cover the situation where:
(1) A owns a company.
(2) The company disposes of asset 1 and realises a loss.
(3) A transfers the company to B.

> (b) this section does not otherwise apply in relation to losses accruing to the company.

The CG Manual correctly provides:

> **CG57295 losses: - general** [Nov 2019]
> [s.3 TCGA] is concerned with the apportionment of gains not losses. If the disposal by the non-resident company gives rise to a loss then that loss cannot be apportioned to UK residents for them to set it off against their other gains. However, the loss can be set-off
> - against gains made by the same company in the same year of assessment
> - against gains made by other non-resident companies which have been apportioned to the taxpayer in the same year of assessment.
>
> The term year of assessment means the year of assessment for a UK resident individual. Where the participator is a UK resident company the references to year of assessment are references to accounting periods of the participator.
> Losses of the same company (TCGA92/S13(8))
> If the non-resident company makes gains and losses in the same year of assessment the losses can be set off against the gains. Any surplus losses cannot be carried forward or back to set-off against gains arising in a different year of assessment.
> **Losses of different companies**
> If the UK resident is a participator in more than one non-resident company the proportion of the gains and losses of those companies apportioned to the UK resident can be set off against each other in the same year of assessment. Any surplus loss cannot be carried forward or back to set against the gains arising in different years of assessment.

Careful timing of disposals is needed to ensure that the loss relief is used: s.3 losses should not exceed s.3 gains in any year.

64.14.2 *Remittance basis participator*

Section 3D TCGA provides:

(4) The company disposes of asset 2 and realises a gain (in the same year).
Perhaps the intention is that the loss is not available to B. But that would have been clear in any case.
Perhaps it was intended to disapply the former rule that losses of one spouse could be deducted against gains of the other, in which case the provision has been otiose since the introduction of independent taxation in 1988.

> (4) The apportioned amount may not be reduced or extinguished by a loss under section 3 if-
> (a) the apportioned amount is regarded for the purposes of paragraph 1 of Schedule 1 as accruing on a disposal of a foreign asset,
> (b) the remittance basis applies to the individual for the tax year in question, and
> (c) any of the apportioned amount is remitted to the UK in a subsequent tax year.

This is analogous to the general rule that there is no carry-back of losses, and it echoes the rule which applies where there is a loss election.

Careful planning is needed to ensure that relief is available for s.3 losses of remittance basis taxpayers.

It is considered that the code of restrictions which apply to personal losses of remittance basis taxpayers[32] do not apply to s.3 losses. If a remittance basis taxpayer has made a loss election, personal losses are set against gains in a particular order, but those rules do not easily fit with the s.3 loss rules. If a remittance basis taxpayer has not made a loss election, personal foreign losses are not allowable; but foreign s.3 losses should remain allowable under the s.3 loss rules.

64.14.3 *Non resident trust participator*

The position is similar as for a UK participator. The aim should be that s.3 losses should not exceed s.3 gains in any year, so that the losses can be set against the gains in computing trust gains (s.1(3) amounts).

64.14.4 *s.3 losses: Policy and reform*

At first sight the rules for s.3 losses are unfair and anomalous compared to other losses:

(1) s.3 losses can only be set against s.3 gains.
(2) s.3 losses can only be set against current year s.3 gains and cannot be carried forward.

However there is a good reason not to apportion s.3 losses in the same way as gains, as there may be scope for acquisition of companies in order to acquire their losses; CT has rules for pre-acquisition losses, but no-one would want to introduce that complexity into CGT.

There is a better case for carry forward of s.3 losses, to set against other

[32] See 65.16 (Loss of remittance basis taxpayer).

s.3 gains, but even here the possibility of buying in losses prevents reform. Section 16A TCGA prevents obvious abuse, but is not a substitute for properly targeted rules.

A reasonable reform would be to allow s.3 losses to be set only against s.3 gains but to be carried forward for a limited period, say 4 or 6 years Indeed it would be reasonable to restrict all losses from being carried forward for more than that period.

64.15 Negligible value claim

Section 24 TCGA provides:

> (1A) A negligible value claim may be made by the owner of an asset ("P") if condition A or B is met.

The usual case is condition A:

> (1B) Condition A is that the asset has become of negligible value while owned by P.[33]

The negligible value claim should be made by the non-resident company, though in practice HMRC have accepted claims by UK resident participators.[34] It is possible that the non-resident company might authorise a person to make claims on its behalf, especially if that person is the direct or indirect owner and subject to tax under s.3 on the company's gains.

Section 24(2)(a) TCGA provides the relief:

> Where a negligible value claim is made:
> (a) this Act shall apply as if the claimant had sold, and immediately reacquired, the asset
> [i] at the time of the claim or
> [ii] (subject to paragraphs (b) and (c) below) at any earlier time specified in the claim,
> for a consideration of an amount equal to the value specified in the claim.

Section 24(2)(b) TCGA specifies the limit of the carry-back:

> (b) An earlier time may be specified in the claim if:
> (i) the claimant owned the asset at the earlier time; and

[33] Condition B (not discussed) arises when the disposal by which P acquired the asset was a no gain/no loss disposal.

[34] Private correspondence.

> (ii) the asset had become of negligible value at the earlier time; and either
>
> (iii) for capital gains tax purposes the earlier time is not more than two years before the beginning of the year of assessment in which the claim is made; or
>
> (iv) for corporation tax purposes the earlier time is on or after the first day of the earliest accounting period ending not more than two years before the time of the claim.

The time limit here is that in (iv), on or after the first day of the earliest accounting period of the non-resident company ending not more than two years before the time of the claim, since s.3 gains are calculated by CT rules.[35]

64.16 s.3 motive defence

Section 3(1) TCGA provides:

> This section applies if ...
>
> (b) the gain is connected to avoidance (see section 3A)

Section 3A(1) TCGA provides:

> A gain accruing to a company on the disposal of an asset is taken to be "connected to avoidance" unless it is shown[36] that neither-
>
> (a) the disposal of the asset by the company, nor
>
> (b) the acquisition or holding of the asset by the company,
>
> formed part of a scheme or arrangements of which the main purpose, or one of the main purposes, was avoidance of liability to capital gains tax or corporation tax.

I refer to this as the "**s.3 motive defence**".[37]

CGT/CT means the UK taxes, and does not include corresponding foreign taxes.[38] Only CGT/CT avoidance matters; eg an intention to avoid IHT/IT would not disqualify the s.3 motive defence. For convenience I refer below only to CGT and leave CT to be understood.

It is best to approach the s.3 motive defence in 2 stages:

[35] See 64.4 (Computing gains: CT rules).

[36] See App 2.24.5 ("It is shown that").

[37] See 3.1 (TAAR/unallowable purpose test).

[38] See 52.9 (Meaning of "taxation"). The context suggests that corporation tax here means corporation tax on chargeable gains.

(1) Identify the arrangement, of which the disposal, acquisition or holding form part
(2) Does this arrangement have a CGT avoidance purpose?

64.16.1 *Identify the arrangement*

It is difficult to envisage that there could be no arrangement, but it is necessary to identify what the arrangement is in order to ascertain its purpose.[39]

Acquisition, holding and disposal themselves will normally constitute one arrangement. Arguably the wording requires a wider arrangement, of which these steps form part, but not much more is needed, so it does not matter. In practice the company will often be part of a trust/corporate structure, and that will constitute the arrangement. A company held directly (without a trust) may also constitute an arrangement.

It is possible that (1) an acquisition constitutes (or is part of) one arrangement and (2) a disposal constitutes (or is part of) another arrangement. Eg suppose:
Step 1: In year 1, X transfers an asset to a company owned by X
Step 2: In year 5, X sells the company to a 3rd party, P
Step 3: In year 10, the company sells the asset

Step 1 and Step 3 should constitute 2 separate arrangements, not one single arrangement.
Arrangement 1 involves the acquisition and holding of an asset.
Arrangement 2 involves the holding and disposal of an asset.

The motive defence is lost if the purpose of arrangement 2 was CGT avoidance, ie if the purpose of holding the asset in years 5-10, or the purpose of the disposal, was CGT avoidance. One is looking at the purpose of P. It does not matter what was the purpose of X in years 1-5.

64.16.2 *Purpose of arrangement*

CGT and CT were introduced in 1965. Where a structure was set up before the introduction of CGT, and not in anticipation of the introduction of CGT, it cannot have had a CGT avoidance purpose.

The CG Manual provides:

[39] See App.2.2 (Arrangement). I use the singular (arrangement); there is no difference between arrangement (singular) and arrangements (plural).

> **CG57319 disposal of assets where the arrangements did not involve a tax avoidance motive - for 2012-13 and later years** [Nov 2019]
> ... There may be a number of genuine[40] reasons why a non-resident company is used as an investment vehicle.
> For example if an individual wanted to acquire a property in another country but was prevented from doing so under the prevailing law in that country because they are non-resident there, this difficulty might be overcome by setting up a company in that territory. The company could then acquire the property as a resident.
> To determine if the exemption applies a clear understanding of why the asset was acquired, held and disposed of by the company is needed....

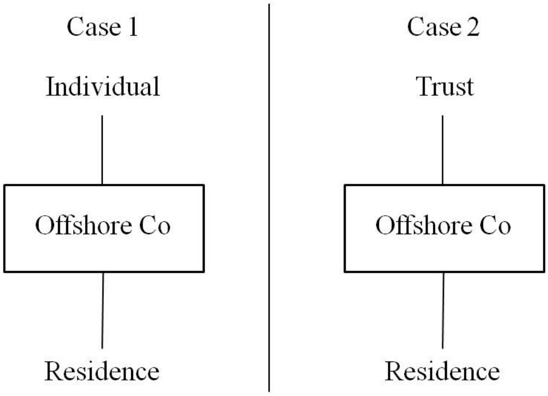
64.16.3 *Offshore co holds residence*

Suppose:

(1)(a) *Case (1):* an individual owns an offshore company which holds a residence

(1)(b) *Case (2):* a trust owns the company which holds the residence; and

(2) In either case, the residence which would have been expected to qualify for private residence relief if held directly:



This was typically done before 2017 for IHT reasons.

Applying the two-stage approach:

(1) In case 1, the arrangement is the use of the company. This cannot have a CGT avoidance purpose: no CGT would be payable if the property had been held in a trust or by the occupier. That continued to be the

[40] "Genuine" reasons here means non-tax-avoidance reasons: see 3.21.3 ("Genuine"). But of course the focus ought to be specifically on CGT avoidance.

case after the introduction of NRCGT in 2015,[41] though the circumstances in which a property can be expected to qualify for private residence relief are narrower than before. What matters is the expectation at the time of the acquisition by the company.

(2) In case (2) the arrangement is the creation of the trust and company. Was CGT avoidance one of the purposes of the creation of the trust? This requires further investigation of the facts. Was the trust a part of a CGT avoidance scheme?[42] Was the use of the company envisaged when the trust was created? and does it matter if it was not?

64.16.4 *Motive defence claim*

The s.3 motive defence does not require a formal claim. If there is no CGT avoidance purpose, a taxpayer is entitled and indeed required to submit tax returns on the basis that the motive defence applies; one is not required to show the motive defence applies before completing the tax return on that basis.

If an individual completes a self assessment return, it is necessary to indicate that they have taken advantage of the ToA motive defence by an entry in the relevant box.[43] There is no comparable box for the s.3 motive defence, so usual disclosure principles apply.[44]

64.16.5 *Pre-2012 gains*

The CGT motive defence is one of the 2013 changes[45] and applies to gains from 2012/13.[46] Older trusts may have substantial s.1(3) amounts (trust gains) even if the motive defence applies. It is arguable that the pre-2012 rules were not EU-law compliant and earlier gains should have qualified for exemption. But the position would need to be reviewed post-Brexit.

It is possible to envisage circumstances where the taxpayer will be better off if the motive defence does not apply, because matching to pre-2012 trust gains to a greater interest surcharge than if a capital payment is matched to post-2012 gains.[47] That will not happen often, but might

[41] Now replaced by CGT payable by non-residents; see 56.6.5 (CGT/CT charge: non-residents).

[42] See 52.12.4 (Avoidance of beneficiary CGT).

[43] See 52.33 (Tax return: Motive defence).

[44] See chapter 116.1 (Tax return filing position).

[45] See 64.1.2 (2013 changes).

[46] See s.62(5) FA 2013.

[47] See 61.17 (Interest surcharge).

perhaps explain why the relief was not backdated before 2012.[48]

64.16.6 *ToA/s.3 motive defence compared*

In summary, the two motive defences have the following real or apparent differences:

Transfer of Assets Abroad	**s.3 TCGA**	**Which is stricter?**
Any purpose test	*Main* purpose test	Little difference
Avoidance of *any* tax	*CGT* avoidance needed	ToA stricter
"...reasonable to assume..."	no equivalent wording	No difference[49]
Test operations individually	Test arrangement	ToA stricter
Applies to all historic income	Post-2012 gains only	CGT stricter (EU law may help)

64.17 Foreign trade exemption

Section 3(1) TCGA provides relief for a non-resident trading company:

> This section applies if ...
> (c) the gain is not connected to a foreign trade ...

Section 3A(2) TCGA provides:

> A gain is "connected to a foreign trade" if it accrues on the disposal of an asset used only-
> (a) for the purposes of a trade carried on by the company wholly outside the UK, or
> (b) for the purposes of the foreign part of a trade carried on by the company partly within, and partly outside, the UK,
> and the reference here to the foreign part of a trade is to the part of the trade carried on outside the UK.

A company within the foreign trade exemption will normally also qualify for the economically significant activity exemption; but it is just about possible to imagine a foreign trade which is not economically significant.

64.17.1 *Furnished holiday letting*

Section 3A(3) TCGA extends the foreign trade exemption to include furnished holiday letting. Spring Budget 2024 announced the abolition of the Furnished Holiday Lettings tax regime from 2025/26, so presumably this will then cease to be the case. The legislation was not in the Finance (no.2) Bill 2024, but is promised to follow in due course.

[48] Note that pre-2008 s.1(3) amounts may not count; see 61.44 (Pre-2008 capital payment/trust gain, matched post 2008).

[49] See App.2.24 (Reasonable-to-assume).

64.18 Economically significant activity

Section 3(1) TCGA provides exemption for a company carrying on an economically significant activity:

> This section applies if ...
> (c) the gain is not connected to ... other economically significant foreign activities (see section 3A)

Section 3A(6) TCGA provides:

> A gain accruing on the disposal of an asset is "connected to other economically significant foreign activities" if-
> (a) the asset is used only for the purposes of activities carried on by the company wholly or mainly outside the UK,
> (b) the activities consist of the provision of goods or services on a commercial basis, and
> (c) the activities also satisfy the staff, premises and economic value test.

I refer to this as the "**economic activity defence**". It is one of the 2013 changes.[50]

64.18.1 *Staff/premises/economic value*

Section 3A(7) TCGA provides:

> Activities satisfy the staff, premises and economic value test if they involve-
> (a) the use of employees, agents or contractors of the company in numbers, and with competence and authority, commensurate with the size and nature of the activities,
> (b) the use of premises and equipment commensurate with the size and nature of the activities, and
> (c) the addition of economic value by the company to the persons to whom the goods or services are provided commensurate with the size and nature of the activities.

The CG Manual provides:

> **CG57314: Economically Significant Activities** [Dec 2021]
> The purpose of the requirement in [s.3(1)(c) TCGA] is to ensure that only arrangements that are wholly artificial arrangements are caught by the charge under [s.3]. The test distinguishes between commercial arrangements, where an

[50] See 64.1.2 (2013 changes).

asset is held by a non UK resident company for reasons of genuine commercial activity outside the UK, and artificial arrangements put in place for the circumvention of UK tax rules through the holding of an asset in a non UK resident company without genuine commercial use in the UK. An asset will be outside of the scope of [s.3] if it is used only for the purposes of economically significant activities carried on by the company wholly or mainly outside the UK. (If the activities are wholly or mainly carried on in the UK see CG57315).

Based on the approach of both the Court and Advocate General in Case C-196/04 *Cadbury Schweppes*, the legislation seeks to differentiate between companies carrying on legitimate economic activities (which reflect economic reality) and those operating wholly artificial arrangements in the host (other) country.

In applying [s.3] activities carried on by a company which are 'economically significant activities' are to be regarded as legitimate economic activities and excluded from the [s.3] charge. Such activities are so characterised if they consist of the provision of goods or services to others on a commercial basis and involve:

- the use of staff (employees, agents or contractors of the company) in numbers and with competence and authority
- the use of premises and equipment
- the addition of economic value by the company to those to whom the goods or services are provided
- which are commensurate with the size and nature of the activities of the company.

Applying these criteria as indicators of legitimate (as opposed to wholly artificial) arrangements enables an assessment to be made of the genuine nature of the business, activities. For example that:

1. the non-resident company is genuinely established in another country, which is informed by the number of staff in use, whether they are directly employed or contractors. Also whether the premises they are working from and the equipment available to them is consistent with what would reasonably be expected for a legitimate (genuine) commercial operator, bearing in mind the size and nature of the services offered;

2. the genuine nature of the services provided by the company - that where the services offered require a level of decision making the staff employed reasonably have the level of competence necessary for a genuine company to operate; and

3, the company is providing genuine value added contribution on a sound commercial basis - that reasonable consideration is being provided in return for any payment by the UK parent company. For example if the non-resident company is providing services which have no economic substance in relation to the parent company's activity, then it would indicate that there is a wholly artificial arrangement.

To determine if this exemption applies a clear understanding of the activities of the company and how the asset is used by the company is needed. The features described are indicators of genuine behaviour and should be assessed on that basis. If the arrangements appear genuine time should not be spent on a detailed analysis of scale and proportion - see CG57315.

If the economically significant test is satisfied, no charge is generated under [s.3].

CG57315: Economically Significant Activities practical considerations [Dec 2021]

The term economically significant activities should be straightforward to apply in practice provided a clear understanding of the nature of the company's activities is held. If a company is carrying on genuine commercial activity then the test would be met. For example a joint property venture in a genuine commercial business would satisfy this test. Difficult areas that may need to be considered include investments, holding companies and cases where the asset was used wholly or mainly in activities carried on wholly or mainly in the UK:

Asset used in activities wholly or mainly in the UK

Following the approach of the Advocate General in Case C-196/04 *Cadbury Schweppes* the question of the genuineness or otherwise of the company's activities focuses on the activities of the company in the host country (Member State or third country other than the UK). However, although the specific exclusion in [s.3(1)(c)] is not available for an asset used for the purposes of 'economically significant activities' carried on by the company wholly or mainly in the UK, consideration must still be given to how the asset has been used. If it has been used by the company in carrying on legitimate economic activities which reflect economic reality then the disposal of the asset will be outside the scope of [s.3].

Investment companies

Investments comes within the meaning of "goods and services to others on a commercial basis" for the purposes of [s.3A(6)(b)]. So an investment business may provide a service to investors on a commercial basis, for example a financial service company providing investments to the general public would be providing a service on a commercial basis.

However a company holding or making investments solely for its participants is unlikely to meet the test - it may just be a private money box.

A distinction needs to be drawn between a business that uses the asset within its business of asset management and for which it would expect reward from the management activity itself and merely seeking to benefit from the actual or anticipated increase in the value of the asset.

Holding companies

It is possible for a holding company to undertake economically significant activities, for example providing management services to other companies in a group.

A holding company may undertake no economically significant activities within the holding company itself. For the purposes of applying the economically significant activities test HMRC will look at the wider business structure in assessing the business of the holding company.

64.18.2 *Activities "outside UK"*

The defence requires one to identify where the company's activities are carried on, or at least, whether they are wholly or mainly carried on outside the UK. If the activities are in the UK, or partly in the UK, this defence does not apply.

64.19 Partnership holds non-resident co

Suppose a partnership holds a non-resident company to which a gain accrues. Section 59(1) TCGA provides:

> Where 2 or more persons carry on a trade or business in partnership—
> (a) tax in respect of chargeable gains accruing to them on the disposal of any partnership assets shall, in Scotland as well as elsewhere in the UK, be assessed and charged on them separately, and
> (b) any partnership dealings shall be treated as dealings by the partners and not by the firm as such.

This does not apply to a s.3 gain, which is not a gain on the disposal of a partnership asset. But the partners are participators in the company, and it is just and reasonable (because it fits the scheme of the TCGA) to attribute the s.3 gain to the partners. That is, HMRC do not need s.59 TCGA to tax the partners.

64.20 s.3 distribution relief

Section 3C(1) TCGA provides:

> If-
> (a) an amount of tax [s.3 tax] is paid by a person as a result of section 3 in respect of a gain, and
> (b) there is a distribution[51] of an amount in respect of the gain before the end of the relevant period,
>
> the amount of tax [s.3 tax] is applied so as to reduce or extinguish any liability of the person to tax[52] in respect of the distribution.

In the following discussion:
This relief is "**s.3 distribution relief**".
The amount of tax in (a) - paid as a result of s.3 - is "**s.3 tax**".
The amount of the liability on the distribution in (b) - in respect of the distribution - is "**distribution tax**".

In short, the s.3 tax is set against the distribution tax.

[51] Section 3C(2) TCGA provides: "For the purposes of subsection (1)-
(a) the distribution is one made by way of dividend or distribution of capital or on the dissolution of the company,"

[52] Section 3C(2) TCGA provides: "For the purposes of subsection (1) ...
(b) the tax in respect of the distribution is income tax, corporation tax or capital gains tax."

The CG Manual provides:

> **CG57351 outline of tax credit relief** [Oct 2019]
> [The Manual summarises the provision and continues]
> [1] It is important to note that relief under TCGA92/S13(5A) is only due where a charge arises under section 13 in respect of a gain and a further charge arises in respect of a distribution of an amount in respect of the same gain, and that both charges arise on the same person.
> [2] Where a gain is attributed to participator A and the distribution is made to participator B no relief can be given to B as B has not paid tax under section 13. ...

Point [1] is a rough paraphrase. Point [2] is correct, but will not arise much in practice.

> **CG57360 quantifying tax set-off available following capital dividends or distributions** [Nov 2019]
> ... Once capital gains tax has been paid under TCGA92/S13(2), then the whole of that tax is available for set-off against any tax liability on a subsequent distribution where the conditions for relief are met. Should only half of the gain be distributed this does not mean that only half of the section 13 capital gains tax can be set off. The section 13 tax represents a pool of tax credit to be used up against tax liability arising from appropriate distributions in respect of the same gain. Thus if only half of the gain is distributed but the tax liability on the distribution is at a higher rate than the tax on the section 13 gain, the tax credit relief will be more than half of the Section 13 tax.
> It is a condition of TCGA92/S13(5A) relief that the tax arising on the gain attributed under TCGA92/S13 must have been paid. In some cases the liability on the section 13 gain and on the distribution will arise in the same year of assessment or accounting period, and in other cases the tax on the section 13 gain will not have been paid.
> In practice relief may be given by set off providing that the only reason preventing relief being given is that tax on the section 13 gain is unpaid.
> ...

Income distributions by a non-resident company are generally exempt in the hands of a corporate participator, so they do not benefit from s.3 distribution relief.

64.20.1 *Amount of distribution tax*

For the purpose of s.3 distribution relief, it is necessary to ascertain:

(1) The amount of distribution tax, which may be
 (a) Income tax or

(b) CGT[53]

(2) The amount of s.3 tax

Where the distribution is subject to income tax, the amount of distribution tax is straightforward. The position is governed by s.3C(2) TCGA:

> For the purposes of subsection (1) ...
>
> (c) in determining the liability to tax of any individual in respect of any distribution for a tax year it is to be assumed that the distribution is the highest part of the individual's income for the year.

Where the distribution is subject to CGT, the amount of distribution tax is less straightforward.

Before 2008:

(1) the former s.13(7A)(b)(c) TCGA determined the amount of distribution tax when the distribution was subject to CGT;

(2) the former s.13(7A)(d) TCGA determined the amount of s.3 tax.

The former s.13(7A) TCGA provided:

> *In ascertaining for the purposes of subsection (5A) or (7) above the amount of CGT or income tax chargeable on any person for any year on or in respect of any chargeable gain or distribution...*
>
> *(b) any gain accruing in that year on the disposal by that person of any asset representing his interest as a participator in the company shall be regarded as forming the highest part of the gains on which he is chargeable to tax for that year;*
>
> *(c) where any such distribution as is mentioned in subsection (5A)(b) above falls to be treated as a disposal on which a gain accrues on which that person is so chargeable, that gain shall be regarded as forming the next highest part of the gains on which he is so chargeable, after any gains falling within para (b) above; and*
>
> *(d) any gain treated as accruing to that person in that year by virtue of subsection (2) above shall be regarded as the next highest part of the gains on which he is so chargeable, after any gains falling within para (c) above.*

The CG Manual explains:

[53] Or corporation tax, but that is not considered here.

> **CG57375 tax adjustment and reliefs: tax relief ordering rules** [Nov 2019]
>
> Where the events which could give rise to relief under TCGA92/S13(5A) and (7) occurred within a single tax year, there could, in certain circumstances, be computational problems. To prevent this subsection (7A) set out the order of priority to be given to each tax charge. In ascertaining for the purposes of subsections (5A) and (7) the amount of CGT or IT which is chargeable on a person for a year, the order was
>
> 1. any distribution which is chargeable as income is treated as the top slice of income for that year
> 2. any gain accruing on the disposal of any asset representing the participator's interest in the non-resident company is treated as the top slice of gains for that year
> 3. any gain accruing on a capital distribution is treated as the second slice of gains for that year
> 4. the gain attributed to the participator under Section 13 is treated as the third slice of gains for that year. ...

Paragraphs (b) - (d) were repealed in 2008. The CG Manual explained why:

> In 2008-09 and later years Capital Gains Tax is charged at a fixed rate regardless of an individual's income and so these priority rules are not necessary.[54]

This was correct in 2008. But in 2010/11, CGT rates changed and there were (once again) two rates of CGT, then 18%/28%, and now there are five rates.[55] Unfortunately, the need to re-enact subsections (b)-(d) was overlooked! So there is no current statutory guidance. It is considered the pre-2008 rules should continue to be applied, on the basis that they provide an indication of the intention of parliament, and the failure to re-enact them must have been an oversight. The HMRC examples below adopt that view.

It would of course be easy to tidy up this muddle by re-enacting the old provisions. Mistakes like this are inevitable, and will become more

[54] See CG57375: Non-resident companies: tax adjustment and reliefs: tax relief ordering rules. The passage was deleted in Apr 2019, presumably the point was thought to be of historical interest only.
In fact, even in 2008 the provision might have been retained to deal with the CGT annual exemption; but that might have been regarded as trivial.

[55] See 43.13 (CGT rates).

frequent as the complexity of the UK tax system spirals each year, and the part which a single person can keep in mind becomes ever smaller. It is a pity that the rewrite did not take the opportunity to put this right.

64.20.2 *HMRC examples*

The CG Manual tries to provide two straightforward worked examples. The first sets s.3 tax against tax on a dividend. The second sets s.3 tax against tax on a capital distribution. There are problems with the worked examples, which have been altered, not always successfully, in a series of amendments to the Manual. I hope to consider this in a future edition.

64.20.3 *Relevant period*

Section 3C TCGA provides:

> (3) For the purposes of subsection (1) "the relevant period" means the period of 3 years from the end of whichever of the following periods is earlier-
> (a) the period of account of the company in which the gain accrued, and
> (b) the period of 12 months beginning with the date on which the gain accrued.

The drafting is convoluted, but in plain English the time limit is the earlier of:

(1) three years from the end of the accounting period; or
(2) four years from the date of the gain.

CIOT have argued that this time limit should be removed.[56] But no-one has taken any notice. There is something to be said for the current rule. A time limit offers some administrative simplification, as it prevents the need to examine very distant years. Indeed there is something to be said for a similar time limit on other carry forward reliefs, such as loss relief, which currently applies without any time limit on the gap between when the loss accrues, and when the gain accrues against which the loss is set.

64.20.4 *Remittance basis taxpayer*

Section 3 distribution relief applies to foreign s.3 gains which are taxed on

[56] CIOT, "Reform of two anti-avoidance provisions" (2012) *https://www.kessler.co.uk/wp-content/uploads/2018/12/121002-s13-and-transfer-of-assets-CIOT-comments.pdf*

a remittance basis. However the relief only sets tax on the s.3 gain against tax on the distribution. So the relief does not apply unless:

(1) the s.3 gain is remitted (so tax is paid on it), and
(2) the distribution is remitted (so tax actually paid on the distribution qualifies for relief).

Thus suppose:

(1) Year 1: A company realises a gain deemed to accrue to a remittance basis taxpayer under s.3 but not taxed as it is not remitted.
(2) Year 3: The company declares a dividend in respect of the gain. The dividend is RFI but not taxable as it is not remitted.
(3) Year 10: the gain and the dividend are remitted.

The relief applies. The time limit is met as the distribution was within 3 years of the relevant time, the time that the gain accrued to the company. The date of the remittance is not relevant.

64.20.5 *Distribution relief/s.87/86: Interaction*

Suppose non-resident trustees hold a company, and:

(1) A gain accrues to the company; this gain (the "s.3 gain") is a trust gain.
(2) The company is wound up, and a gain accrues to the trustees; this gain ("the distribution gain") is a further trust gain.
(3) The two trust gains are matched to a capital payment resulting in a charge under s.87.

Does s.3 distribution relief apply? The taxpayer has to argue:

(1) CGT paid by the beneficiary, so far as the capital payment is matched to the s.3 gain, is paid "as a result of section 3".
(2) CGT paid by the beneficiary, so far as the capital payment is matched to the distribution gain, is tax "in respect of the distribution".

The s.87 gain matched to the s.3 gain arises as a result of the combination of s.3 and s.87. The s.87 gain matched to the distribution gain arises in respect of the combination of the distribution and the capital payment.

"As a result of" and "in respect of" are vague phrases. They can be interpreted more widely, or more loosely, and should take their meaning from the context. The context here is the avoidance of a double charge to tax, which suggests that the words should be construed more widely, so that s.3 distribution relief is available in this case.

A solution may be to make the trust UK resident (the company remaining non-resident); then s.3 distribution relief clearly applies.

By contrast, the application of s.3 distribution relief where s.86 applies seems relatively straightforward.

64.21 Deduction relief

Section 3C TCGA provides:

> (4) The amount of tax paid by a person as a result of section 3 is allowable as a deduction in calculating a chargeable gain accruing on the disposal by the person of any asset representing the person's interest as a participator in the company.
>
> (5) An amount of tax-
>
> (a) is not to be used more than once under this section (whether to reduce or extinguish a liability or as a deduction or a combination of those things)...

I refer to this as "**s.3 deduction relief**".

This relief sets s.3 tax against the gain, so it is not generous. The CG Manual provides:

> **CG57370 tax adjustment and reliefs: disposal of interest by UK resident participator** [Nov 2019]
>
> [The Manual summarises s.13(7) and continues]
>
> No deduction is due if the tax was paid by the non-resident company, see CG57390.
>
> Example:
>
> Facts
>
> - June 2016 a taxpayer buys 500 out of the 750 issued shares in X Ltd, a non- resident close company, at a cost of £100,000.
> - March 2017 X Ltd realises a gain of £6,000. 500/750 × £6,000 = £4,000 is apportioned to the taxpayer. The amount is included in the 2016-17 Self Assessment return. The taxpayer was liable at 20% and tax of £800 was due.
> - August 2017 the taxpayer sells the shares for £130,000.

Chargeable Gain		
Disposal proceeds		£130,000
Less Cost	£100,000	
Less s.13(7) deduction	£ 800	−£100,800
Chargeable gain		£ 29,200

64.22 Reimbursement by non-resident co

Tax on the s.3 gain is due from the UK resident participator and not from the company. The participator has no statutory right of indemnity against the company. But it is possible that the company might pay the tax on the s.3 gain voluntarily, or perhaps a participator might anticipate the problem and enter into a contract requiring the company to pay the tax.

Section 3G TCGA provides:

> (1) If tax payable by a person ("P") as a result of section 3 is paid by-
> (a) the company ("C") to which the gain accrues, or
> (b) a company by reference to which P is regarded as an indirect participator in C, the amount paid is not a payment to P for tax purposes.
>
> (2) The reference here to tax purposes is to the purposes of income tax, capital gains tax or corporation tax.

I refer to this as "**reimbursement relief**".

The CG Manual provides a précis:

> CG**57390 Payment of UK tax by NR company** [Nov 2019]
> The non-resident company may pay the UK tax due from a UK resident when gains have been apportioned to him under [s.3 TCGA]. If so, TCGA92/S13 (11) provides that the payment of the tax on behalf of the UK resident does not give rise to any further liability in the hands of the UK resident. You do not treat the payment as income of the resident or as a capital distribution in respect of the shares in the non-resident company. TCGA92/S13 (11) will also apply if the liability arises because a UK resident has an indirect shareholding in the non-resident company. The liability can be paid by any of the non-resident close companies in the chain.

Reimbursement is better than an income distribution in respect of the gain as the reimbursement is tax free, whereas an income distribution is subject to income tax (at income tax rates) with the benefit of CGT relief (at CGT rates). Of course, the non-resident company will need to consider whether it would be proper to make the reimbursement as a matter of company law (eg are there other shareholders who may be prejudiced?).

Section 3C TCGA provides:

> (5) An amount of tax ...
> (b) is not to be applied[57] if it is reimbursed by the company.

64.23 Section 3 remittance basis

Section 3D TCGA provides a relief which I call the "**s.3 remittance basis**".

[57] That is, the amount is not to be applied so as to reduce or extinguish any liability of the person to tax, see s.3C(1).

Section 3D provides:

> (1) This section applies if, as a result of section 3, an amount in respect of a gain accruing to a company in a tax year is apportioned to an individual who is not domiciled in the UK in that year.
> (2) The apportioned amount is regarded for the purposes of paragraph 1 of Schedule 1 as accruing on a disposal of a foreign asset if the asset disposed of by the company is a foreign asset[58] (but not otherwise).

This brings sch 1 TCGA into effect, and so provides the remittance basis.[59]

Section 3D(3) TCGA provides:

> For the purposes of Chapter A1 of Part 14 of ITA 2007 (remittance basis)-
> (a) treat any consideration obtained by the company on the disposal of the asset as deriving from the apportioned amount, and
> (b) if that consideration is less than the market value of the asset, treat the asset as deriving from the apportioned amount.

In the absence of express provision, it might be argued that a s.3 gain could not be remitted as it does not exist. Section 3D(3)(a) deals with that problem.[60] I refer to the amount treated as derived from the s.3 gain (under s.3D(3)) as "**s.3 derived property**".

Suppose:

(1) A non resident company ("OC") disposes of a foreign situate asset and realises a gain.
(2) A s.3 gain is deemed to accrue to T (a remittance basis taxpayer).

T is subject to tax on the s.3 gain if:

(1) OC brings/receives/uses the s.3 derived property in the UK and
(2) OC is a relevant person in relation to T. (This requirement will in principle be met, as a company within s.3 will in principle be a relevant person in relation to T.)

[58] Section 3D(5) TCGA provides:
> Paragraph 5 of Schedule 1 applies for the purposes of this section as it applies for the purposes of that Schedule.

This is a somewhat roundabout way of applying the definition of "foreign asset" in para 5(1) sch 1 TCGA; see 56.17 (CGT remittance basis).

[59] See 56.17 (CGT remittance basis).

[60] Section 3D(3)(b) is necessary since the equivalent rule in s.809T ITA only applies to gains accruing on a disposal by an individual: see 18.45.2 (Remittance of deemed gain).

Suppose OC distributes the s.3 derived property by way of dividend and T brings/receives/uses the sum in the UK. Then T is arguably subject to two charges:
(1) CGT on the s.3 gain and
(2) IT on the distribution

Likewise if OC is wound up and the liquidator distributes the s.3 derived property by way of capital distribution, and T brings/receives/uses the sum in the UK. Then T is arguably subject to two charges:
(1) CGT on the s.3 gain and
(2) CGT on the disposal of the shares in OC

If there are two charges, s.3 distribution relief may apply. But the better view is that there is only a single charge to tax in these cases. One receipt cannot give rise to two charges under the remittance basis.[61]

64.24 CG group reliefs

Group reliefs prevent a gain accruing when an asset is transferred between group companies. We need labels for these reliefs, and I coin the following terminology:

Type of relief	**TCGA section**	**See para**
UK-group relief	s.170-181	64.27
Non-resident group relief	s.3F	64.31

Where it is necessary to distinguish these from other group reliefs, I call them CG group reliefs.

A full discussion needs a long chapter to itself. The private client practitioner might think that this is a topic of interest only to corporate tax practitioners; but no: non-resident group relief is important for offshore company structures, and so for offshore trust tax, and one cannot understand non-resident group relief without understanding UK-group relief on which it is based.

For other aspects of group reliefs, see 85.24 (Partnerships: Group reliefs); 61.55.3 (Chain of cos: Disadvantages).

64.25 Group/principal co of group

Section 170(2) TCGA provides:

> Except as otherwise provided—

[61] See 18.18.15 (Income from income/gains).

> (b) subsections (3) to (6) below apply to determine
> [i] whether companies form a group
> [ii] and, where they do, which is the principal company of the group.

So we turn to s.170(3) TCGA:

> Subject to subsections (4) to (6) below—
> (a) [i] a company (referred to below and in sections 171 to 181 as the "principal company of the group") and all its 75% subsidiaries form a group and,
> [ii] if any of those subsidiaries have 75% subsidiaries, the group includes them and their 75% subsidiaries, and so on

Under this definition both resident and non-resident companies may form a group. For partnerships in group structures, see 85.24 (Partnerships: Group reliefs).

64.26 "51/75/90 % subsidiary"

Section 1154 CTA 2010 defines 51/75/90 % subsidiary. The definitions also apply for IT purposes.[62] Section 1154 CTA 2010 provides:

> (1) Subsections (2) to (4) define, for the purposes of the Corporation Tax Acts,[63] the circumstances in which a body corporate ("B") is a 51% subsidiary, a 75% subsidiary or a 90% subsidiary of another body corporate ("A").
> (2) B is a 51% subsidiary of A if more than 50% of B's ordinary share capital is owned directly or indirectly by A.
> (3) B is a 75% subsidiary of A if at least 75% of B's ordinary share capital is owned directly or indirectly by A.
> (4) B is a 90% subsidiary of A if at least 90% of B's ordinary share capital is owned directly by A.
> (5) For the purposes of subsections (2) and (3) ordinary share capital is owned "directly or indirectly" by a body corporate if it is owned by it—
> (a) directly,
> (b) indirectly, or
> (c) partly directly and partly indirectly.

[62] Section 989 ITA provides:
'51% subsidiary', in relation to bodies corporate, has the same meaning as in the Corporation Tax Acts (see Chapter 3 of Part 24 of CTA 2010).
'75% subsidiary', in relation to bodies corporate, has the same meaning as in the Corporation Tax Acts (see Chapter 3 of Part 24 of CTA 2010).

[63] CT principles apply for s.3 purposes, see 64.4 (Computing gains: CT rules).

The term used here is body corporate, not company; the difference occasionally matters.

For the definition of ordinary share capital, see 90.55 (Ordinary share capital).

The term "51% subsidiary" is not wholly accurate (because any shareholding over 50% will suffice); but the label is convenient, and one should not expect complete accuracy in short labels.

CTM provides:

> **CG45110 what is a group?** [Jul 2019]
> ...The question of whether a particular entity has ordinary share capital may be important when considering capital gains groups. A company that has no ordinary share capital cannot be a subsidiary. The question arises most often when considering entities created under foreign law. There is also the possibility that a foreign entity may be considered to be transparent for UK tax purposes. Of course, a company that has no ordinary share capital may be the principal company of a group. ...

64.26.1 *Ownership*

Section 1154(6) CTA 2010 provides:

> In this Chapter references to ownership are to be read as references to beneficial ownership.

Beneficial ownership is not defined; it has its English law meaning.[64]

64.26.2 *Indirect ownership*

Section 1155 CTA 2010 provides:

> (1) For the purposes of this Chapter ordinary share capital is owned indirectly by a body corporate if it is owned through another body corporate or other bodies corporate.
> (2) References in this Chapter to ownership through a body corporate are to be read in accordance with subsections (3) and (4).
> (3) Suppose that 3 or more bodies corporate are ordered in a series such that each body in the series (other than the last) owns ordinary share capital of the body immediately below it in the series.
> (4) If B is a body that is below, but not immediately below, A in the series, A is said to own ordinary share capital of B through each body corporate that is between A and B in the series.

[64] See App. 6.2 (English-law beneficial ownership).

So indirect ownership means ownership through another body corporate. Section 1155(5) CTA 2010 provides:

> Sections 1156 and 1157 contain rules for calculating, for the purposes of this Chapter, the amount of a body corporate's ordinary share capital that another body corporate owns-
> (a) indirectly, or
> (b) partly directly and partly indirectly.

These rules are straightforward but not discussed here.

64.26.3 *Effective subsidiary rule*

Section 170(3) TCGA provides:

> (b) a group does not include any company (other than the principal company of the group) that is not an effective 51% subsidiary of the principal company of the group.

I refer to this as the **"effective subsidiary rule".** Section 170(7) TCGA provides:

> For the purposes of this section and sections 171 to 181, a company ("the subsidiary") is an effective 51% subsidiary of another company ("the parent") at any time if and only if—
> (a) the parent is beneficially entitled to more than 50% of any profits available for distribution to equity holders of the subsidiary; and
> (b) the parent would be beneficially entitled to more than 50% of any assets of the subsidiary available for distribution to its equity holders on a winding-up.

These terms are defined by reference:

> (8) Chapter 6 of Part 5 of CTA 2010 (group relief: equity holders and profits or assets available for distribution) applies for the purposes of subsections (6) and (7) as if—
> (a) references to section 151(4)(a) and (b) of that Act were references to subsections (6) and (7) above, . . .
> (aa) in section 158 of that Act after subsection (2) there were inserted—
>> (2A) But for those purposes a person carrying on a business of banking is not treated as a loan creditor of a company in respect of any loan capital or debt issued or incurred by the company for money lent by the person to the company in the

ordinary course of that business.”,[65] and

(b) sections 171(1)(b) and (3), 173, 174 and 176 to 178 of that Act were omitted.

The definitions are as follows:

Term	**Definition in CTA 2010**
Equity holder	s.157-164
Available for distribution	
Proportion of profits	s.165
Proportion of assets available on winding up	s.166
Supplementary	s.167-182

These definition are highly elaborate, and a full discussion would need a long chapter. In short, the parent’s beneficial ownership must confer a corresponding economic interest in the subsidiary, both when its profits are distributed and when it is wound up.

64.26.4 *Principal company*

Section 170(4) TCGA provides:

> A company cannot be the principal company of a group if it is itself a 75% subsidiary of another company.

Section 170(5) TCGA provides:

> [a] Where
> [i] a company (“the subsidiary”) is a 75% subsidiary of another company but
> [ii] those companies are prevented from being members of the same group by subsection (3)(b) above [effective 51% subsidiary rule],
> the subsidiary may, where the requirements of subsection (3) above are satisfied, itself be the principal company of another group notwithstanding subsection (4) above
> [b] unless this subsection enables a further company to be the principal company of a group of which the subsidiary would be a member.

64.26.5 *Which group?*

Section 170(6) TCGA provides:

> [A] A company cannot be a member of more than one group;
> [B] but where, apart from this subsection, a company would be a member

[65] See 104.25.11 (Bank creditor).

> of 2 or more groups (the principal company of each group being referred to below as the "head of a group"), it is a member only of that group, if any, of which it would be a member under one of the following tests (applying earlier tests in preference to later tests)—
>
> (a) it is a member of the group it would be a member of if, in applying subsection (3)(b) above [effective 51% subsidiary rule], there were left out of account any amount to which a head of a group is or would be beneficially entitled of any profits available for distribution to equity holders of a head of another group or of any assets of a head of another group available for distribution to its equity holders on a winding-up,
>
> (b) it is a member of the group the head of which is beneficially entitled to a percentage of profits available for distribution to equity holders of the company that is greater than the percentage of those profits to which any other head of a group is so entitled,
>
> (c) it is a member of the group the head of which would be beneficially entitled to a percentage of any assets of the company available for distribution to its equity holders on a winding-up that is greater than the percentage of those assets to which any other head of a group would be so entitled,
>
> (d) it is a member of the group the head of which owns directly or indirectly a percentage of the company's ordinary share capital that is greater than the percentage of that capital owned directly or indirectly by any other head of a group (interpreting this paragraph as if it were included in section 1154(2) of CTA 2010).

64.26.6 *Change of principal company*

Section 170(10) TCGA provides:

> For the purposes of this section and sections 171 to 181, a group remains the same group so long as the same company remains the principal company of the group, and if at any time the principal company of a group becomes a member of another group, the first group and the other group shall be regarded as the same, and the question whether or not a company has ceased to be a member of a group shall be determined accordingly.

Section 170(10A) deals with a company becoming a Societas Europaea, which I need not consider here.

64.26.7 *Winding up*

Section 170(11) TCGA provides:

> For the purposes of this section and sections 171 to 181, the passing of a resolution or the making of an order, or any other act, for the winding-up of a member of a group of companies shall not be regarded as the occasion of that or any other company ceasing to be a member of the group.

64.26.8 *"Company"*

Section 170(9) TCGA provides a non-standard definition of "company":

> For the purposes of this section and sections 171 to 181, references to a company apply only to—
> (a) a company as defined in section 1(1) of the Companies Act 2006,[66] and
> (b) a company (other than a limited liability partnership) which
> [i] is constituted under any other Act or a Royal Charter or letters patent or
> [ii] is formed under the law of a country or territory outside the UK, and
> (c) a registered society (see section 1119 of CTA 2010) [Co-operative and Community Benefit Societies, etc];[67] and
> (cc) an incorporated friendly society within the meaning of the Friendly Societies Act 1992; and
> (d) a building society.

A company without ordinary share capital (eg a company limited by guarantee) may only be a member of a group as its principal company.

A group of companies can include companies that are not resident in the UK.

An unincorporated association does not count as a company and so cannot be a member of a group. Perhaps that is the main point of this definition.

[66] Section 1(1) Companies Act 2006 provides:
In the Companies Acts, unless the context otherwise requires—
"company" means a company formed and registered under this Act, that is—
(a) a company so formed and registered after the commencement of this Part, or
(b) a company that immediately before the commencement of this Part—
(i) was formed and registered under the Companies Act 1985 or the Companies (Northern Ireland) Order 1986, or
(ii) was an existing company for the purposes of that Act or that Order,
(which is to be treated on commencement as if formed and registered under this Act).

[67] Section 170(2) TCGA provides: "Except as otherwise provided ...
(c) in applying section 1154(3) of CTA 2010 (meaning of "75% subsidiary") any share capital of a registered society (see section 1119 of that Act) shall be treated as ordinary share capital".

Section 170(2) TCGA extends the definition to foreign incorporated companies:

> Except as otherwise provided ...
>
> (d) "group" and "subsidiary" shall be construed with any necessary modifications where applied to a company incorporated under the law of a country outside the UK.

64.27 UK-group relief

Section 171 TCGA provides UK-group relief:

> (1) Where—
>
> (a) a company ("company A") disposes of an asset to another company ("company B") at a time when both companies are members of the same group, and
>
> (b) the conditions in subsection (1A) below are met,
>
> company A and company B are treated for the purposes of corporation tax on chargeable gains as if the asset were acquired by company B for a consideration of such amount as would secure that neither a gain nor a loss would accrue to company A on the disposal.

Section 171(1A) TCGA restricts this relief to UK resident companies (or non-resident companies within the scope of CT). It is helpful to set out the two conditions side by side:

> The conditions referred to in subsection (1)(b) above are—

Company A (transferor)	***Company B (transferee)***
(a) that company A is resident in the UK at the time of the disposal, or	(b) that company B is resident in the UK at the time of the disposal, or
the asset is a chargeable asset[68] in relation to that company immediately before that time, and	the asset is a chargeable asset in relation to that company immediately after that time.

[68] "Chargeable asset" is defined in the final sentence of s.171(1A) TCGA:

> "For this purpose an asset is a "chargeable asset" in relation to a company at any time if, were the asset to be disposed of by the company at that time, any gain accruing to the company would be a chargeable gain chargeable to corporation tax as a result of section 2B(3) or (4)."

This extends UK-group relief to:

(1) Non-resident companies with a UK permanent establishment

(2) Disposals of UK land/land-rich assets

See 56.6.2 ("Chargeable" asset).

I refer to this as "**UK-group relief**".

Group relief is compulsory but it should be possible to arrange that companies are not part of a group, by issuing shares or arranging some other breach of the definition of a group, and so exclude the relief. That is not likely to arise for UK-group relief, but it may for non-resident group relief.

Section 171(6) TCGA dots some *I*'s and crosses some *T*'s:

> Subsection (1) above applies notwithstanding any provision in this Act fixing the amount of the consideration deemed to be received on a disposal or given on an acquisition.
>
> But where it is assumed for any purpose that a member of a group of companies has sold or acquired an asset, it shall be assumed also that it was not a sale or acquisition to which this section applies.

64.28 Dividend in specie

The CG Manual provides:

> **CG45315: groups: dividends in kind** [Jul 2019]
>
> The transfer of the asset may be effected by the subsidiary company declaring a dividend in kind also known as a dividend in specie. The Corporation Tax consequences are described at CTM15250. Such a dividend will normally be declared in a given amount, to be satisfied by the transfer of the asset, and any dividend within CTA10/S1000(1)A will be equal to that specified amount. If the dividend is declared in an amount equal to the market value of the asset, then that is the measure of the dividend. If the dividend is declared in an amount equal to the book value of the asset, any excess of market value of that asset over the specified amount will be a distribution within CTA10/S1020, but CTA10/S1021 will disapply section 1020 in a group case.
>
> The receipt of the dividend will not give rise to a chargeable gain. The disposal of the asset by the subsidiary will be covered by TCGA92/S171, provided, for dividends on or after 1 April 2000, the asset remains within the UK tax net (CG45301). Neither the specified amount of the dividend nor any amount that would be a distribution for CTA10/Part 23 purposes but for CTA10/S1021 will be a capital distribution in respect of shares as defined in TCGA92/S122. Nor will there be any charge under TCGA92/S22. If a dividend paid on or after 1 April 2000 results in the asset ceasing to be within the scope of UK corporation tax on chargeable gains, the disposal is not within section 171, and will be at market value under TCGA92/S18...

EXAMPLE
B Ltd is a wholly owned UK resident subsidiary of A Ltd, a UK resident company. B Ltd owns an asset X book value £100,000 market value £1M. B Ltd declares a dividend of £100,000 to be satisfied by the transfer of X to A Ltd.
For chargeable gains purposes there are potentially two disposals

- the disposal of X by B Ltd. This is protected by TCGA92/S171
- the receipt of a capital distribution by A Ltd in respect of its shareholding in B Ltd. Neither the dividend of £100,000 nor the £900,000 difference between the market value of X and the specified amount of the dividend represents a capital distribution.

If A Ltd was not resident in the UK, and did not take the asset into use for the purposes of the trade of a UK permanent establishment, the transfer of the asset will be a disposal by B Ltd which could give rise to a chargeable gain or allowable loss. The disposal proceeds to B for the purposes of computing any gain or loss will be the market value of £1M. As A Ltd is not within the charge to corporation tax, it will have no chargeable gain on any capital distribution received.

64.29 Disposal + acquisition needed

The CG Manual provides:

CG45320 Exceptions [Jul 2019]
The no gain/no loss rule in TCGA92/S171(1) only applies where a member of a group of companies disposes of an asset to another member of the same group. The general requirement is therefore that there should be both
[1] a disposal by a group company and
[2] an acquisition by a group company.
The no gain/no loss rule does not apply where a group company makes a deemed disposal of an asset for consideration received from another group company, if the group company paying the consideration does not itself acquire an asset.

64.29.1 *Disposal without acquisition*

Disposal without a corresponding acquisition happens on the destruction of an asset. The CG Manual continues:

Examples would be
[1] intra-group transactions involving capital sums derived from assets within TCGA92/S22, or
[2] capital distributions in respect of shares within TCGA92/S122, see CG45315.

Suppose A Ltd owns B Ltd, B Ltd is put into liquidation, and its asset is transferred to A Ltd. There are two disposals:

(1) B Ltd disposes of the asset which is transferred to A Ltd: this disposal qualifies for group relief.

(2) A Ltd disposes of its shares in B Ltd.[69]

There are two reasons why disposal 2 does not qualify for group relief. Firstly there is no corresponding acquisition. Secondly, s.171(2) TCGA provides:

> the reference in subsection (1) above to company A disposing of an asset shall not apply to anything which under section 122 is to be treated as a disposal of an interest in shares in a company in consideration for a capital distribution (as defined in that section) from that company, whether or not involving a reduction of capital.

It seems strange that the relief does not apply, but the rule is clearly deliberate.

Another example is a purchase of own shares:

> **CG45320 Exceptions** [Jul 2019]
> If group company A owns shares in group company B, and company B purchases its own shares from A under Section 690 Companies Act 2006, there is a disposal by A of the shares in B but no corresponding acquisition of those shares by B. TCGA92/S171(1) accordingly does not apply. Further instructions on company own share purchases are at CG58600+.

64.29.2 *Acquisition without disposal*

Acquisition without corresponding disposal happens on the creation of an asset. The CG Manual gives an example of an issue of shares or securities:

> **CG45320 Exceptions** [Jul 2019]
> If group company B issues shares to group company A, there is an acquisition of the shares by A but no disposal of the shares by B. This is in accordance with the general rule that a company issuing shares does not make any disposal of those shares. The no gain/no loss rule [group relief] accordingly does not apply when one group company issues shares to another. The same considerations apply when one group company issues securities to another.

See too App 4.8.1 (Acquisition without disposal).

[69] Section 122 TCGA.

64.30 Exceptions to group relief

64.30.1 *Charge on branch/agency asset*

Section 171(1B) TCGA provides:

> If—
> (a) company A is deemed under section 25(3) to have previously disposed of the asset, but
> (b) no gain or loss accrued on that deemed disposal as a result of section 25ZA(2),
>
> that deemed disposal is to be ignored in applying subsection (1) of this section in relation to company B.

See 56.8 (Asset ceases to be chargeable).

64.30.2 *Debts*

Section 171(2) TCGA provides:

> (2) Subsection (1) above shall not apply where the disposal is—
> (a) a disposal of a debt due from company B effected by satisfying the debt or part of it

> **CG45320 Exceptions** [Jul 2019]
> The no gain/no loss rule does not apply to a disposal of a debt due from a member of a group of companies where the disposal is effected by satisfying the debt or part of it. This specific exception puts the matter beyond doubt as for such a disposal there is no corresponding acquisition, so the general rule in TCGA92/S171(1) would not in any event apply.
> The exclusion of debts from the no gain/no loss rule only applies to the disposal of the debt itself at the time it is wholly or partly repaid. If one group company transfers an asset to another in satisfaction of a debt, the no gain/no loss rule may apply separately to the asset transferred.
> EXAMPLE
> Company A lends money to company B in the same group. In satisfaction of the debt company B transfers an asset (land) to company A. If none of the specific exclusions from Section 171(1) applies, B disposes of the land to A at no gain/no loss, so that A effectively takes over the capital gains cost of the land to B. The no gain/no loss rule does not apply to A's disposal of the debt.

64.30.3 *Redeemable shares*

Section 171(2) TCGA provides:

> (2) Subsection (1) above shall not apply where the disposal is...

> (b) a disposal of redeemable shares in a company on the occasion of their redemption

This exception also overlaps with the exclusion of cases where there is a disposal but no corresponding acquisition.

64.30.4 *Exempt transferee company*

Section 171(2) TCGA provides:

> (2) Subsection (1) above shall not apply where the disposal is...
> (c) a disposal by or to an investment trust; or
> (cc) a disposal by or to a venture capital trust; or
> (cd) a disposal by or to a qualifying friendly society[70]; or
> (d) a disposal to a dual resident investing company; or
> (da) a disposal by or to a company which is, or is a member of, a UK REIT within the meaning of Part 12 of CTA 2010

64.30.5 *Options*

Section 171(2) TCGA provides:

> (2) Subsection (1) above shall not apply where the disposal is...
> (db) a disposal by company A in fulfilment of its obligations under an option granted to company B at a time when those companies were not members of the same group

64.30.6 *Reorganisations*

Section 171(3) TCGA provides:

> Subsection (1) above shall not apply to a transaction treated by section 127 as it applies by virtue of section 135 as not involving a disposal by company A.

64.31 Non-resident group relief

64.31.1 *"Non-resident group"*

Section 3F(3) TCGA provides:

> In this section-
> "non-resident company" means a company which is not resident in the UK,
> "non-resident group of companies"-

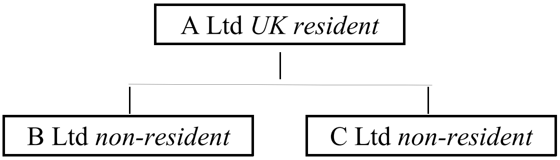
[70] Defined in subsection (5).

(a) in the case of a group none of whose members are resident in the UK, means that group, and

(b) in the case of a group some of whose members are not resident in the UK, means the members which are not resident in the UK, and "group" is to be read in accordance with section 170.

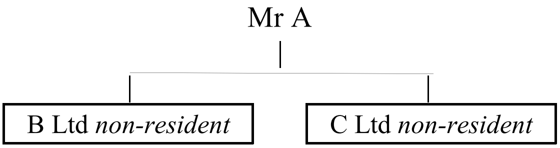
The CG Manual provides 3 examples:

> CG**57400 non-resident group** [Nov 2019]
>
> ...[71]
>
> *Example 1*



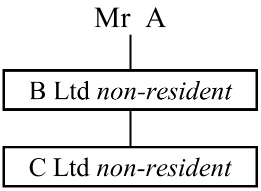
A Ltd *UK resident*
B Ltd *non-resident*
C Ltd *non-resident*

> B Ltd and C Ltd form a non-resident group.
> A Ltd is not a member of the non-resident group but it does have the effect of 'grouping' B Ltd and C Ltd.
>
> *Example 2*



Mr A
B Ltd *non-resident*
C Ltd *non-resident*

> B Ltd and C Ltd do not form a non-resident group because they are not members of any group.
>
> *Example 3*



Mr A
B Ltd *non-resident*
C Ltd *non-resident*

> B Ltd and C Ltd form a non-resident group because all of the companies in the group are not resident.

64.31.2 *s.3 group relief*

Section 3F TCGA provides:

[71] I have created the diagrams to increase clarity.

> (1) This section applies, for the purposes of section 3, certain provisions of this Act (modified as mentioned below) in relation to non-resident companies which are members of a non-resident group of companies.
> (2) The applied provisions are-
> (a) section 41(8) [capital allowances],
> (b) section 171 but as if subsections (1)(b) and (1A) were omitted,
> (c) section 173 but as if "to which this section applies" in subsections (1)(a) and (2)(a) were omitted, as if "such" in subsections (1)(c) and (2)(c) were omitted and as if subsection (3) were omitted,
> (d) section 174(4) but as if "at a time when both were members of the group" were substituted for "in a transfer to which section 171(1) applied",
> (e) section 175(1) but as if "to which this section applies" were omitted...

Thus the rules for UK-group relief are applied to a transfer from a non-resident group company to another non-resident group company. I refer to this as **"non-resident group relief"**.

What about a disposal from a non-resident group company to a UK resident group company? Non-resident group relief does not apply because the companies are not both members of a non-resident group; UK-group relief does not apply as the condition in s.171(1A) TCGA is not met. In practice this problem may not arise, as a transfer from a non-resident company (within the scope of s.3) to a UK company in the same group would be unusual.

For the position before 2019, see the 2018/19 edition of this work para 62.29.7 (Scope of s.3 group relief).

64.32 De-grouping charge

Section 3F TCGA provides:

> (1) This section applies, for the purposes of section 3, certain provisions of this Act (modified as mentioned below) in relation to non-resident companies which are members of a non-resident group of companies.
> (2) The applied provisions are ...
> (f) section 179 but as if subsections (1)(b) and (1A) were omitted, as if for any reference to a group of companies there were substituted a reference to a non-resident group of companies and as if for any reference to a company there were substituted a reference to a non-resident company.

So the clawback rules for which apply to UK-group relief are incorporated into non-resident group relief. Amended as s.3F directs, s.179(1) TCGA (in outline) provides:

> This section applies where—
> (a) [i] a company not resident in the UK ("company A") acquires an asset from another company not resident in the UK ("company B")
> [ii] at a time when company A and company B are members of the same non-resident group
> (b) [disapplied for non-resident group relief purposes]
> (c) company A ceases to be a member of that group within the period of six years after the time of the acquisition.
>
> References in this section to a company ceasing to be a member of a group of companies do not apply to cases where a company ceases to be a member of a non-resident group in consequence of another member of the non-resident group ceasing to exist.

Amended as s.3F directs, s.179(3) TCGA provides the charge:

> If, when company A ceases to be a member of the non-resident group, company A, or an associated non-resident company also leaving the group, owns, otherwise than as trading stock—
> (a) the asset, or
> (b) property to which a chargeable gain has been carried forward from the asset on a replacement of business assets,
>
> then, subject to subsection (4) below, company A shall be treated for all the purposes of this Act as if immediately after its acquisition of the asset it had sold, and immediately reacquired, the asset at market value at that time.

Section 179(4) TCGA deals with timing:

> Any chargeable gain or allowable loss accruing to company A on the sale referred to in subsection (3) above shall be treated as accruing to company A at whichever is the later of the following, that is to say—
> (a) the time immediately after the beginning of the accounting period of that company in which or, as the case may be, at the end of which the company ceases to be a member of the group; and
> (b) the time when under subsection (3) above it is treated as having reacquired the asset; and sections 138 to 142 of CTA 2010 have effect accordingly as if the actual circumstances were as they are treated as having been.

Section 179(13) TCGA dots some *i*’s and crosses some *t*’s:

> Where under this section company A is to be treated as having disposed of, and reacquired, an asset, all such recomputations of liability in respect of other disposals, and all such adjustments of tax, whether by way of assessment or by way of discharge or repayment of tax, as may be required in consequence of the provisions of this section shall be carried out.

64.32.1 *Associated cos leave together*

Amended as s.3F directs, s.179(2) TCGA provides:

> Where two non-resident companies cease to be members of the non-resident group at the same time, subsection (1) does not have effect as respects the acquisition of an asset by one of the companies from the other if condition A or B is met.

I refer to “**de-grouping exemptions A and B**”.
Section 179(2ZA) sets out degrouping exemption A:

> Condition A is that the non-resident companies—
> (a) are both 75% subsidiaries and effective 51% subsidiaries of another non-resident company on the date of the acquisition, and
> (b) remain both 75% subsidiaries and effective 51% subsidiaries of that other non-resident company until immediately after they cease to be members of the non-resident group.

Section 179(2ZB) sets out degrouping exemption B:

> Condition B is that one of the non-resident companies—
> (a) is both a 75% subsidiary and an effective 51% subsidiary of the other on the date of the acquisition, and
> (b) remains both a 75% subsidiary and an effective 51% subsidiary of the other until immediately after the non-resident companies cease to be members of the non-resident group.

Section 171 then deals with the case where company A leaves the second non-resident group:

> (2A) Subsection (2AA) applies where—
> (a) a non-resident company ("company A") acquired an asset from another non-resident company ("company B") at a time when both company A and company B were members of the same non-resident group ("the first non-resident group"),
> (aa) company A has ceased to be a member of the first non-resident group,
> (b) subsection (2) above applies in the case of company A’s ceasing to be a member of the first non-resident group so that subsection (1) above does not have effect as respects the acquisition of that asset,

(c) at the time company A ceases to be a member of the first non-resident group there is a connection between that group and the group of companies of which company A becomes a member on leaving the first group ("the second group"), and

(d) subsequently—

(i) company A ceases to be a member of the second non-resident group, or

(ii) (before sub-paragraph (i) applies) there ceases to be a connection between the two groups.

(2AA) Where this subsection applies—

(a) in a case within subsection (2A)(d)(ii), for the purposes of this section (other than subsection (2A)) as it applies as respects the acquisition, company A and any associated non-resident company are to be treated as having ceased to be members of the second non-resident group at the time the connection between the two groups ceases,

(b) subsection (1) has effect in relation to company A's ceasing to be a member of the second non-resident group as if it had been the second non-resident group of which both companies had been members at the time of the acquisition, and

(c) subsection (2) may operate to prevent subsection (1) applying by virtue of paragraph (b), unless subsection (2AB) applies.

(2AB) This subsection applies if company A's ceasing to be a member of the first non-resident group at the same time as one or more associated non-resident companies forms part of arrangements the main purpose, or one of the main purposes, of which is the avoidance of a liability to corporation tax.

(2B) For the purposes of subsection (2A) above there is a connection between the first group and the second group at a particular time if, at that time, the company which is the principal company of that group is under the control[72] of—

(a) the non-resident company which is the principal company of the first non-resident group or, if that group no longer exists, which was the principal company of that group when company A ceased to be a member of it;

(b) any person or persons who control the non-resident company mentioned in paragraph (a) above or who have had it under their control at any time in the period since company A ceased to be a member of the first non-resident group; or

(c) any person or persons who have, at any time in that period, had under their control either—

(i) a non-resident company which would have been a person falling within paragraph (b) above if it had continued to exist, or

(ii) a company which would have been a person falling within this paragraph (whether by reference to a company which would have been a person falling

[72] Section 179(9A) TCGA provides: "Sections 450 and 451 of CTA 2010 (meaning of control) shall have effect for the purposes of subsection (2B) above as they have effect for the purposes of Part 10 of CTA 2010; but a person carrying on a business of banking shall not for the purposes of that subsection be regarded as having control of any company by reason only of having, or of the consequences of having exercised, any rights of that person in respect of loan capital or debt issued or incurred by the company for money lent by that person to the company in the ordinary course of that business."

within that paragraph or to a company or series of companies falling within this subparagraph).

(2C) This section shall not have effect as respects any asset if, before the time when company A ceases to be a member of the group or, as the case may be, the second group, an event has already occurred by virtue of which the company falls by virtue of section 101A(3) to be treated as having sold and immediately reacquired the asset at the time specified in subsection (3) below.

(2D) This section shall not have effect as respects any asset if, before the time when company A ceases to be a member of the non-resident group or, as the case may be, the second non-resident group, an event has already occurred by virtue of which the company falls by virtue of section 101C(3) to be treated as having sold and immediately reacquired the asset at the time specified in subsection (3) below.

64.32.2 *Exceptions: Chargeable assets*

*S*ection 179 TCGA goes on to set out some exceptions to the charge:

(3A) Any chargeable gain or allowable loss which would otherwise accrue to company A on the sale referred to in subsection (3) does not so accrue if—

(a) company A ceases to be a member of the non-resident group in consequence of—

(i) a disposal of shares in company A or another member of the group made by a member of the group, or

(ii) two or more such disposals,

(b) either—

(i) subsection (3B) applies to the disposal or, if there is more than one disposal, to at least one of them, or

(ii) sub-paragraph (i) does not apply but had subsection (3B) applied to the disposal or, if there is more than one disposal, to each of them, any gain arising on the disposal or disposals would not have been a chargeable gain by virtue of Schedule 7AC, and

(c) in the absence of this subsection, section 535 of CTA 2010 (UK REITS: exemption of gains) would not apply to the chargeable gain or allowable loss which would accrue to company A on the sale.

(3B) This subsection applies to a disposal of shares if—

(a) the company making the disposal is resident in the UK at the time of the disposal,

(b) the shares are chargeable assets[73] in relation to that company immediately before that time, or

(c) any part of the chargeable gain or allowable loss accruing on the disposal is treated as a gain or loss accruing to a person by virtue of section 3 (attribution of gains to

[73] Section 179(10A) TCGA provides: "For the purposes of this section an asset is a "chargeable asset" in relation to a company at any time if any gain accruing to the company on a disposal of the asset by the company at that time—

(a) would be a chargeable gain and would by virtue of section 10B form part of its chargeable profits for corporation tax purposes, or

(b) would, but for Schedule 7AC (exemptions for disposals by companies with substantial shareholdings), be within paragraph (a)."

members of non-resident companies).

In this section “group disposal” means a disposal within subsection (3A)(a) to which this subsection applies and the company making the disposal is referred to as “the transferor company”.

(3C) For the purposes of subsections (3A) and (3B), the question whether there is a disposal is to be determined ignoring section 127 (share reorganisations etc treated as not involving disposal).

(3D) If subsection (3A) applies, any chargeable gain or allowable loss accruing to the transferor company on a group disposal (other than a group disposal to which section 127 applies) is to be calculated—

(a) where a chargeable gain would accrue to company A in the absence of subsection (3A), as if the amount of the consideration for the group disposal were increased by the amount of the gain, and

(b) where an allowable loss would accrue to company A in the absence of subsection (3A), as if an amount equal to the amount of the loss were a sum allowable under section 38 as a deduction in the computation of the gain or loss accruing on the group disposal.

(3E) If subsection (3A) applies, and section 127 applies to a group disposal, any chargeable gain or allowable loss accruing to the transferor company on a disposal of the new holding arising from the group disposal (or any part of that holding) is to be calculated—

(a) where a chargeable gain would accrue to company A in the absence of subsection (3A)—

(i) as if an amount equal to the amount of the gain were excluded from the expenditure allowable as a deduction under section 38 in the computation of the gain or loss accruing on the disposal (but not so as to reduce that expenditure below nil), and

(ii) where (ignoring sub-paragraph (i)) the amount of the gain exceeds the expenditure allowable as such a deduction, as if a gain equal to that excess accrued on the disposal of the new holding (or, if the disposal is of a part of the new holding, a gain equal to the corresponding part of that excess accrued on that disposal), in addition to any gain or loss that actually accrues on the disposal of the new holding or part, and

(b) where an allowable loss would accrue to company A in the absence of subsection (3A), as if an amount equal to the amount of the loss were a sum allowable under section 38 as a deduction in the computation of the gain or loss accruing on the disposal.

In this subsection “new holding” has the meaning given by section 126.

(3F) If there is more than one group disposal, the references in subsections (3D) and (3E) to the amount of the gain or loss which would accrue to company A in the absence of subsection (3A) are to be read, in relation to each disposal, as references to—

(a) such proportion of that amount as the transferor companies in relation to the group disposals jointly elect as the appropriate proportion in relation to the disposal in question, or

(b) where no election is made, the proportion of that amount attributable to that disposal if that amount is divided equally between the group disposals.

(3G) An election under subsection (3F) must—

(a) specify the appropriate proportion in relation to each group disposal, and
(b) be made, by notice to an officer of Revenue and Customs, no later than 2 years after the end of the first accounting period of a company in which any chargeable gain or allowable loss on a group disposal accrues.

(3H) If a group disposal by a company consists of shares of more than one class, then, for the purposes of subsections (3D) and (3E), the company may apportion any increase or deduction to be made between the classes of shares in such manner as it considers appropriate.

64.32.3 *Principal co joins other group*

Amended as s.3F directs, s.179 TCGA (in outline) provides:

(5) Subsections (6) to (8) apply where—
(a) in the absence of subsection (6), company A would be treated by virtue of subsection (3) as selling an asset at any time, by reason of ceasing to be a member of the group, and
(b) company A ceases to be a member of the group by reason only of the fact that the principal company of that group becomes a member of another group.

(6) Subsection (3) does not apply to treat company A as selling the asset at that time; but if—
(a) within 6 years of that time company A ceases at any time ("the relevant time") to satisfy the following conditions, and
(b) at the relevant time, company A, or a company in the same group as that company, owns otherwise than as trading stock the asset or property to which a chargeable gain has been carried forward from the asset on a replacement of business assets, company A shall be treated for all the purposes of this Act as if, immediately after its acquisition of the asset, it had sold and immediately reacquired the asset at the value that, at the time of acquisition, was its market value.

(7) Those conditions are—
(a) that company A is a 75% subsidiary of one or more members of the other group referred to in subsection (5) above, and
(b) that company A is an effective 51% subsidiary of one or more of those members.

(7A) Any chargeable gain or allowable loss which would otherwise accrue to company A on the sale referred to in subsection (6) does not so accrue if—
(a) company A ceases at the relevant time to satisfy the conditions in subsection (7) in consequence of—
(i) a disposal of shares in company A, or another member of the other group mentioned in subsection (5)(b), made by a member of that other group, or
(ii) two or more such disposals,
(b) either—
(i) subsection (3B) applies to the disposal or, if there is more than one disposal, to at least one of them, or
(ii) sub-paragraph (i) does not apply but had subsection (3B) applied to the disposal or, if there is more than one disposal, to each of them, any gain arising on the disposal or disposals would not have been a chargeable gain by virtue of Schedule 7AC, and
(c) in the absence of this subsection, section 535 of CTA 2010 (UK REITS: exemption

of gains) would not apply to the chargeable gain or allowable loss which would accrue to company A on the sale.

(7B) Where subsection (7A) applies, subsections (3C) to (3H) apply to the calculation of any chargeable gain or allowable loss accruing on a disposal within subsection (7A)(a) to which subsection (3B) applies (a "relevant disposal") with the following modifications—

(a) in subsections (3C) to (3H) for the references to a group disposal substitute references to a relevant disposal, and

(b) in subsections (3C), (3D) and (3E) for the references to subsection (3A) substitute references to subsection (7A).

(8) Any chargeable gain or allowable loss accruing to company A on the sale referred to in subsection (6) is to be treated as accruing immediately before the relevant time.

(9) Where—

(a) by virtue of this section a company is treated as having sold an asset at any time, and

(b) if at that time the company had in fact sold the asset at market value at that time, then, by virtue of section 30 or 31, any allowable loss or chargeable gain accruing on the disposal would have been calculated as if the consideration for the disposal were increased by an amount, subsections (3) and (6) above shall have effect as if the market value at that time had been that amount greater.

64.32.4 *"Associated"*

Section 179(10) TCGA provides:

> For the purposes of this section—
>
> (a) two companies are associated with each other if one is a 75% subsidiary of the other or both are 75% subsidiaries of another company.
>
> (b) a chargeable gain is carried forward from an asset to other property on a replacement of business assets if, by one or more claims under sections 152 to 158, the chargeable gain accruing on a disposal of the asset is reduced, and as a result an amount falls to be deducted from the expenditure allowable in computing a gain accruing on the disposal of the other property,
>
> (c) an asset acquired by company A shall be treated as the same as an asset owned at a later time by that company or an associated company if the value of the second asset is derived in whole or in part from the first asset, and in particular where the second asset is a freehold, and the first asset was a leasehold and the lessee has acquired the reversion.

64.33 QCB: Non-resident co

For this topic see 58.1 (Reorganisations: Introduction). I focus here on one particular point which arises where a reorganisation is carried out by a non-resident company within s.3.

For individuals and trustees, the TCGA distinguishes between:

(1) a qualifying corporate bond ("QCB")
(2) a non-qualifying corporate bond ("NQCB")

A bond which would otherwise be a QCB may be drafted so as not to meet the requirements of a QCB, eg by a provision allowing the holder to redeem in a currency other than sterling. So on a reorganisation, individual or trustee shareholders can opt out of the QCB regime into the NQCB regime.
However, s.117(A1) TCGA provides:

> For the purposes of corporation tax "qualifying corporate bond" means any asset representing a loan relationship of a company

This rule applies for s.3 purposes. A corporate bond is in principle a loan relationship of a company. Suppose:
(1) A non-resident company within s.3 ("H") holds a subsidiary ("S").
(2) H sells S to a purchaser ("P") in consideration of loan notes of P.

The loan notes may be drafted so as to constitute a NQCB in the hands of individual or trustee shareholders, but for s.3 purposes gains are computed as if the loan note were a QCB.

64.34 Private residence relief

Suppose T owns a non-resident company, which holds residential property that is T's main residence ("the residence"). If the company disposes of the residence, and a gain accrues to T, could private residence relief apply? Section 222(1) TCGA provides:

> This section applies to a gain accruing to an individual so far as attributable to the disposal of, or of an interest in—
> (a) a dwelling-house or part of a dwelling-house which is, or has at any time in *his* period of ownership been, his only or main residence, or
> (b) land *which he has* for his own occupation and enjoyment with that residence as its garden or grounds up to the permitted area.
>
> (emphasis added)

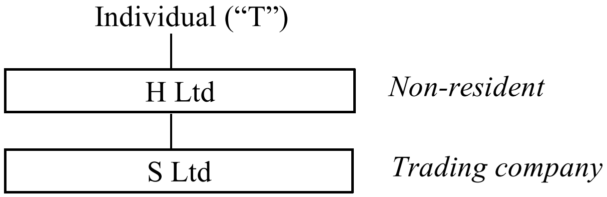
The gain may accrue to an individual, and it is attributable to the disposal of the residence. However, the relief cannot apply because:
(1) the condition in (b) is not met: there is no land which T *has*;
(2) the condition in (a) is not met: the company's period of ownership is not *his* period of ownership.

T might argue that the section should be read non-literally, but it is not absurd to deny private residence relief when a residence is held through a company. The policy is consistent with the rule that gain are computed as if the company were within the charge to CT, and no-one suggests a UK resident company qualifies for private residence relief.

Likewise if the company is held by a non-resident trust, no relief applies to the trustees and the gain on a disposal of the property by the company is a s.1(3) amount (s.87 trust gain) or a s.86 trust gain.

64.35 BAD relief: Trade group

Suppose an individual holds a non-resident company which holds a trading company, thus:



If T owned the shares in S personally, T can in principle qualify for business asset disposal relief (formerly called entrepreneurs' relief) on a disposal of S, assuming the necessary conditions are satisfied.[74]

Suppose H disposes of S. The s.3 gain which will accrue to T on that disposal does not qualify for BAD relief, because it is not a material disposal of business assets (as defined in s169I TCGA).

Suppose H is wound up after the disposal of S. The gain accruing to T on the disposal of H can qualify for BAD relief and so in principle qualifies for the 10% rate.

T will also be able to claim s.3 distribution relief[75] so that tax charged under s.3 on the disposal of S will be set against tax on the gain from disposal of H. However the s.3 gain will be charged at 20% and the gain on the disposal of H will be charged at 10%. The former is likely to eliminate the latter so the benefit of BAD relief will be lost.

64.36 Foundations

A Foundation is not within s.3 TCGA for the following reasons:

(1) A Foundation is a trust in the standard IT/CGT sense.

(2) Even if a Foundation is not a trust, it is still not a company in the

[74] See 56.19 (BAD relief: Remittance basis).

[75] See 64.20 (s.3 distribution relief).

standard tax sense.[76]

(3) A Foundation is in principle a settlement for the purposes of s.87, so even if it were a company in the standard tax sense, it would fall within s.87.[77] The presumption against double taxation applies. The s.87/s.3 regimes must be alternatives. So even if a Foundation is a company in the s.3 sense, it should be regarded as within the protection of 3B(4) TCGA.[78]

However some commentators take the view that a Foundation is a company, and for completeness I outline here the s.3 issues which would arise if that view were correct.

If a Foundation is a company for the purposes of s.3, the Foundation may be a close company[79] and so within s.3. If that is right, two questions arise:

(1) Are foundation-beneficiaries participators?[80]
(2) If they are participators, what is the extent of their interest for the purpose of s.3?

These questions raise imponderable and unexplored sub-issues: what are the rights of the beneficiaries under the relevant foreign law;[81] and do those rights amount to "interests" for this purpose (a matter of UK law)?

In practice the HMRC view, and my view, is that foundations are trusts, in the standard IT/CGT sense, and not companies, so these problems should not arise.[82]

Different considerations apply to a Foundation with Founder's Rights. That is a company within s.3, and Foundation gains would be attributable to the founder.[83]

64.37 Pension scheme

Pension schemes qualify for CGT relief under s.271(1)(c) and (1A) TCGA:

[76] See 90.14.4 (Foundation: IT/CGT trust).
[77] See 61.3.4 (Foundations).
[78] See 64.9 (Participators overlap: Trustees/beneficiaries).
[79] A Foundation may be a close company on the basis that:
(1) The members of the board are directors.
(2) The members of the board are participators.
(3) The Foundation is under the control of directors who are participators.
However this depends on the constitution of the Foundation.
[80] See 104.23.4 (Trustees and beneficiaries).
[81] See 90.13 (Beneficiary rights).
[82] See 90.14.11 (HMRC view).
[83] See 90.14.10 (Founder's Rights: a company).

> (1) The following gains shall not be chargeable gains ...
>
> (c) any gain accruing to a person from his acquisition and disposal of assets held by him as part of a fund—
>
> (i) mentioned in section 614(2) of the Taxes Act,
>
> (ii) to which section 615(3) of the Taxes Act applies, or
>
> (iii) mentioned in section 648, 649, 650, 651 or 653 of ITEPA 2003;
>
> ...
>
> (1A) A gain accruing to a person on a disposal of investments held for the purposes of a registered pension scheme or an overseas pension scheme is not a chargeable gain.

This does not confer relief from s.3 gains but s.3B(5) TCGA provides relief:

> If-
>
> (a) exempt assets of a pension scheme[84] are taken into account in ascertaining a person's interest as a participator in a company, and
>
> (b) if those assets were ignored, an amount in respect of a gain accruing to the company would not be apportioned to the person as a result of section 3,
>
> no amount in the respect of the gain is to be apportioned to the person as a result of that section.
>
> (6) For this purpose-
>
> (a) "assets of a pension scheme" means assets held for the purposes of a fund or scheme to which section 271(1)(c) or (1A) applies, and
>
> (b) those assets are "exempt" if, at the time when the gain accrues, a disposal of those assets would be exempt from tax as a result of either of those provisions.

A beneficiary of a pension scheme might be a participator in a non-resident company held by the scheme, but they are protected by the exclusion for beneficiaries.[85]

Section 3B(5) also prevents aggregation of a pension scheme's interest

[84] Defined s.3B(6): "For this purpose-
(a) "assets of a pension scheme" means assets held for the purposes of a fund or scheme to which section 271(1)(c) or (1A) applies, and
(b) those assets are "exempt" if, at the time when the gain accrues, a disposal of those assets would be exempt from tax as a result of either of those provisions."

[85] See 64.9 (Participators overlap: Trustees/beneficiaries).

with the interest of a person connected with the trustees of the pension scheme, for the purposes of the 25% minimum condition. That will not normally arise, as trustees of a pension scheme are not usually connected with other persons, but it could happen, eg if the trustees were partners in an investment partnership.

64.38 Administration and appeals

The CG Manual provides:

> **CG57213 Non-resident companies: reports and liaison** [Nov 2019]
> Any case within the scope of [s.3 TCGA] involving individuals should be sent to WMBC Assets using the WMBC, Assets Disclosures (Specialist PT) mailbox whether there is any Capital Gains Tax liability or not. That Group will also consider any Income Tax liability under ITA07/s720.
> Mail items that should be sent to this mailbox include:
>
> - any disclosures (Inheritance Tax, Trusts, Periods of Administration)
> - intel reports (Inheritance Tax, Trusts, Periods of Administration)
> - information that may lead to a discovery assessment for Inheritance Tax, Trusts or Periods of Administration
>
> If you are required to make an apportionment that is just and reasonable by reference to the interests of all of the participators (see CG57260), you will need to liaise with other officers dealing with participators in the non-resident company.

64.39 Tax return: s.3 gain

There is no box in form SA108 (Capital Gains Tax summary, 2022/23) for s.3 gains of individuals or trustees, so s.3 gains must be entered into the same boxes as if they accrued directly to the participator.

For disclosure of the motive defence, see 64.16.4 (Motive defence claim).

Non-resident trustees are not taxable on s.3 gains, so there is no obligation to put in any return. If the trustees choose to submit the voluntary form 50(FS) (Trust gains and capital payments, 2022/23) details of s.3 gains are disclosed:

> Box 9: Did the trustees or any underlying non-UK resident company make any offshore income gains in the year ended 5 April 2023? If Yes, enter the amount.
> Box 10: Did the trustees or any underlying non-UK resident company make any capital gains in the year ended 5 April 2023? If Yes, enter the amount.

64.40 DT relief: s.3 gain

In the following discussion I use the following terms to distinguish between 3 types[86] of company residence:

Type of residence	UK-law resident	Treaty-resident in State with CG article
Treaty non-resident	No	Yes
Simple non-resident	No	No
UK resident	Yes	No

In this terminology, for instance, a company in Belize is *simple* non-resident (the Belize/UK DTA has no CG article) but a company in Luxembourg is *treaty* non-resident (the Luxembourg/UK DTA does have CG article).

I consider the following permutations:

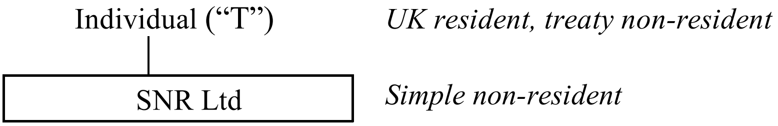
Case no	**Individual (**UK-law resident**)**	Company
1	Treaty non-resident	Simple non-resident
2	Treaty non-resident	Treaty non-resident
3	Treaty resident	Treaty non-resident

64.40.1 *Individual treaty non-resident; company simple non-resident*

Suppose

(1) An individual ("T") is UK-law resident but treaty non-resident

(2) T owns a simple non-resident company which realises a gain:



The gain treated as received by T is the same gain as the gain received by SNR Ltd. But art.13(5) OECD Model provides (with immaterial exceptions):

> Gains from the alienation of any property ... shall be taxable only in the Contracting State of which the *alienator* is [treaty-resident].

On a literal reading, T does not qualify for treaty relief on a gain accruing to SNR Ltd. T (though treaty non-resident) is not the alienator. SNR Ltd is the alienator but (on the facts of this example) NR Ltd is not treaty

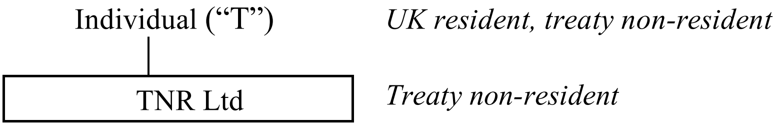
[86] A company which is treaty non-resident must also be domestic law non-UK resident, see 8.19 (DTA residence rule). So it is not necessary to consider the position of a company which is UK resident but treaty-resident outside the UK.

resident in the foreign state which confers DT reliefs. So the terms of art.13(5) are not satisfied.

The US treaty is wider and DT relief applies to an individual who is treaty-resident in the US.[87]

Even under OECD Model, it is suggested that the result is the same, on the grounds that the gain is treated as accruing to T, so T should be deemed to be the alienator; or the word "alienator" does not require that one must dispose of property, only that the gain on the alienation accrues to the person.

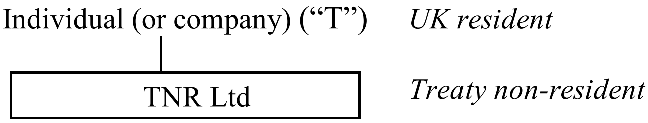
Take the same facts except that the company is also treaty non-resident:



In this case DT relief will apply.

64.40.2 *Company treaty non-resident*

Suppose an individual (or a company) owns a treaty non-resident company which realises a gain:



Section 3(4) TCGA provides:

> The amount apportioned to each person is treated as a chargeable gain accruing to the person.

The sidenote to s.3 calls this "attribution" of gains. The expressions *attribute/apportion/treat as* all come to the same thing. This is a deeming which changes the recipient, but the s.3 gain treated as received by T is the same gain as the gain actually received by TNR Ltd. Subject to the OECD Savings Clause, T can in principle claim DT relief (in my terminology, third-party DT relief)[88] for gains accruing to TNR Ltd (deemed to accrue to T) under s.3 TCGA.[89]

[87] See 91.7.8 (s.624/720 income; s.3/86 gain).

[88] See 109.1 (Third-party DT relief).

[89] The same point is also made (no doubt it was common ground of the parties) in C-112/14 *EC v UK* (the s.3 case) at [5].

HMRC agree. The CG Manual provides:

> **CG57380 double taxation agreements** [May 2020]
> You should always check whether there is a double taxation agreement between the UK and the country in which the company making the gain is resident. If there is no double taxation agreement any [s.3 TCGA][90] charge is unaffected. Similarly if the agreement does not refer to capital gains or Capital Gains Tax the charge under [s.3 TCGA]is unaffected. But, if the agreement provides that gains of the type realised by the non-resident company are only taxable in that company's country of residence [s.3 TCGA] cannot apply. For example, Article 15(4) of the Kenya/UK Double Taxation Agreement would prevent [s.3 TCGA] applying to the disposal of stocks and shares by a company resident in Kenya. Agreements will often treat gains on the disposal of particular types of asset differently.[91]

However the Savings Clause (if applicable) overrides DT relief.[92] so 3rd party DT relief applies only:

(1) In jurisdictions where the OECD Savings Clause does not apply (because the foreign State has opted out of this clause). Luxembourg is an example.

(2) In the (rare) case where the individual is treaty non-resident (and so

[90] I have updated references to the former s.13 TCGA.

[91] Likewise INT Manual provides:

> **INTM169060 Resident shareholders in non-resident companies - Section 13 TCGA 1992** [Jun 2016]
> ... the Capital Gains Articles in double taxation agreements may override [s.3 TCGA].
> If the non-resident company disposes of immovable property; for example, land, buildings etc, in the UK, double taxation agreements normally provide that any gain can be taxed in UK. Although UK domestic law may prevent a capital gains tax charge on the non-resident company (see s.10 TCGA 1992), s.13 TCGA 1992 can be applied to tax the UK resident shareholder.
> If the asset disposed of is not immovable property in the UK; for example, immovable property situated outside the UK, shares etc, then the Capital Gains Article will normally prevent a charge to tax under s.13 TCGA 1992 being made on the shareholder..."

Of course, the text of the CG article in the relevant DTA agreement with the country concerned would need to be examined to see whether it has any variations from the OECD model form, as some did. This is discussed in the 2018/19 edition of this work para 66.40.2 (DTAs excluding s.3 relief); the material is now omitted as the OECD Savings Clause makes it less important.

[92] See 109.5 (Savings Clause).

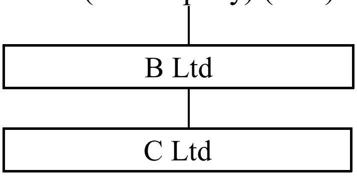
outside the Savings Clause).

If the policy is to exclude s.3 gains from treaty relief, this seems misguided. It is illogical for a treaty to provide CGT exemption but not s.3 exemption. If the foreign state does not tax chargeable gains, there should be no CG exemption at all. If it does, exemption should extend to s.3. But there it is.

64.40.3 *Chain of companies*

Suppose there is a chain of companies:

Individual (or company) ("A") - *UK resident*



Suppose a gain accrues to C ("C's gain"). We have the following possibilities:

	Case 1	**Case 2**	**Case 3**
B Ltd	UK resident	simple non-resident	treaty non-resident
C Ltd	treaty non-resident	treaty non-resident	simple non-resident

Case 1: If B Ltd is UK resident, and C Ltd is treaty non-resident:

(1) C's gain is deemed to accrue to B Ltd; B Ltd may claim DT relief, as noted above, but subject to the Savings Clause.

(2) A does not need to claim relief, as C's gain is not deemed to accrue to A.

Case 2: If B Ltd is simple non-resident and C Ltd is treaty non-resident, C's gain in principle accrues to A. A can claim DT relief, but subject to the Savings Clause.

Case 3: If C Ltd is simple non-resident, but B Ltd is treaty non-resident, C's gain is deemed to accrue to A, but A cannot claim DT relief.

64.41 Trust participator: No DT relief

Section 79B(1) TCGA provides:

> This section applies where the trustees of a settlement are participators[93]—

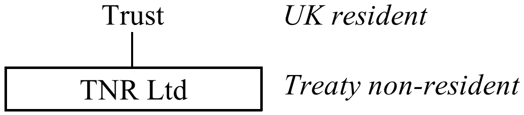
[93] The second sentence in s.79B(1) TCGA provides: "For this purpose "participator" has the same meaning as in section 3 (see section 3B)". That incorporates the

> (a) in a close company,[94] or
> (b) in a company that is not resident in the UK but would be a close company if it were resident in the UK...

Assuming this condition is met, we move on to the rule. Section 79B(2) TCGA provides:

> Where this section applies, nothing in any double taxation relief arrangements[95] shall be read as preventing a charge to tax arising by virtue of the attribution to the trustees under s.3, by reason of their participation in the company mentioned in subsection (1) above, of any part of a chargeable gain accruing to a company that is not resident in the UK.

Suppose a UK trust owns a treaty non-resident company which realises a gain:



DT relief is disallowed under s.79B(1)(b) and the trustees are taxable.

Similarly if a non-resident trust within s.86 owns a treaty non-resident company which realises a gain: DT relief is disallowed under s.79B(1)(b) and the settlor is taxable.

Section 79B(3) TCGA provides:

> Where this section applies and—
> (a) a chargeable gain accrues to a company that is not resident in the UK but would be a close company if it were resident in the UK, and
> (b) all or part of the chargeable gain is treated under section 3 as accruing to a close company which is not chargeable to corporation tax in respect of the gain by reason of double taxation arrangements, and
> (c) had the company mentioned in para (b) (and any other relevant[96]

standard definition; see 64.6.2 (Overlapping participators).

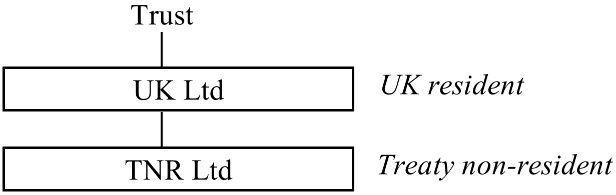
[94] I am unable to see the point of s.79B(1)(a). If trustees are participators in a close company, gains accrue to that company and are not attributed to the trustees. Probably the drafter followed other statutory precedents using this form, and did not realise the wording is unsuitable here. See 104.29.1 (Non-resident close company).

[95] For the meaning of this term, see 12.6.1 ("DTR arrangements" for CGT).

[96] Section 79B(4) TCGA provides:
"The references in subsection (3) above to 'any other relevant company' are to any

> company) not been resident in the UK, all or part of the chargeable gain would have been attributed to the trustees by reason of their participation in the company mentioned in subsection (1) above,
>
> section 3(7)[97] shall apply as if the company mentioned in para (b) above (and any other relevant company) were not resident in the UK.

Section 79B(3) addresses the more challenging case where:
(1) a trust owns a UK holding company ("UK Ltd")
(2) UK Ltd holds a treaty non-resident subsidiary ("TNR Ltd"):



UK Ltd is not taxed under s.3 on TNR's gain as UK Ltd can claim DT relief. In the absence of s.79B(3), TNR's gain apparently cannot be apportioned to the trust. The trust does not need DT relief. Section 79B(3) treats UK Ltd as non-resident, so that the gain accruing to TNR can be attributed to the trust.

64.41.1 *Critique of s.79B*

There are two objections to s.79B.

One is the constitutional point that the UK is in breach of DTAs with a standard form CG article. It might pragmatically be said that if the foreign state does not complain, that does not matter.

It is anomalous that s.79B adversely singles out trustee participators, ignoring individual and company participators.[98] Section 79B could have no part to play in a coherent and logical system of taxing offshore company gains.

other company which if it were not resident in the UK would be a company in relation to which section 3(7) applied with the result that all or part of the chargeable gain was attributed to the trustees as mentioned in that subsection."

[97] See 64.10 (Co chain: Indirect participator).

[98] CIOT make this point: "Reform of two anti-avoidance provisions" (2012) *https://www.kessler.co.uk/wp-content/uploads/2018/12/121002-s13-and-transfer-of-assets-CIOT-comments.pdf*
But the anomaly is reduced by the introduction of the Savings Clause.

64.42 Foreign tax credit relief: s.3

SP D23 provides:

> [1] Where a UK participator in a non-resident company which would be a close company if resident in the UK is chargeable to CGT on a proportion of a capital gain accruing to that company, tax credit relief may be given against UK CGT for the appropriate proportion of any overseas tax payable by the company in the country where it is resident in respect of its gain [s.9(2) TIOPA[99]];
> [2] alternatively, under [s.113 TIOPA[100]], the appropriate proportion of the overseas tax may be deductible in computing the shareholder's gains to the extent that the overseas tax has not qualified for relief under [s.9(2) TIOPA].

This relates to two reliefs:
(1) Foreign tax credit relief
(2) CGT computation deduction
The CG Manual summarises these two reliefs and gives a worked example:

> **CG57381 overseas tax payable by non-resident company** [Nov 2019]
> The non-resident company may have to pay tax on the gain in its country of residence. UK residents to whom the gain is apportioned will get relief for this tax. The two methods of giving relief are:
>
> - Either the UK resident can claim tax credit relief, or
> - a proportionate part of the tax can be claimed in computing the apportioned gain.
>
> Relief is given on a proportion of the foreign tax equal to the proportion of the total gain attributable to the UK resident. This amount is set-off against the charge to Capital Gains Tax or Corporation Tax on the relevant chargeable gains.
> If tax credit relief is allowed no deduction can be allowed in computing the chargeable gain.
> If the UK resident does not want to claim tax credit relief, the tax can be deducted in computing the gain, see INTM169010+. The foreign tax paid does not qualify for indexation allowance. Although it is an allowable deduction in computing the gain it is not a deduction within TCGA92/S38 (1)(a) or TCGA92/S38 (1)(b). This means it is not relevant allowable expenditure for indexation allowance purposes, see CG17240. In all other respects you compute and apportion the gain in the usual way

[99] See 111.1 (Credit for foreign tax).
[100] See 111.27 (CGT/IT computation deduction).

allowing the foreign tax paid as a deduction.

The Manual gives a worked example:

> The following example illustrates the differences between allowing any foreign tax paid by the non-resident company as tax credit relief or as a deduction in computing the gain.
>
> Facts
>
> - The non-resident company realises a gain of £20,000 computed under the normal Capital Gains Tax rules.
> - It has to pay £5,000 tax on this gain in its country of residence.
> - 75% of the gain is attributable to a UK resident.
>
> *Capital Gains Tax treatment*
>
> A [s.3 TCGA] charge of £20,000 @ 75% = £15,000 is apportioned to the UK resident. Relief for the tax paid can be claimed in two ways.
>
> • TAX CREDIT RELIEF
>
> Suppose the UK resident is liable to Capital Gains Tax at 40%. The tax payable would be £6,000. The UK resident can claim tax credit relief on the foreign tax of £5,000 paid by the company in the same proportion as the gain is apportioned. £5,000 @ 75% = £3,750. The total tax payable by the UK resident becomes £2,250.
>
> • DEDUCTION IN COMPUTING THE GAIN
>
> The foreign tax paid of £5,000 can be deducted in computing the gain. No indexation allowance is due on this deduction. The gain to be apportioned becomes £20,000 - £5,000 = £15,000. The taxpayer's share is £15,000 @ 75% = £11,250. At a rate of 40% the tax payable would be £11,250 @ 40% = £4,500.
>
> In this example you would expect the taxpayer to claim tax credit relief.

67.22 (Losses from offshore funds)
64.14 (Loss of non-resident co) - s.3 loss

65.1 Capital losses: Introduction

This chapter considers CGT relief for losses.

In this chapter:
"**Personal losses**" means losses accruing to individuals
"**Trust losses**" means losses accruing to trustees

I concentrate on the themes of this book, but the subject can only be understood in the context of the provisions as a whole.

65.2 Relief for losses

The rules are in s.1(3) TCGA for non-companies and s.2A(1) for companies. It is easier to follow if the provisions are read side by side:

s.1(3) TCGA	**s.2A(1) TCGA**
Capital gains tax is charged on the total amount of chargeable gains accruing to a person[1] in a tax year after deducting—	The amount of chargeable gains to be included in a company's total profits for an accounting period is the total amount of chargeable gains accruing to the company in the period after deducting—
(a) any allowable losses accruing to the person in the tax year, and	(a) any allowable losses accruing to the company in the period, and
(b) so far as not previously deducted under this subsection, any allowable losses accruing to the person in any previous tax year.	(b) so far as not previously deducted under this subsection, any allowable losses previously accruing to the company while it was within the charge to corporation tax

Para (a) deducts current year losses and para (b) deducts brought forward losses.

65.3 Loss within scope of CGT

The rule is in s.1E(1) TCGA for non-companies and s.2A(2) for companies. It is easier to follow if the provisions are read side by side:

[1] Section 1(3) refers to a "person", so it applies to individuals, trustees and PRs.

Section 1E TCGA

A loss is not an allowable loss if it accrues in a tax year at a time when, had a gain accrued instead, the gain would not have been chargeable to capital gains tax under this Act for the tax year (and see also sections 16(2) and 16A).

Section 2A(2) TCGA

For the purposes of corporation tax on gains "allowable loss" does not include a loss accruing to a company if, had a gain accrued, the company would not have been chargeable to corporation tax on the gain.

65.4 Corporation tax losses

Other rules specifically relating to capital losses for corporation tax are not discussed here.

65.5 Computation of loss

Section 16(1) TCGA provides a fairly commonsense rule to compute the amount of a loss:

> [a] Subject to sections 261B, 261D and 263ZA and except as otherwise expressly provided
> [b] the amount of a loss accruing on a disposal of an asset shall be computed in the same way as the amount of a gain accruing on a disposal is computed.

The exceptions listed in [a] are specialist topics not discussed here:

Section	**Topic**
s.261B	Trading loss treated as CGT allowable loss
s.261D	Post-cessation trade loss treated as CGT allowable loss
s.263ZA	Former employees: employment-related liabilities

65.6 Allowable loss

The legislation refers to "allowable" losses. Section 16(2) TCGA defines "allowable" loss:

> [a] Except as otherwise expressly provided, all the provisions of this Act which distinguish gains which are chargeable gains from those which are not, or which make part of a gain a chargeable gain, and part not, shall apply also
> [i] to distinguish losses which are allowable losses from those which are not, and
> [ii] to make part of a loss an allowable loss, and part not;
> [b] and references in this Act to an allowable loss shall be construed accordingly.

Thus there are two drafting techniques to disallow losses. The drafter may direct that a certain type of gain is not chargeable, from which it follows that a loss is not allowable. Or the drafter may direct that a loss is not allowable (in which case a gain from the same asset might be chargeable).

An allowable loss requires a notice or claim.[2] The notice must be given, and any dispute about the loss resolved, at the time the loss accrues, not when the loss is used, which may be at any subsequent time.

65.7 Loss of non-resident

Section 16(3) TCGA formerly provided:

> *A loss accruing to a person in a year of assessment where the residence condition is not met (see section 2(1A)) shall not be an allowable loss for the purposes of this Act unless, under section 2B, 10, 10B, 14D or 188D,[3] he would be chargeable to tax in respect of a chargeable gain if there had been a gain instead of a loss on that occasion.*

Section 16(3) was repealed in the 2019 CGT rewrite (saving the need to update the five cross references). I wonder if that was intended. There does not seem to be an express replacement. Perhaps the drafter thought that the general rule about losses sufficed.[4]

Applying the presumption of continuity, if needed, it continues to be the case that a loss accruing to a non-resident is not in general an allowable loss. This gives a symmetry with the rule that a gain accruing to a non-resident is not in principle subject to CGT.

There is also some relief for losses of non-resident trusts within s.86, 87 TCGA,[5] and non-resident companies within s.3 TCGA.[6]

65.7.1 *Non-resident UK land gains*

Section 1E TCGA provides:

[2] See 123.2.3 (Capital loss claims).

[3] The exceptions referred to are:

Old	**Now**	**Topic**
s.2B	-	ATED-related gains
s.10	s.1B	Non-resident trading through UK branch/agency
s.10B	s.2C	Non-resident company trading through UK PE
s.14D	s.1A(3)/s.2B(3)	NRCGT, now non-residents CGT/CT
s.188D	-	NRCGT group

[4] See 65.3 (Loss within scope of CGT).

[5] See 65.13 (Loss of non-resident trustees).

[6] See 64.14 (Loss accruing to non-resident co).

> (2) In addition, the only allowable losses that qualify for deduction from chargeable gains under section 1A(3) (non-UK residents) are those accruing to the person on disposals of assets within that subsection.
> (3) An allowable loss counts for the purposes of subsection (2) even if it accrues in a tax year in which the person was UK resident.

65.8 Loss in split year

A split year does not fall within non-residence condition A, as it is a year for which the individual is UK resident. Section 16(3A) TCGA provides:

> If the person is an individual and the year is a split year as respects that individual, subsection (3) also applies to a loss accruing to the individual in the overseas part of that year.

This still refers to s.16(3) which set out the rule which disallowed losses of non-residents but was (perhaps accidentally?) repealed. Applying the presumption of continuity, if needed, s.16(3A) continues to apply or extend this rule to disallow a loss accruing in the overseas part of a split year.

65.9 Loss on connected person disposal

Section 18 TCGA provides:

> (1) This section shall apply where a person acquires an asset and the person making the disposal is connected with him.
> (2) [See App.4.10.9 (Deemed non-arm's length)]
> (3) Subject to subsection (4) below, if on the disposal a loss accrues to the person making the disposal, it shall not be deductible except from a chargeable gain accruing to him on some other disposal of an asset to the person acquiring the asset mentioned in subsection (1) above, being a disposal made at a time when they are connected persons.[7]

Losses within s.18(3) are referred to as **"clogged"** losses.

The purpose of this rule is not obvious. Perhaps the thinking is that connected person disposals are unlike unconnected person disposals as an asset transferred to a connected person may continue to be available to the

[7] For completeness: s.18(4) TCGA contains an exemption for gifts for educational, cultural or recreational purposes, which (more or less) never has effect and ought to be repealed; s.18(5) TCGA deals with options, not discussed here.

transferor. The rule restricts a taxpayer's ability to accrue losses without the practical consequences that a sale to an unconnected person would entail.

Where there is a clogged loss, a person may make a disposal to the connected person on which a gain accrues, to set the loss against the gain. That should be regarded as acceptable, at least in principle. The drafter could have directed that the loss is not allowable but has expressly recognised that it could be set against some gains.

65.10 Chattels

65.10.1 *Gain on disposal of chattel*

Section 262 TCGA provides:

> (1) Subject to this section a gain accruing on a disposal of an asset which is tangible movable property shall not be a chargeable gain if the amount or value of the consideration for the disposal does not exceed £6,000.
> (2) Where the amount or value of the consideration for the disposal of an asset which is tangible movable property exceeds £6,000, there shall be excluded from any chargeable gain accruing on the disposal so much of it as exceeds five-thirds of the difference between—
> (a) the amount or value of the consideration, and
> (b) £6,000.

65.10.2 *Loss on disposal of chattel*

Section 262(3) TCGA provides:

> Subsections (1) and (2) above shall not affect the amount of an allowable loss accruing on the disposal of an asset, but for the purposes of computing under this Act the amount of a loss accruing on the disposal of tangible movable property the consideration for the disposal shall, if less than £6,000, be deemed to be £6,000 and the losses which are allowable losses shall be restricted accordingly.

The CG Manual gives a worked example:

> **CG76613 - Chattels: examples: losses** [Jul 2019]
> Mr C sells his son a painting for £5,000. It had originally cost him £8,000. He claims a loss of £3,000.
> As this is a transaction between connected persons, see CG14580+, the market value of the asset is used as the disposal consideration. The painting has a market value of £4,000.

However, as this is less than £6,000, the loss is restricted to:

Deemed consideration	£6,000
Less cost	-£8,000
Restricted loss	£2,000

It would be simpler just to disallow losses on disposals of assets for less than £6k, and it seems anomalous to allow a loss in circumstances when a gain would not be allowable.

The figure of £6,000 was fixed in 1989, so this relief has been substantially eroded by inflation. But it may not actually be a relief, as it is more likely to disallow a loss than to exempt a gain.

65.11 Losses used in best way

Section 1F TCGA provides:

> (1) Allowable losses may (subject to express provision to the contrary) be deducted from gains in whichever way is most beneficial to a person chargeable to capital gains tax.
> (2) Accordingly, an allowable loss may be deducted from a chargeable gain irrespective of the rate of tax at which the gain would otherwise have been charged.
> (3) Allowable losses that are deducted from gains may not be deducted any further than is necessary to eliminate the gains.
> (4) No part of an allowable loss may be relieved under this Act more than once.
> (5) So far as an amount has been relieved under the Income Tax Acts, it may not be further relieved under this Act.

It may be advantageous to set losses against:

(1) Residential/carried interest gains (in priority to ordinary gains)
(2) Ordinary gains (in priority to gains which qualify for DT relief)[8]

65.12 Losses on death

65.12.1 *Loss accruing before death*

Losses accruing before death are not carried forward to PRs.

Section 62(2) TCGA provides for carry-back of losses accruing in the year of death:

> Allowable losses sustained by an individual in the year of assessment in which he dies may, so far as they cannot be deducted from

[8] See 111.21.2 (FTC: Capital losses).

> chargeable gains accruing in that year, be deducted from chargeable gains accruing to the deceased in the 3 years of assessment preceding the year of assessment in which the death occurs, taking chargeable gains accruing in a later year before those accruing in an earlier year.

Section 62(2AA) TCGA provides the same rule for non-resident losses:

> Where relevant non-resident losses (see subsection (11)) are sustained by an individual in the year of assessment in which the individual dies, the losses may, so far as they cannot be deducted from chargeable gains accruing to the individual in that year, be deducted from any gains such as are mentioned in subsection (2A)(b) that accrued to the deceased in the 3 years of assessment preceding the year of assessment in which the death occurs, taking chargeable gains accruing in a later year before those accruing in an earlier year.

Section 62(11) provides the definition:

> "relevant non-resident loss" means an allowable loss accruing on a disposal which, had a gain accrued instead, would have been a relevant non-resident gain.

Carry-back on death seems unnecessary; its repeal would be a small but useful simplification.[9]

Section 62(2A) TCGA provides:

> Amounts deductible from chargeable gains for any year in accordance with subsection (2) above shall not be so deductible from any such gains so far as they are—
>
> (a) gains that are treated as accruing by virtue of section 87 or 89(2) (read, where appropriate, with section 1M), or
>
> (b) relevant non-resident gains (see subsection (11)).[10]

Thus the disallowance of personal losses against s.87 gains, and the disallowance of ordinary losses against relevant non-resident gains,

[9] This rule perhaps made more sense when introduced in 1965, in the context of the CGT charge on death. If so, the rule lost its rationale following the introduction of rebasing on death in 1971.

[10] Section 62(11) provides: "In this section "relevant non-resident gain" means—
(a) a gain that falls to be dealt with by section 1A(3) because the asset disposed of is within paragraph (b) or (c) of that subsection, or
(b) a gain that falls to be dealt with by section 1A(1) in accordance with section 1G(2) because the asset disposed of is within section 1A(3)(b) or (c)".

continues to apply on death. That is consistent with the general rule.[11]

65.12.2 *Unrealised loss at death*

If a person dies holds assets standing at a loss, the effect of CGT rebasing on death is to nullify the loss.[12] Losses could be preserved by a lifetime gift (or sale) to the spouse.[13]

Alternatively, if appropriate, the individual may realise the losses in the year of death (but before death) in order to carry them back against gains in the preceding three years.[14]

65.13 Loss of non-resident trust

65.13.1 *s.87 and trust loss*

Section 87(4) TCGA provides:

> The section 1(3) amount for a tax year for which this section applies to the settlement is—
>
> (a) the amount upon which the trustees would be chargeable to tax under section 1(3) for that year if they were resident in the UK in that year ...

Under this provision, trust losses in a tax year could be set against trust gains in the same year, in computing s.1(3) amounts (trust gains). But trust losses of an earlier year in which the trustees were not resident could not be carried forward and set against trust gains of a later year, because losses of nonresidents are disallowed.[15] However s.97(6) TCGA allows losses to be carried forward:

> Section 16(3)[16] shall not prevent losses accruing to trustees in a year of assessment for which section 87 of this Act or section 17 of the 1979 Act applied to the settlement from being allowed as a deduction from chargeable gains accruing in any later year (so far as they have not previously been set against gains for the purposes of a computation under either of those sections or otherwise).

[11] See 65.14 (Personal loss and s.87 gain).

[12] See 88.5 (Acquisition by PRs).

[13] See 65.22 (Spouse-transfer loss).

[14] See 65.12.1 (Loss accruing before death); 65.22 (Inter-spouse transfer).

[15] See 65.7 (Loss accruing to non-resident).

[16] The 2019 CGT rewrite (accidentally?) repealed s.16(3) but see 65.7 (Loss of non-resident).

Carried-forward trust losses will usually be used to reduce s.1(3) amounts (trust gains) of a subsequent year. If the trust became UK resident they could be set against gains to reduce the trust's own liability.

A trust is in this respect better than absolute ownership by a remittance basis taxpayer, whose personal losses may be disallowed.[17]

65.13.2 *s.86 and trust loss*

Under s.86 TCGA the settlor is taxed on what I call "**s.86 gains**", which is the amount on which trustees would be charged to tax if UK resident.[18] Under this provision trust losses in a tax year could be set against trust gains in the same year, in computing the s.86 gains. But trust losses of an earlier year in which the trustees were not resident could not be carried forward and set against trust gains of a latter year because non-residents losses are disallowed. However para 1(2) sch 5 TCGA provides:

> In construing section 86(1)(e) as regards a particular year of assessment [that is, in order to ascertain the s.86 gains] —
> (a) any deductions provided for by section 2(2) shall be made in respect of disposals of any of the settled property originating from the settlor, and
> (b) section 16(3)[19] shall be assumed not to prevent losses accruing to trustees in one year of assessment from being allowed as a deduction from chargeable gains accruing in a later year of assessment (so far as not previously set against gains).

For losses and sch 4B TCGA, see 62.21.6 (Loss set against s.86 gain).

65.13.3 *Loss: s.86 conditions not met*

A settlor who is not within s.86 may later come within the section.

Para 1(6) sch 5 TCGA provides:

> The following rules shall apply in construing section 86(1)(e) as regards a particular year of assessment ("the year concerned") in a case where the trustees fall within section 86(2)(a)—
> (a) if the conditions mentioned in section 86(1) are not fulfilled as regards the settlement in any year of assessment falling before the year concerned, no deductions shall be made in respect of

[17] See 65.16 (Loss of remittance basis taxpayer).

[18] See 60.11 (Section 86 gains condition).

[19] The 2019 CGT rewrite (accidentally?) repealed s.16(3) but see 65.7 (Loss of non-resident).

> losses accruing before the year concerned;
>
> (b) if the conditions mentioned in section 86(1) are fulfilled as regards the settlement in any year or years of assessment falling before the year concerned, no deductions shall be made in respect of losses accruing before that year (or the first of those years) so falling,
>
> but nothing in the preceding provisions of this sub-paragraph shall prevent deductions being made in respect of losses accruing in a year of assessment in which the conditions mentioned in section 86(1)(a) to (d) and (f) are fulfilled as regards the settlement.

65.13.4 *Loss on pre-1991 disposal*

For completeness, para 1(7) Sch 5 TCGA provides:

> In construing section 86(1)(e) as regards a particular year of assessment and in relation to a settlement created before 19th March 1991, no account shall be taken of disposals made before 19th March 1991 (whether for the purpose of arriving at gains or for the purpose of arriving at losses).

65.14 Personal loss and s.87 gain

Section 1E(4) TCGA provides:

> No allowable losses may be deducted from chargeable gains treated as accruing to an individual as a result of section 87, 87K, 87L or 89(2) (read, where appropriate, with section 1M).

The effect is that personal losses may not be set against s.87 gains accruing to the individual.

65.14.1 *Personal loss & s.87: Critique*

The disallowance of personal losses against s.87 gains was introduced in 1998 because of difficulties of interaction with taper relief.[20] The repeal of taper in 2008 should have allowed personal losses to be set once again against s.87 gains. Presumably this point was overlooked; or perhaps a deliberate decision was made to discourage the use of trusts. It is

[20] The CG Manual formerly provided: "**CG34272 Personal losses** [June 2005]
... For 1998–99 onwards the beneficiary's personal allowable losses are not available to reduce these attributed gains. It is not possible to identify any particular gain with a capital payment and so the changes introduced for Section 77 and Section 86 gains, see CG34865+, for 2003–04 onwards could not be extended to Section 87 gains."

suggested that the rule disallowing personal losses against s.87 gains should be repealed.

65.15 Personal loss and s.86 gain

The settlor can set their personal losses against s.86 gains, under s.1(3) TCGA.

For completeness, s.1E(5) TCGA deals with the situation where a settlor has made two or more settlements:

> If—
> (a) amounts (or elements of amounts) treated as accruing to an individual as a result of section 86 relate to different settlements, and
> (b) the deduction of allowable losses does not reduce the amounts or elements to nil,
>
> the deduction applicable to each amount is the proportion that the amount concerned bears to the total of the amounts.

This is only necessary to ascertain the amount which can be recovered under the settlor's indemnity against each settlement.

65.16 Loss of remittance basis taxpayer

65.16.1 *"Foreign/UK loss/gain"*

The legislation distinguishes between foreign losses and other losses. Section 16ZA(6) TCGA gives "**foreign loss**" a commonsense meaning:

> In this section "foreign loss" means a loss accruing from the disposal of an asset situated outside the UK.

In this chapter:
"**UK loss**" means a loss which is not a foreign loss, ie a loss on a disposal of a UK situate asset
"**Foreign gain**" means a gain accruing on a disposal of an asset situated outside the UK.
"**UK gain**" means a gain which is not a foreign gain, ie a gain on a disposal of a UK situate asset

65.16.2 *Background*

The complex rules can be better understood if one understands the constraints faced by the drafter.

It is difficult to think of a satisfactory rule for losses of a remittance basis taxpayer. Relief for all losses is too generous when only some gains are taxable. Relief for foreign losses remitted to the UK is not satisfactory, as it would usually be easy to remit the losses to the UK, so that amounts to a relief for (almost) all losses, at least for a well-advised taxpayer. Moreover in the case of the extinction of an asset there may be nothing to remit.

The pre-2008 solution was to disallow relief on foreign losses on foreign domiciliaries (to whom the remittance basis applied compulsorily – there was no claim procedure). The CGT remittance basis was a package with advantages and this disadvantage. This was a rough and ready solution, but simple and workable. However the introduction of the claim for the CGT remittance basis in 2008 changed the situation. If foreign losses of a foreign domiciliary were disallowed only in years that the individual claimed the remittance basis, then an individual might claim the remittance basis in the year that they realise gains and not in the year that they realise losses. On the other hand, the failure to claim would often be expensive in other ways, and as a simple and pragmatic solution it has much to commend it.

The FD draft clauses 2007 proposed to disallow all foreign losses of foreign domiciliaries, but that was not EU-law compliant (not to mention unfair). HMRC presumably agreed, and a new solution had to be devised in the rushed weeks between publication of the FD draft clauses and the Finance Bill, allowing insufficient time for HMRC to consider the issues, and none at all for consultation.

65.16.3 *Summary*

EN FB 2008 provides a summary:

> 355. The overall effect of these new rules is that:
> [1] on the first occasion when a non-UK domiciled individual claims remittance basis for a tax year, the individual may make an election in relation to their foreign losses;
> [2] if the individual does not make an election, foreign losses of that tax year and all future tax years will not be allowable losses; and
> [3] if the individual makes an election, special rules apply to the deduction of allowable losses where there are foreign chargeable gains.
> 356. The effect of the special rules is that:
> [1] where foreign chargeable gains are remitted to the UK in a tax year later than that in which the asset was disposed of:
>
> [a] no losses of that later year, or of any year later than that in which

they arose, are deductible from those gains, and

[b] [those gains] may not be covered by the [CGT annual exemption] of the year in which they are remitted; and

[2] if remittance basis is claimed for the tax year in which foreign chargeable gains arise, the allowable losses available for deduction from gains of that year are deducted

[a] first from foreign chargeable gains that both arise and are remitted in that year,

[b] then against foreign chargeable gains arising but not remitted in that year, and

[c] only then from any other (non-foreign) chargeable gains arising in that year.

The CG Manual provides:

> **CG25330 - Remittance basis: losses: introduction** [Nov 2019]
> ... For tax year 2008-09 onwards an individual may elect that such "foreign losses" which arise in the year of election or subsequent years are allowable, subject to certain special rules, against chargeable gains (TCGA92/S16ZA). The election is irrevocable and has effect in the year it is made and all subsequent years.
> The special rules for giving relief in respect of foreign losses have two main effects:
>
> - They prevent any loss (not just a foreign loss) of a later year being allowed against a foreign chargeable gain which arose in an earlier year but which is not remitted (and so not taxed) until the year of the loss or later (TCGA92/S16ZB). This is analogous to the "no carry back" rule where the remittance basis is not in point.
> - They limit the amount of losses available for relief against chargeable gains in a year by imposing a strict order in which they are matched with gains of various classes, including unremitted foreign chargeable gains (TCGA1992/S16ZC). Correct operation of these rules is likely to demand careful record-keeping by the taxpayer. ...

The CG Manual provides:

> **CG25330C - Remittance basis: matching rules for relieving losses: TCGA92/S16ZC** [Nov 2019]
> If an election has been made for foreign losses to remain allowable losses (see CG2530A) then, in a tax year in which the remittance basis applies and the individual is not domiciled in the UK, special rules apply to determine how gains are to be relieved by losses. In summary, the allowable losses deductable under TCGA92/S2 are matched:

> - Firstly, against foreign chargeable gains accruing in the tax year to the extent that they are remitted to the UK in that year
> - Secondly, against foreign chargeable gains accruing in that year to the extent that they are not so remitted and
> - Thirdly, against chargeable gains accruing in that year other than foreign chargeable gains (this does not include chargeable gains treated as accruing under TCGA92/S12 ie on the remittance basis).
>
> And then the amount on which Capital Gains Tax is charged in the year is the total amount of chargeable gains accruing in the year less the losses matched against gains in the first and third categories only.
>
> This means in effect that allowable losses which are matched with unremitted foreign chargeable gains are not available for relief against gains on UK assets, which therefore remain chargeable. The unremitted foreign chargeable gains are reduced by the losses matched with them, and so will not give rise to any tax charge if or when they are remitted (TCGA92/S16ZD(3))...
>
> A taxpayer will need to keep records to allow the correct operation of these provisions to be verified.

The F(no.2)A 2017 tweaked these rules by making provision for the possibility that a (deemed) domiciled individual may cease to be deemed domiciled, and later become UK resident again; but that is of limited importance.

65.16.4 *Foreign-loss election*

Section 16ZA(1) TCGA provides:

> An individual may make an election under this section in respect of—
> (a) the first tax year in which section 809B of ITA 2007 (claim for remittance basis) applies to the individual, or
> (b) the first tax year in which that section applies to the individual following a period in which the individual has been domiciled[21] in the UK.

I refer to para (a) as the **"first RB-claim year"**.

One can put off the first RB-claim year by not making a s.809B remittance basis claim, but that is not generally going to be worthwhile. In straightforward cases the first RB claim year will be 2008/09 or the first year of UK residence if later.

[21] Section 16ZA(7) ITA provides: "Section 835BA (deemed domicile) applies for the purposes of this section." This is the standard wording to apply the deemed domicile rules.

Para (b) will not be common: it will apply where (in short):

(1) An individual becomes deemed domiciled in the UK.
(2) The individual leaves the UK for 5 years.
(3) The individual becomes UK resident again, but not deemed domiciled, as time starts running again for the 15-year rule.

An individual within s.809D or 809E (sub-£2k taxpayer or non-taxpayer) is not within s.809B so all losses are allowable in the usual way.

65.16.5 *Permanent effect of election*

Section 16ZA TCGA provides:

> (2) Where an individual makes an election under this section in respect of a tax year, the election has effect in relation to the individual for—
> (a) that tax year, and
> (b) all subsequent tax years.
> ...
> (5) An election under this section is irrevocable.

Thus a taxpayer on claiming the remittance basis has a (more or less) once in a lifetime opportunity to make an election under s.16ZA (which I call a **"foreign-loss election**") and this election (if made) applies for the rest of their life. It is impossible to know what will be the best choice and the taxpayer will have to guess. This is almost unprecedented in tax legislation.

65.16.6 *Individual becomes UK dom*

A foreign-loss election lapses if and when the individual becomes UK domiciled. Section 16ZA TCGA provides:

> (2A) But if after making an election under this section an individual becomes domiciled[22] in the UK at any time in a tax year, the election does not have effect in relation to the individual for—
> (a) that tax year, or
> (b) any subsequent tax year.
> (2B) Where an election made by an individual under this section in respect of a tax year ceases to have effect by virtue of subsection (2A), the fact that it has ceased to have effect does not prevent the individual from making another election under this section in respect of a later tax year.

[22] See above footnote.

The professional bodies have published a set of Q&As[23] which includes two questions on this topic. Question 10 provides:

> Do surplus losses which arise while a capital loss election is in force remain available to offset gains accruing once deemed domiciled?
>
> **Suggested answer put to HMRC**
>
> Section 16ZA TCGA provides for an election, the consequence of which is to confirm foreign losses as allowable losses. While the election has effect, s16ZB, s16ZC and s16ZD also have effect (subject to other specific criteria) and provide for special ordering rules on how to offset foreign losses.
>
> Once an individual becomes deemed domiciled, s16ZA(2A) disapplies the election for that, and subsequent, tax years and consequently s16ZB, s16ZC and s16ZD are also turned off. Surplus foreign losses which arose while the election was in place remain as allowable losses under s16 once the individual becomes deemed domiciled. And since the special ordering rules at s16ZB, s16ZC and s16ZD no longer apply, the surplus losses may be offset against both UK and foreign gains which arise (subject to any normal restrictions that might apply eg, to a foreign loss that is also a clogged loss) once the individual is deemed domiciled.
>
> For individuals who did not make the foreign capital loss election, any losses which accrued prior to becoming deemed domiciled are not allowable losses and remain so.
>
> **HMRC Comments**
>
> Agreed.

Question 11 provides:

> Can capital losses which are realised while deemed domiciled be offset against Remittance Basis foreign chargeable gains that are remitted to the UK during the deemed domiciled period?
>
> *Suggested answer*
>
> S16ZB operates to stop allowable losses being offset against earlier foreign chargeable gains remitted at a later date (i.e. to prevent the effective carry back of losses). Loss relief is instead provided by the special ordering rules in s16ZC.

[23] The full title is "Rebasing and Adjustment to the CGT Foreign Capital Losses Election Professional Bodies Q&A". See *https://www.icaew.com/-/media/corporate/files/technical/tax/tax-faculty/taxguides/2019/taxguide-09-19-foreign-capital-losses.ashx* or *https://assets-eu-01.kc-usercontent.com/220a4c02-94bf-019b-9bac-51cdc7bf0d99/225a7316-5841-4f2e-9a4b-cd789906664a/RebasingAdjustments.pdf*

> However, once an individual becomes deemed domiciled, s16ZA(2A) disapplies the election under s16ZA for that, and subsequent, tax years and consequently s16ZB, s16ZC and s16ZD are also turned off. Thus, allowable losses which are realised while the individual is deemed domiciled can be offset against Remittance Basis foreign chargeable gains remitted while the individual is deemed domiciled.
>
> It should be noted that the same result applies where the individual did not make the foreign capital losses election (that is a loss realised after an individual is deemed UK domiciled can be set against a gain that: (i) was realised when an individual was not deemed UK domiciled; and (ii) is remitted when the individual is deemed UK domiciled).
>
> **HMRC Comment**
>
> Agreed

65.16.7 *Making election/time limit*

RDR Manual provides:

> **RDRM32060 - Foreign chargeable gains loss election** [Jan 2019]
>
> The election should be made for the first year for which the remittance basis is claimed, irrespective of whether the individual has any foreign chargeable gains or overseas losses in that year. The election will usually be expected to be made within the white space in the Capital Gains supplementary pages of the same SA Return as the first remittance basis claim is made. ...

The election is made in form SA108 (2022/23) box 54 (Any other information). HMRC, “Capital gains summary notes” (2022/23) provides:

> if you’re making a claim or an election for losses on foreign assets to be allowable losses, write in the box ‘I elect for my foreign losses to be allowable losses’

The usual time limits apply.[24] The best approach may be to wait until the time limit approaches and make the decision then to elect or not, with the benefit of four year’s hindsight.

65.17 Foreign loss disallowed if no election

Section 16ZA(3) TCGA provides:

> If an individual does not make an election under this section in respect of a year referred to in subsection (1)(a) or (b), foreign losses accruing

[24] See 123.2.3 (Capital loss claims).

to the individual in—

(a) that tax year, or

(b) any subsequent tax year except one in which the individual is domiciled[25] in the UK,

are not allowable losses.

In short, if no election is made, foreign losses accruing to a foreign domiciliary are not allowable:

(1) in the year that a s.809B remittance basis claim is made; or
(2) in any subsequent year (even if no remittance basis claim is made in that year) up to the acquisition of UK domicile

There are therefore four or five distinct periods for a UK resident foreign domiciled individual, assuming no foreign-loss election is made:

(1) Before 2008/09: foreign losses are disallowed[26]
(2) From 2008/09:
    (a) Period when UK resident but before making a s.809B remittance basis claim: foreign losses are allowable
    (b) The first RB-claim year, and subsequently while non-domiciled: foreign losses are disallowed
    (c) After becoming UK domiciled: foreign losses are allowable
(3) If individual ceases to be UK deemed domiciled and returns to UK, the para (2) cycle begins again.

If a foreign-loss election is not made, UK losses are allowable in the normal way, and so:

(1) Set against
    (a) UK gains and
    (b) foreign gains (whenever realised) in the year that they are remitted to the UK; or

[25] Section 16ZA(7) ITA provides: "Section 835BA (deemed domicile) applies for the purposes of this section." This is the standard wording to apply the deemed domicile rules.

[26] Section 16(4) TCGA as it had effect before 2008/09 provided:

> "In accordance with section 12(1), losses accruing on the disposal of assets situated outside the UK to an individual resident or ordinarily resident but not domiciled in the UK shall not be allowable losses."

This wording is confusing. It means that losses accruing to a foreign domiciliary on a disposal by the foreign domiciliary of foreign situated assets are not allowable. It does not mean that losses are not allowable on a disposal (by any person) to a foreign domiciliary.

(2) Carried forward.

Para 3(5) sch 8 F(no.2)A 2017 provides a transitional rule:

> Where—
> (a) an individual makes an election under section 16ZA of TCGA 1992 as originally enacted for a tax year before the tax year 2017-18, but
> (b) after making the election the individual becomes domiciled in the UK at any time in a tax year,
>
> sections 16ZB and 16ZC of that Act do not have effect in relation to the individual by virtue of that election for that tax year or any subsequent tax year.

65.17.1 *Planning*

Consider the position before disposing of an asset on which an (otherwise) non-allowable loss will accrue. Possibilities are:
(1) making assets UK situate prior to disposal[27]
(2) an inter-spouse transfer[28]

A foreign domiciliary who claims the remittance basis may be worse off than if they had not made the claim, if (1) they fail to make a foreign-loss election (2) they realise disallowed foreign losses; and (3) they remit sufficient gains to the UK.

An individual who comes to the UK may consider:
(1) realising historic foreign losses in the first year of residence (or in the UK part of a split year); and
(2) not making a s.809B remittance basis claim until after the first year of residence.

65.18 Effect of loss foreign-election

For the purposes of the following discussion it is necessary to distinguish:
(1) the year in which a gain actually accrues and
(2) the year in which a gain is remitted (the year of remittance)

A remittance basis taxpayer has three types of foreign gains:
"**Promptly-remitted gains**" means gains remitted in the year that the gains actually accrue.

[27] Contrast 103.24 (Planning: Changing situs).
[28] See 65.22 (Inter-spouse transfer).

"**Subsequently-remitted gains**" means gains which are remitted in a year after the gains actually accrue.
"**Unremitted gains**" means gains which are not remitted and so remittance basis exempt.

Para 2 sch 1 TCGA provides:

> (1) This paragraph applies if—
> (a) gains are treated as accruing to an individual in a tax year as a result of paragraph 1 [remittance basis],[29]
> (b) the tax year is later than the one ("the actual year of accrual") in which those gains actually accrued to the individual, and
> (c) an election under section 16ZA (election for foreign losses to be allowable losses) has effect for both the tax year and the actual year of accrual.
> (2) No allowable losses may be deducted under section 1 from the gains.
> (3) This prohibition—
> (a) applies regardless of whether or not the allowable losses accrue on disposals of foreign assets, but
> (b) does not prevent the prior application of paragraph 3(3) in relation to the gains (which contains a rule for reducing the amount of the gains by reference to losses).

In short, para 2 applies to subsequently-remitted gains accruing in or after the RB-claim year. The rules do not apply to gains which accrued before that year. In particular, the rules do not apply to pre-2008 gains, since no s.809B claim or foreign-loss election was made in those years.
The CG Manual provides:

> **CG25330B: no effective carry back of foreign allowable losses: TCGA92/S16ZB*** [May 2020]
> If an election has been made for foreign losses to remain allowable losses (see CG25330A) then a loss may not be set against chargeable gains taxable on the remittance basis in a tax year -known as the applicable tax year[30] - after the foreign chargeable gains which are being remitted arose, if the foreign chargeable gain arose in a year before the loss. This means that a loss cannot be "carried back" and set against a foreign chargeable gain of an earlier year, even if that gain is not taxed until the year of loss because of the remittance basis.

[29] See 17.14 (Charge on remitted gains).
[30] The Manual is using the terminology of the pre-2017 legislation.

> **Example:** (Henri)
> H elects to use the remittance basis in 2014-15 and has an unremitted foreign chargeable gain of £1m in that year. He also elects for his foreign losses to remain allowable losses. In 2016-17 he remits the gain to the UK and has a foreign loss of £500,000. He does not elect to use the remittance basis in 2016-17. The relevant tax year[31] is 2014-15 and the applicable tax year is 2016-17. Foreign chargeable gains accrued in or after the relevant tax year but before the applicable tax year and a chargeable gain is treated as accruing in the applicable tax year when those gains are remitted. The conditions of TCGA92/S16ZB(1)* are therefore satisfied. The remitted gains are known as relevant gains and are excluded from the total amount of chargeable gains from which losses are deducted under TCGA92/S2*. The relevant gains are nonetheless included in the amount on which Capital Gains Tax is charged for the applicable tax year (TCGA92/S16ZB(2)-(3)*). So the £500,000 loss may not be set against the chargeable gain of £1m treated as accruing to Henri in 2016-17.
> *These provisions were re-written for disposals from 6 April 2019 see CG10150.
> Note that this prohibition of carry-back applies to all losses, not just to foreign losses.
> Note also that this prohibition applies whether or not the remittance basis applies in the applicable year, ie the year in which the foreign chargeable gain is remitted.

65.18.1 *Setting losses against gains*

Para 3 sch 1 TCGA directs that losses are to be used in a manner which is not the most favourable to the taxpayer:

> (1) This paragraph applies in the case of an individual for a tax year if—
> (a) the remittance basis applies to the individual for the tax year, and
> (b) an election under section 16ZA has effect for the tax year.
> (2) Allowable losses accruing to the individual must be matched to chargeable gains accruing to the individual in accordance with paragraph 4.
> (3) If allowable losses are matched to chargeable gains accruing on disposals of foreign assets—
> (a) which actually accrue in the tax year, but
> (b) which are, as a result of paragraph 1, treated as not accruing in

[31] The Manual is using the terminology of the pre-2017 legislation.

> the tax year,
>
> the amount of those gains is reduced by the matched amount (and the allowable losses are reduced accordingly).
>
> (4) So far as allowable losses are matched to other chargeable gains, they are deducted from chargeable gains accruing to the individual in the tax year.
>
> (5) This is subject to—
>
> (a) paragraph 2 (no use of allowable losses against foreign gains remitted in later year), and
>
> (b) section 1E(4) (prohibition of deduction of losses from gains treated as accruing under section 87, 87K, 87L or 89(2)).

So in my terminology, losses are set against gains in this order:

(a) promptly-remitted gains;
(b) unremitted foreign gains;
(c) UK gains.

Losses set against (b) may not be wasted but they are not used until the unremitted gains are remitted.

Para 4 sch 1 TCGA provides:

> (1) This paragraph explains how, for the purposes of paragraph 3, allowable losses are matched to chargeable gains in the case of an individual to whom that paragraph applies for a tax year.
>
> (2) The losses are matched to the gains in the following order—
>
> *first*, gains actually accruing to the individual in the tax year on the disposal of foreign assets so far as they are remitted to the United Kingdom in the tax year;
>
> *second*, gains actually accruing to the individual in the tax year on the disposal of foreign assets so far as they are not remitted to the United Kingdom in the tax year;
>
> *third*, any other gains accruing to the individual in the tax year.
>
> (3) If the tax year is a split year, the matching under the first and second steps is to be done by reference to the extent to which the gains are, or are not, remitted in the UK part of the year.
>
> (4) If there are losses to be matched to gains under the second step but the losses are insufficient to eliminate the gains—
>
> (a) the losses are to be matched against gains accruing on the most recent day first (and then the next most recent day and so on until none of the losses remain), and
>
> (b) if losses cannot be matched fully against gains accruing on a particular day, the appropriate portion of the losses is matched against each of the gains.

(5) "The appropriate portion" means the amount of each gain accruing on the day divided by the total amount of all of the gains accruing on the day.

65.18.2 *HMRC example*

The CG Manual provides:

> **CG25330D - Remittance basis: matching rules for relieving losses: example: Section S16ZC TCGA 1992** [Nov 2019]
>
> *Example (Johann)*
>
> J is a remittance basis user in all years. He has made an election under Section 16ZA TCGA 1992 so his foreign losses are allowable, subject to the rules in Section 16ZB TCGA 1992 and Section 16ZC TCGA 1992. His history of gains and losses is as follows:

	UK gains	UK losses	Foreign gains	Cash brought to UK	Foreign losses
2008-09	100,000	25,000	30,000	0	0
2009-10	17,000	5,000	50,000	60,000[32]	30,000
2010-11	0	0	12,000	20,000[33]	25,000

The HMRC analysis is as follows:

2008-09

Relevant allowable losses are £25,000 (Section 16ZC(7) TCGA 1992)

Chargeable gains classified and ordered according to Section 16ZC(3) TCGA 1992:

a) 2008-09 foreign chargeable gains remitted	Nil
b) 2008-09 foreign chargeable gains not remitted	30,000
c) 2008-09 other chargeable gains [UK gains]	100,000

Step 1 deduct relevant allowable losses from the gains so ordered. The net gains are therefore:

a) 2008-09 foreign chargeable gains remitted	Nil
b) 2008-09 foreign chargeable gains not remitted	5,000
c) 2008-09 other chargeable gains	100,000

Step 2 the total amount of chargeable gains on which tax is charged by Section 2(2) TCGA 1992 is equal to the amount it would be if there were no relevant allowable losses (i.e. £100,000 UK gains) LESS the total amount deducted at step 1 from gains in classes (a) and (c) (i.e. £Nil).

So in 2008-09 Capital Gains Tax is charged on £100,000. The effect of the rules is to use allowable losses to frank unremitted foreign chargeable gains even though that leaves UK gains in charge.

[32] [HMRC's note] accepted after enquiry to establish facts and application of mixed fund rules ... as being £30,000 from 2008-09 plus £30,000 from 2009-10

[33] [HMRC's note] accepted after enquiry to establish facts and application of mixed fund rules ... as being all from 2009-10

The foreign chargeable gain not remitted is reduced by the allowable UK loss deducted from it at step 1 so going forward it becomes £5,000 (Section 16ZD (3) TCGA 1992). This is important to remember if it is remitted in a later year (see below).

2009-10

Relevant allowable losses are £35,000 (Section 16ZC(7) TCGA 1992)

Chargeable gains classified and ordered according to Section 16ZC(3) TCGA 1992:

a) 2009-10 foreign chargeable gains remitted	30,000
b) 2009-10 foreign chargeable gains not remitted	20,000
c) 2009-10 other chargeable gains	17,000

Step 1 deduct relevant allowable losses from the gains so ordered. The net gains are therefore:

a) 2009-10 foreign chargeable gains remitted	Nil
b) 2009-10 foreign chargeable gains not remitted	15,000
c) 2009-10 other chargeable gains	17,000

Step 2 the total amount of chargeable gains on which tax is charged by Section 2(2) TCGA 1992 is equal to the amount it would be if there were no relevant allowable losses(i.e.

£35,000 remitted gains[34]
£17,000 UK gains
£52,000

LESS the total amount deducted at step 1 from gains in classes (a) and (c) (i.e. £30,000).

So in 2009-10 Capital Gains Tax is charged on £22,000 (52,000 - 30,000). The effect of the rules is to use allowable losses to frank unremitted foreign chargeable gains even though that leaves UK gains in charge.

The foreign chargeable gain not remitted (category (b)) is reduced by the loss deducted from it at step 1, so it becomes £15,000 (Section 16ZD(3) TCGA 1992). This will be significant if it is remitted in a later year (see below).

2010-11

Relevant allowable losses are £25,000 (Section 16ZC(7) TCGA 1992)

Chargeable gains classified and ordered according to Section 16ZC(3) TCGA 1992:

a) 2010-11 foreign chargeable gains remitted	Nil
b) 2010-11 foreign chargeable gains not remitted	12,000
c) 2010-11 other chargeable gains	Nil

Step 1 deduct relevant allowable losses from the gains so ordered. The net gains are therefore:

a) 2010-11 foreign chargeable gains remitted	Nil
b) 2010-11 foreign chargeable gains not remitted	Nil
c) 2010-11 other chargeable gains	Nil

Step 2 the total amount of chargeable gains on which tax is charged by Section 2(2) TCGA 1992 is equal to the amount it would be if there were no relevant

[34] £5,000 from 2008-09 (after set-off of 2008-09 losses) plus £30,000 from 2009-10

allowable losses (i.e.
£15,000, the adjusted residue of the 2009-10 gain; see above)
LESS the total amount deducted at step 1 from gains in classes (a) and (c) (i.e. £Nil).
So in 2010-2011 Capital Gains Tax is charged on £15,000. Note that none of the foreign loss arising in 2010-2011 can be relieved against the chargeable gain which accrued in the earlier year, even though that gain was not remitted until the year of loss. This is consistent with the fact that UK losses cannot be carried back to set against gains of earlier years.
The foreign chargeable gain not remitted (category (b)) is reduced by the loss deducted from it at step 1, so it becomes £Nil (Section 16ZD (3) TCGA 1992). It has been franked by the loss of the period and will not give rise to a taxable remittance if cash etc representing it is brought to the UK in a later year.
The unused balance of allowable losses (£25,000 − 12,000 = £13,000) is carried forward and may be used to relieve chargeable gains of later years. (Section 16ZD(2) TCGA 1992).

65.18.3 *Record-keeping*

Record-keeping from 2008 is onerous. Before 2008 a taxpayer had only to keep a total of brought forward losses and remitted gains. But now (if a taxpayer makes a foreign-loss election) they need to keep track of which year losses accrue, and which day and year subsequently-remitted gains accrue, in order to apply these loss rules.

65.19 When is loss election worthwhile

Careful timing of realisation of losses and of remittances is necessary in order to maximise loss relief if a foreign-loss election is made. A few general points can be made.

A person who will realise UK losses and not foreign losses should not make a foreign-loss election.

A person who will realise UK losses and foreign losses, but can use inter-spouse transfers to avoid disallowable foreign losses should not make an election.

A person who will realise foreign losses and not UK losses should make an election.

In other cases it is a matter of guesswork.

65.20 Basic planning for losses

The restriction on carry-back of losses means that careful timing of disposals may be needed to match losses to gains.

The realisation of losses by non-residents is wasteful. Unless the temporary non-residence rules apply:

(1) An individual leaving the UK may consider realising losses before they become non-resident.

(2) An individual coming to the UK may postpone the disposal of assets with unrealised losses until they become UK resident.

65.21 Capital-loss TAAR

Capital loss relief is restricted by a TAAR.[35] Section 16A(1) TCGA provides:

> For the purposes of this Act, "allowable loss" does not include a loss accruing to a person if—
>
> (a) it accrues to the person directly or indirectly in consequence of, or otherwise in connection with, any arrangements, and
>
> (b) the main purpose, or one of the main purposes, of the arrangements is to secure a tax advantage.

I refer to this as the **"capital-loss TAAR"**.

HMRC have issued guidance which I call the "**loss-TAAR guidance**".[36]

There are two stages to the application of s.16A:

(a) *Loss-arrangement analysis*: To identify the arrangement[37] within (a): I refer to such arrangements as a "**loss-arrangement**".

(b) *Main-purpose analysis* To ascertain whether the (or a) main purpose of the loss-arrangement is to secure a tax advantage **("a tax-advantage purpose"**).

65.21.1 *Loss-arrangement*

Section 16A(1)(a) TCGA provides:

> For the purposes of this Act, "allowable loss" does not include a loss accruing to a person if—
>
> (a) it accrues to the person directly or indirectly in consequence of, or otherwise in connection with, any arrangements...

At first glance s.16A(1) contains two conditions, but para (a) in isolation

[35] See 3.1 (TAAR/unallowable purpose test).

[36] CG Manual Appendix 9 CGT: avoidance through the creation and use of capital losses [Jul 2019].

[37] I do not distinguish between plural *arrangements* and the singular *arrangement*.

does not amount to anything: a loss will (more or less) never accrue without an arrangement.[38] The purpose of para (a) is to *identify* "the arrangements" referred to in para (b), that is, the arrangements whose main purpose must be ascertained. One cannot ascertain the purpose of an arrangement until one knows what the arrangement is.

"The arrangements" are those:

(1) in consequence of which (directly or indirectly) the loss accrues to the person,[39] or

(2) in connection with which, the loss accrues to the person.

65.21.2 *Gain-transfer arrangement*

Correct identification of the arrangement may make a crucial difference to the outcome. Suppose:

(1) H realised a loss.

(2) Some time later there is an arrangement (a "gain-transfer arrangement") under which:

   (a) W transfers an asset to H (by gift or sale).

   (b) H disposes of the asset and realises a gain.

   (c) Possibly, H transfers the proceeds of sale back to W (by gift or payment of the purchase price).[40]

The main purpose of the gain-transfer arrangement is to secure that a gain is set against H's loss. However it is considered that there is no loss-arrangement (so the TAAR does not apply), because:

(a) the loss did not arise in consequence of the gain-transfer arrangement; and

(b) the loss did not accrue in connection with the gain-transfer arrangement. The loss accrued entirely independently of that arrangement, indeed (let us assume) before that arrangement was ever contemplated.

[38] A disposal on which a loss accrues is a single step, but probably constitutes "arrangements" as the plural includes the singular. If that is right then a loss can never accrue without an arrangement. But that does not matter, as a single step arrangement is not likely to have a tax-advantage purpose.

[39] The statutory words "directly or indirectly in consequence of" are otiose, as if the loss accrues *in consequence of* the arrangements it must accrue *in connection with* the arrangements.

[40] In practice step (c) is not necessary, and it may be wise not to do it; but it is included for the purpose of the example.

Steps (1) and (2) do not constitute a single arrangement.[41]

Section 16A(3) TCGA provides:

> For the purposes of subsection (1) it does not matter—
> (a) whether the loss accrues at a time when there are no chargeable gains from which it could otherwise have been deducted, or
> (b) whether the tax advantage is secured for the person to whom the loss accrues or for any other person.[42]

That does not add anything, or anything much. One would not expect an anti-avoidance rule to be narrowly construed. Section 16A(3)(a) does not alter the analysis of the gain-transfer arrangement: the reason that the arrangement is not a loss-arrangement is not *because* the loss accrues at a time when there are no chargeable gains (although it does accrue at such a time).

A similar point arises with clogged losses. Suppose:

(1) T transfers an asset to C (a connected person, perhaps a trust made by T) by gift or by sale. A loss accrues which is a clogged loss.[43]

(2) Some time later:
  (a) T transfers another asset to C, by gift or sale, on which a gain accrues. The clogged loss can be set against the gain.
  (b) C sells the asset.
  (c) Possibly, C transfers the proceeds of sale back to T (by gift or payment of the purchase price).[44]

Step 2 constitutes a gain-transfer arrangement with a tax-advantage purpose. However it is considered that there is no loss-arrangement (so the TAAR does not apply), because:

(a) the loss did not arise in consequence of the gain-transfer arrangement; and

(b) the loss did not accrue in connection with the gain-transfer arrangement. The loss accrued entirely independently of that

arrangement, indeed (let us assume) before that arrangement was ever

[41] The GAAR might need separate consideration.

[42] What is the point of s.16A(3)(b) TCGA? How can a tax advantage be secured for a person *other* than the person to whom the loss accrues? The answer is if the loss accrues to a non-resident trust or company, for the tax advantage might be enjoyed by a settlor (under s.86) or a beneficiary (under s.87) or a participator (under s.3).

[43] See 65.9 (Loss on connected person disposal).

[44] In practice step (c) is not necessary, and it would be wise not to do it; but it is included for the purpose of the example.

contemplated.

65.21.3 *"Tax advantage"*

Section 16A(2) TCGA provides the standard definition of "tax advantage".[45]

65.21.4 *Tax-advantage purpose*

Section 16A(1) TCGA provides:

> For the purposes of this Act, "allowable loss" does not include a loss accruing to a person if...
>
> (b) the main purpose, or one of the main purposes, of the arrangements is to secure a tax advantage.

Where the (or a) main purpose is to secure a tax advantage, I refer to it as **"a tax-advantage purpose"**.

65.21.5 *"Genuine" loss and the TAAR*

The loss-TAAR guidance provides:

> The [TAAR] does not apply to a simple sale at arm's length of an investment standing at a loss and the setting of that loss against gains, utilising the statutory relief for losses. Such a transaction does not constitute arrangements whose main purpose is to secure a tax advantage, as the main purpose is the disposal of the unprofitable investment.

And again:

> Nor will the [TAAR] ordinarily[46] prevent a genuine loss on a real disposal of an asset from being set off against a person's own gains, including the case where, before the real disposal that gives rise to the genuine loss, the person acquires the relevant asset from a spouse or civil partner at no gain/no loss under section 58 [TCGA].

According to this, s.16A does not (in short) apply to genuine losses, and a loss following an inter-spouse transfer ("a spouse-transfer loss") is an example of a genuine loss.

[45] See 3.19.1 (Tax advantage: Definitions).

[46] The word "ordinarily" seems unnecessary, given that the sentence is already qualified by the requirements of a "genuine" loss and a "real" disposal; but the author did not want to give any hostage to fortune.

What is meant by genuine loss? At first the unlawyerlike term "genuine" seems almost impossible to pin down, but I think that the concept intended here is the tax avoidance/mitigation distinction.[47] A loss is genuine (in the intended sense) if it is in accordance with the intention of parliament, which may be inferred from indicia such as its economic consequences.

The loss-TAAR guidance provides:

> The straightforward use of a statutory relief does not of itself bring arrangements within the TAAR.

The straightforward use of a statutory relief (almost) always involves an arrangement, and often, perhaps usually, there is a tax-advantage purpose; but it is not tax avoidance.

The loss-TAAR guidance gives 18 examples:

Example	**Facts**	**Result**
1	Avoidance scheme: loss on second-hand policy	Caught
2	Avoidance scheme manipulating co value	Caught
3	Avoidance scheme: matched options	Caught
4	H sells to realise loss; W buys unbeknown to H (!)	OK
5	Inter-spouse transfer to transfer loss to spouse	OK
6	H sells, W buys same shares & transfers to H	Caught
7	As eg 6, but W buys different no. shares	"less likely" caught
8	As eg 6, but W waits 30 days	OK
9	Share sale to realise loss + repurchase after 30 days	OK
10	Sale to realise loss + option to repurchase	Caught
11	Trustees sell to realise loss	OK
12	As eg 11, + trustees fund beneficiary who buys asset	OK
13	As eg 11	OK
14	Trustees distribute asset to beneficiary to realise loss	OK
15	Disposal to purchase EIS shares & obtain EIS relief	OK
16	Disposal of EIS shares	OK
17	Liquidation of company	OK
18	Trustees make deliberate sch4B transfer of value	Caught

Examples 15 and 16, concerning EIS relief, illustrate the "genuineness" point. Example 15 is a sale (realising a loss) in order to raise funds to purchase EIS shares:

> An individual, J, invests in shares under the Enterprise Investment Scheme (EIS), with a view to securing income tax relief.

[47] See 3.21.3 ("Genuine").

> In order to fund the purchase of the shares J sells a capital asset which is standing at a loss to a third party.
>
> To decide whether or not the TAAR applies, it is necessary to consider whether there have been arrangements, and whether a main purpose of those arrangements was the securing of a tax advantage.
>
> In this case it is clear that there have been arrangements within the meaning of the legislation, as J has disposed of the capital asset and used the proceeds to fund the purchase of the EIS shares.

That is correct.

> To decide what J's main purpose was in entering into these arrangements, it is necessary to consider the overall economic objective of the arrangements, and whether that objective is being fulfilled in a straightforward way, or whether additional, complex or costly steps have been inserted.
>
> J has made a real disposal of a capital asset in a straightforward way, and has incurred a genuine economic loss. There have been no additional, costly or complex steps inserted into the transactions. The fact that the disposal has been made with a view to using the proceeds to invest in shares which fall within the EIS tax regime does not mean that the arrangements have been entered into with a main purpose of securing a tax advantage, because the straightforward use of a statutory relief does not of itself bring arrangements within the TAAR. Hence the TAAR does not apply.

Example 16 is the disposal of EIS shares at a loss:

> Y has disposed of a capital asset and realised a chargeable gain, but the gain is deferred because he invests a sufficient amount in shares issued under the Enterprise Investment Scheme (EIS).
>
> Unfortunately the EIS company in which Y has invested does not succeed, and the shares later become worthless.
>
> Y makes a negligible value claim under section 24(2) and the resulting loss on the shares is set against
>
> [a] the original gain that is brought back into charge under the EIS rules,
>
> [b] or possibly against Y's income under [s.131 ITA].
>
> To determine whether or not the TAAR applies so that the losses Y has realised on the shares in the EIS company are not allowable, it is necessary to decide whether or not arrangements have been entered into with a main purpose of realising a tax advantage. It is clear that there have been arrangements...

More analytically, the question is not *whether* there are arrangements, but *what* are the arrangements. HMRC assume that the arrangement is (1) the acquisition of the EIS shares and (2) the negligible value claim. I doubt if these unconnected steps constitute one set of arrangements. However it does not matter:

> ... and to decide whether securing a tax advantage was a main purpose of those arrangements it is necessary to take account of all the circumstances in which the arrangements were entered into, including the participants' overall economic objective, and whether that objective is being fulfilled in a straightforward way, or whether additional, complex or costly steps have been inserted.
>
> In this case, Y has made a real investment in an EIS company, and there is nothing to suggest that the EIS company was other than a genuine investment opportunity from Y's perspective. The negligible value claim only creates a disposal for capital gains purposes. No additional, costly or complex steps have been inserted as part of the arrangements; Y is taking advantage of the tax reliefs offered in respect of EIS investments in a straightforward manner. The loss Y suffers on the shares in the company is a real economic loss. Taken together, these factors suggest (?) that there was no main purpose of securing a tax advantage and so Y's loss is allowable. It makes no difference that a gain on the EIS shares may have been exempt. The [capital-loss TAAR] does not have any effect on the normal operation of the relief.

The difficulty is to reconcile the loss-TAAR guidance with the words of the statute. One might simply give up at this point:

> We think that the words "**tax avoidance**" should be substituted for "**tax advantage**" ... the guidance contradicts the legislation. Some transactions (such as transfers between spouses) are stated in the guidance not to be caught by the TAAR, when it is strongly arguable that they are caught.[48]

[48] CIOT consultation response (8 February 2007). An earlier version of the loss-TAAR guidance (27 March 2007) stated this expressly:

> "5. The effect of the legislation will be to restrict the use of capital losses resulting from the arrangements where *tax avoidance* is the main purpose or one of the main purposes of the arrangements."

But presumably HMRC noticed the inconsistency, and the guidance was amended on 19 July 2007 to read:

> "The legislation is intended to have effect where a person enters deliberately and knowingly into arrangements to gain a tax advantage."

If that is right, then the HMRC guidance is wrong. That is CIOT view.[49] The decision whether or not to apply the legislation to inter-spouse transfers (and many other cases) would then made by HMRC with no appeal by the taxpayer (outside judicial review). However, our tools of construction are not so weak as that. There are at least two possible routes to reach the HMRC view:[50]

(1) A genuine transaction does not give rise a tax advantage. That is, the reference to "tax advantage" should be construed to mean tax avoidance in the strict sense.
(2) In the case of a genuine transaction, a tax-advantage purpose is not a main purpose.

In either case, the statutory words are construed restrictively. Perhaps it does not matter which analysis is chosen. HMRC rely on the concept of main purpose:

> 38. The rule does not apply to a simple sale at arm's length of an investment standing at a loss and the setting of that loss against gains, utilising the statutory relief for losses. Such a transaction does not constitute arrangements whose main purpose is to secure a tax advantage, as the main purpose is the disposal of the unprofitable investment.

In the normal sense of the expression, a disposal of an asset standing at a loss could have the main purpose of obtaining loss relief. In March,

[49] "2.1 CIOT disagrees strongly with the majority of HMRC's Guidance, believing it to be in contradiction to the clear wording of section 16A. While it would be tempting to rely on HMRC's leniency, CIOT believe that it may be dangerous to do so.
2.2 CIOT agrees HMRC's *conclusions* in examples 1, 2, 3, 6, 7, 10 and 18 of HMRC Guidance. CIOT also agree that, depending upon the exact fact pattern, HMRC's conclusions in examples 12, 13 and 17 may also be correct.
2.3 However, CIOT disagrees with HMRC's *reasoning* in all bar the first example. In some cases (examples 2, 3, 10 and 17) this is because HMRC's reasoning does not go far enough. In the remaining cases, CIOT believes HMRC's reasoning is incorrect.
2.4 CIOT disagrees with both HMRC's *conclusions* and their *reasoning* in examples, 4, 5, 8, 9, 11, 14, 15 and 16 believing that it is unduly lenient and does not accord with the wording of section 16A TCGA. CIOT believes that HMRC's reasoning and conclusions may also be lenient in examples 12, 13 and 17, although this will depend upon the exact factual situation."
CIOT, "TAAR guidance: Comments" (2007)
HMRC did not respond.

[50] A third route is to say that a genuine transaction does not constitute an arrangement.

before the tax-year end, all competent fund managers review their client portfolios and arrange disposals to accrue losses to set against gains. It may be - indeed I think it will often be - the case that but for CGT, these disposals would not take place.

The fact that the investment was unprofitable in the past might constitute the reason for the disposal, but not necessarily. The asset might become profitable in the future. "Past performance is not a guide to future performance" is an investment mantra.

I suggest, therefore, that context shows that the expression "main purpose" should be given a restricted meaning. Whatever the subjective frame of mind of the taxpayer, and regardless of the result of a but-for test, it is only the main purpose to obtain a tax advantage, in cases of tax avoidance, or (which comes to the same thing) in non-genuine transactions. That is not, admittedly, the most natural meaning of "main purpose", but it is a possible meaning, and if necessary supportable on *Pepper v Hart* grounds. In other words, purpose is a subjective question of fact, but *main* purpose is a legal concept.

The reader may wonder whether this discussion matters, given that HMRC have stated that they will not normally challenge, say, a spouse-transfer loss. On a constitutional level it matters to those who believe that tax should be based on law and not concession and discretion. On a practical level it matters if HMRC decide to change their practice (which the IR20 debacle shows is not a theoretical possibility) or if they apply it inconsistently.

65.21.6 *Sale and repurchase*

Loss-TAAR guidance example 9 is a straightforward sale and repurchase after 30 days:

> An individual, R, who has realised a chargeable gain in a particular tax year, sells shares in a company, X plc., which are standing at a loss, to an unconnected third party.[51] R wishes to offset the resulting capital loss against the other chargeable gain.
>
> 31 days later R buys back the same number of shares in X plc., again from an unconnected third party.[52]
>
> To decide whether or not the TAAR applies, it is necessary to consider whether there have been arrangements, and as for example 8, this seems

[51] If the sale is to a connected person, the loss is restricted.

[52] It should not matter that the purchase is from a connected person.

> to be the case here.

More analytically, the question is not *whether* there are arrangements, but *what* are the arrangements. The loss-arrangement is (1) the sale and (2) the repurchase.

> The next question, therefore, is whether the arrangements have a main purpose of securing a tax advantage. As for previous examples, this entails examining all the circumstances surrounding the arrangements, considering their overall economic objective, whether that objective is one that the participants might be expected to have, and which is genuinely being sought, and whether that objective is being fulfilled in a straightforward way, or additional, complex or costly steps have been inserted. In this case, the shares were bought back after the 30 day time limit in section 106A(5) TCGA, so the transaction is not within those "bed and breakfasting" rules.[53]
> In disposing of the shares in X plc, R has incurred a real economic loss on a genuine disposal to a third party.

This is not quite right. In disposing of the shares, R did not *incur* a loss. R *accrued* or *realised* the loss which had already been incurred as the asset had fallen in value.

The main-purpose analysis can then begin:

> Provided that R has not entered into some form of contract or agreement to ensure that he is not exposed to a genuine economic risk in respect of the shares during the period they were not in his ownership, this suggests that he has not entered into arrangements with a main purpose of securing a tax advantage. The transactions therefore fall outside the scope of the TAAR.

I suggest the better analysis is that since the statute sets out a 30 day limit, a purchase thereafter is not avoidance, and so not a main purpose.

65.21.7 *Liquidation*

The loss-TAAR guidance provides:

> **Example 17 - capital loss following disposal of company assets**
> M and K are married and between them own all the shares in a property investment company, B Ltd. The shares are standing at a loss but B Ltd owns a valuable property.
> M and K jointly buy the property from B Ltd. for cash at its open market

[53] See 56.12 (Share pooling).

> value and the company distributes its remaining assets, the cash, during its winding up.
>
> M and K realise losses on their shares.

The HMRC analysis is as follows:

> To decide whether or not the TAAR applies, it is necessary to consider whether there have been arrangements, and whether a main purpose of those arrangements was the securing of a tax advantage. In this case, it seems clear that there have been arrangements, so it is necessary to look at what M and K's main purpose in entering into these arrangements was. This can be determined only by looking at all the circumstances surrounding the arrangements.

The author assumes that M and K have the same purpose. That is not necessarily the case, though the fact that they are married suggests that is likely. (The fact that M and K are married is otherwise irrelevant.) Otherwise, so far, this is not contentious.

> In the present example, M and K wanted to wind up B Ltd, but also to retain ownership of the valuable property they controlled via the company. The property was purchased by them from the company at market value, and paid for with real consideration, so there was no artificial reduction in the value of the company.[54] The winding-up of the company allowed the shareholders to realise the economic value of their investment in it in a straightforward way. B Ltd. has simply converted value represented by property into the same value represented by cash, and M and K now own the property directly. This, coupled with the fact that the tax effect of the transactions reflects the economic outcome suggests that there was no main purpose of realising a tax advantage, and so the TAAR will not apply.

It is difficult to take this seriously, but what does emerge is that HMRC do not seek to apply the loss-TAAR to a straightforward liquidation. The same must logically apply if the company were put into liquidation without a prior purchase of its property.

[54] Author's footnote: HMRC suggest that if the sale was at an undervalue, there would have been an artificial reduction in the value of the company, so the loss-TAAR would apply. Normally the sale at an undervalue would be a distribution subject to IT, and the cost of the IT charge on the distribution would exceed the benefit of the loss relief, so the issue is not likely to arise. But if one could devise circumstances where that were not the case (DT relief for the distribution, but not for the chargeable gain, perhaps?) then the point may be valid.

65.22 Spouse-transfer loss

65.22.1 *Tax reasons for spouse transfer*

Suppose an individual ("H") owns an asset which stands at a loss. It will sometimes happen that the position would be improved if the loss accrued to H's spouse ("W") rather than to H. That would be the case if:

(1) W has realised a gain which could be set against the loss.
(2) W expects to realise a gain which could be set against the loss.[55]
(3) W is UK resident and H is non-resident, so his loss is not allowable.
(4) H is a remittance basis taxpayer, and has made a foreign-loss election, so that his loss would be set against foreign gains and so wasted.
(5) H is expected to die and his loss will then cease to be available, but W has a better life expectancy.

Inter-spouse transfers are on a no-gain no-loss basis for CGT.[56] This relief offers possible tax planning:

(1) H gives the asset to W.
(2) W disposes of the asset, and so the loss accrues to her.

65.22.2 *Spouse transfer and the TAAR*

The planning is accepted in loss-TAAR guidance example 5:[57]

> H has shares in S plc which are standing at a loss.
> W has shares in a separate company, T plc, standing at a gain.
> H transfers his shares to W under the no-gain, no-loss rule in section 58 TCGA, and she then sells both holdings of shares.
> The loss on the shares in S plc covers the gain arising from the shares in T plc, and so no CGT is payable by W.

The HMRC analysis is as follows:

> Taking the spouses together, H and W each have shares which they want to sell. What happens in fact is that they do sell their shares, and the economic consequence is that they realise a gain on one set of shares and a loss on the other set. To decide whether or not the TAAR applies, it is necessary to consider whether there have been arrangements, and

[55] An alternative here may be for W to transfer the asset with the gain to H, so H realises the gain and the loss.

[56] See 93.11 (CGT spouse exemption),

[57] The guidance refers to Mr H and Mrs H; I have changed that to H and W, which I find slightly easier to follow.

> whether a main purpose of those arrangements was the securing of a tax advantage. In this case, it seems clear that there have been arrangements, namely the transfer of the shares from H to W.

More analytically, the question is not *whether* there are arrangements, but *what* are the arrangements. Here, the loss-arrangement consists of (1) the transfer to W and (2) the sale by W; not the transfer alone. But it does not matter.

We turn to the main-purpose analysis:

> It is then necessary to look at what the main purpose of H and W in entering into these arrangements was. This can be determined only by looking at all the circumstances surrounding the arrangements. In the present example, H and W wanted to dispose of their shareholdings, and they did this in a straightforward way.

"Straightforward" is not, er, straightforward. It is evaluative, subjective, and a matter of degree. The *most* straightforward way would be for H to sell, not to give the shares to W who then sells.

> They made use of the provisions of section 58 TCGA, which provides the opportunity for spouses (or civil partners) to bring together gains and losses, but again the straightforward use of a statutory relief in this way does not (of itself) bring arrangements within the TAAR.

The same point arises.

> Moreover, the tax outcome of the transactions reflects the economic reality of H and W's situation.

"Economic reality" is vague, evaluative, subjective and often debatable.[58] But in this case the position is clear: in economic reality, W does not realise a loss. The *family unit* (H and W) realises a loss but husband and wife are not now[59] regarded as one person, or one unit, in society generally or for (most) tax purposes (apart from anti-avoidance). That is why the inter-spouse transfer is needed.

> In all the circumstances, this suggests that there was no main purpose of achieving a tax advantage, and where there is no such main purpose the rule does not apply.

[58] See App.7.7 (Economic reality etc).

[59] It is relevant to note that from the inception of CGT until 1988, spouses were one taxable unit, and losses of one spouse were set against gains of the other: s.4(2) Capital Gains Tax Act 1979 (repealed).

A main purpose is to obtain the benefit of the loss on a simple but-for test, the inter-spouse transfer would not otherwise have taken place. Any other view is highly implausible. However the purpose is not to achieve a *tax advantage* in the relevant sense, so it does not count as a main purpose within the sense of the section.

Contrast HMRC example 6:

> As in example 4, H sells shares in a company, in order to crystallise a loss which can then be set against his chargeable gains arising in the year.
> H makes arrangements for his wife W to purchase the same number and class of shares.
> W then transfers the shares back to H on the following day. By virtue of section 58 TCGA this is a no-gain, no-loss transaction.

The author's CGT analysis (leaving the loss-TAAR aside for a moment) is defective. Section 58 is not likely to be relevant, as W acquires the shares at market value so she would not realise a gain on the disposal the next day to H. More importantly, the author overlooks the effect of s.106A TCGA on the acquisition by H.[60] But on the assumption that s.106A does not apply, the passage continues:

> To decide whether or not the TAAR applies, it is necessary to consider whether there have been arrangements, and whether a main purpose of those arrangements was the securing of a tax advantage. In this case it is clear that there have been arrangements, as H has arranged for his wife to purchase the same number and class of shares.

More analytically, the question is not *whether* there are arrangements, but *what* are the arrangements. The arrangements are the sale by H, the purchase by W, and the transfer from W to H.

The main-purpose analysis can then begin:

> It is then necessary to look at what the main purpose of H and W in entering into these arrangements was, and to do so it is necessary to consider the overall economic objective of the arrangements, and whether that objective is being fulfilled in a straightforward way, or whether additional, complex or costly steps have been inserted. Clearly the real economic ownership of the shares has remained with H, which suggests that the disposal of the shares was incidental to some other

[60] See 56.12.2 (Share-matching rules).

> main purpose of the arrangements. The only substantive change here is that a tax loss has been obtained. Since H & W have the same effective holding of shares and no less cash at the end of the arrangements as at the beginning, they have not suffered any corresponding economic loss, which suggests that a main purpose of the arrangements was the securing of that tax advantage. The TAAR will therefore apply and the capital losses claimed by H will not be allowable losses.

There has in fact been a substantive change: W has transferred assets to H so she owns less and he owns more. The difference would be crucial if H became insolvent.

> On a subsequent sale by H any chargeable gain would be greater (or any allowable loss would be smaller) than would have been the case if the arrangements had not been entered into. This does not affect the operation of the TAAR in relation to the losses generated under the arrangements.

Example 7 tweaks two facts: (1) the number of shares purchased by W and (2) W wisely does not transfer the shares to H:

> The situation may arise where variants on the arrangements in example 6 occur. For example, instead of making arrangements for W to buy back the same number of shares as had been sold by H, the couple might arrange for a slightly different number of shares to be bought. Or she might purchase the shares and retain them as part of her own portfolio, not transferring them back to H at all.
>
> To decide whether or not the TAAR applies in such cases, it is still necessary to consider whether there have been arrangements, and whether a main purpose of those arrangements was the securing of a tax advantage. In each case it is clear that there have been arrangements, and so it is necessary to look at what the main purposes of these arrangements were.

The main-purpose analysis can then begin:

> All the circumstances surrounding the arrangements have to be taken into account, and to do so it is necessary to consider the overall economic objective of the arrangements, whether that objective is one that the participants might ordinarily be expected to have, whether that objective is genuinely being sought, and whether it is being fulfilled in a straightforward way, or additional, complex or costly steps have been inserted.
>
> In a case where a slightly different number of shares has been bought

> back by W, but those shares are immediately transferred back to H, it is likely that the securing of a tax advantage would still be one of the main purposes, in which case the TAAR would still apply. But if only a very small proportion of the shares sold by H were then purchased by W and transferred back to H, or if W bought the shares and retained them as part of her own share portfolio, it is less likely that the securing of a tax advantage was one of the main purposes of the arrangements, in which case the TAAR would not apply.

"It is less likely" is not exactly guidance. But the author of the guidance did not want to give a hostage to fortune by venturing into the realm of "unlikely".

Example 7 also raised the intriguing question which arises if W does not transfer the shares to H; but the author forgot to address that.

Example 8 tweaks the facts relating to timing:

> A further variant on the situation in example 6 is that W could buy back the same number and class of shares that had been sold by H, but that she does not do so until, say, 31 days after H has sold the shares.
>
> Again, it seems clear that there have been arrangements, and so it is necessary to look at what the main purpose of H and W in entering into these arrangements was.
>
> So to determine whether or not the TAAR applies all the circumstances surrounding the arrangements have to be taken into account, considering:
>
> - the overall economic objective of the arrangements,
> - whether that objective is one that the participants might be expected to have, and which is genuinely being sought, and
> - whether that objective is being fulfilled in a straightforward way, or additional, complex or costly steps have been inserted.
>
> If W bought back the same number and class of shares which had been sold by H, but did not do so until some weeks after his disposal, it is less likely that the securing of a tax advantage will have been a main purpose of the arrangements, because there will have been a degree of exposure to market fluctuations and therefore a genuine economic risk. As a general rule of thumb HMRC considers that the TAAR will not apply in any case where a sale of shares is followed by their re-purchase after a period exceeding 30 days, provided that the exposure to market fluctuations in that period is real and there are, for example, no additional contracts or arrangements in place that significantly limit any economic risk. This 30 day rule of thumb is derived from the time limit in section 106A(5) TCGA 1992, the rule which operates to counteract

> so-called “bed and breakfasting” transactions.

This is consistent with example 9.[61]

65.23 Loss-TAAR: Critique

IFS say:

> 7.4 ... the width of this relatively simple provision [s.16A TCGA] meant that HMRC needed to publish 17 pages of detailed Explanatory Notes to explain how the legislation would be applied. So, considering the example of the person who sells shares standing at a loss in order to set the loss against a gain on another disposal, the Explanatory Notes explain that this transaction will not be prevented, albeit that the legislation could be used to prevent this.
> 7.5 There are several problems with this approach. First, the Explanatory Notes are not themselves subject to the scrutiny and care in drafting given to legislation. By their nature, Explanatory Notes are not drafted in the precise (?) way required for legislation.
> 7.6 Second, HMRC does not have the power to legislate: taxation can only be imposed by the legislature and while HMRC may decide upon its own interpretation of the legislation, that interpretation is not binding on taxpayers.
> 7.7 Third, the ability of taxpayers to rely on the guidance depends upon the type of transaction involved: if it is a single transaction entered into in reliance on specific guidance, the taxpayer can rely on the guidance (although enforcement may be cumbersome, for the reasons explained below). In contrast, if the taxpayer is seeking to rely on guidance in relation to a continuing state of affairs, the taxpayer is exposed to changes in that guidance. ... [62]

IFS then discussed the important issue of whether the loss-TAAR guidance is enforceable.[63] But the loss-TAAR guidance is intended to give HMRC maximum freedom to disregard their guidance (or at least to give freedom to decide when it should or should not apply, which comes to the same thing):

[61] See 65.21.6 (Sale and repurchase),

[62] TLRC discussion paper 7, “Countering Tax Avoidance in the UK” (2009*)* *https://ifs.org.uk/sites/default/files/output_url_files/dp7.pdf (*Footnotes omitted).

[63] The material, updated, is now in IFS, “HMRC’s Discretion: The Application of the Ultra Vires Rule and the Legitimate Expectation Doctrine” (2014) *http://www.ifs.org.uk/publications/7475* But this is a developing area, and the starting point should now be *Samarkand v HMRC* [2017] EWCA Civ 77.

> Examples of how the legislation will apply in particular circumstances are set out below. These examples are intended to show how different factors will be taken into consideration in deciding whether or not the TAAR applies in a given set of circumstances. They are not designed as templates[64] for deciding whether a loss is or is not caught by the TAAR in any particular case.

Thus unless my view on the meaning of "tax advantage" in s.16A TCGA is adopted, the loss-TAAR guidance is (more or less) unjusticiable: there is no law, only discretion.

In the 8th and subsequent editions of this work, I said:

> The uncertainty caused by provisions such as s.16A (which apply for corporation tax as well as CGT) is a factor which encourages companies... to leave the UK for Ireland, Switzerland or elsewhere.[65] Nevertheless, HMRC regard the provision as "successful"[66] (which in the sense of preventing avoidance it no doubt is). So the current position will continue until HMRC change their view that preventing tax avoidance is a priority that trumps other policy considerations such as the need for certainty and the rule of law.

When lobbying against or critiquing what was (in 2007) perceived as the striking vagueness and uncertainty of the capital loss-TAAR, practitioners did not foresee that this would become a standard form, routinely included in countless new TAARs.[67] But there it is.

[64] "Template" is a metaphor which may mean little or much. It might mean that the examples cannot be relied on for deciding whether a loss is caught by the TAAR. (In that case one might wonder what is their purpose.) Or it might mean that special circumstances may alter the position so the example is not directly applicable; that seems unobjectionable, indeed self-evident.

[65] Freedman et al, "Alternative Approaches to Tax Risk and Tax Avoidance: analysis of a face-to-face corporate survey" (2008) *ideas.repec.org/p/btx/wpaper/0814.html:* "A majority of ... respondents expressed exasperation with the complexity and unpredictability of current anti-avoidance rules, all but one asserting that this was a phenomenon hindering the competitiveness of the UK economy." Brexit issues are likely to put the loss-TAAR uncertainty issue, with countless others, onto the back shelf, because of its higher salience and importance.

[67] See 3.2.1 (Types of unallowable purpose).

65.24 DT relief on gain + loss

The International Manual provides:

> **INTM153150 - Description of double taxation agreements: Capital gains** [Jul 2018]
> ...CSTD Business, Assets & International, Tax Treaty Team would like to see any case where an individual claims relief for capital losses in circumstances where a corresponding gain would be exempt from UK tax under the terms of a double taxation agreement. In the case of companies such losses are not allowable by virtue of TCGA92/S8(2).[68]

It is easy to think of cases where losses would be allowable but gains exempt; however in practice it will not often matter.

[68] See 65.3 (Loss within scope of CGT).

66.1 Fund terminology

This chapter considers terminology relating to funds:

Term	**FSMA definition**		**Tax definition(s)**	
	Section	**See**	**Section**	**See**
FSMA terms				
CIS	s.235 FSMA	*This chapter*	Various, based on FSMA	66.1.3
OEIC	s.236 FSMA	*This chapter*	Various, based on FSMA	66.1.2
Unit trust	s.237 FSMA	69.2	Various, based on FSMA	69.2
TIOPA terms				
Mutual fund	*Not used in FSMA*		s.356, 357 TIOPA	*This chapter*
Offshore fund	*Not used in FSMA*		s.355 TIOPA	*This chapter*

The definitions of CIS/OEIC interact, in that:

- an OEIC must meet the requirements of a CIS and certain further requirements, but
- certain OEICs (bodies corporate) do not count as a CIS

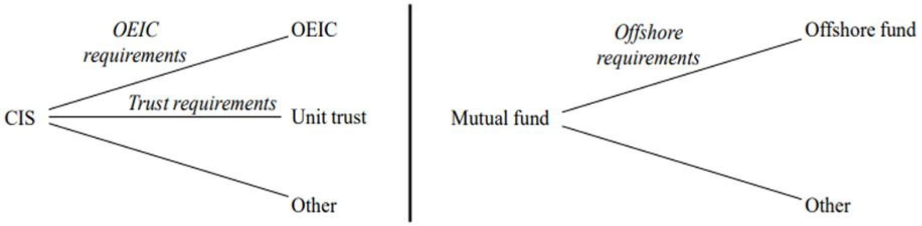
Thus an entity may have the status of:
- CIS but not OEIC
- OEIC but not CIS
- both CIS and OEIC (though in practice perhaps that is rare)

The definitions of mutual fund/CIS overlap as the TIOPA definition of mutual fund derives from the FSMA definition of CIS. In practice a CIS or OEIC is usually a mutual fund, and vice versa.

Unit trust/offshore fund are secondary terms in the sense that they are defined as a CIS/mutual fund meeting further requirements:
- Unit trust is a CIS where the property is held on trust
- Offshore fund is a mutual fund meeting "offshore" requirements

FCA guidance[1] on the FSMA terms CIS/OEIC is relevant to mutual/ offshore funds, so far as the wording is comparable. I do not discuss all the guidance here. A full discussion would need a long chapter.

It may be helpful to summarise the terminology with a diagram. In short:



66.1.1 *FSMA terms: Tax definitions*

When FSMA terms (CIS, OEIC, unit trust) are used in a tax context, a definition is provided. Sometimes the tax definition simply incorporates the FSMA definition. I refer to that as the **"standard FSMA definition"**. Sometimes the tax definition tweaks the FSMA definition, and occasionally there are more significant changes. Strictly one should not use these terms without indicating which definition applies: the FSMA

[1] See PERG 9 (Meaning of open-ended investment company) *https://www.handbook.fca.org.uk/handbook/PERG.pdf*

definition or a specific tax definition; but the context may supply the definition.

66.1.2 *OEIC: Tax definitions*

There are two definitions, a standard definition (adopting FSMA) and (what I call) a “domestic OIEC definition” (tweaking the FSMA definition):

Standard definition **s.613 CTA 2010**	**Domestic OEIC definition** **s.272 IHTA**
In this Chapter ‘open-ended investment company’ means a company incorporated in the UK to which section 236 of FISMA 2000 applies.	‘open-ended investment company’ means an open-ended investment company within the meaning given by section 236 of the Financial Services and Markets Act 2000 which is incorporated in the UK.

These definitions only apply for the purposes of Chapter 2 Part 13 CTA 2010/IHTA; but the definitions are often incorporated or repeated elsewhere.

A foreign incorporated OEIC is within the FSMA definition but not the domestic OEIC definition.

66.1.3 *CIS: Tax definitions*

Section 288(1) TCGA provides:

> In this Act, unless the context otherwise requires ...
> "collective investment scheme" has the meaning given by section 235 of the Financial Services and Markets Act 2000 (subject to section 99A)

For the s.99A exemption see 66.17 (One fund or more).

In other places the standard definition of CIS may be tweaked:

Topic	**See para**
Disguised investment management fees	73.11.1
TRS/International Tax Compliance Regs 2015	131.28.2

66.2 Participant/participate

The term “participant” is used in the definitions of mutual fund and CIS, and throughout OFTR and FSMA. The term has a commonsense definition in TIOPA and in FSMA. These use different drafting techniques, but the meaning is the same:

s.362 TIOPA (tax definition)	**s.235 FSMA (FSMA definition)**
(1) In this Part [Part 8, Offshore Funds] references to “participant”, in relation to arrangements (or a fund), are to a person taking part in the arrangements (or the arrangements constituting the fund), whether by becoming the owner of, or of any part of, the property that is the subject of the arrangements or otherwise.	(1) In this Part “collective investment scheme” means any arrangements with respect to property of any description, including money, the purpose or effect of which is to enable persons taking part in the arrangements (whether by becoming owners of the property or any part of it or otherwise) to participate in or receive profits or income arising from ... the property ... (2) The arrangements must be such that the persons who are to participate (“participants”) do not have day-to-day control over the management of the property ...
(2) In this Part references (however expressed) to participation, in relation to arrangements (or a fund), are to be read in accordance with subsection (1).	

These definitions only apply for the provisions specified, but they are incorporated by reference when the same term is used elsewhere.[2]

66.2.1 *“Participant” for CGT*

Section 288(1) TCGA provides:

> In this Act, unless the context otherwise requires ...
> "participant", in relation to a collective investment scheme, has the meaning given by section 103C(10)

So we turn to s.103C(10) TCGA which provides:

> "participant", in relation to a collective investment scheme, is to be read in accordance with section 235 of the Financial Services and Markets Act 2000.

So the FSMA definition applies for CGT, in relation to a CIS.

A mutual fund may not be a CIS in which case the FSMA definition does not apply. With this in mind, s.103D(10) TCGA tweaks the definition:

> In this section—
> “participant”—

[2] See 66.2.1 (“Participant”).

(a) in relation to a collective investment scheme, is to be read in accordance with section 235 of the Financial Services and Markets Act 2000, and

(b) in relation to an offshore fund (which is not a collective investment scheme), has the meaning given in section 362(1) of TIOPA 2010

But the two meanings are the same.

66.3 Mutual fund/CIS/OIEC

66.3.1 *Why it matters*

"CIS" matters as the term is used in the definitions of OEIC and unit trust, and is common in taxation.
"OEIC" matters as the term is used in the definitionof CIS, and OEICs have a dedicated tax regime.
"Mutual fund" matters as the term is used in the definition of offshore fund, and offshore funds have a dedicated tax regime.

66.3.2 *The definitions compared*

It is helpful to see the definitions side by side, so far as possible:

Mutual fund: s356 TIOPA	**CIS: s.235 FSMA**	**OEIC: s236 FSMA**
(1) In section 355 "mutual fund" means arrangements with respect to property of any description (including money) that meet conditions A, B and C.	(1) In this Part "collective investment scheme" means any arrangements with respect to property of any description, including money,	(1) In this Part "an open-ended investment company" means a collective investment scheme which satisfies both the property condition and the investment condition.
(2) [Signposts winding-up exemption]		(2) The property condition is that the property belongs beneficially to, and is managed by or on behalf of, a body corporate[3] ("BC")

Mutuality conditions:

Mutual fund: s356(3) TIOPA	**CIS: s.235(1) FSMA**	**OEIC: s236(2) FSMA**
(3) Condition A is that the purpose or effect of the	the purpose or effect of which is to enable persons	having as its purpose the investment of its funds with

[3] For completeness: s.417 FSMA provides: "body corporate" includes a body corporate constituted under the law of a country or territory outside the United Kingdom. But no-one would have thought otherwise.

arrangements is to enable the participants—	taking part in the arrangements (whether by becoming owners of the property or any part of it or otherwise)	the aim of—
(a) to participate in the acquisition, holding, management or disposal of the property, or (b) to receive profits or income arising from the acquisition, holding, management or disposal of the property or sums paid out of such profits or income.	to participate in or receive profits or income arising from the acquisition, holding, management or disposal of the property or sums paid out of such profits or income.	(a) spreading investment risk; and (b) giving its members the benefit of the results of the management of those funds by or on behalf of that body.

Management conditions:

Mutual fund: s356(3) TIOPA	**CIS: s.235(1) FSMA**	**OEIC**
(4) Condition B is that the participants do not have day-to-day control of the management of the property.	(2) The arrangements must be such that the persons who are to participate ("participants") do not have day-to-day control over the management of the property,	
(5) For the purposes of condition B a participant does not have day-to-day control of the management of property by virtue of having a right to be consulted or to give directions.	whether or not they have the right to be consulted or to give directions.	

Realisation conditions:

Mutual fund: s356(6) TIOPA	**CIS: s.235 FSMA**	**OEIC: s236(3) FSMA**
Condition C is that, under the terms of the arrangements, a reasonable investor participating in the arrangements would	[No realisation requirement]	The investment condition is that, in relation to BC, a reasonable investor would, if he were to participate in the scheme—
expect to be able to realise all or part of an investment in the		(a) expect that he would be able to realize, within a period

arrangements	appearing to him to be reasonable, his investment in the scheme (represented, at any given time, by the value of shares in, or securities of, BC held by him as a participant in the scheme); and
on a basis calculated entirely, or almost entirely, by reference to— (a) the net asset value of the property that is the subject of the arrangements, or (b) an index of any description.	(b) be satisfied that his investment would be realized on a basis calculated wholly or mainly by reference to the value of property in respect of which the scheme makes arrangements.

66.3.3 *Summary*

In outline, there are three broad requirements, or sets of requirements. OEIC and mutual fund use different terms, and CIS does not have any terms at all. But in order to discuss the conditions, it is convenient to use transparent terms, common to all the various entities, so I coin the following:

My term	**Statutory terms**		
	Mutual Fund	***OEIC***	***CIS***
Mutuality	Condition A	Property condition	*No statutory term*
Control	Condition B	*No extra requirement*	*No statutory term*
Realisation	Condition C	Investment condition	*Not required*

Requirement	**Mutual fund**	**CIS**	**OEIC**	**See**
	TIOPA	**FSMA**	**FSMA**	
Mutuality	s.356(3)	s.235(1)/(4)(a)	s.236(2)	66.4
Control	s.235(4)	s.235(2)/(4)(b)	No extra requirement	66.5
Realisation	s.235(6)	Not required	s.236(3)	66.6

So the starting point is:

- a mutual fund must meet 3 conditions: Mutuality, Control and Realisation
- a CIS need only meet the first two of those conditions
- An OEIC is a CIS which meets further conditions relating to Mutuality and Realisation

The wording of these conditions varies between the 3 terms, but they are best considered together.

CIS has a further requirement which has no equivalent in the definition of mutual fund. Section 235(3) FSMA provides:

> The arrangements must also have either or both of the following characteristics—
> (a) the contributions of the participants and the profits or income out of which payments are to be made to them are pooled;
> (b) the property is managed as a whole by or on behalf of the operator of the scheme.

Here, para (a) is a Mutuality requirement and para (b) is a Management requirement, but only one of these needs to be met.

66.3.4 *Body corporate status*

Reg 3(1) Open-Ended Investment Companies Regulations 2001 provides:

> If the Authority makes an authorisation order then, immediately upon the coming into effect of the order, the body to which the authorisation order relates is to be incorporated as an open-ended investment company (notwithstanding that, at the point of its incorporation by virtue of this paragraph, the body will not have any shareholders or property).

In *HMRC v Hargreaves Lansdown Asset Management:*[4]

> An OEIC is a body corporate. That is clear from Regulation 3 (1) of the Open-Ended Investment Companies Regulations 2001 which provides that if the FCA makes an authorisation order permitting an OEIC to be marketed to the public then immediately upon the coming into effect of the order, the body to which the authorisation order relates is to be incorporated as an open-ended investment company.

This is also clear from the Property Condition of an OEIC, which requires that OEIC property belongs beneficially to a body corporate.

A CIS and an offshore fund may take the form of a body corporate but need not do so (eg a unit trust).

66.4 Mutuality conditions

Mutual fund: s356(3) TIOPA	**CIS: s.235(1) FSMA**	**OEIC: s236(2) FSMA**
Condition A is that the purpose or effect of the	the purpose or effect of [the arrangements] is to enable	The property condition is that the property belongs

[4] [2019] UKUT 246 (TCC) at [68].

arrangements is to enable the participants—	persons taking part in the arrangements (whether by becoming owners of the property or any part of it or otherwise)	beneficially to, and is managed by or on behalf of, a body corporate ("BC") having as its purpose the investment of its funds with the aim of—
(a) to participate in the acquisition, holding, management or disposal of the property, or (b) to receive profits or income arising from the acquisition, holding, management or disposal of the property or sums paid out of such profits or income.	to participate in or receive profits or income arising from the acquisition, holding, management or disposal of the property or sums paid out of such profits or income.	(a) spreading investment risk; and (b) giving its members the benefit of the results of the management of those funds by or on behalf of that body.

There must be more than one participant.[5]

66.5 Control conditions

Mutual fund: s356 TIOPA	**CIS: s.235(2) FSMA**
(4) Condition B is that the participants do not have day-to-day control of the management of the property.	The arrangements must be such that the persons who are to participate ("participants") do not have day-to-day control over the management of the property
(5) For the purposes of condition B a participant does not have day-to-day control of the management of property by virtue of having a right to be consulted or to give directions.	whether or not they have the right to be consulted or to give directions.

The IF Manual provides:

[5] This is self-evident but if authority is needed, see *Barker v Baxendale Walker Solicitors* [2016] EWHC 664 (Ch) at [207]:

> "[The statutory conditions of a CIS] require, albeit by necessary implication, that there is more than one participator taking part in the [collective investment] scheme: indeed, that is the essence of the investment being "collective"."

The case floats the possibility that additional participators with "only an illusory or purely nominal share" might not suffice to meet the requirement, but the point is not pursued at first instance, and was not mentioned on the appeal.

> **IFM12233 Meaning of 'mutual fund': condition 'B'** [Apr 2020]
> Condition B is that the participants do not have day-to-day control of the management of the property. In this context, 'participants' means persons acting in the capacity of investors in a particular scheme. Control would therefore mean having control by way of rights as an investor. So, if the scheme manager held units or shares in the fund managed, that would not prevent condition B from being satisfied.
> In the case of a fund with an advisory committee, which would typically comprise either a few key investors or independent investment experts, again nothing prevents Condition B from being satisfied (particularly so in this case, as it would not be expected that the role of the investment manager would be usurped by such a committee).

The IF Manual continues:

> Merely having a right to be consulted or to give directions does not result in a participant having day-to-day control. So, for example, the right to a vote at annual general meetings would not be considered to amount to day-to-day control.

PERG 11 provides:

> In order for the arrangements not to be a collective investment scheme, all individual participants, regardless of their contribution or stated preferences, must have day-to-day control. So, if one participant does not have day-to-day control then the whole scheme could amount to a collective investment scheme.

PERG 11 provides:

> **Q6.** What is the purpose of the 'day-to-day control' test and the nature of day-to-day control?
> The purpose of the 'day-to-day control' test is to try to draw an important distinction about the nature of the investment that each investor is making. If the substance is that each investor is investing in a property whose management will be under his control, the arrangements should not be regarded as a collective investment scheme. On the other hand, if the substance is that each investor is getting rights under a scheme that provides for someone else to manage the property, the arrangements would be regarded as a collective investment scheme. Day-to-day control is not defined and so must be given its ordinary meaning. In our view, this means you have the power, from day-to-day, to decide how the property is managed. You can delegate actual management so long as you still

have day-to-day control over it.

Q7. The participants in my property investment club do not get involved in every single management decision, but appoint agents to take decisions for them in accordance with criteria agreed between them. Have the participants lost day-to-day control?

We do not consider that day-to-day control means that each participant would themselves need to be involved in each and every decision taken, so long as they retain day-to-day control over the management. For example, delegating rent collection, cleaning and management services in relation to a property, by appointing agents to carry out these tasks would not necessarily mean that the participants lose day-to-day control, so long as the participants retain day-to-day control over the management of the agency contracts.

Q8. Must each participant individually have day-to-day control for my property investment club not to be a collective investment scheme?

Yes, though this does not prevent two or more individuals having day-to-day control together. (This may happen, for example, where business partners buy several flats in a block and manage them jointly.) But the more distant any individual participant is from controlling the management of the property himself, the less likely it is that the individual participants can be said to have control which is 'day-to-day'.

Q9. I run a property investment club where the participants have a right to be consulted on management decisions or at least give directions. Do they have day-to-day control?

Not by virtue of those rights alone. Simply having the right to be consulted or give directions is not enough to give a participant day-to-day control. Also, if all management decisions are taken by the operator (or a person appointed by him) using generic mandates (for example, a power of attorney) from participants, then it is unlikely to be the case that the participants have day-to-day control. It is more likely in this case that the scheme is effectively one where management is devolved entirely to the operator, with participants only retaining a notional control over the decision-making of the operator - in essence amounting to a right to be consulted or give directions, rather than day-to-day control.

66.6 Realisation conditions

Mutual fund: s356(6) TIOPA	**OEIC: s236(3) FSMA**
(6) Condition C is that, under the terms of the arrangements, a reasonable investor participating in the	(3) The investment condition is that, in relation to BC, a reasonable investor would, if he were to participate in the

arrangements would expect to be able to realise all or part of an investment in the arrangements	scheme— (a) expect that he would be able to realize, within a period appearing to him to be reasonable, his investment in the scheme (represented, at any given time, by the value of shares in, or securities of, BC held by him as a participant in the scheme); and
on a basis calculated entirely, or almost entirely, by reference to— (a) the net asset value of the property that is the subject of the arrangements, or (b) an index of any description.	(b) be satisfied that his investment would be realized on a basis calculated wholly or mainly by reference to the value of property in respect of which the scheme makes arrangements.

A realisation condition (my term), (or "investment condition", the FSMA OEIC term), is one of the requirements to be a Mutual Fund /OEIC. It is not part of the definition of CIS (except indirectly, because of the rule that a closed-ended company is not a CIS).

PERG 9 has extensive guidance.

66.6.1 *Realisation at NAV*

The IF Manual provides:

> **IFM12235 Condition 'C': introduction** [Dec 2021]
> [The Manual sets out mutual fund condition C and continues:]
> To 'expect', in this context, does not necessarily mean that an enforceable right exists, but it does mean that an investor could reasonably expect to rely on realisation as described.
> "Realisation" of an investment has a wide meaning, and so may be by redemption, by sale to a third party, or by distribution of assets on the termination of a fund. So, if a fund has a limited life, it would not matter that an investor may not be able to sell his or her shares or units on the open market for a sum representing NAV or close to NAV, as there would be an expectation that the investment could be realised at or close to NAV when the fund terminated...
> **IFM12236: Condition 'C': meaning of 'reasonable investor'** [Apr 2020]
> A 'reasonable investor' is not defined in the legislation. It is assumed that such an investor (whether an individual, corporate investor, or otherwise) would have read the documentation and taken account of all additional material and communications of any nature whatsoever provided by the fund prior to investing.
> Where the scheme documentation is not written in a language that the investor can understand then it is assumed that the investor will have obtained a translation of the prospectus and any other relevant scheme documents or

material.

IFM12237 realisation of investment by reference to NAV or an index [Dec 2021]

... There is no definition within the legislation of 'almost entirely'. Any stated percentage limit of variation from NAV could be susceptible to arrangements seeking to avoid the intention of the offshore funds rules. It depends on what the arrangements are intended to provide. For example, buy-back arrangements normally take effect when there is a large discount to NAV, but may also be used in very exceptional circumstances to buy back at a very small discount or at NAV which, on its own, may not mean that the arrangements constitute a mutual fund...

Realisation of investment on a basis calculated at or close to NAV

It is not necessary that the investor obtains NAV directly from the fund. Where a reasonable investor could expect to receive NAV on selling their interest on a secondary market the fund will be an offshore fund if all other conditions are satisfied. For example, Exchange Traded Funds (ETFs) are usually operated in such a way that the quoted prices are at NAV or very close to NAV because market makers are able to create or redeem units. In that sense, such funds are open-ended and ETFs would be expected to qualify as mutual funds. On the other hand, arrangements where a fund offered to buy back shares to keep a discount on the share price within a reasonable limit would not make the fund a mutual fund unless it was clear to a reasonable investor, at the time that they invested (or on alteration of the terms of an investment), that there were such arrangements and that they were intended to ensure that such purchases were at, or almost at, NAV...

Shares trading close to NAV

The mere fact that shares in a closed-ended arrangement sometimes trade at or close to NAV does not mean that condition C is satisfied unless that is as a result of arrangements being in place, such that a reasonable investor could expect to receive NAV or close to NAV on selling their interest.

Warrants and options

Warrants or options that give an investor the right to sell shares back to an issuer for a particular price will not cause condition C to be satisfied unless the price is determined by reference to NAV so that the investment can be realised at or close to NAV. Similarly, rights that carry the option to convert to other classes of interest would only satisfy condition C if the new rights themselves permitted an investor to realise their investment at or close to NAV

The IF Manual provides:

IFM12224 corporate entities - s355(1)(a) TIOPA 2010 [Apr 2020]

... It is expected that relatively few fixed share capital companies will fall within the new [2009] definition of an offshore fund. For example, an investment in a trading or investment company or group with fixed share capital and that was not limited life (even if local law provides for continuation votes) would not come within the definition. But under the characteristics-based approach, entities that have fixed share capital and that are structured in such a way that they share characteristics of open-ended share capital arrangements will be within the definition. So, fixed share capital companies that are predicated on the basis that investors will get a net asset value return or a return which is very close to net asset value may fall within the new definition of an offshore fund. That will also be the case where there are no redemption rights but where the arrangements have a limited life and a reasonable investor could expect to get a net asset value return on winding up (unless one of the exceptions in S357 TIOPA 2010 applies).

IFM12238: disposals of underlying fund assets [Dec 2021]
A reasonable investor could expect to realise their investment at or close to NAV as a result of the intention of a fund to dispose of its assets in tranches followed by a final distribution of any remaining assets, instead of a liquidation of all of the fund's assets on a winding-up. For example, a fund may be set up in order to acquire distressed debt assets with an intention to realise those assets as they mature and to distribute the proceeds to investors in the following way-
Step 1: debt assets are acquired with 1, 2 and 3 year lives;
Step 2: the assets are realised, without reinvesting the proceeds, at the various maturity dates;
Step 3: the sums realised on the occasion of each realisation are distributed to investors, and;
Step 4: the fund is formally wound up and any remaining assets distributed.
There would be an expectation of realising an investment in such an arrangement at or close to NAV ('at NAV' on the final distribution or perhaps 'close to NAV' if remaining negligible assets are not in fact distributed). In those circumstances condition C would be satisfied and the fund would be a mutual fund, so long as conditions A and B were also satisfied and none of the exceptions at S357 TIOPA 2010 applied. It would therefore be an offshore fund as defined at S355 TIOPA 2010.
In the example above, condition E (not limited life) is not satisfied as the nature of the fund's assets and the intention not to reinvest them mean that there is a determinable latest termination date- see IFM12244).
Note that in the example above, a UK investor would be treated as making a part-disposal of his or her interest (see S42 TCGA 1992). If the fund was within the definition of an offshore fund then the treatment of that part-disposal would depend on whether regulation 17 of the Offshore Funds (Tax) Regulations 2009 applied. If regulation 17 did apply then an offshore income gain would arise on any gain or, if it did not apply, then any gain would be subject to capital gains tax or corporation tax on capital gains.

66.6.2 *Realisation at indexed value*

The IF Manual provides:

IFM12237 realisation by reference to index [Dec 2021]
... Realisation of investment by reference to an index
In some cases, an investor may have a right to redeem an investment at an amount not representing the assets directly invested in, but which

> is expressed in terms of an index. The fund manager may then invest the assets to produce a return as nearly as possible matching the index that is offered. In such a case condition C will also be met. Again, this is subject to exceptions where conditions E or F apply.
>
> In many cases investments designed to produce an indexed return are likely to be non-income producing (that is, they reflect capital growth only) in which case the exception provided by S357(5) - condition F - may apply.
>
> Where an investment is by reference to an index that reflects both capital growth and income returns then S357(5) would not apply, but condition F may still apply due to S357(7) - see IFM12249.
>
> Realisation by reference only to a fixed return does not constitute realisation by reference to an index (although it does not exclude it being by reference to NAV).

66.6.3 *CIS: Realisation time limit*

The mutual fund realisation condition (unlike the OEIC definition) does not require that the realisation must be within a reasonable period.[6]

The OEIC realisation condition requires realisation within a reasonable period.

PERG 9.11 (FAQs) provides:

> **Q8:** Would a body corporate holding out redemption or repurchase of its shares or securities every six months be an OEIC?
>
> **A:** In the FSA's view a period of six months would generally be too long to be a reasonable period for a liquid securities fund. A shorter period affording more scope for an investor to take advantage of any profits caused by fluctuations in the market would be more likely to be a reasonable period for the purpose of the realisation of the investment (in the context of the 'expectation' test, see PERG 9.8 and, in particular, PERG 9.8.9 G which sets out the kind of factors that may need to be considered in applying the test).

This does not introduce an upper limit of six months on the length of period which is reasonable to decide if any investment company is open-ended. The reply to FAQ8 is in the context of liquid securities funds that are offering redemption or repurchase of securities.

PERG 9.8.9 G provides:

> As indicated in PERG 9.3.5 G (The definition), the potential for

[6] See 66.3 (Mutual fund/CIS/OIEC).

variation in the form and operation of a body corporate is considerable. So, it is only possible in general guidance to give examples of the factors that the FSA considers may affect any particular judgment. These should be read bearing in mind any specific points considered elsewhere in the guidance. Such factors include:

(1) the terms of the body corporate's constitution;
(2) the applicable law;
(3) any public representations that have been made by or on behalf of the body corporate;
(4) the actual behaviour of the body corporate or of a person acting on its behalf in relation to investors seeking to realise their investment in it;
(5) whether investors in the body corporate are in a position to take advantage of fluctuations in property value in the particular market in which the body corporate invests;
(6) the existence of a guarantee, which may mean that a longer period may appear reasonable than would be the case without the guarantee;
(7) where the underlying property in which the body corporate invests is relatively illiquid; in this case, the period within which realisation of an investment may be regarded as reasonable may be longer than it would be for property which has greater liquidity;
(8) the levels of disclosure of the terms on which investment is made;
(9) the nature of the investment objectives or policy of the body corporate; and
(10) the appropriateness of the name of the body corporate.

66.7 OEIC: Purchase of own shares

Section 236(4) FSMA provides:

> In determining whether the investment condition is satisfied, no account is to be taken of any actual or potential redemption or repurchase of shares or securities under—
> (a) Chapters 3 to 7 of Part 18 of the Companies Act 2006;
> (d)[7] provisions in force in a country or territory which the Treasury have, by order, designated as corresponding provisions.

Chapters 3-7 relate to redeemable shares, purchase of own shares, and treasury shares. Mutual funds have no close equivalent of this, but the

[7] There is no para (b)(c).

mutual fund winding-up exemption is comparable in some respects.

66.8 Mutual fund: winding-up exemption

Section 357(1) TIOPA provides:

> Arrangements are not a mutual fund for the purposes of section 355 if—
> (a) condition D is met, and
> (b) condition E or F is met.

The conditions are as follows:

Condition	**TIOPA**	**Topic**	**See**
D	s.357(2)	Realisation only on winding up	66.9
E	s.357(4)	Fixed end date	66.10
F	s.357(5)-(7)	Rules relating to fund income	66.11

I refer to them together as **"winding-up conditions D to F"**.

66.9 Condition D: Realisation on winding up

Section 357(2) TIOPA provides:

> Condition D is that, under the terms of the arrangements, a reasonable investor participating in the arrangements would expect to be able to realise all or part of an investment in the arrangements on a basis mentioned in section 356(6)[8] only in the event of the winding up, dissolution or termination of the arrangements.

The IF Manual provides:

> **IFM12242 exceptions to the meaning of mutual fund: introduction** [Dec 2021]
> ...Arrangements meet the criteria of condition D where the only occasion on which a reasonable investor would expect to be able to realise an investment based entirely or almost entirely by reference to the net asset value ('NAV') of the property or an index of any description is on a winding-up, dissolution or termination of the arrangements. An example is a case where there is a final redemption of a class of interest (s357 (2)).
> Section 357(2) has the effect that 'open-ended' arrangements (i.e. those that enable investors to realise NAV by disposing of their interest) cannot come within the exceptions provided by s357.
> The conditions E or F do, however, except certain types of closed-ended arrangements from the meaning of a 'mutual fund'.
> The exceptions can also apply to arrangements where a reasonable investor

[8] See 66.6 (Condition C: realisation value).

> could expect to realise their investment at or close to NAV as a result of the intention of a fund to dispose of its assets in tranches followed by a final distribution of any remaining assets, as opposed to a liquidation of all of the fund's assets on a winding-up.

The IF Manual provides:

> **IFM12235: Condition 'C': introduction** [Dec 2021]
> Condition C requires that a 'reasonable investor' (see IFM12236) would, as participant in the arrangements, expect to be able to realise all or part of an investment in the arrangements on a basis calculated entirely or almost entirely by reference to either
> • the net asset value (NAV) of the scheme property, or
> • an index of any description.
> To 'expect', in this context, does not necessarily mean that an enforceable right exists, but it does mean that an investor could reasonably expect to rely on realisation as described.
> "Realisation" of an investment has a wide meaning, and so may be by redemption, by sale to a third party, or by distribution of assets on the termination of a fund. So, if a fund has a limited life, it would not matter that an investor may not be able to sell his or her shares or units on the open market for a sum representing NAV or close to NAV, as there would be an expectation that the investment could be realised at or close to NAV when the fund terminated.
> See IFM12236 for guidance on the meaning of a 'reasonable investor', and IFM12237 regarding realising an investment on a basis calculated entirely, or almost entirely, by reference to NAV or an index of any description.
> The exceptions to the meaning of the term 'mutual fund' relate directly to condition C, and so condition C must be read in conjunction with section S357 TIOPA 2010 (which provides the exceptions) for the purposes of determining whether or not arrangements come within the meaning of a mutual fund, and hence an offshore fund- see IFM12240 onwards.

66.10 Condition E: Fixed end date

Section 357(3) TIOPA provides:

> Condition E is that the arrangements are not designed to wind up, dissolve or terminate on a date stated in or determinable under the arrangements.

Section 357(8) TIOPA provides:

> For the purposes of this section the fact that arrangements provide for a vote or other action that may lead to the winding up, dissolution or termination of the arrangements does not, by itself, mean that the arrangements are designed to wind up, dissolve or terminate on a date stated in or determinable under the arrangements.

The IF Manual provides:

> **IFM12244 condition 'E'** Apr 2020]
>
> [The Manual summarises condition E and continues:]
>
> This condition means, for example, that ordinary shares in any company with defined share capital (that is, not an open-ended company with variable share capital) and which does not have a limited life, will not be an offshore fund.
>
> ... As elsewhere "arrangements" has a wide meaning and is not limited to the documents establishing the fund, so can include all agreements and understandings. Similarly, "determinable" has a wide meaning. For example, if a fund prospectus stated that it was intended to wind-up the fund after it had realised all of its assets, but those assets consisted of debt instruments none of which was longer dated than 5 years, then the termination date would be determinable (unless, of course, it was clear that the fund would reinvest the proceeds of asset realisations and was not 'limited life' in any other regard).
>
> **Asset realisations**
>
> It will not be sufficient to satisfy condition E, for a fund to state that an intention to dispose of its assets on or by a certain date is subject to market conditions or some similar caveat. Where it is clear that a long-stop date exists, or where there is no specific and realistic possibility that would lead a reasonable investor to conclude that the fund would not be able to dispose of its assets by the date stated, condition E is not met. For example, if a fund's assets consist of short-dated debt instruments, or commercial leases with a life of 20 years then, unless the fund was reasonably likely to re-invest funds from disposals, condition E could not be satisfied. Where there is no such long-stop date implicit in the nature of the assets themselves then condition E may still not be satisfied if a fund stated an intention to dispose of its assets in, say, four years' time 'subject to market conditions' or some other broad statement.
>
> HMRC will consider particular cases where a fund manager or its advisers believe that there are tangible and specific reasons why such a statement should lead to condition E being satisfied, but this is expected only to apply in exceptional circumstances. An example of the circumstances when a broad statement relating to whether assets could be realised on or by a given date may be sufficient to satisfy condition E would be if a fund held significant assets in a country about which there were real and significant concerns regarding any future government's policy in respect of the assets in question (such as public declarations of an intention to nationalise particular industries or companies in which the fund holds significant investments).

> **Continuation votes**
> Where arrangements provide for a continuation vote, or similar action, to determine whether they will persist beyond a given date that will not, in itself, mean that condition E is not met. So, if a reasonable investor, considering all of the facts, could not have any expectation that a continuation vote would fail then, provided the continuation vote was not for a determinable period and absent any other factors, the arrangements could not be said to have a determinable life and condition E could then be satisfied. HMRC accept that it could usually be expected that condition E would be satisfied where continuation votes are provided for, because continuation resolutions may well be passed if a fund is performing well, and a reasonable investor would be expected to invest on the basis that a fund would be successful. However, if arrangements or understandings are in place, so that it could be expected that a continuation vote would not be passed, then there would be a determinable date...

66.11 Condition F: Fund income

Condition F is in fact a set of conditions. Section 357(4) TIOPA provides:

> Condition F is that—
> (a) the arrangements are designed to wind up, dissolve or terminate on a date stated in or determinable under the arrangements,
> (b) subsection (5), (6) or (7) applies, and
> (c) the arrangements are not designed to produce a return for participants that equates, in substance, to the return on an investment of money at interest.

66.11.1 *No income-producing assets*

Section 357(5) TIOPA provides:

> This subsection applies if none of the assets that are the subject of the arrangements is a relevant income-producing asset (see section 358).

Section 358 TIOPA provides the definition:

> (1) This section has effect for the purposes of section 357.
> (2) An asset is a relevant income-producing asset if it produces income on which, if it were held directly by an individual resident in the UK, the individual would be charged to income tax (but see subsections (3) and (4)).
> (3) An asset is not a relevant income-producing asset if the asset is hedged, provided that no income is expected to arise from—

> (a) the asset (taking account of the hedging), or
> (b) any product of the hedging arrangements.
>
> (4) Cash awaiting investment is not a relevant income-producing asset, provided that the cash, and any income that it produces while awaiting investment, is invested as soon as reasonably practicable in assets that are not relevant income-producing assets (as defined by this section).

This is designed to exclude funds which invest in assets intended to give a purely capital growth based return.

The IF Manual provides:

> **IFM12237: meaning of realisation of investment by reference to NAV (net asset value) or an index** [Dec 2021]
>
> ... In many cases investments designed to produce an indexed return are likely to be non-income producing (that is, they reflect capital growth only) in which case the exception provided by S357(5) - condition F - may apply (see IFM12247 onwards).
>
> Where an investment is by reference to an index that reflects both capital growth and income returns then S357(5) would not apply, but condition F may still apply due to S357(7) - see IFM12249.
>
> Realisation by reference only to a fixed return does not constitute realisation by reference to an index (although it does not exclude it being by reference to NAV).

66.11.2 *Entitlement to income*

Section 357(6) TIOPA provides:

> This subsection applies if, under the terms of the arrangements, the participants in the arrangements are not entitled to the income from the assets that are the subject of the arrangements or any benefit arising from such income.

The IF Manual provides:

> **IFM12248 condition 'F': no entitlement to income or any benefit arising from income** [Apr 2020]
>
> An example of an arrangement satisfying this condition might be the capital shares or units in an arrangement which splits the rights to capital and income between the holders of different classes of interest, where the holders of capital shares or units are not entitled to any of the income or any benefit arising from the income.

66.11.3 *Income distributed*

Section 357(7) TIOPA provides:

This subsection applies if—

(a) under the terms of the arrangements, after deductions for reasonable expenses, any income produced by the assets that are the subject of the arrangements is required to be paid or credited to the participants, and

(b) a participant who is an individual resident in the UK would be charged to income tax on the amounts paid or credited.

66.12 Share buy-back and share issue

The IF Manual provides:

> **IFM12285 share buy-backs and share issuance** [Apr 2020]
> The price or value of shares in fixed share capital companies may reflect either a discount or a premium to the net asset value of the underlying assets. It may also be the case in some circumstances that there is either directors' or investors' discretion to allow or require the buy-back of shares if there is a discount of a certain level between the net asset value of the arrangements and the share price.
>
> Provided the share buy-back arrangements are made to prevent the discount becoming too large by reference to net asset value, and provided a reasonable investor cannot expect to realise their investment either entirely or almost entirely by reference to net asset value (or by reference to an index), and there is no determinable termination date, then such arrangements will be outside the definition of an offshore fund for UK tax purposes (as condition C at s356 TIOPA2010 will not be satisfied). Similar considerations apply where the shares trade at a premium.
>
> For example, if a foreign equivalent of an investment trust was trading at a discount of 15% to NAV and bought its own shares on the open market to reduce the discount then, absent any factors that could lead to an investor being able to expect to redeem their investment at or close to NAV, this would not cause condition C at s356(6) TIOPA2010 to be satisfied: it is clear that before the company commenced to buy its own shares that some investors would not have been able to redeem their interest at NAV and that any subsequent reduction in the discount would be due to normal operation of the market. Without any factors indicating that the company would act to reduce the discount, either having been in place prior to this market activity or at some point in the future, a reasonable investor could not expect to realise their investment at or close to NAV.
>
> However, share buy-back arrangements that are specifically designed to provide tracking to net asset value will cause the company or share class to come within the definition of an offshore fund. This would include any arrangements introduced as a result of changes to the constitution of a scheme. See IFM13251, IFM13270 and IFM13370 for further guidance.
>
> When considering an investor's rights, account should be taken of all scheme documents, promotional documentation or communications to determine what guarantees or undertakings may have been given to the investor.
>
> An undertaking or guarantee etc. to buy back or redeem only a part of an

> investor's holding, entirely or almost entirely by reference to the net asset value of the property or an index of any description, can still constitute an expectation. For example, if the fund manager undertook to redeem or buy back an investor's shares in tranches the arrangements could still be within the definition of an offshore fund.
>
> Warrants or options that give an investor the right to sell shares back to an issuer for a particular price will not cause condition C to be satisfied unless the price is determined by reference to NAV, so that the investment can be realised at or close to NAV. Similarly, rights that carry the option to convert to other classes of interest would only satisfy condition C if the new rights themselves permitted an investor to realise their investment at or close to NAV.

66.13 Company in liquidation

The IF Manual provides:

> **IFM12289 limited life companies: company liquidations** [Apr 2020]
>
> An investor may have invested in a company or other arrangement which subsequently goes into liquidation, at which point the investor might reasonably expect to realise their investment at net asset value. However, if a company or other arrangement is outside the definition of an offshore fund before it goes into liquidation, then being in liquidation will not by itself bring that company or arrangement into the definition of an offshore fund. This also applies in the case of self-managed wind-downs with the subsequent appointment of a liquidator to complete the liquidation.
>
> This treatment would also extend to the purchase of shares in a company after it has entered a self-managed wind-down or liquidation. This may not be the case, though, for wind-downs and liquidations that are intentionally extended or contrived.
>
> Some overseas companies can be liquidated or reconstructed at any time. If there is a decision to do so, at the point of the approval of the reconstruction or liquidation the investors may obtain net asset value. However, the relevant point is whether a reasonable investor can expect the company to be liquidated or reconstructed in order to deliver net asset value. It is necessary to consider the reasonable investor's expectation to realise their investment either entirely or almost entirely by reference to net asset value (or by reference to an index) when the company was established (or when there was a change in the investor's rights).

66.14 CIS exemptions

The definition of CIS is very wide. However, there are very wide exceptions set out in the Financial Services and Markets Act 2000 (Collective Investment Schemes) Order 2001 which I call **"CISO 2001"**. This sets out 21 categories of exceptions. Many of them are of somewhat specialist interest but the following are relevant to the themes of this book.

66.14.1 *Operated by way of business*

Para 4 Sch CISO 2001 provides:

> Arrangements do not amount to a collective investment scheme if they are operated otherwise than by way of business.

This is further elaborated in Financial Services and Markets Act 2000 (Carrying on Regulated Activities by Way of Business) Order 2001. In particular, reg 3 provides:

> (1) A person is not to be regarded as carrying on by way of business an activity to which [paragraph (2) applies], unless he carries on the business of engaging in one or more such activities.
> (2) This paragraph applies to an activity of the kind specified by any of the following provisions of the Regulated Activities Order, namely—
> (a) article 14 (dealing in investments as principal);
> (b) article 21 (dealing in investments as agent);

Art 14(1) Regulated Activities Order 2001[9] provides (so far as relevant):

> Buying, selling, subscribing for or underwriting securities or contractually based investments ... as principal is a specified kind of activity.

Art 21(1) Regulated Activities Order 2001[10] provides:

> Buying, selling, subscribing for or underwriting securities, structured deposits or relevant investments as agent is a specified kind of activity.

66.14.2 *Contract of insurance*

Para 17 Sch CISO 2001 provides:

> A contract of insurance does not amount to a collective investment scheme.

[9] The full title is: Financial Services and Markets Act 2000 (Regulated Activities) Order 2001.

[10] The full title is: Financial Services and Markets Act 2000 (Regulated Activities) Order 2001.

Contracts of insurance are excluded as they are governed by different regulatory and tax regimes.

66.14.3 *Exemption for non-OEICs*

Most companies would be meet the requirements of a CIS set out in s.235 FSMA. But para 21 Sch CISO 2001 provides:

> (1) Subject to sub-paragraph (2),
> [a] no body
> [i] incorporated under the law of, or any part of, the UK relating to building societies or [registered societies] or
> [ii] registered under any such law relating to friendly societies, and
> [b] no other body corporate other than an open-ended investment company,
> amounts to a collective investment scheme.
> (2) Sub-paragraph (1) does not apply to any body incorporated as a limited liability partnership.

This is clumsy drafting, but if one ignores the specialist topics of building/registered/friendly societies, the rule is that a body corporate is not a CIS, unless it is an OEIC or a LLP (ie, a UK LLP).

One might refer to a body corporate which is not an OEIC or LLP as a "closed-ended" company. So in short, the rule is that a closed-ended company is not a CIS.

The reference to LLPs makes sense as a LLP is (generally) treated like a partnership for tax purposes, it is not treated like a body corporate.

The definition of OEIC is crucial for this purpose. CISO fails to supply a definition but the context shows that the FSMA definition applies.

66.15 Offshore fund: Definition

Armed with the definition of mutual fund, we can turn to the definition of offshore fund.

Section 355(1) TIOPA provides:

> In section 354 "offshore fund" means—
> (a) a mutual fund constituted by a body corporate resident outside the UK,
> (b) a mutual fund under which property is held on trust for the participants where the trustees of the property are not resident in the UK, or
> (c) a mutual fund constituted by other arrangements that create

rights in the nature of co-ownership[11] where the arrangements take effect by virtue of the law of a territory outside the UK.

In short, an offshore fund is a non-resident mutual fund.

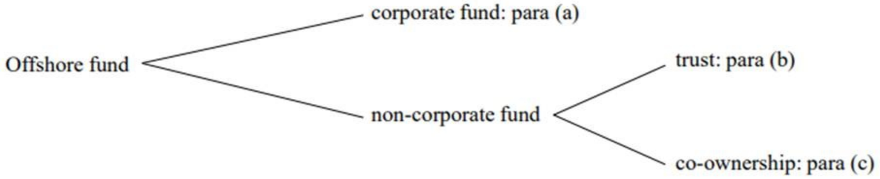
This definition applies only for s.354,[12] so it needs to be incorporated when the expression "offshore fund" is used elsewhere.[13]

66.15.1 *Types of offshore fund*

Offshore funds may be categorised as follows:

Type of offshore fund	**Definition**
Corporate fund	Fund within s.355(1)(a): a company
Non-corporate fund	Fund within s.355(1)(b)/(c): unit trust/co-ownership

Diagrammatically:



IFM12214 gives examples of typical offshore funds:

Corporate funds:
Belgian SICAV
Cayman registered company with a limited life

Non-corporate funds:
Luxembourg Fonds Commun de Placement
Jersey property unit trust

Offshore funds may also be categorised as follows:

Type of offshore fund	**See para**
Bond fund	68.2

[11] Section 355(3) TIOPA provides:

> "In this section ... "co-ownership" is not restricted to the meaning of that term in the law of any part of the UK."

[12] Section 354 TIOPA, headed "Power to make regulations about tax treatment of participants", is the authority for the OFTR.

[13] So reg.3(1) OFTR provides:

> "In these Regulations "offshore fund" has the meaning given by section 40A(2) of FA 2008 [now s.355(1) TIOPA] (read with the provisions of the relevant group of sections)."

The definition is similarly incorporated in s.378A(7) ITTOIA.

Reporting/non-reporting fund	67.2.2
Transparent fund	67.24.1

66.15.2 *Residence of fund*

Residence of a body corporate matters, because a body corporate must be non-resident to count as an offshore fund. Section 363A TIOPA provides a special residence rule for the benefit of EU offshore funds (in short, deeming such funds to be non-UK resident and thus disapplying the usual residence tests.) EN FB 2011 provides:

> The UCITS IV directive provides that an investment fund authorised under the provisions of Article 5 of that directive may have a manager which is not resident in the same State as that in which the fund is established and regulated.
> 6. [Section 363A] ensures that the affected offshore funds and their investors will not be subject to any tax consequences in the UK as a result of having a UK resident management company.

For unit trusts, see 69.7.3 (Residence of unit trust).

66.16 Partnerships

One would not expect partnerships to be offshore funds, because partnership income and gains accrue to the partners: there is no scope or need for offshore fund rules.

66.16.1 *General/limited partnership*

A partnership might[14] fall within limb (c) of the definition of mutual fund; but if it did, s.355(2) TIOPA takes it out:

> Subsection (1)(c) does not include a mutual fund constituted by two or more persons carrying on a trade or business in partnership.

A partnership does not fall within limb (b) of the definition of mutual fund, because property is not (generally) held on trust for the participants, or because if it is, it is just for conveyancing reasons, and not a trust within the meaning of s.354.

A general or limited partnership does not fall within limb (a) of the

[14] Though it is not self-evident that a partnership constitutes "rights in the nature of co-ownership".

definition of mutual fund as it is not a body corporate.

66.16.2 *UK LLP*

A non-resident UK incorporated LLP would within limb (a) of the definition of mutual fund, as it is a body corporate,[15] but s.355(3) TIOPA takes it out:

> In this section—
> "body corporate" does not include a limited liability partnership.

The IF Manual provides:

> **IFM12216 ... Limited liability partnerships** [Apr 2020]
> Limited liability partnerships ('LLPs') incorporated under the Limited Liability Partnerships Act 2000 but that are tax resident outside the UK are excluded from the definition even if they are otherwise treated as being a "body corporate" (S355(3) TIOPA 2010).
> This exclusion does not apply to LLPs formed under the law of any other territory. If such an LLP is a body corporate (and opaque for capital gains purposes) and a mutual fund, then it will come within the definition of an offshore fund at S355(1)(a) TIOPA 2010.

66.17 One fund or more?

66.17.1 *"Umbrella arrangement"*

Section 235(4) FSMA provides:

> If arrangements provide for such pooling as is mentioned in subsection (3)(a) in relation to separate parts of the property, the arrangements are not to be regarded as constituting a single collective investment scheme unless the participants are entitled to exchange rights in one part for rights in another.

Section 363 TIOPA provides:

> (1) In this Part [Part 8, Offshore Funds] "umbrella arrangements" means arrangements which provide for separate pooling of the contributions of the participants and the profits or income out of which payments are made to them.
> (2) In this Part references to a part of umbrella arrangements are to the arrangements relating to a separate pool.

[15] See 85.21.1 (Definition and nature of LLP).

66.17.2 *Umbrella/class: Separate funds*

s.360 TIOPA

(1) This section has effect for the purposes of this Part [Part 8, Offshore Funds].

(2) In the case of umbrella arrangements (see section 363)—

(a) each part of the umbrella arrangements is to be treated as separate arrangements, and

(b) the umbrella arrangements are to be disregarded.

(3) Subsection (2)(a) is subject to section 361 [More than 1 class of interest].

s.361 TIOPA

(1) This section has effect for the purposes of this Part.

(2) Where there is more than one class of interest in arrangements (the "main arrangements")—

(a) the arrangements relating to each class of interest are to be treated as separate arrangements, and

(b) the main arrangements are to be disregarded.

(3) In relation to umbrella arrangements, "class of interest" does not include a part of the umbrella arrangements (but there may be more than one class of interest in a part of umbrella arrangements).

The significance of being separate arrangements is that each part of the umbrella or class of interest is treated as separate, so the test of whether it is a mutual/offshore fund must be applied to each part/class separately.[16]

Reg 5 OFTR

In these Regulations, in relation to an offshore fund constituted by a part of umbrella arrangements (within the meaning of [s.363 TIOPA])—

(a) a reference to the assets of an offshore fund is to such of the assets of the umbrella arrangements

Reg 6 OFTR

In these Regulations, in relation to an offshore fund constituted by a class of interest in the main arrangements (within the meaning of section [361 TIOPA])—

(a) a reference to the assets of an offshore fund is to the assets of the main arrangements;

[16] See 66.3 (Mutual fund). See too 66.17(One fund or more?).

as under the arrangements form part of the separate pool to which that part of the umbrella arrangements relates;	
(b) a reference to the income of an offshore fund is to the income arising from those assets; and	(b) a reference to the income of an offshore fund is to such of the income of the main fund as is attributable to interests of that class under the arrangements constituting the main arrangements; and
(c) a reference to a participant in an offshore fund is to a person for the time being owning an interest in that separate pool.	(c) a reference to a participant in an offshore fund is to a person for the time being owning an interest of that class.

The IF Manual discusses umbrellas:

> **IFM12260 umbrella funds and protected cell companies** [Apr 2020]
> References to part of an umbrella arrangement are to the arrangements relating to a separate pool (or 'sub-fund'). Umbrella arrangements will not themselves be treated as an offshore fund. Instead -
>
> - each sub-fund and each class of interest is treated as an offshore fund in its own right,
> - the umbrella fund is not treated as an offshore fund,
> - the overall arrangements are disregarded.
>
> The same approach applies to an individual cell of a protected cell company.

The former OFM discussed residence of umbrellas/parts:

> **OFM08000 umbrella funds & protected cell companies** [Jun 2016]
> [The Manual sets out the definition in s.363 and continues:]
> ... For umbrella arrangements and protected cell companies, it would usually follow that each sub-fund has the same residence status as the overall arrangement. In the case of a non-resident company it would be expected that each sub-fund would also be non-resident if it was under the "central management and control" of the directors of the company which constitutes the overall arrangement. In the case of a unit trust scheme, the trustees of the overall trust arrangements will usually also be the trustees of each separate arrangement, and so their residence status determines the residence of the fund, but where there are different

> trustees for each sub-fund then each must be considered separately. The "central management and control" test is also applicable to unit trusts.

This does not seem to be in the current manual.

The IF Manual discusses classes of interest:

> **IFM12270 classes of interest** [Apr 2020]
> [The Manual summarises s.361 and continues:]
> "Class of interest" is not limited to share classes. There may be other forms of interest which entitle an investor to realise their investment on a basis calculated entirely or almost entirely by reference to the net asset value (NAV) of the scheme property or an index. For example, certain types of loan may provide a return which tracks NAV or is based on an index. A class of interest may also be created as a result of new issues or conversions of existing rights.
> It is possible for an entity, particularly a company, to have a class of interest such as ordinary shares which does not constitute a mutual fund and another class of interest which does constitute such a mutual fund.
> However, a particular class of shares can only constitute a single class of interest, even if different types of holders of those shares enjoy different rights. For example, in the case of an exchange traded fund, only the creation unit holders who act as market makers typically have the right to redeem or issue shares directly. Shares acquired by another investor on the secondary market would still form part of the same class of interest and satisfy condition C (s356 TIOPA 2010) because, as a consequence of the market makers' ability to redeem or create units, all other investors would expect to be able dispose of their interest at or close to NAV. (See also IFM12282 regarding exchange traded funds).
> ... Funds may issue units in 'series' on a monthly basis as a method of equalising the charging of performance fees. These units will have different names (2016 - M1, 2016 - M2, 2016 - M3 etc) depending on the month in which they are issued. Each monthly series will be charged performance fees based on different issue prices and to that extent each monthly series may have a different reportable income per unit for the reporting period of issue. In most cases in later years all 2016 units will typically carry exactly the same rights to reportable income per unit.
> Strictly each different unit class should be a treated as a separate fund, but HMRC are prepared to reduce the administrative burden placed on fund managers by treating the funds as if they are a single fund in certain circumstances.
> HMRC will agree to treat such funds as a single fund where the units of each different class are identical in all respects except in respect of rights to income and expenditure in the first reporting period. Where this is the case the fund should include in its application for reporting fund status (see IFM12423):
>
> - details of the different share classes that it intends to issue in the period along with details of how the rights of unit holders vary from other share classes issued in the reporting period.
> - a statement confirming that the income of all share classes of the fund will

derive from a single pool of assets in current and future reporting periods.

- a statement confirming that all such share classes will collapse into one reporting fund at the end of the reporting period to the effect that in the next reporting period the same units will hold identical rights.

Example: Vanilla Fund (UK investors)

If a reporting offshore fund issues 1 class of share per month to UK investors only, where in reporting period 1 the units hold different rights, and where going forward all units will collapse into one class the fund may apply to the Collective Investments Scheme Centre to treat all such share classes as one reporting fund. But note that separate reports of reportable income will be required for each new series in the first period in which that series is issued.

Example: UK/ Worldwide investors

If a reporting offshore fund issues some classes of shares to UK investors, and issues other general classes of shares to other investors, where in reporting period 1 the units hold different rights, but at the end of reporting period 1 all units of a share class will collapse into a single class of shares, and the fund wishes to apply for reporting fund status in respect of the share classes relating to UK investors but not for the share classes issued to general investors, the fund may apply to the Collective Investment Schemes Centre for reporting fund status for those share classes relating to UK investors.

However, if the fund later wishes to merge all share classes there could be tax consequences for any UK investors who invested in non-reporting share classes. This is because an offshore income gain may accrue when the units held in the non-reporting fund are merged into a reporting offshore fund (See IFM13380).

These rules are not found in the definitions of CIS/OEIC. There are comparable rules for co-ownership schemes.

See too s.99A TCGA and s.619 CTA 2010.

66.18 Offshore fund: Clearance

The IF Manual provides:

IFM12210 Introduction [Apr 2020]

... HMRC is not able to provide an up-front clearance service confirming whether or not a particular set of arrangements comes within the definition of an offshore fund. It will often be clear that a particular set of arrangements either does or does not come within the definition, but HMRC recognise that will not always be the case. If, after having considered the guidance in this manual in relation to all of the facts, there is material uncertainty as to whether particular arrangements are within the definition, then HMRC will provide an opinion, unless it is considered that the request does not come within published guidelines. Although this is not a formal clearance service, enquirers should consider the guidance concerning clearance requests available on gov.uk, including the circumstances in which HMRC will

> and will not provide an opinion. Queries should be sent at least 28 days in advance if the matter is material to whether or not to proceed with marketing to UK investors, and should be addressed to HMRC's Collective Investment Schemes Centre.

The INT Manual provides:

> **INTM180060 Contacts and clearances** [Dec 2023]
> If you need HMRC's view on whether particular entities constitute collective investment schemes, you should contact *cisc.sheffield@hmrc.gov.uk*

For OIG of charities, see Kessler, Wong & Borlace, *Taxation of Charities & Nonprofit Organisations* (13th ed., 2022-23), para 4.15 (Offshore Funds) online version *https://www.taxationofcharities.co.uk*

67.1 Taxation of offshore funds

This chapter considers offshore income gains ("OIG") arising on the disposal of an offshore fund (it is assumed that the relevant conditions are met, in short, that the fund is a non-reporting fund). The next chapter considers income distributions from offshore funds.

The tax legislation is in the Offshore Funds (Tax) Regs ("OFTR"). The OFTR naturally referred to the then current provisions in FA 2008, now in TIOPA. The Tax Law Rewrite did not update secondary legislation so those references remain in the regulations. The obsolete references take effect as references to the corresponding TIOPA provisions[1] but readers

[1] Para 5(1) sch 9 TIOPA provides:
"Any reference (express or implied) in any enactment, instrument or document to a superseded enactment in its application for relevant tax purposes is to be read, so far as is required for those relevant tax purposes, as including, in relation to times, circumstances or purposes in relation to which any corresponding rewritten provision has effect, a reference to the rewritten provision."
Para 9(1) sch 9 TIOPA provides: "In this Part—
"enactment" includes subordinate legislation (within the meaning of the Interpretation Act 1978),
"relevant tax purposes" means, in relation to a superseded enactment, tax purposes for which the enactment has been rewritten by this Act, and
"superseded enactment" means an earlier enactment which has been rewritten by this Act for certain tax purposes (whether it applied only for those purposes or for those and other tax purposes)."

were left to work out what those are.

Term	**Definition**	**Formerly**	**See**
Offshore fund	s.355 TIOPA	s.40A FA 2008	66.15
Mutual fund	s.356, s.357 TIOPA	s.40B - 40E FA 2008	66.3

The reader may think it unfortunate that such an important matter was left to regulations, since the drafting and opportunity for consideration are of lower quality, and regulations are not updated with current statutory references. But there it is.

I do not consider in full the position of offshore funds held by UK resident companies subject to corporation tax.

67.2 Definitions

The following definitions are considered elsewhere:

Term	**Para**
Participant	66.2
Offshore fund	66.15
Main arrangements	66.17.2

67.2.1 *"Interest in an offshore fund"*

Regulation 8(1) OFTR provides a commonsense definition:

> For the purposes of these Regulations the interest of a participant in an offshore fund is the investment held by a participant taking part in arrangements (or arrangements constituting a fund) to which the relevant group of sections applies.

67.2.2 *Reporting/non-reporting fund*

Regulation 4 OFTR provides:

> (1) Offshore funds consist of—
> (a) non-reporting funds (see Part 2 of these Regulations), and
> (b) reporting funds (see Part 3 of these Regulations).
> (2) In a period of account, an offshore fund is a non-reporting fund unless it is a fund to which Part 3 of these Regulations applies.

Regulation 50 OFTR provides:

> In these Regulations a "reporting fund" means an offshore fund to which this Part [Part 3] applies for a period of account.

The requirements to qualify as a reporting fund are not discussed here, though I hope to cover it in a future edition.

The terminology is not to be confused with the CRS concept of reporting/non-reporting financial institutions.

HMRC publish a list of reporting funds.[2]

67.3 Charge to tax on OIG

The legislation distinguishes:

(1) Offshore income gains ("**OIG**"), which arise on a disposal of a non-reporting offshore fund and fall within the offshore funds rules.

(2) Chargeable gains, within the scope of CGT. I refer to this for clarity as "**CGT chargeable gains**" though strictly the term "chargeable gains" is only applicable to CGT. HMRC Manuals sometimes use the term "capital gains". I do not use that expression as capital gains are not necessarily chargeable gains; but in context the meaning may be clear.

Regulation 17(1) OFTR provides the charge to tax:

> There is a charge to tax if—
> (a) a person disposes of an asset,
> (b) either condition A or condition B is met, and
> (c) as a result of the disposal, an offshore income gain arises to the person making the disposal.

I refer to **"OIG conditions A and B"**.

This provision refers to a "person" so it applies to individuals, trustees, companies and PRs.

67.3.1 *Condition A: Non-reporting fund*

Regulation 17(2) OFTR provides:

> Condition A is that the asset is an interest in a non-reporting fund at the time of the disposal.

67.3.2 *Condition B: former non-reporting fund*

Condition B concerns funds changing from non-reporting to reporting fund status. Regulation 17(3) OFTR provides:

> Condition B is that—
> (a) the asset is an interest in a reporting fund at the time of the disposal,
> (b) the reporting fund was previously a non-reporting fund

[2] *https://www.gov.uk/government/publications/offshore-funds-list-of-reporting-funds*

(becoming a reporting fund as the result of an application under regulation 52),

(c) the interest was an interest in a non-reporting fund during some or all of the material period,[3]

(d) an election under regulation 48[4] was not prevented by paragraph (5) of that regulation, and

(e) no election has been made under regulation 48(2).

67.3.3 *OIG treated as income*

Regulation 18(1) OFTR provides:

> The offshore income gain arising is treated for all the purposes of the Tax Acts as income which arises at the time of the disposal to the person making the disposal (or treated as making the disposal).

OIG are not income for trust law purposes; so for instance, proceeds of sale of an offshore fund represent OIG but are not payable to a life tenant.

In accordance with the principles of plain English drafting, reg.18(5) signposts the exceptions:

Regulation	**Topic**
19	Remittance basis
20(1)	Non-resident trusts: OIG not income of settlor
20(5)	Non-resident trusts
24(6)	s.3 TCGA

67.3.4 *Person liable*

Regulation 18(2) OFTR provides:

> The tax is charged on the person making the disposal (or treated as making the disposal).

67.3.5 *Charge as misc income*

Reg 18(3) OFTR: Income tax	**Reg.18(4) OFTR: Corporation tax**
In the case of a person chargeable to income tax, tax is charged under	In the case of a person chargeable to corporation tax, tax is charged

[3] Defined reg. 17(4) OFTR:
"For the purposes of paragraph (3)(c) the "material period" means a period
[a] beginning with the day on which consideration was given for the acquisition of the asset or on 1st January 1984 (whichever is the later) and
[b] ending with the day on which the fund became a reporting fund."

[4] See 67.26 (Fund becomes reporting fund).

Chapter 8 of Part 5 of ITTOIA 2005 (miscellaneous income: income not otherwise charged) for the year of assessment in which the disposal is made ...	under Chapter 8 of Part 10 of CTA 2009 (miscellaneous income: income not otherwise charged) for the accounting period in which the disposal is made.

Thus the charge is under the Misc Sweep-up Income charge.[5]

Regulation 18(3) continues:

> but sections 688(1) and 689 of ITTOIA 2005 (income charged and person liable) do not apply.

These sections are disapplied because OFTR cover the points or covers them differently.

Under s.689, the person liable is the person liable is the person receiving/ entitled to the income. Under reg 18(2) tax is charged on the person making (or treated as making) the disposal. I would have thought that was the same thing.

Under s.688(1) the charge is on the income arising in the tax year. But OIG is the same. Perhaps s.688(1) is disapplied in order to disapply the exceptions in s.688(2).

It would have been simpler to impose a separate charge, rather than to incorporate the charging provision from the misc income sweep-up provisions, and then to exclude other rules of those provisions; but it does not matter. I think the drafting is for historical reasons as the earlier provisions imposed a charge under sch D case VI.

67.4 Meaning of "disposal"

It will be recalled that there is a charge to tax if a person disposes of an offshore fund. "Disposal" is defined in Chapter 4 Part 2 OFTR. Regulation 32 provides:

> This Chapter [Chap 4 Part 2] applies if a participant disposes of an asset and at the time of the disposal—
> (a) the asset is an interest in a non-reporting fund, or
> (b) [i] the asset is an interest in a reporting fund and
> [ii] the requirements specified in paragraph (3) of regulation 17 (read, as appropriate, with paragraphs (4) and (5) of that regulation)[6] are met.

[5] See 33.1 (Misc Sweep-up Income).

[6] See 67.3.2 (Condition B: former non-reporting fund).

I cannot see the point of this, as if a participant disposes of an asset which is not within (a) or (b) then there is no charge under the OFTR and the question of whether there is a disposal for the purposes of the OFTR does not arise. I would be grateful to any reader who could explain. However that may be, reg.32 does no harm.

We can move on to reg.33(1) which defines disposal:

> There is a disposal of an asset for the purposes of these Regulations if there would be a disposal of an asset for the purposes of TCGA 1992.

It is considered that this incorporates the CGT rules on the timing of disposals, as well as the CGT definition of disposal.

OIG differs from CGT in two respects:

Issue	**See para**
Charge on death	67.5
Reorganisations	67.27

67.5 OIG charge on death

For CGT purposes, there is no disposal on death. Section 62(1) TCGA provides:

> For the purposes of this Act the assets of which a deceased person was competent to dispose—
> (a) shall be deemed to be acquired on his death by the personal representatives or other person on whom they devolve for a consideration equal to their market value at the date of the death, but
> (b) shall not be deemed to be disposed of by him on his death (whether or not they were the subject of a testamentary disposition).[7]

Regulation 34(1) OFTR undoes this and provides for a deemed disposal on death:

> Notwithstanding anything in paragraph (b) of subsection (1) of section 62 of TCGA 1992 (general provisions applicable on death: no deemed disposal by the deceased), where a person dies and the assets of which the deceased was competent to dispose[8] at the time of death include an

[7] See 88.5 (Acquisition by PRs).

[8] Regulation 34(2) defines this expression by reference:

"... the reference in that paragraph to the assets of which a deceased person was

> interest in a non-reporting fund, then, for the purposes of these Regulations—
>
> (a) immediately before the acquisition referred to in paragraph (a) of that subsection, that interest shall be deemed to be disposed of by the deceased for such a consideration as is mentioned in that subsection; ...

For completeness, reg.34(1) concludes:

> but (b) nothing in this regulation affects the determination, in accordance with regulation 32, of the question whether that deemed disposal is one to which this Chapter applies.

I cannot see the point of that, but it does no harm.

Regulation 34(2) incorporates other rules of s.62 TCGA:

> Subject to paragraph (1), section 62 of TCGA 1992 applies for the purposes of these Regulations as it applies for the purposes of that Act...,

The following provisions of s.62 therefore apply for OIG; I set out the section highlighting the amendments that the context requires when applying the section to OIG:

> [(2) and (2A) deal with losses and are not relevant to OIG.]
>
> (3) In relation to property forming part of the estate of a deceased person the personal representatives shall for the purposes of this Act be treated as being a single and continuing body of persons (distinct from the persons who may from time to time be the personal representatives), and that body shall be treated as having the deceased's residence and domicile at the date of death.
>
> (4) On a person acquiring any asset as legatee (as defined in section 64)—
>
> (a) no ~~chargeable~~ offshore income gain shall accrue to the personal representatives, and
>
> (b) the legatee shall be treated as if the personal representatives' acquisition of the asset had been his acquisition of it.
>
> (5) Notwithstanding section 17(1) no ~~chargeable~~ offshore income gain shall accrue to any person on his making a disposal by way of donatio mortis causa.
>
> [Subsections (6) to (9) deal with IoVs and need not be set out here.]

competent to dispose are to be construed in accordance with [s.62(10) TCGA]." Section 62(10) provides a commonsense definition; see 88.5 (Acquisition by PRs).

The IF Manual deals with the interaction of the OIG charge on death and IHT:

> **IFM13383: Offshore Funds: participants in offshore funds: participants within the charge to income tax: disposals: non-reporting funds: death of participant** [Apr 2020]
> ...An offshore income gain arises and resulting tax becomes payable before the estate of the deceased person is valued for inheritance tax purposes.

There is scope for deathbed planning: a lifetime gift to charity or to a spouse avoids the OIG charge on death, because no OIG arises on the disposal (applying CGT rules which brings into effect the CGT spouse exemption and the CGT charity exemption). By contrast if there is a gift by will to charity or to a spouse the OIG comes into charge on the death. It seems that a gift by way of *donatio mortis causa* [gift in anticipation of death] also avoids the OIG charge on death.[9]

67.6 OIG arising to partnership

Partnerships are transparent for IT and CGT, in the sense that income/gains arise to the partners not the partnership, The same applies to OIG. HMRC agree. SAI Manual provides:

> **6370 Offshore income gains: The tax charge** [Feb 2020]
> Where an offshore income gain is realised by a partnership, each partner should be separately assessed in respect of his share of the ... income.

67.7 OIG remittance basis

Regulation 19 OFTR provides:

> (1) This regulation applies to income treated as arising under regulation 17 to an individual in a tax year if—
> (a) section 809B, 809D or 809E of ITA 2007 (remittance basis) applies to the individual for that year, and
> (b) the individual is not [actually] domiciled[10] in the UK in that year.
> (2) The income is treated as relevant foreign income of the individual.

The significance of treating the income as RFI is that the income can

[9] See 88.7.3 (Gift in anticipation of death).

[10] The deemed domicile rules do not apply to para 19(1)(b): see 5.3.1 (Scope of IT/CGT deemed-dom). But that does not matter, as the deemed domiciled rules do apply for s.8090B (remittance basis claim), and for s.809E; so a deemed domiciled individual cannot usually meet the requirement in reg 19(1)(a).

qualify for the remittance basis. I refer to this as the "**OIG remittance basis**".

The remittance basis applies even if the offshore fund is a UK situate asset (the CGT situs rules are not relevant) but in practice that is not likely to happen.

So long as the gain is not remitted, a remittance basis taxpayer will not care if the gain is a chargeable gain or an OIG, ie they will not care whether the asset disposed of is an offshore fund.

Regulation 19(3) OFTR contains two rules:

> For the purposes of Chapter A1 of Part 14 of ITA 2007 (remittance basis)—
>
> (a) any consideration obtained on the disposal of the asset[11] is treated as deriving from the income, and
>
> (b) unless the consideration so obtained is of an amount equal to or exceeding the market value of the asset, the asset is treated as deriving from the income.

At first sight it is not clear why reg.19(3)(a) is needed. It seems self-evident. There is no equivalent in the CGT charge on gains accruing to individuals. But a reason will emerge.[12]

Regulation 19(3)(b) is the equivalent of the CGT rule for deemed gains.[13]

67.8 OIG arising to UK trust

67.8.1 *UK trust (not settlor-interested)*

A UK resident trust is in principle subject to income tax on its OIG.[14] Tax is charged at the trust rate, 45%: it falls within s.482 type 3.[15]

67.8.2 *UK settlor-interested trust*

An OIG arising to UK trustees is not "income" in the general sense and in

[11] Reg 19(4) provides two somewhat unnecessary definitions:

"In paragraph (3)—

(a) "the asset" means the asset the disposal of which causes the income to be treated as arising, and

(b) "the disposal" means the disposal mentioned in sub-paragraph (a) of that paragraph."

[12] See 67.13.7 (OIG s.87 TCGA remittance basis).

[13] See 18.45 (Gain on disposal at undervalue).

[14] See 67.3 (Charge to tax on OIG).

[15] See 41.2.3 (Trust-rate income).

the absence of express provision it would not fall within s.624 ITTOIA which only applies to income. However reg.18 OFTR directs that the OIG is "treated for all the purposes of the Tax Acts as income" so it does fall within s.624 ITTOIA.

If the settlor is a remittance basis taxpayer the s.624 remittance basis applies, ie an unremitted OIG is not taxed on the settlor but on the trustees.[16]

The rate of tax in the absence of s.624 is the trust rate, which is the top rate, so s.624 can only reduce the tax rate (or make no difference).

67.9 OIG non-residence defence

Regulation 22(1) OFTR provides a territorial limitation for non-residents:

> The following enactments have effect in relation to income tax or corporation tax in respect of offshore income gains as they have effect in relation to capital gains tax or corporation tax in respect of chargeable gains—
>
> (a) section 2(1) of TCGA 1992 (persons chargeable to capital gains tax) ...

This incorporates the CGT territorial limitations by reference.[17]

[16] See 47.8 (s.624 remittance basis).

[17] See 56.6.3 (Territorial scope: Summary). For completeness: reg 22 OFTR also incorporates s.10 TCGA (now s.1B TCGA) which would apply if a non-resident carried on a trade through a branch or agency and used the offshore funds for the purposes of the trade. This gives a neat symmetry with the CGT rules but it is hard to imagine that this will ever apply in practice. Regulation 22 provides:

> "(1) The following enactments have effect in relation to income tax or corporation tax in respect of offshore income gains as they have effect in relation to capital gains tax or corporation tax in respect of chargeable gains—
>
> ...
>
> (b) section 10 of TCGA 1992 (non-resident with a UK branch or agency);
>
> (c) section 10B of TCGA 1992 (non-resident company with UK permanent establishment).
>
> (2) Paragraph (1) is subject to paragraphs (3) and (4).
>
> (3) In the application of section 10 of TCGA 1992 in accordance with paragraph (1), paragraphs (a) and (b) of subsection (1) (assets on the disposal of which chargeable gains are taxable) have effect with the omission of the words "situated in the UK and".
>
> (4) In the application of section 10B of TCGA 1992 in accordance with paragraph (1), paragraphs (a) and (b) of subsection (1) (assets on the disposal of which chargeable profits arise for the purposes of corporation tax) have effect with the

After the 2019 rewrite, the reference to s.2(1) takes effect as a reference to the CGT/CT rules in s.1A(1)/2B(1) TCGA. It is helpful to read these side by side, amended as reg. 22(1) directs:

IT: s.1A(1) TCGA	**CT: s.2B(1) TCGA**
A person who is UK resident for a tax year is chargeable to ~~capital gains tax~~ income tax on ~~chargeable gains~~ offshore income gains accruing to the person in the tax year on the disposal of assets wherever situated.	A company which is resident in the UK in an accounting period is chargeable to corporation tax on ~~chargeable gains~~ offshore income gains accruing to the company in the period on the disposal of assets wherever situated.

By implication, a person is not chargeable to IT on offshore income gains if they do not meet the residence condition, that is, if they are not UK resident.

67.10 OIG arising to non-resident trust

Where an OIG arises to a non-resident trust, the trustees are not subject to tax on the gain because they are non-UK resident.

67.10.1 *Non-res. settlor-interested trust*

An OIG arising to a non-resident settlor-interested trust is not within s.624 ITTOIA, unlike a UK resident trust. Regulation 20(1) OFTR provides:

> If
> [a] an offshore income gain arises to a settlement in a tax year and
> [b] the trustees of the settlement are not resident in the UK in the tax year,
> the gain is not regarded as income for the purposes of Chapter 5 of Part 5 of ITTOIA 2005 (settlements: amounts treated as income of settlor).

It follows that a settlor (if liable under s.720) does not have an indemnity against the trust for the tax. One wonders if this has been thought through.

The whole of Chapter 5 is disapplied, so where a capital payment is made to a minor child of the settlor, the settlor is not taxable under s.629 ITTOIA (instead the child would be taxable at the appropriate rate. This could lead to a significant saving).

omission of the words “situated in the UK and”.”

Section 1015 ITA could also restrict the territorial scope of the OIG charge, but the rules discussed here leave it no room to operate.

67.11 OIG anti-avoidance: Outline

The rule that non-resident trusts and companies are not subject to tax on OIG presents an obvious means of tax avoidance. HMRC might have applied either ToA or CGT anti-avoidance provisions to deal with this. In fact they have applied both:
(1) The ToA provisions apply: reg.21
(2) The CGT provisions apply (with amendments):
 (a) Regulation 20 applies s.87 TCGA.
 (b) Regulation 24 applies s.3 TCGA.

Further rules are needed to deal with the many possible ways in which the anti-avoidance provisions may interact:
(1) Interaction between these IT and CGT anti-avoidance provisions potentially applying to the same OIG; and
(2) Interaction between:
 (a) the applicable anti-avoidance provision relating to an OIG and
 (b) s.731 or CGT s.87 (where a beneficiary receives a benefit and there is also relevant income or a CGT s.1(3) amount).

67.11.1 *OIG avoidance rules: Critique*

The result of applying two sets of overlapping anti-avoidance provisions is so complicated that no-one could expect the rules which I seek to explain below to be applied in practice, except by the largest trusts with a large budget for UK professional advice. It also introduces a full set of anomalies and some scope for tax planning.

Although it was the case before 2008 that both ToA and CGT anti-avoidance provisions applied, the 2008 reforms made both sets of provisions more complicated, so that the dual application presents much more complexity than before.

The drafting of the OIG provisions was even more rushed than the rest of the 2008 legislation, leaving no time even for HMRC to properly consider the issues, let alone for consultation.[18] It seems to me that there can be no better criticism of the rules than an attempt to explain them. The reader who labours through this chapter is likely to agree that the law ought to be simplified by applying either the ToA or the CGT anti-avoidance rules – CGT would be the better of the two, as OIG are more

[18] The 2009 regulations might have offered an opportunity to rethink, but it was not taken up.

like capital gains – but not both.

67.12 OIG ToA provisions

An OIG arising to a non-resident is not "income"; so in the absence of express provision it would not fall within the ToA provisions even if it arose to a person abroad within s.720 or s.731.[19] Regulation 21(1) OFTR deals with this and thus applies the ToA provisions to OIG:

> Chapter 2 of Part 13 of ITA 2007 (transfer of assets abroad) applies in relation to an offshore income gain arising to a person resident or domiciled outside the UK as if the offshore income gain were income becoming payable to the person.

It is helpful to distinguish the ordinary transfer of asset rules and the rules as they apply to OIG. I use the following terminology:

(1) **"OIG s.720"**: the provisions of s.720 ITA which apply when:
   (a) a person abroad receives OIG, treated as income for the purposes of s.720, and
   (b) the transferor is deemed to receive income ("**OIG s.720 income**").

(2) "**OIG s.731**": the provisions of s.731 ITA which apply when:
   (a) a person abroad receives OIG, treated as relevant income for the purposes of s.731, and
   (b)a beneficiary is deemed to receive income ("**OIG s.731 income**").

There are only limited differences between the way that s.720/ 731 work for OIG/ordinary income.

67.12.1 *s.720/s.371 remittance basis*

Regulation 21(2) OFTR provides:

> Income treated as arising under that Chapter [Chapter 2 Part 13 ITA, transfer of assets abroad] by virtue of paragraph (1) is regarded as "foreign" for the purposes of section 726, 730 or 735 of that Act.

This feeds into s.726 ITA which provide a remittance basis for s.720 income.[20] So the s.720 remittance basis applies for OIG s.720 income. The s.731 remittance basis applies similarly for OIG s.731 income.

The motive and EU-law defences may also apply.

[19] See 48.15 (Income of person abroad).

[20] See 49.26 (s.720 remittance basis).

67.12.2 *OIG: Protected s.720 income?*

The question arises whether offshore income gains of a person abroad constitute protected foreign-source income (in my terminology, "protected s.720 income").[21] This matters because protected s.720 income qualifies for (what I call) s.720 protected-trust relief. One would expect the answer to be, yes, whether or not the transferor was a remittance basis taxpayer; because that is the case for other foreign source income, and one would expect OIG to be treated in the same way.

The definition of protected s.720 income is in s.721A ITA. The difficulty is the RFI condition, that:

> it [in this case, the OIG which arises to the person abroad] would be relevant foreign income if it were the individual's[22]

Income is RFI if there is a provision which specifically says so.[23]

There are three provisions which might be called on to show that the requirement in s.721A(3)(a) is met.

The first contender is reg. 21(2) OFTR, combined with s.726 ITA. But that does not help for two reasons (either one would suffice):

(1) it concerns the s.720 OIG income which arises to the transferor. We are concerned with the OIG income which arises to the person abroad. The two are distinct.

(2) s.726 only applies to remittance basis taxpayers (like reg 19).

The second contender is reg. 19 OFTR. This provides:

> (1) This regulation applies to income treated as arising under regulation 17 to an individual in a tax year if—
>
> (a) section 809B, 809D or 809E of ITA 2007 (remittance basis) applies to the individual for that year, and
>
> (b) the individual is not domiciled in the UK in that year.
>
> (2) The income is treated as relevant foreign income of the individual.

For the purpose of the RFI condition, we must imagine that the OIG arising to the person abroad arises to the individual. It should follow, applying the deeming, that there is income treated as arising under

[21] See 60.9 (Protected s.720 income).

[22] Where the person abroad is a trust the applicable provision is s.721A(3)(a) ITA. Where the person abroad is a company, the applicable provision is s.721A(4)(a) ITA. But the wording is the same in each case, so it makes no difference.

[23] See 16.9.2 ("Relevant foreign income").

regulation 17 to the individual.[24] However reg 19 only applies if the individual is a remittance basis user.

That suggests that the position is as follows:

(1) If the transferor is a remittance basis taxpayer, the OIG is protected s.720 income, and qualifies for s.720 protected-trust relief.

(2) If the transferor is not a remittance basis taxpayer (typically because they are deemed domiciled and cannot claim the remittance basis; or because they chose not to do so) then the OIG is not protected s.720 income; so it is taxable on the transferor on an arising basis.

That would be a strange and no doubt unintended result.

67.12.3 *Deemed source argument*

A third argument is based on s.830(1) ITTOIA:

> ... "relevant foreign income" means income which
> (a) arises from a source outside the UK, and
> (b) is chargeable under any of the provisions specified in subs.(2)

OIGs are chargeable under one of the provisions specified in s.830(2), namely, Chapter 8 Part 5 ITTOIA, which is specified in s.830(2)(o).

The professional bodies have flagged up this argument in a series of papers ("OIG papers"). For completeness, these are:

Title	**ICAEW name**	**Date**
Summary Technical Analysis		Jan 2019
HMRC Response		Nov 2020
Trust Protections and Offshore Income Gains	TAXguide 03/21	Feb 2021[25]

The 2021 OIG paper sets out the text of the earlier papers verbatim, so it is not now necessary to read the earlier papers..

The 2019 OIG paper started with a disclaimer in fortissimo:

> THE ANALYSIS BELOW DOES NOT REFLECT THE VIEWS OF ANY OF THE PROFESSIONAL BODIES. IT IS PUBLISHED SO THAT PROFESSIONAL ADVISERS CAN CONSIDER THE ANALYSIS FOR THEMSELVES USING THEIR OWN PROFESSIONAL JUDGMENT AND

[24] Reg.17 requires a disposal, and there is no provision expressly deeming a disposal; contrast 67.13.5 (Deemed disposal for s.87). But this can be implied.

[25] *https://www.icaew.com/-/media/corporate/files/technical/tax/tax-faculty/taxguides/2021/taxguide-03-21-deemed-domicile-changes---note-on-the-trust-protections-and-offshore-income-gains.ashx*

> CONSTITUTES NEITHER ADVICE NOR GUIDANCE ...

The 2021 paper has a similar disclaimer, though no longer in block capitals.

The "summary technical analysis" is as follows:

> 4) ... the question put is whether the income would meet the definition of RFI at section 830 ITTOIA 2005 if received by the transferor directly. There are 2 conditions to be RFI.
>
> *Condition 1: Is the OIG foreign income?*
>
> All income must have a source (various case law can be cited in support of this contention), so if one carries through the deeming in line with *Marshall v Kerr* ... then the deemed income must too have a source.
>
> [The analysis cites the well-known passage from *Marshall v Kerr*,[26] and continues]
>
> In the case of offshore income gains the source should be the foreign fund (it is argued that nothing else is plausible (as stated at the beginning readers must make their own evaluation on this and the other issues).

But an OIG does not arise from a source, as it is a capital gain.[27] It is not the case that "All income must have a source". The CIOT argument fails at this point. HMRC agree.

I set out the rest for completeness:

> *Condition 2: Is the OIG chargeable under one of the provisions listed in s830(2), one of which is Chapter 8 of Part 5 (income not otherwise charged)?*
>
> The analysis postulates that under section 721A(3) the income is received by the transferor (see point 3 above). The analysis goes on to say that Regulation 18 would then be the relevant charging provision in this case (charging individuals under Chapter 8 of Part 5 ITTOIA 2005).
>
> Taking all of the above into account, the analysis concludes that both conditions 1 and 2 are met.
>
> Having gone through the above, the analysis concludes that:
>
> - the OIG does meet the definition of RFI at section 830 ITTOIA 2005; and
> - the corollary of this conclusion is that the OIG falls within the trust protections on first principles.

CIOT then seek to explain the purpose of reg 19(2) and s.830(4)(aa)

[26] See App. 4.4 (Deeming provisions: Construction).

[27] See 16.6 (No source/deemed source).

ITTOIA (which refers to reg 19(2)):

> Various arguments have been put forward. The first is that regulation 19(2) was included by the draftsman to put the matter beyond any doubt. [CIOT cite a well-known comment on the argument from redundancy[28]]. Alternative arguments are that:
>
> - regulation 19 deals only with remittance basis users but is not exclusive; or
> - in 2009 regulation 19 unnecessarily re-enacted section 762ZB ICTA 1988 without appreciating that the 2008 reforms had already brought OIGs within Chapter 8 Part 5 ITTOIA.
>
> Whichever argument is correct the analysis states that the existence of regulation 19(2) and section 830(4)(aa) ITTOIA 2005 does not preclude the technical argument made that OIGs should fall within the trust protections on first principles.

But reg 19(2) is needed on the basis that an OIG has no source.

CIOT say:

> Note that there is a similar issue for accrued income profits with a similar technical argument being available for why the income should come within the trust protections.

It is arguable that a purposive construction should apply, so that OIG can be protected s.720 income even if the transferor does not claim the remittance basis. As tax statutes become more complex, and the standard of statutory drafting does not (and realistically, cannot) meet the challenge, the Courts should become more willing to correct obvious slips by construction. But that requires moving the line which distinguishes construction from rewriting the legislation.

CIOT asked to change the law, but it was too much trouble.[29] Perhaps

[28] See App.2.1.2 (Argument from redundancy).

[29] HMRC say (2018): "A decision has been made not to amend the current legislation to include income arising in offshore non-reporting funds in the foreign trust exemptions at this time. The current demands placed on parliamentary resource make it difficult for the government to justify returning to the legislation at this time to add to the generous package of protections which the government has already legislated for in the extensive reform of the non-dom rules last year. Going forward, HMRC will continue to monitor this situation and engage with stakeholders."
https://www.tax.org.uk/non-dom-reforms-protected-trusts-and-non-reporting-funds-a-survey-for-completion-by-offshore-trustees
The reason (if it can be called that) will not satisfy HMRC's customers, and perhaps

the hope of the CIOT argument was to give HMRC the opportunity to allow the relief under the easier guise of interpretation. But HMRC declined to do so, with an analysis which is technically correct, though lacking an acknowledgement of the unfairness of the consequences:

> Having considered the analysis HMRC CANNOT AGREE THAT IT IS A CORRECT INTERPRETATION for the OIG situation and we would make the following observations:
> 1) Whilst we appreciate that Regulation 18 of the Offshore Funds (Tax) Regulations 2009 (the Offshore Funds Regulations) treats OIGs arising to participants in non-reporting funds as income which arises at the time of the disposal to the person making the disposal "for all the purposes of the Tax Acts" we do not agree that it follows that OIG income is relevant foreign income as defined in s 830(1)ITTOIA.
> 2) For the purposes of s 830(1) ITTOIA relevant foreign income means income which:
>
> a) arises from a source outside the UK; and
> b) is chargeable under any of the provisions listed in s 830(2)
>
> We do not consider that OIG income treated as arising under Regulation 18(2) of the Offshore Fund Regulations can be said to be income which arises from a source outside the UK. Whilst Regulation 18(2) treats the OIGs as income which arises at the time of the disposal to the person making the disposal it does not treat it as income arising from a source outside the UK. To do so would be to take the deeming provision too far.

It is not even a matter of taking the deeming "too far": the deeming simply does not entail that the offshore fund has a source.

> Therefore it is our view that while it may (?) be correct to say that such deemed income is chargeable under Chapter 8 of Part 5 ITTOIA and thus falls within s 830(2)(o), it does not fall within the definition of relevant foreign income.
> 3) S 830(4) ITTOIA refers to the treatment of "other income" as relevant foreign income. The wording of this provision makes it clear that it was intended to deal with the treatment of income which had not already been covered in the preceding subsections. It refers to the "treatment" of these categories of income as relevant foreign income rather than stating that they will fall within the definition of relevant foreign income. This is because only some of the statutory provisions listed treat the income in question as relevant foreign income for all

the decision will come to be reviewed.

purposes. Others such as the provision relating to OIG income limit this treatment.

4) We do not believe that it is correct to say that the provision in Regulation 19(2) of the Offshore Funds Regulations simply restates the position which already existed as a result of applying the definition of relevant foreign income set out in section 830(1) and (2) ITTOIA (on the assumption that OIG income fell within it). If OIG income was correctly categorised as relevant foreign income under s 830(1) and (2) ITTOIA, that would have enabled an individual who was a non-domiciled remittance basis user access to the remittance basis in respect of that income. However there are also other consequences of income being categorized as relevant foreign income which apply to those other than non-domiciled remittance basis users. For example, Part 8 Chapter 3 ITTOIA contains provisions about deductions and reliefs available where relevant foreign income is charged on the arising basis.[30]

Therefore, if it was correct to say that OIG income falls within s 830(1) ITTOIA, the effect would be not only that non-domiciled remittance basis users would be able to claim remittance basis in respect of that income, but that those individuals in receipt of OIG income who are not non-domiciled remittance basis users would be entitled to those deductions and reliefs. When the Offshore Fund Regulations were made, Regulation 19(2) could have stated that OIG income treated as arising under Regulation 17 was treated as relevant foreign income of the individual. However it did not do so – it specifically limited treatment of OIG income as relevant foreign income to those cases where the individual was a non-domiciled remittance basis user.

5) If HMRC were to accept that OIG income already falls within the definition of relevant foreign income in s 830(1) and (2) ITTOIA, the effect would be wider than simply enabling OIG income treated as arising to offshore trustees to be within the definition of protected foreign source income for the purposes of section 721A Income Tax Act 2007. It would also mean that individuals not entitled to claim remittance basis could treat their OIG income as relevant foreign income for the purposes of the rules about expenses and deductions in Part 8 Chapter 3 ITTOIA both before and after the 6 April 2017 date. This would appear to frustrate the intentions of Parliament in enacting section 830 ITTOIA, which clearly indicates that it is s 830(4)(aa) and the provisions of the Offshore Funds Regulations which are to determine the treatment of OIG income as relevant foreign income.

[30] See 16.10 (RFI collection costs).

> ... The intention behind Regulations 18 and 19 of the Offshore Funds Regulations is clear, in that those provisions, rather than s 830(1), are to determine the relevant foreign income treatment of such deemed income and this is confirmed by the wording of s 830(4)(aa) ITTOIA. Here we have a provision which deems an OIG to be income arising at the time of the disposal to the person making the disposal but does not go on to deem it to be income arising from a foreign source. There is nothing in the deeming provision which is irreconcilable with the conclusion that the OIG income, being deemed rather than actual income, does not have a source.

An action group was formed with a view to taking a test case, but no test case has been forthcoming.[31]

67.12.4 *Tax return disclosure*

CIOT say:

> **2017/18 Tax Returns**
> For those completing 2017/18 returns now, where this issue is in point, consideration will need to be given as to what filing position to take. The professional bodies cannot provide advice or guidance; however, professional advisers may want to take the following into account.
> HMRC expect: (i) tax returns to be filed on the basis that the trust protections do not apply to OIGs; and (ii) for tax to be paid accordingly.
> Notwithstanding HMRC's response, an adviser might consider that the better technical position is that the trust protections DO apply. This could be on the basis of the [CIOT analysis] ... or as a result of a different technical analysis. Appropriate white space disclosure of the technical position should be considered (this would include a reference to the view taken being contrary to that of HMRC) bearing in mind the fundamental principles and standards set out in PCRT with particular reference to paragraph 2.29 et seq.[32]
> If the tax return is filed on the basis that the trust protections do not apply, the client will have to 31 January 2020 to file an amended return.
> In the light of the HMRC response, tax advisers may want to consider: (i) whether to amend returns already submitted on the basis that the trust protections do apply; or (ii) whether they feel that the HMRC response is incorrect (in such cases the adequacy of the initial white space disclosure may be something to review).

[31] For details, contact Jennifer.Smithson@Macfarlanes.com

[32] See 122.3 (Tax return filing position); 122.8 (Disclosing doubt/further information).

The 2021 OIG paper upgrades this advice (if one may use the term, having regard to the disclaimer?):

> full disclosure is essential (this would include a reference to the view taken being contrary to that of HMRC).

The PCRT has not changed in the interim, but it seems that its "fundamental principles and standards" are susceptible to more than one interpretation. But in this case, disclosure would be advisable.

67.13 OIG s.87 charge

An OIG is not a chargeable gain, and so in the absence of express provision an OIG arising to a non-resident trust would not be a s.1(3) amount (trust gain), and would not give rise to a charge under s.87 TCGA. Regulation 20(3) OFTR deals with this and applies the s.87 rules with modifications. Because there are modifications, there are significant differences between OIG s.87 and CGT s.87.

67.13.1 *OIG s.87 charge*

Regulation 20(3) OFTR incorporates the s.87 TCGA rules in this manner:

> Sections 12,[33] 87 to 90A and 96 to 98 of, and Schedule 4C to, TCGA 1992 apply in relation to OIG amounts[34] as if—
> (a) references to section 2(2) amounts[35] (except those in paragraph 7B(2)(b) and (4) of Schedule 4C) were to OIG amounts,
> (b) references to chargeable gains (except the one in paragraph 1(5) of Schedule 4C) were to offshore income gains,
> (c) references to anything accruing were to it arising[36] (and similar references, except the one in paragraph 1(5) of Schedule 4C, were read accordingly),
> (d) sections 87(4), 88(2) to (5) and 97(6) and paragraphs 1(3A), 3 to 7 and 12 of Schedule 4C were omitted, and

[33] The reference to s.12 TCGA in regulation 20(3) (which became sch 1 TCGA under the 2019 CGT rewrite) makes no sense, and must be a drafting error. However no great harm is done by the error. What matters is the incorporation of s.87 ff TCGA.

[34] See 67.13.2 ("OIG amount"),

[35] Section 2(2) amounts (trust gains) are now called s.1(3) amounts; but the 2019 CGT rewrite did not rewrite statutory instruments.

[36] The terminology of the Taxes Acts is that CGT chargeable gains *accrue;* but OIG *arise.* There is no difference in meaning so it seems slightly pedantic to make the change of terminology when incorporating the CGT s.87 provisions for OIG; but it does no harm.

(e) regulation 21[37] did not apply.

In this section I consider the application of s.87-98 TCGA to OIG.

I do not set out all of s.87-98 TCGA, as amended, because the text would be too long for the exercise to be useful. The key provision is s.87(2)(3) TCGA which (amended as reg.20(3) directs) provides:

> (2)[a] *Offshore income gains* are treated as *arising* in the relevant tax year to a beneficiary of the settlement
> [b] who has received a capital payment from the trustees in the relevant tax year or any earlier tax year
> [c] if all or part of the capital payment is matched (under s.87A as it applies for the relevant tax year) with the *OIG amount* for the relevant tax year or any earlier tax year.
>
> (3) The amount of *offshore income gains* treated as *arising* is equal to—
> (a) the amount of the capital payment, or
> (b) if only part of the capital payment is matched, the amount of that part.

It is necessary to distinguish CGT s.87 and OIG s.87 because the rules are not identical. I use the following terminology:

(1) "**CGT s.87**", the provisions of s.87 TCGA which apply when:
  (a) a trust has a "**CGT s.1(3) amount**" (trust gains) and
  (b) a beneficiary is deemed to receive a CGT chargeable gain ("**s.87 CGT gain"**).

(2) "**OIG s.87**", the provisions of s.87 as amended, which apply when:
  (a) a trust has an "**OIG amount**"; and
  (b) a beneficiary is deemed to receive an OIG ("**s.87 OIG**").

For a discussion of CGT s.87, see 61.1 (s.87 code: Introduction). I concentrate here on points where OIG s.87 is different from CGT s.87.

67.13.2 *"OIG amount"*

Regulation 20(2) OFTR defines the term "OIG amount":

> If—
> (a) offshore income gains arise to the trustees of a settlement in a tax year, and
> (b) section 87 of TCGA 1992 (gains of non-resident settlements) applies to the settlement for that year,

[37] See 67.12 (OIT ToA provisions).

> the OIG amount for the settlement for that year is the amount of the offshore income gains.

"OIG amount" is the OIG equivalent of the CGT concept "s.1(3) amount" (formerly called trust gains).

The definition is not identically worded. It is necessary to have a different definition, since the definition of s.1(3) amounts (trust gains) caters for losses, and for CGT chargeable gains within s.86 TCGA; the definition of OIG amounts does not do this because there is no relief for OIG losses and s.86 does not apply to OIG.

67.13.3 *"Capital payment"*

"Capital payment" is defined in s.97(1) TCGA. The OFTR does not amend this. Section 97(1) provides:

> In sections 86A to 96 and Schedule 4C and this section "capital payment"—
> (a) means any payment which is neither—
> (i) chargeable to income tax on the recipient, nor
> (ii) chargeable to income tax on another person under any of sections 643A, 643J and 643L of ITTOIA 2005 and sections 733A, 733C and 733E of ITA 2007,
> or, in the case of a recipient who is not resident in the UK, any payment received otherwise than as income...

Suppose a trust within OIG s.87 makes a capital payment (or what appears to be a capital payment) to a UK resident beneficiary. The definition does not actually work for OIG s.87, since what would otherwise be a capital payment falling within OIG s.87 *is* chargeable to IT under OIG s.87! But for the purposes of OIG s.87 the definition must be taken to read that "capital payment" means:

> [i] any payment which is not chargeable to income tax ... *[apart from OIG s.87]*
> [ii] or, in the case of a recipient who is not resident in the UK, any payment received otherwise than as income...

I refer to a capital payment which is subject to income tax under OIG s.87 as an **"OIG capital payment"**.

67.13.4 *Disapplied provisions*

Regulation 20(3) OFTR provides:

> Sections 12,[38] 87 to 90A and 96 to 98 of, and Schedule 4C to, TCGA 1992 apply in relation to OIG amounts[39] as if ...
>
> (d) sections 87(4), 88(2) to (5) and 97(6) and paragraphs 1(3A), 3 to 7 and 12 of Schedule 4C were omitted, and
>
> (e) regulation 21[40] did not apply.

The provisions disapplied in this way are:

Provision	**Topic**	**Comment**	**See**
TCGA			
s.87(4)	"s.1(3) amount"	not needed	61.6
s.88(2)	"s.1(3) amount" for s.88	not needed	61.38.1
s.88(3)	"assumed chargeable amount"	not needed	61.38.1
s.88(4)(5)	"protected assets"	not needed	61.38.2
s.97(6)	losses	not appropriate	65.13.1

para 3 to 7			
para 12			
Reg 21 OFTR			

67.13.5 *Deemed disposal for s.87*

If OIG s.87 applies, a beneficiary receives a s.87 OIG. OIG s.87 does not directly impose a charge on the s.87 OIG: the deeming feeds into reg.17 which imposes the charge when an OIG arises to the person making the disposal of an offshore fund.[41] A further deeming is needed, because the beneficiary who receives the s.87 OIG does not make a disposal. Therefore reg.20(5) OFTR provides for a deemed disposal, to bring the s.87 OIG into charge under reg.17:

> If this regulation applies, the person to whom the offshore income gain arises is treated as the person making the disposal.

The same rule applies for s.3 OIG.[42]

[38] The reference to s.12 TCGA in regulation 20(3) (which became sch 1 TCGA under the 2019 CGT rewrite) makes no sense, and must be a drafting error. However no great harm is done by the error. What matters is the incorporation of s.87 ff TCGA.

[39] See 67.13.2 ("OIG amount"),

[40] See 67.12 (OIG ToA provisions).

[41] See 67.3 (Charge to tax on OIG).

[42] See 67.14.1 (Deemed disposal for s.3).

67.13.6 *OIG s.87 : Misc points*

The deemed disposal rules of sch 4B TCGA do not apply to OIG,[43] but sch 4C TCGA may apply.

The interest surcharge rule in s.91 TCGA applies only to CGT s.87 and not to OIG s.87.

A capital payment from a trust with OIG amounts does not give rise to an IHT exit charge as the exit charge income exemption applies.[44]

I deal with the 2008 transitional rules elsewhere because they are best considered together with the CGT s.87 transitional rules.[45]

For sch 4C, see 62.32 (OIG sch 4C).

67.13.7 *OIG s.87 Remittance basis*

If a remittance basis taxpayer receives a s.87 OIG, s.87B TCGA applies to bring in a remittance basis just like the CGT s.87 remittance basis.

Reg.19(5) OFTR provides:

> This regulation does not apply for the purposes of regulation 20.

That disapplies the ordinary OIG remittance basis.[46] That is needed because the OIG s.87B remittance basis applies instead.

67.13.8 *HMRC views*

HMRC agree with the above. The IF Manual provides:

> **IFM13430: Effect of residence / domicile of beneficiary on offshore income gains arising in non-resident settlement structures that are attributed under section 87 TCGA rules - regulation 20** [Apr 2020]
>
> **Beneficiary is UK resident and domiciled**
>
> Where attributions are made to a beneficiary who is UK resident or ordinarily resident and is domiciled in the UK, then the full amount of the offshore income gain attributed is liable to tax on the beneficiary as income.
>
> **Beneficiary is UK resident but non-UK domiciled**
>
> Where attributions are made to a beneficiary who is UK resident or ordinarily resident but non-UK domiciled then, under section 87 TCGA

[43] See 62.17.1 (Chargeable asset).

[44] See 76.9.3 (Income-receipt relief).

[45] See 61.42.1 (Pre-2008 OIG amounts); 61.45 (Pre-2008 inter-trust transfer); 61.51 (Rebasing - OIG amounts).

[46] See 67.7 (OIG remittance basis).

rules, the full amount attributed may not be chargeable to income tax. Special rules may apply where the offshore income gains or capital payment were prior to 6 April 2008 – see the Capital Gains Manual from CG38730.

From 6 April 2017 a person may become deemed domiciled under s835BA ITA 2007. This document gives an introduction to the rules.

The full amount of the offshore income gain attributed to the individual reduces the OIG amount of the non-resident settlement structure that is available to match with future capital payments. That is so even though less than the full amount may be chargeable to income tax on the individual.

Beneficiary is non-UK resident

Offshore income gains can still be attributed to a beneficiary who is not resident or ordinarily resident in the UK using the section 87 TCGA attribution rules. This applies even though they may not be chargeable to tax on such an individual. Any such attribution reduces the OIG amount of the non-resident settlement structure that is available to match with future capital payments. Detail on the rules for matching capital payments can be found in the Capital Gains Manual from CG38700.

67.14 OIG s.3 charge

An OIG is not a chargeable gain, so in the absence of express provision an OIG arising to a non-resident company would not fall within s.3 TCGA. Regulation 24 OFTR deals with this and applies s.3 TCGA to OIG, with some modification:

> (1) Section 13 of TCGA 1992 (chargeable gains accruing to certain non-resident companies) applies for the purposes of this Part with the following modifications.
>
> (2) The section applies as if—
>
> (a) for any reference to a chargeable gain there were substituted a reference to an offshore income gain; and
>
> (b) for any reference to anything accruing there were substituted a reference to it arising[47] (with similar references being read accordingly).
>
> (3) The section applies as if, in subsection (5), paragraphs (b) and (c)

[47] The terminology of the Taxes Acts is that CGT chargeable gains *accrue;* but OIG *arise.* There is no difference in meaning, so it seems slightly pedantic to make the change of terminology when incorporating the CGT s.3 code for OIG; but it does no harm.

> were omitted.
>
> (4) The section applies as if, in subsection (7), for the reference to capital gains tax there were substituted a reference to income tax or corporation tax.
>
> (5) The section applies as if subsection (8) were omitted. ...

The references are to the pre-2019 legislation; the OFTR ought to be rewritten for the 2019 CGT rewrite, but the policy is not to update statutory instruments; we will have to cope as best we can.

I refer to this as the **"OIG s.3 charge"**. It is necessary to distinguish the CGT s.3 rules and the OIG s.3 rules because the rules (though similar) are not identical. I refer below to:

(1) "**CGT s.3**", the provisions of s.3 TCGA which apply when:
  (a) a non-resident close company receives CGT chargeable gains, and
  (b) a participator is deemed to receive the gain (the "**s.3 CGT gain"**).

(2) "**OIG s.3**", the provisions of s.3 as amended, which apply when:
  (a) a non-resident close company receives OIG, and
  (b) a participator is deemed to receive the OIG (the "**s.3 OIG**".)

Amended as reg.24 directs, the former s.13 TCGA provided:

> (1) This section applies as respects *offshore income gains arising* to a company—
>
> (a) which is not resident in the UK, and
>
> (b) which would be a close company if it were resident in the UK.
>
> (1A) [Interaction with ATED-CGT and NRCGT; not now applicable]
>
> (2) Subject to this section, every person who at the time when the *offshore income gain arises* to the company is resident in the UK, and who is a participator in the company, shall be treated for the purposes of this Act as if a part of the *offshore income gain* had *arisen* to him.
>
> (3) That part shall be equal to the proportion of the gain that corresponds to the extent of the participator's interest as a participator in the company.
>
> (3A) Subsection (2) does not apply in the case of a participator who is an individual if—
>
> (a) the tax year in which the *offshore income gain arises* to the company is a split year as respects the participator, and
>
> (b) the *offshore income gain arises* to the company in the overseas part of that year.
>
> (4) Subsection (2) above shall not apply in the case of any participator in the company to which the *offshore income gain arises* where the aggregate amount falling under that subsection to be apportioned to him and to persons connected with him does not exceed one quarter of the gain.
>
> (5) This section shall not apply in relation to—
>
> ~~(b) *an offshore income gain* accruing on the disposal of an asset used, and used only—~~

~~(i) for the purposes of a trade carried on by the company wholly outside the UK, or~~

~~(ii) for the purposes of the part carried on outside the UK of a trade carried on by the company partly within and partly outside the UK, or~~

(ca) *an offshore income gain arising* on the disposal of an asset used, and used only, for the purposes of economically significant activities carried on by the company wholly or mainly outside the UK, or

(cb) *an offshore income gain arising* to the company on a disposal of an asset where it is shown that neither—

(i) the disposal of the asset by the company, nor

(ii) the acquisition or holding of the asset by the company,

formed part of a scheme or arrangements of which the main purpose, or one of the main purposes, was avoidance of liability to capital gains tax[48] or corporation tax, or

(d) to *an offshore income gain* in respect of which the company is chargeable to tax by virtue of section 10B.

[*Subsections 5A to 7A relate to company distribution relief and company disposal relief and need not be set out here.*]

~~(8) So far as it would go to reduce or extinguish chargeable gains accruing by virtue of this section to a person in a year of assessment this section shall apply in relation to a loss accruing to the company on the disposal of an asset in that year of assessment as it would apply if a gain instead of a loss had accrued to the company on the disposal, but shall only so apply in relation to that person; and subject to the preceding provisions of this subsection this section shall not apply in relation to a loss accruing to the company.~~

(9) If a person who is a participator in the company at the time when the *offshore income gain arises* to the company is itself a company which is not resident in the UK but which would be a close company if it were resident in the UK, an amount equal to the amount apportioned under subsection (3) above out of the *offshore income gain* to the participating company's interest as a participator in the company to which the gain *arises* shall be further apportioned among the participators in the participating company according to the extent of their respective interests as participators, and subsection (2) above shall apply to them accordingly in relation to the amounts further apportioned, and so on through any number of companies.

(10) The persons treated by this section as if a part of an *offshore income gain arising* to a company had *arisen* to them shall include the trustees of a settlement who are participators in the company, or in any company amongst the participators in which the gain is apportioned under subsection (9) above, if when the gain *arises* to the company the trustees are not resident in the UK.

[48] In the context of offshore income gains, CGT should be read as a reference to Income Tax. When para (cb) was added to s.13, the drafter overlooked the need to make a corresponding amendment to reg.24 OFTR in order to make the words fit to OIG. This slip should be corrected by construction as the intended meaning is clear.

> (10B) [*This relates to pension schemes and need not be set out here*]
> (11) [*This confers relief where tax is paid by the non-resident close company and need not be set out here*]
> (11A) For the purposes of this section the amount of the gain or loss[49] *arising* at any time to a company that is not resident in the UK shall be computed (where it is not the case) as if that company were within the charge to corporation tax on *offshore income gains*.
> [*Section 13(12) to (14) contain definition and administrative provisions which need not be set out here*]

For a discussion of CGT s.3, see 64.1 (Section 3 TCGA: Introduction). I discuss here only the areas where OIG s.3 is different from CGT s.3.

The most important difference is that a s.3 CGT gain is subject to CGT at CGT rates; a s.3 OIG is subject to IT at IT rates.

The deletions in the former s.13(5)(8) make sense as those CGT rules would not be appropriate for OIG s.3.

DT relief may apply where a UK resident trustee holds a treaty non-resident company to which an OIG applies: s.79B TCGA disapplies the relief for CGT[50] but not for OIG.

Non-resident group relief does not apply to OIG s.3 because reg.24 does not incorporate the group relief rules (formerly s.14 TCGA, now s.3F TCGA).

67.14.1 *Deemed disposal for s.3*

If OIG s.3 applies, a participator receives a s.3 OIG. OIG s.3 does not directly impose a charge on the s.3 OIG: the deeming feeds into reg.17 which imposes the charge when an OIG arises to the person making the disposal of an offshore fund.[51] A further deeming is needed, because the participator who receives the s.3 OIG does not make a disposal. Therefore reg.24(6) OFTR provides for a deemed disposal, to bring the s.3 OIG into charge under reg.17:

> If this regulation applies, the person to whom the offshore income gain arises is treated as the person making the disposal.

The same rule applies for OIG s.87.[52]

[49] The words "or loss" are otiose here. Presumably the drafter overlooked the need to delete them as the legislation takes the trouble to delete them elsewhere. But nothing turns on that.

[50] See 64.41(Trust participator: No DT relief).

[51] See 67.3 (Charge to tax on OIG).

[52] See 67.13.5 (Deemed disposal for s.87).

67.14.2 *OIG s.3 remittance basis*

Section 3D TCGA provides the CGT s.3 remittance basis,[53] but that section does not apply for the purposes of OIG s.3. Instead the ordinary OIG remittance basis in reg.19 applies,[54] but the end result is the same. This explains reg.19(3)(a) which provides:

> (3) For the purposes of Chapter A1 of Part 14 of ITA 2007(10) (remittance basis)—
>
> (a) any consideration obtained on the disposal of the asset is treated as deriving from the income. ...

This is the equivalent of s.3D(3) TCGA; see 64.23 (Section 3 remittance basis).

67.15 OIG and s.86

An OIG is not a chargeable gain so it does not fall within s.86 even if it arises to a non-resident trust. There is no provision which extends s.86 to apply. So a settlor of a non-resident trust is not subject to tax on trust OIG under s.86 TCGA; but s.720 may apply where the settlor has power to enjoy.

67.15.1 *Planning: Exclude settlor not children*

Suppose a non-resident trust where:
(1) the settlor and spouse are excluded, but
(2) s.86 applies (because the settlor is UK domiciled and the settlor's children are beneficiaries)

It may be attractive for a trust to invest in offshore funds (which give rise to OIG outside s.86) rather than other assets (which give rise to CGT chargeable gains within s.86). Similarly, the trustees may invest for income and not capital growth. It may however be a balancing exercise, as to do so does increase the rate of tax on capital payments from CGT rates to IT rates.

67.16 OIG s.87/CGT s.87: Priority

Suppose a capital payment is made to a UK beneficiary from a trust with OIG amounts and CGT s.1(3) amounts. This would in principle give rise

[53] See 64.23 (Section 3 remittance basis).
[54] See 67.7 (OIG remittance basis).

to a charge under OIG s.87 and CGT s.87, or at least it might not be clear which of the two applied.

It matters which applies because in one case the OIG is taxed at income tax rates and in the other the CGT chargeable gain is taxed at CGT rates.

Regulation 20(4) OFTR deals with this:

> Section 87A of TCGA 1992 applies for a tax year by virtue of paragraph (3) before it applies for that year otherwise than by virtue of that paragraph.

In short, OIG s.87 has priority to CGT s.87. Where OIG s.87 applies to a capital payment, there is no "capital payment" for the purposes of CGT s.87 as the payment is subject to income tax.

The IF Manual offers the following example:

> **IFM13432: Allocating capital payments between offshore income gains and chargeable gains arising in non-resident settlements - regulation 20(4)** [Apr 2020]
> Example where both offshore income gains and capital gains received
> A settlement with non-UK resident trustees has never been settlor interested and has never received any income.

This simplifies matters as it is not necessary to consider the ToA rules or s.86 TCGA. In real life, the position would generally be more complicated.

> The following OIG amounts and capital gains have been received by the settlement:

	OIG amount	Chargeable gains
2008-09	£30,000	
2009-10		£40,000
2010-11	£50,000	£60,000
Total	£80,000	£100,000

> The first capital payment out of the settlement is made in 2019-20. That is a capital payment of £70,000 to a UK resident and domiciled beneficiary.

The HMRC analysis for 2019/20 is as follows:

> Regulation 20(4) tells you that you match any capital payments with OIG amounts arising in the non-resident settlement before matching with chargeable gains. This applies even if the OIG amount arose in an earlier year than the capital gain.
> Using the section 87A TCGA attribution rules the capital payment is

> matched first with the entire £50,000 OIG amount arising in 2019-20. Then the remaining £20,000 (£70,000 - £50,000) is matched with £20,000 of the £30,000 OIG amount arising in 2017-18.
> The beneficiary is treated as receiving £70,000 offshore income gains chargeable to income tax in 2019-20.

HMRC note that the £70k capital payment is matched with (1) the £50k OIG in 2010/11 and (2) £20k of the OIG in 2008/09. But it does not matter, as on the facts of the example, it makes no difference to which OIG the capital payment is matched. It matters for CGT chargeable gains, because of the interest surcharge, but that does not apply for OIG.

HMRC do not seek to argue that s.731 OIG applies.

HMRC then turn to consider the position going forward:

> There are unmatched OIG amounts and chargeable gains in the settlement to carry forward at 5 April 2020 of:
> 2017-18 OIG amount £10,000 (£30,000 less £20,000 matched with capital payment)
> 2018-19 Capital gains £40,000
> 2019-20 Capital gains £60,000.

The HMRC example is an easier case as there was one capital payment which was less than the total OIG. Suppose there was more than one capital payment, and the total amount exceeded the OIG. For instance, on the facts of the above example, suppose in the same year but on different days:
Capital payment 1: £80k
Capital payment 2: £20k

Does one say:
(a) Capital payment 1 is matched with the OIG and capital payment 2 is matched with the CGT chargeable gains? or
(b) Each capital payment is matched with 80% of the OIG and 20% of the CGT chargeable gains?

It is considered that solution (b) is correct. That is consistent with the rule for s.1(3) amounts (trust gains).

67.17 OIG s.3/ToA priority: Company structure

Suppose an OIG arises to a non-resident company (the company not being held by a trust). This could give rise to a charge
(1) under OIG s.720 (on the transferor) and

(2) under OIG s.3 (on the participators)

or at least it might not be clear which of the two charges applies.

It may not matter which applies, as the OIG is taxed at income tax rates in either event, but it could matter eg if the transferor is not the sole participator.

Regulation 21(3) OFTR deals with this but it needs to be read with reg.21(1) to follow the sense:

> (1) Chapter 2 of Part 13 of ITA 2007 (transfer of assets abroad) applies in relation to an offshore income gain arising to a person resident or domiciled outside the UK as if the offshore income gain were income becoming payable to the person...
> (3) Paragraph (1) does not apply in relation to an offshore income gain if (and to the extent that) it is treated, by virtue of regulation 24 [OIG s.3], as arising to a person resident in the UK.

In short, a s.3 OIG charge has priority over the OIG ToA provisions. Regulation 24(7) OFTR provides:

> To the extent that an offshore income gain is treated, by virtue of this regulation [reg 24 = OIG s.3], as having accrued[55] to any person resident in the UK, that gain shall not be deemed to be the income of any individual for the purposes of Chapter 2 of Part 13 of ITA 2007 (transfer of assets abroad).

67.18 OIG s.87/ToA: priority

Suppose:

(1) An OIG arises to a non-resident trust

(2) The trust makes a capital payment to a beneficiary.

This could give rise to a charge under OIG s.87 and the ToA provisions, or at least it might not be clear which of the two applies.

It may matter which applies because:

(1) OIG s.87 qualifies for:

(a) 2008 rebasing relief

(b) 2008 transitional relief.

(2) Different remittance basis rules apply.

[55] The terminology of the Taxes Acts is generally that CGT chargeable gains *accrue;* but OIG *arise*. There is no difference in meaning so it does not matter that the wrong word is used here.

Regulation 21(5) deals with this but one first needs to read reg.21(4) OFTR which provides:

> The following provisions apply if regulation 20 [OIG s.87] applies in relation to an offshore income gain (the "relevant offshore income gain").

In short, the two provisions which follow – reg.21(5)(6) – apply where an OIG arises to a non-resident trust.

Regulation 21(5) needs to be read with reg.21(1) to follow the sense:

> (1) Chapter 2 of Part 13 of ITA 2007 (transfer of assets abroad) applies in relation to an offshore income gain arising to a person resident or domiciled outside the UK as if the offshore income gain were income becoming payable to the person...
> (5) If—
> (a) by virtue of regulation 20 [OIG s.87] an offshore income gain is treated as arising in a tax year to a person resident in the UK, and
> (b) it is so treated by reason of the relevant offshore income gain (or part of it),
> for that and subsequent tax years paragraph (1) does not apply in relation to the relevant offshore income gain (or that part).

In short, the OIG s.87 charge has priority over the ToA provisions if the OIG amount is matched to a capital payment to a *UK resident*. I refer to this provision as the "**OIG s.87 priority rule**". This applies even if the s.87 OIG is matched to a remittance basis taxpayer and (un)taxed on the s.87 OIG remittance basis, because an OIG is nevertheless treated as arising to a UK resident.

The OIG s.87 priority rule applies for Chapter 2 of Part 13 of ITA 2007 but it is necessary to consider s.720 and s.731 separately.

67.18.1 *OIG s.720/s.87 priority*

The following examples are based on this situation:

(1) A non-resident settlor-interested trust is within s.720. The transferor/settlor (for the purposes of these examples the terms are interchangeable) is UK resident. The motive defence does not apply.

(2) The trust has realised an OIG in year 1 of £1m.

(3) The trust has no relevant income. (It would be unusual for a trust within s.720 to have relevant income.)

Example 1: no capital payment
The trustees make no capital payment to any beneficiary in the year that the OIG arises.
The settlor as transferor is taxed on the OIG under OIG s.720 (subject to the s.720 remittance basis if applicable).

Regulation 21(6) OFTR prevents a double charge to tax under OIG s.87, if there is a capital payment in a subsequent tax year. It provides:

> If, by virtue of paragraph (1) [OIG s.720] as it applies in relation to the relevant offshore income gain, income is treated under Chapter 2 of Part 13 of ITA 2007 as arising in a tax year, the OIG amount in question must be reduced (with effect from the following tax year) by the amount of the income.

Example 2: capital payment to settlor
The trustees make a capital payment of £1m to the settlor in year 1.
The settlor is taxed on the capital payment under OIG s.87 (subject to the s.87 OIG remittance basis).
The ToA provisions are disapplied for OIG because the OIG s.87 priority rule applies.
It may make no difference whether it is OIG s.720 or OIG s.87 which is used to tax the settlor but it may matter for the following reasons:
(1) 2008 rebasing relief
(2) 2008 transitional relief
(3) mixed fund rules.

Example 2a: capital payment of part of OIG to settlor
The trustees make a capital payment of £0.5m to the settlor in year 1.
The settlor is taxed on the £0.5m capital payment under OIG s.87 (subject to the s.87 OIG remittance basis).
The settlor is taxed on £0.5m under OIG s.720.

Example 3: capital payment to UK beneficiary
The trustees make a capital payment of £1m to a UK resident beneficiary (not the settlor) in year 1.
The beneficiary is taxed on the capital payment under OIG s.87 (subject to the s.87 OIG remittance basis if applicable).
The ToA provisions are disapplied because the OIG s.87 priority rule applies.
So the result of the capital payment is to shift the tax charge from the settlor to the beneficiary. This would be particularly important if the

beneficiary was a remittance basis taxpayer and the settlor was not. In such a case a capital payment to the beneficiary would save tax. The capital payment also affects the quantum of the charge if 2008 rebasing relief or 2008 transitional relief applies.
If the capital payment had been to a non-UK resident beneficiary, the settlor would be taxed on £1m under OIG s.720.

Example 3a: capital payment of part of OIG to beneficiary
The trustees make a capital payment of £0.5m to a UK resident beneficiary (not the settlor) in year 1.
The beneficiary is taxed on the capital payment under OIG s.87 (subject to the s.87 OIG remittance basis if applicable).
The settlor is taxed on £0.5m under OIG s.720.

Planning for trust within s.720 which realises an OIG
In short, where an OIG arises to a trust within s.720, it is advantageous for the trustees to make a capital payment equal to the OIG amount to a UK beneficiary, if:

(1) the settlor is not a remittance basis taxpayer and the beneficiary is a remittance basis taxpayer; or
(2) 2008 rebasing relief or 2008 transitional relief applies.

This planning point will often require a distribution to be made in the year that the OIG arises. The sum distributed need not be the proceeds representing the OIG. Other capital payments (eg the use of living accommodation) may suffice as that capital payment may be matched with the OIG.

If there is no time to make a payment in the form of a bank transfer, a resolution of the trustees to exercise their power to make a distribution will suffice. If the figures are not available, a resolution to distribute an amount equal to the offshore income gains will suffice. In order to make a distribution, it may be necessary to make a deed of appointment, or obtain consent of a protector: that depends of course on the terms of the trust.

67.18.2 *OIG s.731/s.87 priority: same OIG*

I turn to consider whether OIG s.87 takes precedence over OIG s.731.

The effect of the OIG s.87 priority rule is that if the OIG amount is matched to a capital payment to a UK resident then:

(1) an OIG is treated as arising in the year to that beneficiary and

(2) this disapplies OIG s.731.

In this situation, the OIG s.87 charge has priority over OIG s.731. This applies even if the OIG s.87 charge is (un)taxed on the s.87 OIG remittance basis because the s.87 OIG is nevertheless treated as arising.

Examples

The following examples are based on this situation:

(1) A non-resident trust is within s.731 (UK resident beneficiaries) but not within s.720 (transferor has no power to enjoy or is not UK resident). The motive defence does not apply.
(2) The trust has realised an OIG in year 1 of £1m.
(3) The trust has no relevant income (leaving aside the OIG).

Example 1: *capital payment to UK beneficiary in year 1*
The trustees make a capital payment of £1m to a UK resident beneficiary in year 1.
The beneficiary is taxed on the capital payment under OIG s.87 (subject to the s.87 OIG remittance basis).
The ToA provisions are disapplied, ie, the OIG does not count as relevant income for s.731.

Example 1a: *capital payment of part to UK beneficiary*
The trustees make a capital payment of £0.5m to a UK resident beneficiary in year 1.
It is considered that the beneficiary is taxed on the capital payment under OIG s.87 (subject to the s.87 OIG remittance basis). HMRC agree: see the HMRC example set out in para 67.16 (Priority between OIG s.87 and CGT s.87), where a trust with an OIG amount of £80k made a capital payment of £70k and the capital payment was said to fall within OIG s.87. It is not entirely clear from the wording of the OIG s.87 priority rule that this is the case. That provides:

> (5) If—
> (a) by virtue of regulation 20 [OIG s.87] an offshore income gain is treated as arising in a tax year to a person resident in the UK, and
> (b) it is so treated by reason of the relevant offshore income gain (or part of it),
>
> for that and subsequent tax years paragraph (1) [applying the ToA rules] does not apply in relation to the relevant offshore income gain (or that

part).

Now, the position is clear if a capital payment is equal to the entire OIG amount (as in example 1). But if the capital payment is equal to half the OIG amount, one might say that half the OIG remains to count as relevant income so the capital payment falls within s.731 OIG. But that would be an anomalous inconsistency with the position which applies when the capital payment equals the entire OIG. It would be particularly difficult to apply if the capital payment is more than half the OIG. So the better view is that OIG s.87 applies. If that is correct, then OIG s.731 will never apply.

Example 2: *capital payment to UK beneficiary in year 2*
(1) The trustees make no capital payment in year 1.
No-one is subject to tax in year 1 as:
(a) OIG s.87 only applies if there is a capital payment.
(b) OIG s.731 only applies if there is a benefit (which means (more or less) the same as a capital payment).
(2) *The trustees make a capital payment of £1m to a UK resident beneficiary in year 2.*

The beneficiary is taxed on the capital payment under OIG s.87 (subject to the s.87 OIG remittance basis). The beneficiary is not taxed under OIG s.731 as the OIG s.87 priority rule applies.

I have considered whether reg. 21(6) OFTR overrides this rule. Reg 21(6) OFTR provides:

> If, by virtue of paragraph (1) as it applies in relation to the relevant offshore income gain, income is treated under Chapter 2 of Part 13 of ITA 2007 as arising in a tax year, the OIG amount in question must be reduced (with effect from the following tax year) by the amount of the income.

Does this apply in year 1? Only if *income is treated under Chapter 2 of Part 13 of ITA as arising* in year 1. Chapter 2 Part 13 uses the expression *income is treated as arising* in s.731 (income treated as arising to an individual who receives a benefit) and in s.720 (income treated as arising to a transferor). However these sections do not apply in year 1. So reg.21(6) does not apply.

I have considered the argument that income is treated as arising in year 1 to the *person abroad* (the OIG) because of reg.21(1). But this is not correct, for such income is not treated as arising under Chapter 2 Part 13.

This is confirmed, I think, by reg. 21(2) OFTR which uses the expression "treated as arising" where the reference is clearly to income treated as arising to the transferor under s.720 or to a beneficiary under s.731.

It follows that if capital payments are made only to UK resident beneficiaries, they are all taxed under OIG s.87 and not OIG s.731.

Example 2a: *capital payment of part of OIG to UK beneficiary in year 2*
The facts are the same as example 2, but the trustees make a capital payment of only £0.5m to a UK resident beneficiary in year 2.
It is considered that the beneficiary is taxed on the capital payment under OIG s.87 (subject to the s.87 OIG remittance basis). The beneficiary is not taxed under OIG s.731 as the OIG s.87 priority rule applies.

Example 3
(1) Year 1: The trustees make a capital payment of £1m (ie an amount equal to the OIG) to a non-resident beneficiary
No-one is subject to tax in year 1 as OIG s.87 TCGA and OIG s.731 only apply if there is a capital payment or benefit to a UK resident beneficiary.
(2) *Year 2: The trustees make a capital payment of £1m to a UK resident beneficiary.*

(a) The UK beneficiary is taxed on the capital payment under OIG s.87. The trust's capital payment in year 1 is in principle disregarded under the non-resident disregard.
(b) The UK beneficiary is therefore not subject to tax under OIG s.731.

67.18.3 *Trust/company structure*

Suppose:

(1) An OIG arises to a company held by a settlor-interested trust. Suppose the company is within s.720.
(2) The trustees make a capital payment to a UK resident beneficiary.

This could give rise to charges:

(1) under OIG s.720 on the transferor and
(2) under OIG s.87 on the beneficiary, on the basis that the OIG arise to the trustees and constitute OIG amounts which are matched to the capital payments.

Is relief available under reg. 24(7) OFTR? That provides:

> To the extent that an offshore income gain is treated, by virtue of this regulation [reg 24 = OIG s.3], as having accrued to any person resident in the UK, that gain shall not be deemed to be the income of any

> individual for the purposes of Chapter 2 of Part 13 of ITA 2007 (transfer of assets abroad).

One would have to argue that the gain accruing to the individual is the same gain as that accruing to the company. It is suggested that this is the case, since otherwise there would be a strange anomaly between this case and the simple case where the OIG arises to the trust directly (without a company). The purpose of s.3 is to put the taxpayer in the same position as if there were no company.

67.18.4 *Example: OIG s.87/2008 transitional relief*

The IF Manual provides:

> **IFM13434: Example showing how a UK resident but non-UK domiciled beneficiary may not be chargeable to tax on an offshore income gain arising in a non-resident settlement prior to 6 April 2008 - paragraph 100 Schedule 7 FA 2008** [Apr 2020]
> **Example of effect of paragraph 100 Schedule 7 FA 2008**
> A settlement with non-UK resident trustees has never been settlor interested. The trustees own all the share capital of a non-UK resident company. Neither the trustees nor the company has received any income nor made any chargeable gains.
> The non-resident company held a material interest in an offshore fund. When that was disposed of in 2005-06 an OIG amount of £60,000 arose.
> The first capital payments to beneficiaries were made in 2010-11 which were:
>
> - £40,000 to a UK resident and domiciled beneficiary
> - £40,000 to a UK resident but non-UK domiciled beneficiary
> - £40,000 to a non-UK resident beneficiary.

What is the position for OIG s.731? Para 21(5) OFTR (the OIG s.87 priority rule) provides:

> If—
>
> (a) by virtue of regulation 20 [OIG s.87] an offshore income gain is treated as arising in a tax year to a person *resident in the UK*, and
>
> (b) it is so treated by reason of the relevant offshore income gain (or part of it),
>
> for that and subsequent tax years paragraph (1) does not apply in relation to the relevant offshore income gain (or that part).

Of the £60k OIG, only £40k is treated as arising to persons resident in the

UK, so one might think that £20k remained as relevant income, taxable on the UK resident beneficiaries. That is a surprising result, for contrast the situation where the same payments are made to the UK beneficiaries and no payment to the non resident. The UK domiciled resident is taxed on £30k and the foreign domiciled resident is not taxed. It seems strange if the tax should be more because of the payment to the non-resident. The author of the IF Manual presumably thought so. Presumably the reason is that the payment to the non-resident is regarded as distributing the relevant income.

The same point applies to the next example.

67.18.5 *Example: Settlor excluded OIG s.87 rebasing relief*

The IF Manual provides:

> **IFM13436: Example showing how a UK resident but non-UK domiciled beneficiary may benefit from a 'rebasing' election - paragraph 101 Schedule 7 FA 2008** [Apr 2020]
>
> Example of effect of 'rebasing' election - paragraph 101 Schedule 7 FA 2008
>
> A settlement with non-UK resident trustees is settlor interested because the settlor can benefit. The trustees own all the share capital of a non-UK resident company. Neither the trustees nor the company has received any income nor made any chargeable gains. The trustees have made a 'rebasing' election under paragraph 126 Schedule 7 FA 2008.
>
> The non-resident company purchased a material interest in an offshore fund in 2000-01. This is disposed of in 2010-11 resulting in an OIG amount of £60,000. The post 5 April 2008 element of that OIG amount is £15,000.
>
> The first capital payments made to beneficiaries were made in 2010-11. They were:
>
> - £40,000 to a UK resident and domiciled beneficiary
> - £40,000 to a UK resident but non-UK domiciled beneficiary
> - £40,000 to a non-UK resident beneficiary.

The HMRC analysis is as follows:

> There is a matching of £20,000 of each of these capital payments with the 2010-11 OIG amount. Each beneficiary has £20,000 of offshore income gain attributed to them via section 87 TCGA rules. There are no unmatched OIG amounts to carry forward within the non-resident settlement structure.
>
> The UK resident and domiciled beneficiary is chargeable to income tax

in 2010-11 on the £20,000 offshore income gain attributed to them.

The UK resident but non-UK domiciled beneficiary (where the remittance basis is used) is only chargeable to income tax on £5,000 (£20,000 x £15,000/£60,000) of the £20,000 offshore income gain attributed to them.

That is the post 5 April 2008 element of the £20,000 offshore income gain attributed to them. This is by virtue of paragraph 101 Schedule 7 FA 2008.

The non-UK resident beneficiary is not chargeable to income tax on any of the £20,000 offshore income gain attributed to them.

There are unmatched capital payments of £20,000 to each beneficiary to carry forward at 5 April 2011.

67.18.6 *Example: OIG s.720: Loss of rebasing relief*

The IF Manual provides:

IFM13438: Example showing how a UK resident but non-UK domiciled beneficiary may not benefit from a 'rebasing' election - paragraph 101 Schedule 7 FA 2008 [Apr 2020]

Example of 'rebasing' election having no effect - paragraph 101 Schedule 7 FA 2008

This example has similar facts as that in OFM15650 with the exception that capital payments are not made to beneficiaries until a year after that in which the OIG amount arises in the offshore trust structure. In such a case there may be no benefits of a 'rebasing' election to a non-UK domiciled beneficiary in respect of any offshore income gain attributed to them.

A settlement with non-UK resident trustees is settlor interested because the UK resident and ordinarily resident, but non-domiciled, settlor can benefit. The trustees own all the share capital of a non-UK resident company. Neither the trustees nor the company has received any income nor made any capital gains. The trustees have made a 'rebasing' election under paragraph 126 Schedule 7 FA 2008.

The non-resident company purchased a material interest in an offshore fund in 2000-01. This is disposed of in 2010-11 resulting in an OIG amount of £60,000. The post 5 April 2008 element of that OIG amount is £15,000.

The first capital payments made to beneficiaries were made in 2011-12. They were:

- £40,000 to a UK resident and domiciled beneficiary
- £40,000 to a UK resident but non-UK domiciled beneficiary (who was also the settlor)

> - £40,000 to a non-UK resident beneficiary.
>
> In 2010-11 there have been no capital payments in that year, or earlier years, to beneficiaries. So there can be no attribution of the OIG amount to beneficiaries under the section 87 attribution rules in regulation 20. We then have to consider if there can be an attribution under the transfer of assets rules in regulation 21 for 2010-11. The entire £60,000 OIG amount can be attributed to the settlor as an offshore income gain for that year. The non-UK domiciled settlor is chargeable to income tax in 2010-11 on the £60,000 offshore income gains attributed to them, subject to any remittance basis considerations. The 'rebasing' election has no effect on the amount chargeable to income tax as the attribution has not been made via the section 87 attribution rules.
>
> The OIG amount is reduced to Nil (regulation 21(6)). There are no unmatched OIG amounts to carry forward to 2011-12. There is nothing to match with the capital payments made in 2011-12 so the full amount of those payments are unmatched capital payments to carry forward at 5 April 2012.

Was this result intended in 2008? Since HMRC gave no indication of their thinking, it is hard to tell.

67.19 OIG s.87/ToA motive defence

EN FB 2008 provides:

> 46. Offshore income gains that are not matched in that year [the year they arise] will be chargeable to tax by reason of the provisions relating to the transfer of assets abroad legislation in Chapter 2 of Part 13 of the Income Tax Act 2007. *There is an exception to this rule where the motive or purpose defence in sections 736 to 742 applies to the gain.*

Has the legislation achieved this result? Regulation 21(6) disapplies OIG s.87:

> If, by virtue of paragraph (1) as it applies in relation to the relevant offshore income gain, income is treated under Chapter 2 of Part 13 of ITA 2007 as arising in a tax year,...

We must ask whether "income is treated under Chapter 2 of Part 13 of ITA 2007 as arising" if the motive defence applies. In fact even where the motive defence does apply, income is treated as arising *to the person abroad.* Regulation 21(1) OFTR provides:

> Chapter 2 of Part 13 of ITA 2007 (transfer of assets abroad) applies in relation to an offshore income gain arising to a person resident or

> domiciled outside the UK as if the offshore income gain were income becoming payable to the person.

But reg.21(6) is intending us to ask if income is treated as arising *to the transferor or to an individual who receives a benefit* under s.720 or s.731. Section 739(2) ITA provides the relief where the motive defence applies to pre-2006 transactions:

> An individual is not liable for income tax under this Chapter for the tax year by reference to the relevant transactions if the individual satisfies an officer of Revenue and Customs that condition A or B is met.

Section 737(2) ITA is identically worded for post-2006 transactions. Now, even though the individual is not liable for IT, the terms of reg.21(6) are still satisfied: "income is treated under Chapter 2 of Part 13 of ITA 2007 as arising in a tax year" even if the individual is not liable for income tax on that income. But a court is likely to find this too literal an approach. While the author's view has wavered, it is considered that if ToA is disapplied by the motive defence, s.87 OIG continues to apply.

67.20 Computation of OIG

Regulation 38 OFTR provides:

> (1) An offshore income gain arises to a person on the disposal of an asset if a basic gain arises on the disposal.
> (2) The disposal gives rise to an offshore income gain of an amount equal to the basic gain on the disposal.
> (3) The following provisions of this Chapter explain how the basic gain is computed.

67.20.1 *"Basic gain"*

So we move on to reg 39(1) OFTR:

> In the case of a participant chargeable to income tax,[56] the basic gain is a gain of the amount which would be the gain on that disposal for the purposes of TCGA 1992 if the gain were computed without regard to any charge to income tax arising under this Part.

The amount of the "basic gain" is the same as the amount of a CGT chargeable gain would be had the asset not been an offshore fund.

There is no relief for tax credits or foreign tax paid by the offshore fund

[56] Also see 67.20.2 (OIG of company within CT).

(except that such tax reduces the value of the fund and so reduces the OIG). But this is also the case for CGT.

Regulation 39(3) signposts eight special cases:

> The computation of the basic gain is subject to—
>
> (a) regulation 34 (provisions applicable on death);[57]
> (aa) regulation 36A (exchanges and schemes of reconstruction);
> (d) regulation 37 (exchange of interests of different classes);
> (e) regulation 40 (earlier disposal to which the no gain/no loss basis applies);
> (f) regulation 41 (modifications of TCGA 1992);
> (g) regulation 42 (losses);
> (h) regulation 43 (special rules for certain existing holdings).

In these cases the amount of the OIG may exceed the basic gain.

I do not discuss regulations 36A-37.

Regulation 41(1) disapplies roll-over relief:

> If the disposal forms part of a transfer to which section 162 of TCGA 1992 (roll-over relief on transfer of business) applies, the basic gain arising on the disposal is computed without regard to any deduction which falls to be made under that section in computing a chargeable gain.

It would be a rare case where roll-over relief would be in point.

Regulation 41(2) OFTR disapplies hold-over relief:

> If the disposal is made otherwise than under a bargain at arm's length and a claim for relief is made in respect of that disposal under section 165 or 260 of TCGA 1992 (relief for gifts), the claim does not affect the computation of the basic gain arising on the disposal.

67.20.2 *OIG of company within CT*

For completeness: reg.39(2) OFTR provides:

> In the case of a participant chargeable to corporation tax, the basic gain is a gain of the amount which would be the gain on that disposal for the purposes of TCGA 1992 if the gain were computed—
>
> (a) without regard to any charge to corporation tax arising under this Part, and
> (b) without regard to any indexation allowance on the disposal under TCGA 1992.

[57] See 67.5 (OIG charge on death).

Separate provision is needed to disapply the indexation allowance (which is available to companies but not to individuals).

Regulation 40 OFTR prevents indexation relief creeping in by the back door:

> (1) This regulation applies if—
>
> (a) a participant is chargeable to corporation tax, and
>
> (b) the amount of any chargeable gain or allowable loss which would arise on the disposal would fall to be computed in a way which, in whole or in part, would take account of the indexation allowance on an earlier disposal to which section 56(2) of TCGA 1992 (disposals on a no gain/no loss basis) applies.
>
> (2) The basic gain on the disposal is computed as if—
>
> (a) no indexation allowance had been available on any such earlier disposal, and
>
> (b) subject to that, neither a gain nor a loss had arisen to the person making such an earlier disposal.

67.21 CGT gain from offshore fund

A disposal for the purposes of the offshore funds rules is generally also a disposal for CGT.[58] The OFTR provides relief against a double charge. Regulation 44 sets the scene and provides terminology:

> (1) This Chapter applies if—
>
> (a) a material disposal[59] gives rise to an offshore income gain, and
>
> (b) that disposal also constitutes the disposal of the interest concerned for the purposes of TCGA 1992.
>
> (2) In this Chapter the disposal specified in paragraph (1)(b) is called the "TCGA disposal".

Regulation 45 OFTR provides:

> (1) This regulation applies for the purposes of the computation of the chargeable gain arising on the TCGA disposal.
>
> (2) The provisions of this regulation have effect in relation to the TCGA disposal in substitution for section 37(1) of TCGA 1992 (deduction of consideration chargeable to tax on income).
>
> (3) In the computation of the gain arising on the TCGA disposal, a sum equal to the offshore income gain shall be deducted from the sum which

[58] See 67.4 (Meaning of "disposal"),

[59] Defined in reg.15 OFTR: "In these Regulations a 'material disposal' means a disposal to which this Part applies." Since the expression "material disposal" is only used once in reg.44, it could have been more concisely expressed, but the meaning is clear.

> would otherwise constitute the amount or value of the consideration for the disposal.

Regulation 45(2) disapplies s.37(1) TCGA which normally avoids a double charge of IT and CGT. In its place, reg 45(3) introduces its own rules. I am not sure why, because s.37 would seem to have had the same effect.[60] I would be grateful to any reader who could explain.

67.21.1 *Part-disposal*

Regulation 45(5)(6) OFTR deals with part-disposals:

> (5) Paragraph (6) applies if the TCGA disposal is of such a nature that, by virtue of section 42 of TCGA 1992 (part disposals), an apportionment falls to be made of certain expenditure.
> (6) No deduction is to be made by virtue of paragraph (3) in determining the amount or value of the consideration for the purposes of the fraction in section 42(2) of TCGA 1992.

The IF Manual provides:

> **IFM13615: Offshore Funds: deduction of offshore income gains in computing capital gains: treatment of the disposal - general** [Apr 2020]
> **Regulation 45 of SI 2009/3001**
> ... Where there is a part-disposal so that section 42 TCGA applies to determine the apportionment of acquisition costs to the disposal, the full amount of disposal consideration is taken into account for the purposes of the calculation of the fraction required by that section. In other words, the offshore income gain is not deducted from the disposal consideration for the purposes of calculating the part-disposal fraction at section 42(2) - for further details relating to part-disposals see the Capital Gains Manual.

Why is that?

67.22 Losses from offshore funds

Regulation 42 OFTR provides:

[60] Section 37(1) TCGA provides: "There shall be excluded from the consideration for a disposal of assets taken into account in the computation of the gain any money or money's worth charged to income tax as income of, or taken into account as a receipt in computing income or profits or gains or losses of, the person making the disposal for the purposes of the Income Tax Acts."

> (1) If the effect of any computation under regulations 39 to 41 would be to produce a loss, the basic gain on the disposal is nil.
> (2) Paragraph (1) applies notwithstanding section 16 of TCGA 1992 (losses determined in like manner as gains).
> (3) Accordingly, for the purposes of these Regulations, no loss is to be treated as arising on the disposal.

An offshore income gain is charged to IT but where a loss arises on the disposal, there is no income tax relief.[61] The loss will be allowable for CGT if ordinary CGT principles permit. HMRC agree. The IF Manual provides:

> **IFM13410: Offshore Funds: participants in offshore funds: the charge to tax on disposal of an interest in a non-reporting fund: overview** [Apr 2020]
> ...Where there is a loss on disposal then the gain for the purposes of tax on an offshore income gain is nil; that is there is no recognition of losses for the purposes of these regulations (regulation 42). Accordingly, in a case where there is also a disposal for the purposes of TCGA, any loss made (calculated in accordance with that Act) may be treated as a capital loss for the purposes of TCGA.

This means that remittance basis taxpayers and non-residents will generally have no loss relief.[62]

The allowable loss (if there is one) is computed on CGT principles (not the OIG computation rules) but the result is the same.

67.23 Tax regimes priority to OIG

67.23.1 *Loan relationships/derivatives/intangible fixed assets*

Regulation 25 OFTR provides:

> (1) No liability to tax arises under regulation 17 if any of conditions A to E is met.
> (2) Condition A is that the participant is required to treat the interest in the fund as a loan relationship under Chapter 3 of Part 6 of CTA 2009.
> (3) Condition B is that the participant is required to treat the interest in the fund as a derivative contract to which the provisions of Part 7 of CTA 2009 apply.
> (4) Condition C is that the asset is an intangible fixed asset to which the provisions of Part 8 of CTA 2009 apply.

[61] Section 152(8) ITA prevents miscellaneous losses being set against OIG.

[62] See 65.1 (Capital losses).

These exemptions concern UK companies within corporation tax.

67.23.2 *Excluded indexed securities*

Regulation 25 OFTR provides:

> (1) No liability to tax arises under regulation 17 if any of conditions A to E is met...
> (5) Condition D is that the asset consists of excluded indexed securities as defined in section 433 of ITTOIA 2005.[63]

67.23.3 *Insurance policies*

Regulation 25 OFTR provides:

> (1) No liability to tax arises under regulation 17 if any of conditions A to E is met...
> (6) Condition E is that the asset is a right arising under a policy of insurance.

67.24 Transparent fund exemption

Regulation 29(1) OFTR provides:

> No liability to tax arises under regulation 17 if—
> (a) the disposal is the disposal of an interest in an offshore fund falling within paragraph (b) or (c) of section 40A(2) of FA 2008 [now s.355 TIOPA, non-corporate mutual funds],[64] and
> (b) the fund is a transparent fund.
> This is subject to paragraphs (2) and (3).

The exceptions are:

Para	**Exception**
(2)	Fund holding other funds
(3)	Provision of information

67.24.1 *"Transparent fund"*

Regulation 11 OFTR provides the definition:

> For the purposes of these Regulations a fund is a "transparent fund" if,

[63] See 29.7 (Excluded indexed security).

[64] See App. 66.3 (Mutual fund/CIS/OIEC). The wording makes sense, as a fund within para (a) of the section cannot be a transparent fund, but it could have been more simply drafted.

> in the case of holders of interests in the fund who are individuals resident in the UK, any sums which form part of the income of the fund are of such a nature that those holders—
>
> (a) are chargeable to tax under a provision specified in section 830(2) of ITTOIA 2005[65] in respect of such of those sums as are referable to their interests, or
>
> (b) if any of that income is derived from assets within the UK, would be so chargeable had the assets been outside the UK.

I am not sure why the definition is expressed in such a convoluted fashion. But in practice this comes down to the usual tax sense of the word "transparent".[66]

67.24.2 *Fund of funds*

Regulation 29(2) OFTR provides:

> But there is a charge to tax under regulation 17 if—
>
> (a) there is a disposal of an interest in a transparent fund, and
>
> (b) during a period beginning with the date the interest (or any part of it) was acquired and ending with the date of the disposal, the offshore fund has at any time held interests in other non-reporting funds which amounted in total to more than 5% by value of the offshore fund's assets.

The IF Manual provides:

> **IFM13470: interests in certain transparent funds** [Apr 2020]
> Arrangements that fall within the definition of an offshore fund and are transparent for income purposes but not transparent for capital gains purposes include, for example, so called 'Baker' unit trusts (following the case of *Archer-Shee v. Baker*, 11 TC 749) and certain foreign contractual arrangements (such as Fonds Commun de Placement ('FCPs')).
> They are subject to the Offshore Funds (Tax) Regulations 2009 (SI2009/3001) generally, with certain modifications as described below.
> The purpose of the offshore funds regime is to ensure that income cannot be rolled up with any subsequent gain on disposal being charged only as a capital gain. If a fund is transparent for income, such as would be the case for certain unit trusts and contractual funds, then any income

[65] Section 830(2) ITTOIA lists the 24 categories of RFI; see 16.9.2 (Relevant foreign income).

[66] See 90.6 (Transparency issues).

arising to the fund is treated as arising to an investor in proportion to their rights. This means that income is charged to tax as it arises.

However, it might be the case that an income transparent fund that came within paragraph (b) or (c) of S355(1) of TIOPA 2010 has itself invested in an opaque non-reporting fund, and if that were the case then income could be rolled up in the underlying fund, because income would only be credited to the investing fund if it was actually distributed.

To prevent unnecessary administrative burdens for transparent arrangements that come within the definition of an offshore fund and for their investors, any gain on disposal of an interest in an income-transparent offshore fund will not be taxed as an offshore income gain unless -

- during a period beginning on the date the interest (or any part of it) was acquired and ending on the date of the disposal, the offshore fund at any time held interests in other non-reporting funds (except for certain other transparent funds - see below) which amounted in total to more than 5% by value of the offshore fund's assets (regulation 29(2)), or
- the transparent fund is a non-reporting fund, and the fund fails to make sufficient information available to participants in the fund to enable those participants to meet their tax obligations in the United Kingdom with respect to their shares of the income of the fund (regulation 29(3)).

Whilst this means that such funds will have to monitor their underlying investments, it allows them to avoid the need to apply for reporting fund status. UK investors will be charged capital gains tax or corporation tax on a capital gain arising, rather than incurring an offshore income gain, provided the fund has complied with regulation 29(2)).

It follows that, if a transparent offshore fund is invested more than 5% by value of its total investments in non-reporting non-transparent funds, it may apply for reporting fund status in order to allow UK investors to be charged to tax on capital gains on disposal rather than on an offshore income gain. If reporting fund status is granted then the fund will be subject to the requirements of the regulations, including those relating to the calculation of income from non-reporting funds (see regulations 69 to 71).

67.24.3 *Transparent fund holds another*

Regulation 29(4) OFTR provides:

If, on the disposal by an offshore fund of an interest in another non-

> reporting fund, no liability would arise under regulation 17 by virtue of this regulation, that interest is not taken into account for the purposes of paragraph (2)(b).

The IF Manual provides:

> **IFM13470: Offshore Funds: investors in non-reporting funds: exceptions to the charge to tax: interests in certain transparent funds** [Apr 2020
> Investments by transparent non-reporting funds in other transparent non-reporting funds - Regulation 29(4)
> There is one important relaxation of the requirements of regulation 29(2). That is, if a transparent non-reporting fund ('TNRF1') invests in another TNRF (TNRF2). Then, where a disposal of an interest in TNRF2 would not itself give rise to an offshore income gain (under regulation 17) for a UK investor, the interest held by TNRF1 in TNRF2 is ignored in determining whether TNRF1 is invested in non-reporting funds by more than 5% of the value of its assets in total. This is because, in such circumstances, there can be no significant roll-up of income in the underlying fund(s).
> This means that a TNRF's investments could, for example, consist wholly of interests in other underlying TNRFs that may only hold UK property or a TNRF could be the top-layer fund in a fund of funds structure, with multiple layers of other TNRFs below the top fund, provided that each of those underlying TNRFs themselves did not hold more than 5% by value of their total assets in other non-transparent, non-reporting funds.
> In deciding whether the investee fund qualifies under this regulation, this rule may be applied to the investee fund and to any funds in which it, in turn, holds investments.

67.24.4 *Provision of information*

Regulation 29(3) OFTR provides:

> And there is a charge to tax under regulation 17 if—
> (a) there is a disposal of an interest in a transparent fund,
> (b) the fund is a non-reporting fund, and
> (c) the fund fails to make sufficient information available to participants in the fund to enable those participants to meet their tax obligations in the UK with respect to their shares of the income of the fund.

The IF Manual provides:

> **IFM13470: Offshore Funds: investors in non-reporting funds: exceptions to the charge to tax: interests in certain transparent funds** [Apr 2020]
>
> **Provision of 'sufficient information' to participants - Regulation 29(3)**
>
> If a fund is unable to provide sufficient information to its UK investors to enable them to meet their UK tax obligations then an offshore income gain will be charged on any gains realised on subsequent disposals of relevant interests. The provision of 'sufficient information' would include details of an investor's proportionate share of both income arising to the fund and reported income or offshore income gains arising to it, as well as confirmation as to whether or not the fund has invested more than 5% by value of its assets in non-reporting funds.
>
> In practice, many existing income-transparent funds with UK investors already provide vouchers to those clients detailing income arising to the fund, for example interest income, and foreign or UK dividends.
>
> HMRC consider that, for the purposes of regulations 29 and 92D only, sufficient information will have been provided by the fund to a UK investor if the information would enable the UK investor to compute their final UK tax liability (arising from their interest in the offshore fund) correctly. The required level of detail will depend upon the complexity of the fund and/or its investments.
>
> UK investors will still be required to complete their tax returns in the required format under self-assessment. For example, a unit holder would need to know whether the source of their income is land and property income, trading income, interest, UK dividends, foreign dividends and so on. Where transparent funds have complex structures and a number of sources of income, this can lead to complex tax issues arising for an individual completing their tax return.

67.25 DT reliefs: OIG

Suppose an individual who is UK resident and treaty-resident in a foreign state disposes of offshore funds so that OIG arise directly to them.

Article 13(5) OECD Model provides (with immaterial exceptions):

> Gains from the alienation of any property ... shall be taxable only in the Contracting State of which the alienator is a [treaty-resident].

Article 21(1) OECD Model provides:

> Items of income of a resident of a Contracting State, wherever arising, not dealt with in the foregoing Articles of this Convention shall be taxable only in that State.

It is an interesting question whether the individual claims relief under Art.13 or Art.21. At first sight OIG are "gains" which arise from the alienation of property, even though not chargeable gains and even though subject to income tax rather than CGT.[67] But OIG are also "income" if that word is given its UK tax meaning. Of course it does not normally matter which of the articles apply, if the treaty has both. But if a particular treaty has an equivalent of art.21 (Other Income) but no capital gains article, then it is considered that treaty relief is in principle available.

67.25.1 *s.3 OIG: Company treaty-resident outside UK*

Suppose OIG arise to a company which is treaty-resident in a foreign state and so are deemed to accrue to a UK resident participator under s.3 TCGA. In principle, DT reliefs apply to OIG deemed to accrue under OIG s.3 just as they do for chargeable gains deemed to accrue under CGT s.3.[68] I have considered reg. 24(6) OFTR which provides:

> If this regulation applies, the person to whom the offshore income gain arises is treated as the person making the disposal.

This does not disapply treaty relief, either because it has no application for the purposes of the treaty or because (while deeming the participator to be the disponor) it does not say that the non-resident company is not the alienator.[69]

67.25.2 *s.3 OIG: Participator treaty-resident outside UK*

In the case of CGT s.3 gains, the participator has a difficulty in obtaining relief under a CG article, in that they are not at first sight the "alienator".[70] However it is considered that the Other Income article[71] provides relief, in the case of OIG. If the capital gains article is in point, it is arguable that reg. 24(6) OFTR deems the participator to be the alienator.

67.25.3 *s.87 OIG: Beneficiary treaty-resident outside UK*

In the case of CGT s.87 gains, the beneficiary has a difficulty in obtaining relief, in that they are not at first sight the "alienator" and the gain is not

[67] See 56.23.2 (Gain subject to income tax).

[68] For this terminology, see 67.14 (OIG s.3 charge).

[69] For the reason for this provision, see 67.13.5 (Deemed disposal for s.87).

[70] See 64.40.1 (Participator treaty non-resident).

[71] See 33.20 (DT relief: "Other Income").

"from the alienation of any property".[72] However in the case of OIG it is considered that the Other Income article[73] provides relief. If the capital gains article were in point, it is arguable that reg.20(5) OFTR deems the beneficiary to be the alienator but the problem remains that the gain is not "from the alienation of any property".

67.25.4 *DT relief: OIG of trust/co*

If OIG arises to a trust, the position is similar to s.624; see 47.18 (DT relief: s.624 income). If the OIG arises to a company within s.720, s.720 issues arise: see 49.30 (DT relief: s.720 income).

67.26 Fund becomes reporting fund

Reg 48 OFTR provides:

> (1) This regulation applies if an offshore fund ceases to be a non-reporting fund and becomes a reporting fund.
> (2) A participant in the fund may make an election to be treated—
> (a) as disposing of the interest owned by the participant in the non-reporting fund at its market value on the disposal date,[74] and
> (b) as acquiring a holding in the reporting fund at the beginning of the reporting fund's first period of account.
> This is subject to paragraphs (5) and (5A).
> (3) Chapter 5 of this Part applies to determine the offshore income gain arising on the deemed disposal referred to in paragraph (2)(a).
> (4) The deemed acquisition referred to in paragraph (2)(b) is treated as made for the same amount as the deemed disposal referred to in paragraph (2)(a).
> (5) An election may not be made under paragraph (2) unless the offshore income gain arising on the deemed disposal referred to in paragraph (2)(a) (determined in accordance with paragraph (3)) is greater than zero.
> (5A) [This deals with allocation of profit to the AIFM firm under section 863I ITTOIA,]
> (6) If the participant is chargeable to income tax, the election mentioned in paragraph (2) must be made by being included in a return made for the tax year which includes the disposal date.

[72] See 61.60.2 (Beneficiary treaty-resident outside UK).

[73] See 33.20 (DT relief: "Other Income").

[74] Reg 48(8) OFTR provides: "In this regulation ... the "disposal date" means the final day of the last period of account before the fund becomes a reporting fund."

(7) If the participant is chargeable to corporation tax, the election mentioned in paragraph (2) must be made by being included in the participant's company tax return[75] for the accounting period which includes the disposal date.

67.27 Reorganisations: navigation

There are 5 sets of provisions to consider:

Provisions	**Topic**
s.126-138A TCGA	The **"usual reorganisation rules"**
Chapter 4 Part 3 TCGA	Collective Investment Scheme reorganisations
Reg 36A, 37 OFTR	Amendments to above rules for offshore funds
Sch 5AA TCGA	Definition of "reconstruction" for usual rules
Sch 5AZA TCGA	Definition of "reconstruction" for CI Scheme

Usual reorganisations		**Collective Investment Scheme reorganisation**	
TCGA section	***Topic***	***TCGA***	***See para***
	Reorganisation/reduction of share capital		
126	Application of ss. 127 to 131	s.103E	67.28, 67.29
127	Equation of original shares/new holding		
128	Consideration given/received by holder		
129	Part disposal of new holding	s.103F	67.30
130	Composite new holding		
131	Indexation allowance		
	Conversion of securities		
132	Equation of converted securities/new holding		
133	Premiums on conversion of securities		
133A	Cash payments: euroconversion of securities		
134	Compensation stock		
	Company reconstructions		
135	Exchange of securities for those in another company	s.103G	67.31
136	Reconstruction involving issue of securities	s.103H	67.32
137	Reorganisation TAAR	s.103K	67.35
138	Clearance in advance		
138A	Earn out rights		

As the reader interested in this area is likely to be familiar with the usual reorganisation rules, I set out the rules side by side to highlight the differences.

[75] Reg 48(8) OFTR provides: "In this regulation "company tax return" has the same meaning as in Schedule 18 to the Finance Act 1998".

67.28 "Collective investment scheme"

Section 103E TCGA provides:

> (1) In this Chapter (except this section) references to a collective investment scheme are to a collective investment scheme falling within any of the following paragraphs--
> (a) an authorised contractual scheme which is a co-ownership scheme,
> (b) a unit trust scheme, or
> (c) an offshore fund.
> (5) In this Chapter, "units" includes shares in a company.

67.29 Usual reorganisation rules disapplied

Section 103E TCGA provides:

> (2) Sections 126 to 138A (reorganisation of share capital, conversion of securities etc) do not apply for the purposes of the treatment of participants in collective investment schemes falling within subsection (1)(a) to (c) except as applied by this Chapter.
> (3) But sections 135 to 138A (company reconstructions) may apply for those purposes where either company A or company B is not a collective investment scheme falling within subsection (1)(a) to (c).
> (4) In subsection (3), "company A" and "company B" have the meaning given by section 135 or 136 as the case may be.

67.30 Exchange within same scheme

Section 103F TCGA provides:

> (1) This section applies in the following cases.
> Case 1
> Where--
> (a) a participant in a collective investment scheme exchanges units in the scheme for other units in the scheme ("new units") of substantially the same value, and
> (b) the property subject to the scheme and the rights of participants to share in the capital and income in relation to that property are the same immediately before and immediately after the event (ignoring any changes as a result of a variation in management charges[76]).

[76] Defined s.103F(3): "In subsection (1), "management charges" mean the costs charged to the property subject to the scheme in respect of remunerating the parties operating

Case 2
Where there is a reorganisation of the units in a collective investment scheme in which
[i] all the participants holding units in the scheme
[ii] or, where there are different classes of unit in the scheme, all the participants holding units in the same class,
exchange all their units for other units ("new units") in the scheme.

(2) Where this section applies--
(a) sections 127 to 131 (share reorganisations etc) apply with the necessary adaptations as if the collective investment scheme were a company and the event mentioned in subsection (1) were a reorganisation of its share capital, and
(b) any distribution in relation to any new units is to be treated for the purposes of capital gains tax, corporation tax or income tax on the basis set out in section 127 (as adapted).

67.31 Exchange: other scheme units

Section 103G TCGA is the equivalent of the usual s.135 rule:

Section 135	**Section 103G**
(1) This section applies in the following circumstances where a company ("company B") issues shares or debentures to a person in exchange for shares in or debentures of another company ("company A").	(1) This section applies in the following cases where units in a collective investment scheme ("collective investment scheme B") are issued to a person in exchange for units in another collective investment scheme ("collective investment scheme A").
(2) The circumstances are: Case 2 Where company B issues the shares or debentures in exchange for shares as the result of a general offer (a) made to members of company A or any class of them (with or without exceptions for persons connected with company B), and (b) made in the first instance on a condition such that if it were	(2) The cases are-- Case 1 Where units in collective investment scheme B are issued in exchange for units as the result of a general offer-- (a) made to participants in collective investment scheme A or any class of them, and (b) made in the first instance on a condition such that if it were satisfied the property subject to collective investment scheme B would include units in collective investment

the scheme, administrating the scheme or investing or safeguarding the property subject to the scheme."

satisfied company B would have control of company A.	scheme A giving rights to more than 50% of the capital, and more than 50% of the income, of collective investment scheme A.
Case 1 Where company B holds, or in consequence of the exchange will hold, more than 25% of the ordinary share capital of company A.	Case 2 Where-- (a) under an arrangement, participants in collective investment scheme A exchange units in that scheme for units of substantially the same value in collective investment scheme B, and (b) in consequence of the exchanges under the arrangement, 85% or more of the property subject to collective investment scheme B is constituted by units in collective investment scheme A.
Case 3 Where company B holds, or in consequence of the exchange will hold, the greater part of the voting power in company A.	
(3) Where this section applies, sections 127 to 131 (share reorganisations etc) apply with the necessary adaptations as if company A and company B were the same company and the exchange were a reorganisation of its share capital.	(3) Where this section applies, sections 127 to 131 (share reorganisations etc) apply with the necessary adaptations as if collective investment scheme A and collective investment scheme B were the same company and the exchange were a reorganisation of its share capital.
(6) This section has effect subject to section 137(1) (exchange must be for bona fide commercial reasons and not part of tax avoidance scheme).	(4) This section has effect subject to section 103K(1) (exchange must be for bona fide commercial reasons and not part of tax avoidance scheme).

67.32 Reconstruction: issue of units

Section 103H TCGA is the equivalent of the usual s.136 rule:

Section 136 TCGA	**Section 103H**
(1) This section applies where (a) an arrangement between a company ("company A") and (i) the persons holding shares in or	(1) This section applies where-- (a) for the purposes of, or in connection with, a scheme of reconstruction an arrangement is entered into by

debentures of the company, or
(ii) where there are different classes of shares in or debentures of the company, the persons holding any class of those shares or debentures,
is entered into for the purposes of, or in connection with, a scheme of reconstruction, and

(b) under the arrangement
(i) another company ("company B") issues shares or debentures to those persons in respect of and in proportion to (or as nearly as may be in proportion to) their relevant holdings in company A, and
(ii) the shares in or debentures of company A comprised in relevant holdings are retained by those persons or are cancelled or otherwise extinguished.

(2) Where this section applies
(a) those persons are treated as exchanging their relevant holdings in company A for the shares or debentures held by them in consequence of the arrangement, and
(b) sections 127 to 131 (share reorganisations etc) apply with the necessary adaptations as if company A and company B were the same company and the exchange were a reorganisation of its share capital.
For this purpose shares in or debentures of company A comprised in relevant holdings that are retained are treated as if they had been cancelled and replaced by a new issue.

(3) Where a reorganisation of the share capital of company A is carried out for the purposes of the scheme of reconstruction, the provisions of subsections (1) and (2) apply in relation to the position after the reorganisation.

[i] all the participants holding units in an original collective investment scheme ("scheme A"), or
[ii] where there are different classes of units in the scheme, all the participants holding any class of those units, and

(b) under the arrangement--
(i) units in a successor collective investment scheme or feeder fund ("scheme B") are issued to those participants in respect of and in proportion to (or as nearly as may be in proportion to) their relevant holdings in scheme A, and
(ii) the units in scheme A comprised in relevant holdings are retained by those participants or are cancelled or otherwise extinguished.

(2) Where this section applies--
(a) those participants are treated as exchanging their relevant holdings in scheme A for the units held by them in consequence of the arrangement, and
(b) sections 127 to 131 (share reorganisations etc) apply with the necessary adaptations as if scheme A and scheme B were the same company and the exchange were a reorganisation of its share capital.
For this purpose units in scheme A comprised in relevant holdings that are retained are treated as if they had been cancelled and replaced by a new issue.

(3) Where a reorganisation within case 2 of section 103F(1) of the units in scheme A is carried out for the purposes of the scheme of reconstruction, the provisions of subsections (1) and (2) apply in relation to the position after the reorganisation.

(4) In this section (a) "scheme of reconstruction" has the meaning given by Schedule 5AA to this Act;	[See s.103J]
(b) references to "relevant holdings" of shares in or debentures of company A are (i) where there is only one class of shares in or debentures of the company, to holdings of shares in or debentures of the company, and (ii) where there are different classes of shares in or debentures of the company, to holdings of a class of shares or debentures that is involved in the scheme of reconstruction (within the meaning of paragraph 2 of Schedule 5AA);	(4) In this section, references to "relevant holdings" of units are-- (a) where there is only one class of units in scheme A, to holdings of units in the scheme, and (b) where there are different classes of units in scheme A, to holdings of a class of units that is involved in the scheme of reconstruction (within the meaning of paragraph 3 of Schedule 5AZA).
(c) references to shares or debentures being retained include their being retained with altered rights or in an altered form, whether as the result of reduction, consolidation, division or otherwise; and (d) any reference to a reorganisation of a company's share capital is to a reorganisation within the meaning of section 126.	[See s.103J]
(6) This section has effect subject to section 137(1) (scheme of reconstruction must be for bona fide commercial reasons and not part of tax avoidance scheme).	(5) This section has effect subject to section 103K(1) (scheme of reconstruction must be for bona fide commercial reasons and not part of tax avoidance scheme).

67.33 Reconstruction with conversion

Section 103I TCGA provides:

> (1) This section applies where--
>
> (a) a scheme of reconstruction is entered into and given effect to, and
>
> (b) for the purposes of, or in connection with, the scheme of reconstruction, units in a collective investment scheme ("the conversion scheme") are issued to participants in another

collective investment scheme ("scheme C") in exchange for and in proportion to (or as nearly as may be in proportion to) their conversion holdings in accordance with regulation 12(1)(b) of the Undertakings for Collective Investment in Transferable Securities Regulations 2011.[77]

(2) Where this section applies sections 127 to 131 apply with the necessary adaptations as if scheme C and the conversion scheme were the same company and the exchange were a reorganisation of its share capital.

(3) In this section "conversion holdings" means the units in scheme C to be converted in accordance with regulation 12(1)(b) of the Undertakings for Collective Investment in Transferable Securities Regulations 2011 into units in the conversion scheme for the purposes of, or in connection with, the scheme of reconstruction.

(4) This section has effect subject to section 103K(1) (scheme of reconstruction must be for bona fide commercial reasons and not part of tax avoidance scheme).

67.34 Supplementary provisions

Section 103J TCGA provides:

In sections 103H and 103I--

(a) "feeder fund" has the meaning given by paragraph 3(2) of Schedule 5AZA to this Act;

(b) "scheme of reconstruction" has the meaning given by paragraph 1 of Schedule 5AZA;

(c) "original collective investment scheme" and "successor collective investment scheme" must be construed in accordance with paragraph 2(2) of Schedule 5AZA; and

(d) references to units being retained include their being retained with altered rights or in an altered form, whether as the result of

[77] Reg 12(1) provides: "The unit-holders of the merging and the receiving UCITS may require their UCITS—

(a) to purchase or redeem any units they hold in either the merging or the receiving UCITS; or

(b) to convert any units they hold in either the merging or receiving UCITS into units of another UCITS which—

(i) has similar investment policies to those of the merging or receiving UCITS; and

(ii) is managed by the same manager or by a manager which is associated with that manager within the meaning of section 256 of the Companies Act 2006."

reduction, consolidation, division or otherwise.

67.35 Reorganisation TAAR

Section 103K TCGA is the equivalent of the usual s.137 rule:

s.135 TCGA	**s.103K TCGA**
(1) Subject to subsection (2) below, and section 138, neither section 135 nor section 136 shall apply to any issue by a company of shares in or debentures of that company in exchange for or in respect of shares in or debentures of another company unless the exchange or scheme of reconstruction in question is effected for bona fide commercial reasons and does not form part of a scheme or arrangements of which the main purpose, or one of the main purposes, is avoidance of liability to capital gains tax or corporation tax.	(1) Subject to subsection (2) below, and section 138, section 103G, 103H or 103I shall not apply to any issue of units in a collective investment scheme in exchange for or in respect of units in another scheme unless the exchange or scheme of reconstruction in question is effected for bona fide commercial reasons and does not form part of a scheme or arrangements of which the main purpose, or one of the main purposes, is avoidance of liability to capital gains tax, corporation tax or income tax.
(2) Subsection (1) above shall not affect the operation of section 135 or 136 in any case where the person to whom the shares or debentures are issued does not hold more than 5 per cent of, or of any class of, the shares in or debentures of the second company mentioned in subsection (1) above.	(2) Subsection (1) above shall not affect the operation of section 103G, 103H or 103I in any case where the participant to whom the units are issued does not hold more than 5 per cent of, or of any class of, the units in the second scheme mentioned in subsection (1) above.
(3) For the purposes of subsection (2) above shares or debentures held by persons connected with the person there mentioned shall be treated as held by him.	(3) For the purposes of subsection (2) above units held by participants connected with the participant there mentioned shall be treated as held by that participant
(4) If any tax assessed on a person (the chargeable person) by virtue of subsection (1) above is not paid within 6 months from the date determined under subsection (4A) below, any other person who (a) holds all or any part of the shares or debentures that were issued to the chargeable person, and (b) has acquired them without there	(4) If any tax assessed on a participant ("the chargeable participant") by virtue of subsection (1) above is not paid within 6 months from the date determined under subsection (5) below, any other participant who-- (a) holds all or any part of the units that were issued to the chargeable participant, and (b) has acquired them without there

having been, since their acquisition by the chargeable person, any disposal of them not falling within section 58(1) or 171, may, at any time within 2 years from that date, be assessed and charged (in the name of the chargeable person) to all or, as the case may be, a corresponding part of the unpaid tax; and a person paying any amount of tax under this subsection shall be entitled to recover from the chargeable person a sum equal to that amount together with any interest paid by him under section 87A of the Management Act on that amount.	having been, since their acquisition by the chargeable participant, any disposal of them not falling within section 58(1) or 171, may, at any time within 2 years from that date, be assessed and charged (in the name of the chargeable participant) to all or, as the case may be, a corresponding part of the unpaid tax; and a participant paying any amount of tax under this subsection shall be entitled to recover from the chargeable participant a sum equal to that amount together with any interest paid by him under section 87A of the Management Act on that amount.
(4A) The date referred to in subsection (4) above is whichever is the later of (a) the date when the tax becomes due and payable by the chargeable person; and (b) the date when the assessment was made on the chargeable person.	(5) The date referred to in subsection (4) above is whichever is the later of-- (a) the date when the tax becomes due and payable by the chargeable participant; and (b) the date when the assessment was made on the chargeable participant.
	(6) Section 138 (procedure for clearance in advance) applies to this section as it applies to section 137 (with any necessary modifications).

67.36 Reorganisations: Offshore funds

The above rules apply to collective investment schemes. OFTR further tweaks these reorganisation rules in relation to offshore funds. Reg 36A OFTR provides:

> (1) The following sections of TCGA 1992 do not apply to the extent that an interest in a non-reporting fund is exchanged or treated as exchanged for an asset which is not an interest in a non-reporting fund.
> (2) The sections are—
> (a) section 103G (exchange of units for those in another collective investment scheme),
> (b) section 103H (scheme of reconstruction involving issue of units),
> (c) section 135 (exchange of securities for those in another company), and

> (d) section 136 (scheme of reconstruction involving issue of securities).
>
> (3) In a case where one of those sections would apply apart from paragraph (1), the exchange or deemed exchange shall for the purposes of this Part constitute a disposal of interests in the non-reporting fund for a consideration equal to their market value at the time of the exchange or deemed exchange.

Reg 37 OFTR provides:

> (1) If conditions A to D are met, section 127 of TCGA 1992 (equation of original shares and new holding) does not prevent an exchange from constituting a disposal for the purposes of these Regulations.
>
> (2) Condition A is that an offshore fund is constituted by a class of interest ("class A") in main arrangements.[78]
>
> (3) Condition B is that a participant exchanges an interest of class A for an interest in another offshore fund constituted by a different class of interest ("class B") in those main arrangements.
>
> (4) Condition C is that the interest of class A is at the time of the exchange an interest in a non-reporting fund.
>
> (5) Condition D is that the interest of class B is at the time of the exchange an interest which is not an interest in a non-reporting fund.
>
> (6) Any disposal to which this regulation applies is to be treated as a disposal for a consideration equal to the market value of the rights at the time of the exchange.

The object is to prevent fundholders reorganising their way out of OIG status, and so out of OIG charges.

[78] See App.66.17.2 (Different classes of interest).

CHAPTER SIXTY EIGHT

INCOME FROM OFFSHORE FUNDS

68.1 Introduction

68.6 Summary
68.7 Non-reporting fund holds reporting fund
68.8 Fund treated as non-trading
68.9 Non-reporting becomes reporting fund
68.10 2009 transitional rules

68.1 Introduction

This chapter considers the taxation of income arising from offshore funds. The taxation of offshore income gains (which arise on the disposal of a fund) is considered in the previous chapter.

68.2 Bond fund

Section 378A ITTOIA reclassifies some dividends as interest:

> (1) This section applies where—
> (a) a dividend[1] is paid by an offshore fund, and
> (b) the offshore fund fails to meet the qualifying investments test at any time in the relevant period.[2]

[1] Defined in s378A(7): "In this section ... "dividend" includes any distribution that (but for this section) would be treated as a dividend for income tax purposes". What is this referring to?

[2] Defined in s.378A(4)(5):
(4) "The relevant period" means—
(a) the relevant period of account of the offshore fund, or
(b) if longer, the period of 12 months ending on the last day of that period.
(5) "The relevant period of account" means—
(a) the last period of account ending before the dividend is paid, in a case in which the profits available for distribution at the end of that period (and not

(2) The dividend is treated as interest for income tax purposes.

I refer to offshore funds within s.378A as **"bond funds"**, and s.378A is **"the bond-fund rule"**. In short, the rule re-categorises dividends as interest.

EN FA 2009 explains:

> Certain distributions from offshore funds are economically similar to payments of yearly interest. [Section 378A ITTOIA] charges distributions of this type to tax as if they were yearly interest.
> ... The test in subsection (3) is similar to that which applies to corporate investors for the purposes of the loan relationships legislation. (See sections 490 and 493 CTA 2009). A distribution is treated as interest if the offshore fund, at any time during the 'relevant period', holds more than 60 per cent of its assets in the form of qualifying investments. The definition of a qualifying investment is set out in section 494 CTA 2009 and, in summary, refers to interest bearing and economically similar investments.
> ... The purpose of the clause is to prevent a tax advantage being gained by holding interest bearing assets within an offshore fund structure....
> ... where a distribution from an offshore fund takes the form of a dividend the rate will be the dividend tax rate after taking into account the dividend tax credit. However, where the offshore fund is substantially invested in interest bearing, or economically similar, assets as described in paragraph 4 above then any distribution will be treated as interest for income tax purposes.

The bond-fund rule applies to reporting and non-reporting funds.

One might have thought that the bond-fund rule only applies to a corporate fund, as a non-corporate fund does not pay "dividends". But reg 96 OFTR[3] assumes s.378A (the bond-fund rule) may also apply to a non-corporate non-transparent fund. However, the only effect of the bond-fund rule, if it does apply to a non-corporate non-transparent fund, would be to categorise as interest what would otherwise be Misc Sweep-up Income or Annual Payment income: that will rarely if ever make any difference.[4]

used since then by distribution or otherwise) equal or exceed the amount of the dividend (aggregated with any other distribution made by the offshore fund at the same time), and

(b) the period of account in which the dividend is paid, in any other case.

[3] See 68.4 (Taxation of reporting fund income).

[4] It could make a difference if there were miscellaneous income losses.

The bond-fund rule does not apply to transparent funds, because a distribution from (or through) a transparent fund is not a "dividend".

68.2.1 *60% qualifying investments test*

Section 378A(3) ITTOIA defines the qualifying investments test:

> For the purposes of this section, an offshore fund fails to meet the qualifying investments test if the market value of the fund's qualifying investments exceeds 60% of the market value of all of the assets of the fund (excluding cash awaiting investment)...
> "qualifying investments" has the meaning given in section 494 of CTA 2009.

68.2.2 *Qualifying investments*

Section 494(1) CTA 2009 provides:

> In section 493 "qualifying investments", in relation to an open-ended investment company, a unit trust scheme or an offshore fund, means investments of the company, scheme or fund of any of the following descriptions—
> (a) money placed at interest,
> (b) securities,[5]
> (c) shares in a building society,
> (d) qualifying holdings in an open-ended investment company, a unit trust scheme or an offshore fund,
> (e) alternative finance arrangements,
> (f) derivative contracts whose underlying subject matter consists wholly of any one or more of—
> (i) the matters referred to in paragraphs (a) to (e) (other than diminishing shared ownership arrangements), and
> (ii) currency,
> (g) contracts for differences whose underlying subject matter consists wholly of any one or more of—
> (i) interest rates,
> (ii) creditworthiness, and
> (iii) currency, and
> (h) derivative contracts not within paragraph (f) or (g) where there is a hedging relationship between the contract and an asset within paragraphs (a) to (d).

[5] Section 494(2) CTA 2009 provides: "In this section ... "security" does not include shares in a company".

I do not consider the definitions of the terms used above for which s.494(2) CTA 2009 incorporates definitions by reference:

Term	**Definition in CTA 2009**
Contract for differences	s.582
Diminishing shared ownership arrangements	s.504
Hedging relationship	s.496
Qualifying holding	s.495(1)
Underlying subject matter	s.583

68.3 Deemed reporting-fund income

In the absence of express provision, undistributed income of offshore funds would not be subject to tax. Regulation 94(1)(2) OFTR deal with non-transparent/transparent funds;[6] it is helpful to read them side by side:

Reg 94(1): Non-transparent fund	**Reg 94(2): transparent fund**
In the case of a reporting fund which is not a transparent fund,	In the case of a reporting fund which is a transparent fund,
the Tax Acts have effect as if the excess (if any) of [a] the reported income of the fund in respect of a reporting period over [b] the distributions made by the fund in respect of the reporting period	the Tax Acts have effect as if the excess (if any) of [a] the reported income of the fund in respect of a reporting period over [b] the income of the fund for the reporting period
were additional distributions made to the participants in the fund in proportion to their rights.	were additional income of the participants in the fund in proportion to their rights.

I refer to this as "**deemed reporting-fund income**".

Reg.94(3) OFTR identifies the date and recipient of deemed reporting-fund income:

> The excess specified in paragraphs (1) and (2) is treated as made, on the fund distribution date,[7] or on such earlier date as the reported income in respect of that reporting period is recognised in the participant's

[6] See 67.24.1 ("Transparent fund").

[7] This term is defined in reg.94(4) OFTR: In these Regulations the "fund distribution date" for a reporting period of a reporting fund means the date six months following the last day of the reporting period.

> accounts, to participants holding an interest in the fund at the end of the reporting period.

Deemed reporting-fund income is notional income, distinct from the actual income of the offshore fund. For instance, tax credits on the fund would not be available to the participant.

For completeness: reg 94(3A) deals with the interaction with the share-matching 30-day rule:[8]

> If—
>
> (a) a participant disposes of an interest in a reporting fund in a reporting period ("the earlier period"), and
>
> (b) section 106A of TCGA 1992 (identification of securities: capital gains tax) applies to identify the whole or any part of that interest with an interest acquired in the next reporting period,
>
> then, for the purposes of paragraph (3), the disposal of the interest so identified shall be ignored and the participant shall be treated as holding that interest at the end of the earlier period.

68.4 Taxation of reporting-fund income

Regulations 95/96/97 OFTR deal with reporting-fund income as follows:

Reg	**Type of reporting fund**
95	Corporate fund
96	Non-corporate non-transparent fund
97	Transparent fund

It may be convenient to read them side by side:

Reg 95: corporate fund	**Reg 96: non-corp. non-transp.**	**Reg 97: transparent**
(1) This regulation applies if—	(1) This regulation applies if—	(1) This regulation applies if—
(a) a reporting fund makes a distribution to a participant chargeable to income tax in respect of a reporting period, and	[identical to 95(1)(a)]	
(b) the fund falls within section 40A(2)(a) of FA	(b) the fund falls within paragraph (b) or (c) of	

[8] See 56.12.2 (Share-matching rules).

2008 [now s.355(1)(a) TIOPA: corporate fund[9]].	section 40A(2) of FA 2008 [now s.355(1)(b)(c) TIOPA: non-corporate fund[10]], and	
	(c) the fund is not a transparent fund.	(a) a reporting fund is a transparent fund, and
(2) This regulation also applies if some or all of the excess specified in regulation 94(1) is treated as made by such a fund to such a participant.	[identical to 95(2)]	(b) some or all of the excess specified in regulation 94(2) is treated as income of a participant by virtue of that provision.
(3) If section 378A of ITTOIA 2005 (offshore fund distributions)[11] applies to any amount falling within paragraph (1) or (2), the amount is charged to income tax in accordance with that section.	(3) Any amount to which paragraph (1) or (2) applies is charged to income tax—	(2) Any amount to which paragraph (1) applies is charged to income tax
	(a) under section 378A of ITTOIA 2005 (offshore fund distributions), or	
	(b) (if that section does not apply) under Chapter 8 of Part 5 of ITTOIA 2005 (miscellaneous income: income not otherwise charged) for the year of assessment in which the distribution is made,	under Chapter 8 of Part 5 of ITTOIA 2005 as relevant foreign income within the meaning given by section 830 of ITTOIA 2005 for the year of assessment in which the distribution is made,
	but sections 688(1) and 689 of ITTOIA 2005 (income charged and	but sections 688(1) and 689 of ITTOIA 2005 do not apply.

[9] See App. 66.3 (Mutual fund/CIS/OIEC).

[10] See App. 66.3 (Mutual fund/CIS/OIEC).

[11] See 68.2 (Bond fund).

person liable) do not apply.[12]

In short:

(1) Deemed reporting-fund income of bond funds is "treated as interest for income tax purposes."

(2) Corporate non-bond fund: deemed reporting-fund income is treated as a distribution.

(3) Non-corporate non-bond fund: deemed reporting-fund income is treated as miscellaneous sweep-up income.

68.4.1 *Non-resident participant*

Actual distributions from a non-transparent fund: the income is non-UK source, so a non-resident is not subject to tax.

Deemed reporting-fund income from a non-transparent fund: A non-resident is not subject to tax as reg 95/96 only apply if the participant is "chargeable to income tax".

Deemed reporting fund income from a transparent fund: The deeming in reg 92(2) OFTR is that the deemed income arises from the fund, so the income is foreign source and so a non-resident is not subject to tax.[13]

Actual distributions of a transparent fund: UK source income of the transparent fund would be chargeable, subject to non-resident IT relief;[14] but a charge would rarely if ever happen in practice.

It is considered that deemed reporting-fund income counts as income of the person abroad, for the purposes of the ToA provisions, even though it is not chargeable on the person abroad.

68.4.2 *Remittance basis participant*

Actual distributions from a non-transparent fund: the income is RFI and qualifies for the remittance basis.

Deemed reporting-fund income from a non-transparent fund: The deeming in reg 92(1) OFTR is that the deemed income arises from the fund, so the income is RFI and qualifies for the remittance basis.

Deemed reporting fund income from a transparent fund: Reg 97(2) states

[12] The disapplied sections are the rules for quantum of charge/ remittance basis and liability for s.687 misc sweep-up income. This follows the precedent of the OIG provisions; see 67.3.5 (Charge on OIG).

[13] See 16.2 (Source: IT territorial limit).

[14] See 45.1 (Non-residents IT relief: Introduction),

that the income is RFI, so it qualifies for the remittance basis.

Actual distributions of a transparent fund: UK source income of the transparent fund would be chargeable on an arising basis; but that would rarely if ever happen in practice.

Can deemed reporting-fund income be remitted? Legislation frequently deems an individual to receive income/gains (eg deemed s.624/s.720 income, deemed s.3 gains). In these cases the legislation almost always has a provision which deems some actual property to be derived from the individual's deemed income/gain.[15] So if that property is received by the individual (or a relevant person) there is a taxable remittance. In this case however there is no such provision. So it appears at first sight that the deemed reporting-fund income cannot be remitted. While the actual income in the hands of the offshore fund could be received in the UK, those funds do not derive from the deemed reporting-fund income. The deemed reporting-fund income perhaps derives from those funds.

This does lead to a result that might be thought too good to be true. So it is more than possible that a court might read in an implied provision that the actual income of the offshore fund is derived from the deemed reporting-fund income, though that verges on legislation rather than construction.

HMRC may not agree. The IF Manual provides:

> **IFM13338: Offshore Funds: participants in offshore funds: participants within the charge to income tax: non-UK domicile: remittance basis** [Apr 2020]
>
> Where individuals not domiciled in the United Kingdom are taxed on the remittance basis, then the normal remittance basis rules will apply to income arising from the holding in the offshore fund (for detailed guidance see the Residence, Domicile and Remittance basis Manual from RDRM3000.
>
> In the case of income that is reported by a reporting fund, but is not distributed, then that income has not been remitted to the UK.
>
> **Transparent Funds**
>
> In a case where the offshore fund is transparent for UK tax purposes then the income will arise from the underlying assets and not from the fund. In such a case, the income may sometimes arise in the UK (even though the fund itself is domiciled offshore). Where the income arises in the UK the remittance basis does not apply – the income is charged

[15] See for instance 64.23 (Section 3 remittance basis).

to tax on the UK resident individual as it arises. Where the income arises offshore then the remittance rules will apply.

The IF Manual provides:

> **IFM13372: Offshore Funds: participants in offshore funds: participants within the charge to income tax: disposals: reporting funds** [Apr 2020] to w/e 5 Mar 2021)
> ...**Remittance basis users**
> The proceeds of a disposal of a reporting fund will normally constitute a 'mixed fund' for the purposes of the remittance basis rules, applicable to UK resident investors subject to income tax. This is because the proceeds may have been funded by undistributed (and therefore unremitted) reported income as well as by the original investment and any capital growth.

68.4.3 *Tax credit on distribution*

For completeness: reg 95(4) OFTR dealt with tax credits:

> If
> [a] paragraph (3) does not apply to any amount falling within paragraph (1) or (2), but
> [b] the participant is entitled to a tax credit on receiving a distribution falling within paragraph (1),
> section 397A of ITTOIA 2005 (savings and investment income: dividends from non-UK resident companies) also applies to the excess falling within paragraph (2).

But tax credits were abolished in 2016, and s.397A was repealed, so reg 95(4) cannot apply. The failure to repeal it was an oversight or, perhaps, a decision was made not to bother to bring statutory instruments up to date.

68.5 Non-reporting fund income

Non-reporting funds may not make any income distributions to participants. But if they do, then subject to the bond-fund rule, normal principles apply:

(1) Distributions from corporate funds are taxed as dividend income.
(2) Distributions from non-transparent non-corporate funds (eg non-transparent unit trusts) would be taxed as Annual Payments.
(3) Net income of transparent funds would be taxed as the income of the underlying assets.

In each case the income will in principle be RFI and so can qualify for the remittance basis.

68.6 Summary

Type of fund		**Type of distribution**	**Categorisation/Reference**	
Corporate	Bond fund	Dividend	Interest	s.378A
		Distribution	Interest	reg 95(3)(a)
		Deemed R-F income	Interest	reg 95(3)(a)
	Non-bond fund	Dividend/distribution	Div/distribution	Ord principles
		Deemed R-F income	Distribution	reg 92(1)
Non corporate Non transparent	Bond fund	Distribution	Interest	s.378A
		Deemed R-F income	Interest	reg 96(3)(a)
	Non-bond fund	Distribution	Misc income	reg 96(3)(b)
		Deemed R-F income	Misc income	reg 96(3)(b)

68.7 Non-reporting fund holds reporting fund

Regulation 16 OFTR provides:

> (1) This regulation applies if a non-reporting fund which is a transparent fund has an interest in a reporting fund.

Transparent	Actual income	As act income	Gen principles
	Deemed R-F income	Misc income	reg 97

> (2) In the case of any **excess** specified in regulation 94(1) or (2) which is treated, under that regulation, as made to the non-reporting fund, the Tax Acts have effect as if the excess were additional income of the participants in the non-reporting fund in proportion to their rights.
> (3) The additional income is treated as arising on the same date as the excess is treated as made to the non-reporting fund.
> (4) If a participant in the non-reporting fund is chargeable to income tax, the additional income is charged as relevant foreign income within the meaning given by section 830 of ITTOIA 2005.

68.8 Fund treated as non-trading

This topic is dealt with in chapter 6 part 3 OFTR. A full discussion needs a long chapter to itself. In short, reg.80 OFTR provides:

> (1) This regulation applies if a diversely owned fund carries out an investment transaction in an accounting period.
> (2) The investment transaction is treated as a non-trading transaction.

The consequence of non-trading status is that the profit of the transaction is not income and need not be distributed by reporting funds.

The definitions of diversely owned and investment transaction are not considered here. HMRC argue that reg.80 is not to be taken to mean what it says:

> HMRC is aware that there has been recent industry speculation as to whether regulations contained within Chapter 6 of Part 3 of The Offshore Funds (Tax) Regulations 2009 (the 'regulations'), setting out when transactions by certain offshore 'reporting' funds are not treated as trading transactions for the purposes of computing 'reportable income', has any relevance to matters relating to the taxation of such funds potentially trading in the UK through a permanent establishment or agent. HMRC is therefore confirming that there is no such relevance.
>
> Regulation 80(2) of the regulations, which confirms that certain transactions are treated as non-trading transactions, applies only for the purposes of Chapter 5 of the regulations; that is for the purposes of computing an offshore fund's reportable income in order to establish the UK tax position of participants in the fund.
>
> The regulations are made under powers enabling provision to be made about the tax treatment of participants in an offshore fund (section 41 FA 2008) and they should be read in that context. Specifically, the regulations do not make or purport to make rules that affect the taxation of any of the funds referred to therein as 'offshore funds'; only to regulate the taxation of the returns from those funds to persons taxable under UK legislation. Funds that are taxable in the UK are dealt with by other legislation.
>
> It is a question of fact whether or not, for the purposes of that other legislation, a non-resident fund is carrying on a trade in the UK. Where such a fund is carrying on a trade in the UK through an investment manager operating here, the protection of the Investment Manager Exemption may be available in relation to any 'investment transaction' specified in the Investment Manager (Specified Transaction) Regulations 2009.[16]

68.9 Non-reporting becomes reporting fund

Regulation 48 OFTR provides:

> (1) This regulation applies if an offshore fund ceases to be a

[16] *http://webarchive.nationalarchives.gov.uk/20140109143644/http://www.hmrc.gov.uk/ctsa/invest-man-exempt.htm* (Feb 2010).

non-reporting fund and becomes a reporting fund.

(2) A participant in the fund may make an election to be treated—

(a) as disposing of the interest owned by the participant in the non-reporting fund at its market value on the disposal date, and

(b) as acquiring a holding in the reporting fund at the beginning of the reporting fund's first period of account.

This is subject to paragraph (5).

(3) Chapter 5 of this Part applies to determine the offshore income gain arising on the deemed disposal referred to in paragraph (2)(a).

(4) The deemed acquisition referred to in paragraph (2)(b) is treated as made for the same amount as the deemed disposal referred to in paragraph (2)(a).

(5) An election may not be made under paragraph (2) unless the offshore income gain arising on the deemed disposal referred to in paragraph (2)(a) (determined in accordance with paragraph (3)) is greater than zero.

(6) If the participant is chargeable to income tax, the election mentioned in paragraph (2) must be made by being included in a return made for the tax year which includes the disposal date.

(7) If the participant is chargeable to corporation tax, the election mentioned in paragraph (2) must be made by being included in the participant's company tax return for the accounting period which includes the disposal date.

(8) In this regulation—

"company tax return" has the same meaning as in Schedule 18 to the FA 1998;

the "disposal date" means the final day of the last period of account before the fund becomes a reporting fund.

68.10 2009 transitional rules

I do not attempt to discuss transitional rules in detail.[17]

[17] Note also the following HMRC statement: "HMRC regrets that ... the Statutory Instrument (SI 2009/3139) ... contained an error with respect to long periods of account.

The intention was that the transitional rules, which provide for an existing fund to apply for distributing status for periods ended on or after 1 December 2009, would not apply to any period ending after 31 May 2012 (not 2011 as provided for in the instrument).

The government intends to amend the cut-off date given in sub-paragraph 3(3B) of Schedule 1 to The Offshore Funds (Tax) Regulations (SI 2009/3001 as amended by SI 2009/3139) to read 31 May 2012.

This announcement therefore gives notice of the intended amendment, which will be

Reg.30 OFTR provides:

> (1) No liability to tax arises under regulation 17 in respect of any rights in an offshore fund to which this regulation applies if the rights are acquired by a person—
>
> (a) before 1st December 2009, or
>
> (b) in accordance with paragraph (2).
>
> (2) Rights are acquired in accordance with this paragraph if—
>
> (a) the rights are acquired by the participant in accordance with a legally enforceable agreement in writing that was entered into by the participant before 30th April 2009,
>
> (b) in the case of an agreement which was conditional, the conditions are met before that date, and
>
> (c) the agreement is not varied on or after that date.
>
> (3) Rights of a person in a fund are rights in an offshore fund to which this regulation applies if, on the date on which the person acquired the rights, those rights did not constitute a material interest in an offshore fund within the meaning of that expression given by section 759 of ICTA.

Reg.43 OFTR provides for the case where a person holds an offshore fund before 2009 and purchases more of the same fund:

> (1) This regulation applies if—
>
> (a) a person acquired rights (the "protected rights") in an offshore fund—
>
> (i) before 1st December 2009, or
>
> (ii) in accordance with paragraph (2),
>
> (b) immediately before 1st December 2009 those rights did not constitute a material interest in an offshore fund within the meaning of that expression given by section 759 of ICTA, and
>
> (c) on or after 1st December 2009 the person acquires additional rights in the offshore fund (the "non-protected rights").
>
> (2) Rights are acquired in accordance with this paragraph if—
>
> (a) the rights are acquired by the participant in accordance with a legally enforceable agreement in writing that was entered into by the participant before 30th April 2009,
>
> (b) in the case of an agreement which was conditional, the conditions are met before that date, and
>
> (c) the agreement is not varied on or after that date.
>
> (3) For the purposes of tax in respect of chargeable gains—

made at the first convenient opportunity."

(a) section 104 of TCGA 1992 (share pooling: general interpretative provisions) applies as if the protected rights were assets of a different class from the non-protected rights, and

(b) all the protected rights must be treated as disposed of before any of the non-protected rights may be so treated.

CHAPTER SIXTY NINE

UNIT TRUSTS

69.1 Unit trusts: Introduction

This chapter considers:

(1) Unit trusts

(2) Contractual funds (which are treated in a similar way):

(a) Fonds commun de placement

(b) Irish common contractual funds

The taxation of unit trusts needs a book to itself. This chapter focuses on the matters closest to the themes of this book.

69.2 Definition of "unit trust"

The definition is (more or less) standard:

s.1007(1) ITA	**s.99(2) TCGA**	**s.1119 CTA 2010**
In the Income Tax Acts "unit trust scheme" has the meaning given by section 237 of FSMA 2000. This is subject to subsection (2)[1]	Subject to subsection (3) and sections 99A and 151W(a) below,[2] in this Act— (a) "unit trust scheme" has the meaning given by section 237(1) of the Financial Services and Markets Act 2000	[for the purposes of the Corporation Tax Acts] "unit trust scheme" has the meaning given by section 237 of FISMA 2000

So we turn to s.237(1) FSMA, which provides:

> In this Part "unit trust scheme" means a collective investment scheme[3] under which the property is held on trust for the participants,[4] except that it does not include a contractual scheme.

In this work I abbreviate "unit trust scheme" to **"unit trust"**.

Strictly one should not use the term without indicating which definition applies, but the context may supply the definition.

A unit trust (except where it is deemed to be a company) is not a body corporate.[5]

69.2.1 *"On trust for participants"*

It is not sufficient that property is held on trust for the participants. It must be so held under the collective investment scheme. That depends of course on identifying what is the scheme.

Partnership property of partnership with legal personality, such as a Scots partnership, may be, and I expect usually is, held by the partnership and not on trust. But even if property is held on trust for a partnership with

[1] See 69.2.2 (Limited partnership exemption).

[2] These exceptions are as follows:

TCGA	**Topic**	**See para**
s.99(3)	Limited partnerships	69.2.2
s.99A	Umbrella schemes	App.66.17
s.151W(a)	Investment bond arrangements	*Not discussed*

[3] See App 66.3 (Mutual fund/CIS/OIEC).

[4] See App 66.2 (Participant/participate).

[5] This is self-evident, because a unit trust is a trust, and a trust is not a body corporate; see 90.9.3 (What is a body corporate?). But if authority is needed, see *HMRC v Hargreaves Lansdown Asset Management* [2019] UKUT 246 (TCC) at [74].

legal personality, the property is not held on trust for the participants.

Partnership property of an English partnership cannot be held by the partnership. It may sometimes be held by the partners, without a trust, but in practice it will often need to be held by a nominee on trust for the partnership. Land in England is held on trust in all cases of co-ownership. Shares may be held on trust if there are more than four co-owners, as shares cannot usually be registered in the names of more than four shareholders. But this may not constitute a unit trust, on the grounds that the trust is a mere conveyancing device, and not part of the scheme.[6]

What if some but not all scheme property is held on trust for the participants? It is suggested that the definition of unit trust requires that all (or at least substantially all) the property is held on trust.

69.2.2 *Limited partnership exemption*

There is some power to alter the definition by regulation. The drafting is not quite uniform between the taxes, which makes an exposition more difficult to follow, but there it is:

s.1007(2) ITA	**s.99(3) TCGA**
The Treasury may, in relation to a unit trust scheme within the meaning given by section 237 of FISMA 2000 whose trustees are UK resident, by regulations provide that the scheme is not to be a unit trust scheme for the purposes of the definition in section 989 of "unauthorised unit trust" if it is within a specified description.	The Treasury may by regulations provide that any scheme of a description specified in the regulations shall be treated as not being a unit trust scheme for the purposes of this Act...

The regulations are:
Capital Gains Tax (Definition of Unit Trust Scheme) Regulations 1988
Income Tax (Definition of Unit Trust Scheme) Regulations 1988

IT regs	**CGT regs**
3 Subject to the provisions of these Regulations, a unit trust scheme which is ...	**3** A unit trust scheme which is— (a) a limited partnership

[6] In *Samarkand Film Partnership No 3 v HMRC* [2011] UKFTT 610 (TC) at [42] Jersey partnerships (which are like English partnerships) were collective investment schemes, but it was not contended that their assets were held on trust so as to constitute a unit trust. This point was not discussed on appeal.

(c) a limited partnership scheme ... [7] shall be treated as not being a unit trust scheme for the purposes of section 354A [ICTA 1970, now s.504 ITA and s.621 CTA 2010].	scheme ...[8] shall be treated as not being a unit trust scheme for the purposes of the principal Act.[9]
8 A unit trust scheme is a limited partnership scheme when the scheme property is held on trust for the general partners and the limited partners in a limited partnership.[10]	**4** [identical]

I refer to this as the **"LP exemption"**.

An Inland Revenue press release explained the background:

> The wide Financial Services Act definition of unit trust scheme (which was introduced for tax purposes in 1987) may cover some schemes for which there is already a satisfactory tax treatment different from the unit trust tax treatment. Limited partnerships come into this category. It appears that a limited partnership can technically constitute a unit trust scheme within the meaning of the FSA 1986. Consequently, in the absence of regulations, limited partnerships would be subject to taxation as unit trusts. Ministers have decided that this would not be appropriate. Regulations are therefore proposed to leave limited partnerships to be taxed as they always have been, the partners bearing tax on their share of partnership income and gains.[11]

69.2.3 *Partnership outside LP exemption*

The LP exemption only applies to a LP registered under the Limited Partnerships Act 1907 so it does not apply to a foreign law LP. But in a

[7] The omitted words relate to enterprise zone property schemes, charitable unit trust schemes, approved profit sharing schemes and approved employee share ownership plans; these are not discussed here.

[8] The omitted words relate to approved profit sharing schemes and employee share ownership plans; these are not discussed here.

[9] Reg 2 provides that "the principal Act" means the Capital Gains Tax Act 1979; this now takes effect as a reference to the TCGA.

[10] Regulation 2 provides some necessary (and some unnecessary) definitions. In particular, "limited partnership" means a limited partnership registered under the Limited Partnerships Act 1907 and "general partner" and "limited partner" have the same meanings as in that Act. The CGT regs are identical.

[11] [1987] STI 784.

civil law jurisdiction, partnership property is not likely to be held on trust, so the LP would not fall within the definition of unit trust, and the exemption is not needed. So the issue is not likely to arise, except, perhaps, in relation to an LP governed by the law of the Republic of Ireland (which is a common law jurisdiction).

The LP exemption does not apply to a general partnership (because that is not a LP). It was perhaps considered that the exemption is not needed for that, as the partners should have day-to-day control, so the partnership is not a collective investment scheme, so it should not be a unit trust.

Of course, even if the LP exemption is not applicable, a partnership is only a unit trust if it satisfies all the other parts of the definition, and that will not happen very often.

The rule is not likely to have been UE-law compliant, but that is not likely to matter post-Brexit.

69.2.4 *"Units"*

Section 103D(10) TCGA provides a commonsense definition:

> In this section ...
> "units", in relation to a tax transparent fund, means the rights or interests (however described) of the participants in the fund.

69.3 Categories of unit trust

There are (at least) five categories of unit trust for tax purposes:

Type of unit trust	**See**
Authorised unit trust	69.4
Unauthorised unit trusts:	69.5
Exempt unauthorised unit trust	69.5
Non-exempt unauthorised unit trust	
NE UUT with UK trustees	69.6
NE UUT with non-UK trustees	69.7
Tax transparent funds 69.9	

69.4 Authorised unit trust

I discuss authorised unit trusts in outline only.

69.4.1 *AUT: Definition*

s.99(2) TCGA	**s.616 CTA 2010**	**s.272 IHTA**
Subject to subsection (3) and sections 99A and 151W(a) below,		

in this Act ...	In this Chapter[12]	
(b) "authorised unit trust" means, as respects an accounting period, a unit trust scheme in the case of which an order under section 243 of the Financial Services and Markets Act 2000 is in force during the whole or part of that period.	"authorised unit trust" means, in relation to an accounting period, a unit trust scheme in respect of which an order under section 243 of FISMA 2000 is in force during the whole or part of the period.	'authorised unit trust' means a scheme which is a unit trust scheme for the purposes of the Income Tax Acts (see section 1007 of the ITA 2007) and in the case of which an order under section 243 of the Financial Services and Markets Act 2000 is in force.

ITA adopts the CTA definition by reference.[13]

Section 243 FSMA (in short) gives the FCA power to make an order if the relevant requirements are satisfied. That takes us to the topic of financial regulation which strays too far from the themes of this work.

69.4.2 *Income arising to AUT*

Section 617(1) CTA 2010 provides:

> In respect of income arising to the trustees of an authorised unit trust, and for the purposes of the provisions relating to relief for capital expenditure, the Tax Acts shall have effect as if—
> (a) the trustees were a UK resident company; and
> (b) the rights of the unit holders were shares in the company.

So authorised unit trusts are not transparent for IT purposes.

69.4.3 *Distributions of AUT*

EN ITTOIA Vol II discusses the location of the source of AUT income distributions:

> 51. It is possible for the FSA to recognise a non-UK unit trust scheme for marketing into the UK. However, only those UK tax resident unit trusts that are "authorised" by the FSA come within [what is now s.617 CTA 2010]. Section [617(1) CTA 2010] provides that the Tax Acts apply to UK authorised unit trusts and shall have effect as if the trustees

[12] "This Chapter" is Chapter 2 Part 13, but s.119 CTA 2010 applies the definition for the Corporation Tax Acts.

[13] Section 989 ITA provides: "authorised unit trust" is to be read in accordance with sections 616 and 619 of CTA 2010.

> of the authorised unit trust were a company resident in the UK. Although the application of [s.617 CTA 2010] is by reference to the trustees' income (and relief for capital expenditure), the treatment of the trustees as a UK resident company carries through for the purposes of taxing interest distributions treated as made to unit holders. That is because [what is now s.373 ITTOIA] provides that the Tax Acts shall have effect as if such interest distributions were made "by the company referred to in section 468(1)". As these distributions are treated as made by such a company, that is a UK resident company, they can only be UK source income.

The wording has changed but the point is still valid.

69.4.4 *Gains of AUT*

Section 100 TCGA provides a CGT exemption.

69.5 Unauthorised unit trusts

The law is in the Unauthorised Unit Trusts (Tax) Regulations 2013 (UUTT Regs 2013).

Unauthorised unit trusts are divided into two categories:

(1) Exempt unauthorised unit trusts
(2) Non-exempt unauthorised unit trusts (NE UUTs)

An unauthorised unit trust is exempt if, in short, the unit holders are tax-exempt bodies and the trust has been approved by HMRC.[14]

This type of unit trust is not discussed here.

69.6 NE UUT: UK trustees

Reg 28 Unauthorised Unit Trusts (Tax) Regulations 2013 provides:

> (1) In respect of income arising and chargeable gains accruing to UK resident trustees of a non-exempt unauthorised unit trust, and for the purposes of the provisions relating to relief for capital expenditure, the Tax Acts have effect as if—
>
> (a) the trustees were a UK resident company, and
> (b) the rights of the unit holders were shares in the company.
>
> (2) References in the Corporation Tax Acts to a body corporate are to be read in accordance with paragraph (1); and sections 1104 and 1107 of CTA 2010 (companies and nominees required to provide tax certificates) apply with any necessary modifications.

[14] Reg 3 UUTT Regs 2013.

So non-exempt unauthorised unit trusts with UK resident trustees, like authorised unit trusts, are not transparent for IT purposes. The taxation of these unit trusts is not discussed further here. But I wonder if unit trusts of this kind are in fact found in practice.

69.7 NE UUT: Foreign trustees

This leaves the question of non-exempt unauthorised unit trusts with non-resident trustees. There is no statutory provision so we are thrown back to first principles, and ordinary trust rules apply. For IT purposes, depending on the drafting and proper law, a unit trust may be a transparent, *Baker* style trust or non-transparent.[15]

HMRC agree. The IF provides:

> **IFM13324 tax transparent funds** [Apr 2020]
> **Regulation 97 – transparent offshore funds of SI 2009/3001**
> Arrangements that fall within the definition of an offshore fund and are transparent for income purposes but not transparent for capital gains purposes include, for example, so called 'Baker' unit trusts (following the case of *Archer-Shee v. Baker*, 11 TC 749) and certain foreign contractual arrangements (such as Fonds Commun de Placement ('FCPs')).
> Income: UK tax treatment of investors
> No matter what the legal form of a transparent reporting fund, for UK tax purposes the income of an income-transparent fund is treated as arising directly to its investors (UK investors are charged to tax on income arising net of a deduction for proper expenses of the management of the fund in question, and this is the case for both unit trusts and contractual arrangements).

The IF Manual also discusses *Garland* unit trusts:

> **IFM13322 other non-corporate offshore funds** [Apr 2020]
> **Regulation 96 – other non-corporate offshore funds of SI 2009/3001**
> Arrangements that are non-transparent for income purposes and that come within the definition of an offshore fund under section S355(1) TIOPA 2010 (that is, funds that do not take corporate form) will be

[15] See 42.1 (IIP trusts: income tax). This view is supported by *Minister of National Revenue v Trans-Canada Investment Co* [1956] SCC 49 *https://www.kessler.co.uk/wp-content/uploads/2012/04/Minister-of-National-RevenuevTrans-Canada.pdf* where the Canadian Supreme Court applied *Baker* to a unit trust.

> foreign unit trusts. Foreign unit trusts that are not transparent for income purposes are sometimes referred to as 'Garland' unit trusts.
>
> UK investors in foreign unit trusts that are non-transparent for income purposes are taxable on their proportionate share of income (as ascertained after the trustees have met the expenses of administering the trust) when it is indefeasibly allocated to them, regardless of whether the income is paid to them or is accumulated. Unlike the position for transparent unit trusts, that income is taxable as miscellaneous foreign income (under Chapter 8 of Part 5 of ITTOIA 2005) and the tax rates applying will be those applying to such income.
>
> If there is an excess of reported income over the amount allocated (for example if the unit trust has invested in another reporting fund and has itself received reports of income which was not actually distributed to it) then the excess must be treated by the participant in the same way as the allocated income (that is as miscellaneous foreign income (under Chapter 8 of Part 5 of ITTOIA 2005).

A Garland trust may be a reporting or a non-reporting fund.

Whether a fund is a Baker trust or a Garland trust depends on the applicable law[16] and the drafting. Appropriate drafting may create a *Garland*-style non-transparent unit trust even in a *Baker* jurisdiction.

69.7.1 *Australian unit trusts*

The HMRC transparent/opaque list classifies Australian unit trusts as transparent for IT.[17] That is an oversimplification.

In Australia, most unit trusts are drafted to be transparent. But there are some where the unit holder's entitlement depends on the exercise of a discretionary power by the trustee so they are UK-law opaque; they may be treated as Australia-law transparent if the trustee exercises the power by the end of the tax year (in which case the unit trust is a hybrid entity). Australian law also has an anti-avoidance measure designed to prevent listed companies reorganising as unit trusts. A public trading trust /corporate unit trust[18] is a unit trust that carries on a business and has more than a threshold number of unit holders. These are Australian-law opaque, but may be UK-law transparent, so may be hybrid entities.[19]

[16] See 42.12 (Baker or Garland trust?).

[17] See 90.54 (HMRC transparent/opaque list).

[18] A public trading trust is one which was set up as a unit trust; a corporate unit trust – is one which started life as a company whose business was transferred to a unit trust.

[19] I am grateful to Michael Flynn SC for his comments on this point.

69.7.2 *Irish unit trusts*

The HMRC transparent/opaque list classifies Irish unit trusts as opaque.[20] But again, the position will depend on the drafting of the particular unit trust.

69.7.3 *Residence of unit trust trustees*

As a matter of trust law, and tax law, trustees of a unit trust are persons, but a unit trust is not a person. So it is more accurate to refer to trustee residence, not unit trust residence.

The residence of trustees of a unit trust is important for purposes, because the rules depend on whether or not the trustees are UK resident. However, there is no definition of residence for this purpose. The standard IT/CGT definition of residence of "trustees of a settlement"[21] does not apply, because a unit trust is not a "settlement".[22] Ordinary rules of residence apply to determine the residence of the trustees in their private capacities.

The residence of the trustees of a unit trust is also important for determining whether a unit trust is an offshore fund, and (more or less)[23] the same principles apply.

69.7.4 *Equalisation*

The CG Manual provides:

> **CG57705: Unit trusts: dividend equalisation payments** [Dec 2021]
> A unit holder may receive an equalisation payment at the end of the first distribution period in which they buy new units. New investors are not entitled to any share of the unit trust's income which arose before they bought their units. However, at the end of each distribution period the manager allocates the same amount from the income of the fund to each unit. To compensate for this an equalisation payment is added to the cost of new units. This is the amount of in-come that has arisen up to the date of purchase. Because these payments are included in the amount available for distribution they are effectively repaid to the purchaser.

[20] See 90.54 (HMRC transparent/opaque list).

[21] See 7.1 (Residence of trusts).

[22] The term "settlement" in this context is not expressly defined, but property in a unit trust is not "settled property" for the purposes of IT: s.466 ITA. It is considered that "settlement", in this context, requires settled property (as defined).

[23] For an exceptional case, see 66.15.2 (Residence of fund).

> The purchaser's dividend voucher at the end of the first distribution period should show the amount of the returned equalisation payment. This payment is not income. It should not be treated as a capital distribution, see CG57800+. It is a return of the initial price paid and it should therefore be deducted from the price paid when computing the chargeable gain on eventual disposal.

69.8 CGT: Deemed-company fiction

Section 99(1) TCGA provides:

> This Act shall apply in relation to any unit trust scheme as if—
> (a) the scheme were a company,
> (b) the rights of the unit holders were shares in the company, and
> (c) in the case of an authorised unit trust, the company were resident in the UK,
>
> except that nothing in this section shall be taken to bring a unit trust scheme within the charge to corporation tax on chargeable gains.

I refer to this as the **"deemed-company fiction"**.

Residence of the deemed company is important for CGT. Statute states that authorised unit trusts are UK resident but does not define the test of residence for unauthorised unit trusts. Since a unit trust is treated as a company, it is considered that the test of residence for CGT is the corporate test, ie, central management and control.[24]

Gains accruing to a non-resident "close" unit trust fall in principle within the scope of s.3 TCGA, and may be attributed to UK resident unit holders.[25]

A unit trust is (generally) a bare trust, but by implication the deemed-company fiction overrides the general principle of the CGT bare trust disregard.[26]

69.9 Tax transparent funds

69.9.1 *"Tax transparent fund*"

Section 103D(1) TCGA provides:

> For the purposes of this section—
> "tax transparent fund" means—

[24] There is some relevant discussion at 9.19.4 (POEM/CMC compared).

[25] Ghosh agrees: "When is a company not a company?" PTPR Vol 7 p.241 *http://www.khpplc.co.uk/reviews*

[26] See 87.7 (Bare trust/nomineeship).

> (a) an authorised contractual scheme which is a co-ownership scheme,[27] or
> (b) an offshore fund that is a transparent fund within the meaning given by regulation 11 of the Offshore Funds (Tax) Regulations 2009 and
>
> "fund property", in relation to a tax transparent fund, means the property subject to the fund.

69.9.2 *Deemed-company fiction disapplied*

Section 99(1A) TCGA provides an exception to the deemed-company fiction:

> Subsection (1) does not apply to an offshore fund that is a transparent fund within the meaning given by regulation 11 of the Offshore Funds (Tax) Regulations 2009[28] (see instead section 103D).

So we turn to s.103D(3) TCGA which provides:

> [a] A unit in a tax transparent fund is treated as an asset for the purposes of this Act,
> [b] and, accordingly, a participant's interest in the fund property is disregarded for those purposes.

A tax transparent fund is (notwithstanding its terminology) opaque for CGT in the sense that gains accrue to the fund, not to the participants.

69.9.3 *Gain on disposal of unit*

Section 103D TCGA provides:

> (4) In computing the gain accruing on a disposal by a participant of units in a tax transparent fund, an amount which—
> (a) represents income from the fund property, and
> (b) is taken into account as a receipt or other credit of the participant in calculating an amount chargeable to income tax,
>
> is treated as expenditure falling within section 38(1)(b).
>
> (5) In computing the gain accruing on a disposal by a participant of units in a tax transparent fund—
> (a) the sums that would otherwise be allowable under section 38(1) as a deduction from the consideration in the

[27] Defined s.103D(2) TCGA: "For the purposes of this Act—
"authorised contractual scheme" has the meaning given by section 237(3) of the Financial Services and Markets Act 2000, and
"co-ownership scheme" has the meaning given by section 235A of that Act."

[28] For reg 11OFTR, see 67.24.1 ("Transparent fund").

> computation of the gain are reduced (but not below nil) by the amounts within subsection (7), and
>
> (b) if those amounts exceed the sums that would otherwise be so allowable, the consideration is treated as increased by the amount of the excess.
>
> (6) So far as an amount within subsection (7) is dealt with under subsection (5)(a), it is not also dealt with under section 39.
>
> (7) An amount is within this subsection if it is—
>
> (a) any amount arising to the participant from the fund property which is taken into account as an expense or other debit of the participant in calculating an amount chargeable to income tax, or
>
> (b) anything paid or transferred to the participant, or anything else of value received by the participant, which is referable to the holding of the units (whenever paid, transferred or received) unless section 22 applies to whatever is paid, transferred or received.
>
> (8) In the case of any asset transferred as mentioned in subsection (7)(b), the value of the asset on the date of the transfer is taken to be its market value on that date.
>
> (9) If a participant has incurred expenditure in relation to any fund property in respect of which a capital allowance or renewals allowance (as defined by section 41(4) or (5)) has been or may be made, that expenditure is excluded from the sums allowable as a deduction in computing the amount of a loss accruing to the participant on a disposal of the units in the fund.

Lastly, for completeness, 103DA TCGA deals with share pooling for transparent funds:

> A unit in a transparent fund is to be regarded as a security for the purposes of sections 104, 105, 107, 110 and 114 (share pooling, identification of securities and indexation).

I would have thought that was the case anyway, so the provision only for the avoidance of doubt.

69.10 Situs of unit

69.10.1 *Situs of unit for IHT*

The situs of a unit in an authorised unit trust is not normally relevant for IHT[29] but it may matter for the ITA remittance basis. The situs of a unit

[29] See 75.3 (Non-settled UK funds).

in an unauthorised unit trust is important for IHT.

A unit is unlike an equitable interest under a conventional trust. The rights of a unit holder arise from contract as well as trust, and a unit is in many ways analogous to a share in a company.[30] One should not apply rules governing other kinds of equitable interests without considering this.

It is considered that share/security situs rules should normally be applied, so that the place of the register is normally the determining factor. HMRC accept this.[31]

Another possible view is that situs depends on the residence of the trustees. In practice a situation where the place of residence of the trustees is different from the place of the register would be rare so the priority between the two tests may never need to be decided. Trustee residence determines whether a unit trust is treated as a company or offshore fund for IT and CGT purposes.[32] It might therefore be said to be consistent with the tax legislation if situs of a unit for IHT depends upon the residence of the trustees. However, situs for IHT is based on private international law, not tax law, so the relevance of unit trust tax provisions is very marginal.

Situs of a unit does not depend on the situs of the underlying assets of the unit trust. The idea that one looks at the underlying assets, at first sight seems sensible, as it is consistent with the usual test for situs of a bare trust. But it is unsound for two reasons:

(1) If the underlying assets are spread across different jurisdictions it would be impossible to ascertain the situs of the unit (if a unit is regarded as a single asset). The unit should not be regarded as several separate interests in as many assets as are held by the unit trust, looking through the unit trust like a bare trust, as this is to ignore the

[30] Thomas & Hudson, *The Law of Trusts* (2nd ed., 2010), para 53.28, says that the rights are *primarily* contractual, but to classify overlapping rights as "primary" and "secondary" seems to me somewhat arbitrary.

[31] Press Release 16 October 2002 (OEICs and AUTs) para 9 stated (before the introduction of IHT relief for AUTs):

> "[OEICs and units in Authorised Unit Trusts] are treated as situated in the UK in the same way as other UK registered shares. That is so even if the 'underlying' assets of the collective investment fund are non-UK assets."

See too [1998] PCB 172. This conclusion is supported by *CPT Custodian Pty v Commissioners of State Revenue* (2005) 221 ALR 196 *http://www.austlii.com* (unit holders not joint "owner" of land for purposes of Australian rating laws).

[32] See 69.6 (Unauthorised UT: UK trustees); App. 66.3 (Mutual fund/CIS/OIEC).

nature of the unit.[33]

(2) The proposal to look to the situs of the underlying assets is unworkable because the unit holder will not normally be able to ascertain what the underlying assets are at any particular moment. (Accounts of the unit trust may disclose the position at the end of an accounting period but that will not help as underlying assets may be bought and sold frequently by the trustees of the unit trust. The unit holder normally has no further right to information.)

Although the consequence is that one can alter situs by interposition of a unit trust, that is not surprising: one can do the same with an OEIC or a company.

69.10.2 *Situs of unit for CGT*

Since a unit trust is treated as a company, the test of situs for CGT should be that which applies for companies.

The applicable rule is that registered shares are situated where they are registered.[34] As units are treated as shares, and are (in practice) registered, units in a unit trust are situate where they are registered. The situs of the underlying assets is not relevant. This rule is the same as the private international law rule.

There are three other CGT situs rules which I should mention for completeness:

(1) Under the UK-law rule, intangible property governed by UK law is UK situate, unless the situs is otherwise determined.[35] This rule does not apply, even if the unit trust is governed by UK law, because its situs is "otherwise determined": it is determined by the rule which applies to registered shares.

(2) Shares of a company "incorporated in the UK" are UK situate for CGT purposes.[36] It is considered that this rule does not apply, even if the unit trust is governed by UK law, because although a unit trust is treated as a company, and units are treated as shares, there is nothing to say that the deemed company is "incorporated in the UK".

However, a UK law unit trust will in practice have a register here, so these

[33] A similar argument applies in relation to the situs of an equitable interest under a substantive trust.

[34] See 103.6 (Registered security: Non-UK co).

[35] See 103.13.4 (UK-law rule).

[36] See 103.5 (Securities of UK company).

two questions will not arise.

(3) Lastly, under the co-ownership rule, the situs of co-owned assets is determined on the assumption that the asset is wholly-owned by the person holding the interest in the asset.[37] As a matter of general law, unit holders are co-owners of the underlying assets of the unit trust. But the co-ownership rule does not apply to a person holding a unit because the unit is deemed to be a share, so it is not an interest in an asset. (The co-ownership rule would apply if a unit were co-owned by two or more persons.)

69.10.3 *Residence of trustees and situs*

The residence of the trustees is not relevant for situs, though non-resident trustees are required if it is desired that the units are not to be chargeable securities for SDRT purposes.[38]

69.11 Gain on disposal of unit

An offshore unit trust will be an offshore fund. It may qualify as a reporting fund. If it does not, a gain accruing on a disposal of a unit will be an offshore income gain.[39]

69.12 Fonds commun de placement

Fonds commun de placement may be translated as "mutual funds", or "common funds" but it is better to use the French term, (abbreviated as FCP).

The UCITS directive provides:

> Les organismes visés au paragraphe 2 [organismes de placement collectif en valeurs mobilières (OPCVM)] peuvent revêtir la forme contractuelle (fonds communs de placement gérés par une société de gestion) ou de trust (unit trust) ou la forme statutaire (société d'investissement).

> The undertakings referred to in paragraph 2 [undertakings for collective investment in transferable securities (UCITS)] may be constituted in accordance with contract law (as common funds [FCPs] managed by management companies), trust law (as unit trusts), or statute (as investment companies).

[37] See 103.3 (Co-owned assets).

[38] See s.99(5A) FA 1986.

[39] See 66.15 ("Offshore fund").

Luxembourg law offers two definitions of the term in different statutes, but the differences do not matter for present purposes:

> Est réputée fonds commun de placement pour l'application de la présente partie toute masse indivise de valeurs mobilières et/ou d'autres actifs financiers liquides mentionnés à l'article 41, paragraphe (1), composée et gérée selon le principe de la répartition des risques pour le compte de propriétaires indivis qui ne sont engagés que jusqu'à concurrence de leur mise et dont les droits sont représentés par des parts destinées au placement dans le public par une offre publique ou privée.[40]

> Fonds commun de placement for the purposes of this Part means a fund of transferable securities and/or other liquid financial assets mentioned in article 41(1), established and managed, on the basis of spread risk, on behalf of joint owners who are liable for no more than their investment, and whose rights are represented by shares to be issued to the public under a public or private offer.

> Est réputée fonds commun de placement pour l'application de la présente loi toute masse indivise de valeurs composée et gérée selon le principe de la répartition des risques pour le compte de propriétaires indivis qui ne sont engagés que jusqu'à concurrence de leur mise et dont les droits sont représentés par des parts réservées à un ou plusieurs investisseurs avertis.[41]

> Fonds commun de placement for the purposes of this law means a fund of securities, established and managed, on the basis of spread risk, on behalf of joint owners who are liable for no more than their investment, and whose rights are represented by units intended for one or more informed investors.

In France:

> Sous réserve des dispositions de l'article L. 214-8-7, le fonds commun de placement, qui n'a pas

> Subject to the provisions of article L. 214-8-7, a fonds commun de placement, which does not have

[40] Loi du 17 décembre 2010 concernant les organismes de placement collectif (Law of 17 December 2010 concerning undertakings for collective investment) Art 5 *http://legilux.public.lu/eli/etat/leg/loi/2010/12/17/n9/jo*

[41] Loi du 13 février 2007 relative aux fonds d'investissement spécialisés (Law of 13 February 2007 relating to specialized investment funds) Art 4 *http://legilux.public.lu/eli/etat/leg/loi/2007/02/13/n1/jo*

la personnalité morale, est une copropriété d'instruments financiers et de dépôts dont les parts sont émises et rachetées à la demande, selon le cas, des souscripteurs ou des porteurs et à la valeur liquidative majorée ou diminuée, selon les cas, des frais et commissions.[42]

legal personality, is a joint ownership of financial instruments and deposits, the shares of which are issued and redeemed at the requests, as the case may be, from subscribers or holders and at the increased or decreased net asset value, as the case may be, of fees and commissions.

69.12.1 *IT position of FCP*

The HMRC transparent/opaque list refers to Luxembourg fonds commun de placement, and French fonds commun de placement à risques, and classifies them as transparent.[43]

69.12.2 *CGT position of FCP*

An FCP is not a unit trust, on the basis that FCP assets are not held on trust. This is addressed by s.103D TCGA (and assumed in the drafting of the definition of offshore fund[44]).

But if it mattered, the question whether an FCP is a trust (or more accurately, whether references to a trust in any particular provision include an FCP) would benefit from further examination. The Australian Taxation Office classify an FCP as a trust for tax purposes:

> **Overview of the Umbrella Fund**
> 19. The Umbrella Fund is an open-ended unincorporated mutual investment fund in the form of a 'fonds commun de placement'. It is governed by Luxembourg law and qualifies as an Undertakings for Collective Investment in Transferable Securities (UCITS) ...
> 20. As a pooled investment vehicle and form of collective investment fund, the Umbrella Fund receives cash or assets from Unitholder subscriptions and invests its cash/assets in various assets comprising Transferable Securities, Money Market Instruments and some non-transferable securities. Investments are made within permitted

[43] See 90.54 (HMRC transparent/opaque list).

[44] See 66.15 ("Offshore fund").

parameters as set out in the Management Regulations and Prospectus, and in accordance with the requirements applicable to UCITS under Luxembourg laws and regulations.

21. Subscription for Units in the Umbrella Fund is made by completing required documentation (including an Account Opening Agreement) and submitting that, together with payment of the full purchase price of the Units subscribed for, for acceptance by the Management Company. The issue price of a particular Unit class in the Umbrella Fund or a Fund is based on the net asset value of that Unit class (subject to adjustments for swing pricing) at the Valuation Point on the relevant Dealing Day (that is the time of subscription).

22. The key features of the Umbrella Fund are that:

- it is managed by the Management Company, the sole and exclusive objective in respect of which is the management of the Umbrella Fund (and its assets) on behalf, and in the interests, of its Unitholders
- its assets are kept separate from the Management Company which entrusts the Depositary with the custody of its assets in separate accounts or deposits on behalf of the Unitholders
- the Umbrella Fund is divided into separate sub-funds referred to as Funds
- Units issued with respect to each Fund may be divided into separate classes with each such class representing an interest in the underlying net assets of the Fund but with different characteristics as are established specifically with respect to such class
- the Unitholders legally own Units in the Umbrella Fund (or Fund), as evidenced by mention in the Register of Unitholders
- a Unitholder’s acquisition of Units in the Umbrella Fund implies their acceptance of the Management Regulations of the Umbrella Fund which govern the legal relationship between the Unitholders, the Management Company and the Depositary
- the entire assets of the Umbrella Fund are the joint property of all Unitholders, who have equal rights in proportion to the number of Units of each class they hold in individual Funds
- each Unit confers an equal and undivided interest in the assets of the Umbrella Fund as a whole or the relevant Fund, and does not confer an interest in any particular asset
- the Unitholders of Distributing Unit Classes (as beneficiaries of the Umbrella Fund) are beneficially entitled to the income of a Fund as it is earned by the Fund
- the extent to which distributions are made with respect to any Fund will be determined by the Management Company with consideration to net investment income and net realised capital gains, and the net asset value of the Umbrella Fund not falling below the minimum

capital amount prescribed by law, and

- distributions to the Unitholders of Distributing Unit Classes of the Funds will generally be declared and paid at least annually within one month following the end of the financial year of the Umbrella Fund.

23. Distributions to the Unitholders of Distributing Unit Classes in a Fund may represent both dividends and capital gains received by the Umbrella Fund as a result of holding and/or disposing its assets, and on-paying these income streams to the Unitholders in the form of a fund distribution, net of taxes, fees and other expenses.

24. Depending on the domestic tax laws of the jurisdiction that the Umbrella Fund has invested in, withholding tax is likely to be incurred by the Umbrella Fund when income and/or capital proceeds are remitted from that jurisdiction to the Umbrella Fund. The amount of dividend income and/or capital proceeds that is then on-paid by the Umbrella Fund to the Unitholders, in the form of a fund distribution, will effectively be net of withholding tax.

25. Unitholders may request redemption of their Units from a Fund at the redemption price. The redemption price is based on the net asset value of the relevant Unit class in the Umbrella Fund or a Fund (subject to adjustments for swing pricing) at the Valuation Point on the relevant Dealing Day (that is the time of redemption).

26. Legal or beneficial ownership of Units cannot be transferred other than by redemption in accordance with the Management Regulations.

The Management Company

27. Amongst other things, the Management Company:

- is entitled to buy, sell, subscribe for, exchange and receive any assets and to exercise all the rights directly or indirectly connected with the Umbrella Fund's assets
- shall determine the investment policy of the Umbrella Fund, but may avail itself of services of Investment Managers
- is authorised to file any tax elections and tax certifications with tax authorities outside of Luxembourg as it deems necessary, and is responsible for making Units available to Unitholders.

The Depositary

28. Amongst other things, the Depositary:

- holds the legal title to all of the Umbrella Fund's assets for the benefit of all Unitholders
- is the administrative, registrar, transfer and paying agent for the Umbrella Fund
- may only draw on the Umbrella Fund's assets or make payments to third parties for the Umbrella Fund by order of the Management

Company within the scope of the Management Regulations

- shall ensure that the sale, issue, redemption, conversion and cancellation of Units effected for the account of the Umbrella Fund or by the Management Company are carried out in accordance with the law and the Management Regulations
- shall ensure that the value of Units is calculated in accordance with the law and the Management Regulations, and
- shall ensure that the Umbrella Fund's proceeds/earnings are employed in accordance with the Management Regulations...

Explanation

The Umbrella Fund constitutes a trust

30. The term 'trust' is not defined in the ITAA 1936 or ITAA 1997. Whether a trust relationship between the Management Company (or the Depositary) and a Unitholder exists upon the Unitholder's acquisition of Units in the Umbrella Fund should therefore be determined in accordance with guidance provided by the Courts.

31. Gaudron, McHugh, Gummow, Kirby and Hayne JJ in *Associated Alloys Pty Limited v. ACN 001 452 106 Pty Limited* [2000] HCA 25, at paragraph 29, endorsed the joint judgment of Dixon CJ, Williams and Fullagar JJ, in *Kauter v. Hilton* (1953) 90 CLR 86 who, at page 97, identified:

> ...the established rule that in order to constitute a trust the intention to do so must be clear and that it must also be clear what property is subject to the trust and reasonably certain who are the beneficiaries.

32. [The ruling refers to the definition of "trust" in *Harmer v. FCT*; see 90.14.6 (Trust concept in Australian law), and continues:]

33. All four essential elements of a trust are present so as to give rise to a trust relationship between the Management Company, the Depositary and the Unitholders. This is held because:

- legal title to the assets of the Umbrella Fund vests with the Depositary (or a member of the Depositary's sub-custody network).
- the assets of the Umbrella Fund (being Transferable Securities, non-transferable securities and Money Market Instruments) are capable of being held on trust and, pursuant to the terms of the Management Regulations, are dealt with by the Management Company and the Depositary acting in a trustee capacity on behalf of, in the interests and for the benefit of, the Unitholders, and
- Unitholders (who are clearly intended to be beneficiaries of the Umbrella Fund) are beneficially entitled to a proportion of the underlying assets of the Umbrella Fund (or a relevant Fund) in accordance with their Unit holding and receive income from the investment of the Umbrella Fund assets by the Management

Company and/or the Depositary as it arises.[45]

69.13 Irish Common Contractual Fund

The [Ireland] European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011 provides a definition:

> 3(1) In these Regulations—
> "common contractual fund" means a collective investment undertaking, being an unincorporated body established by a management company under which the participants by contractual arrangement participate and share in the property of the undertaking as co-owners

This appears to be a statutory equivalent of a FCP.
The HMRC transparebnt/opaque list classifies a CCF as transparent.[46]

CONTENTS AT A GLANCE

The chapters are organised thematically as follows:

Volume 1

Introduction and What's New
Obtaining further advice and disclaimer
A1 FIG Relief//Abolition of Domicile Rule

Non-dom policy & avoidance

1. Foreign Domicile: Tax Policy
2. Tax Avoidance
3. Targeted Anti-avoidance Rules (TAARs)

Domicile & residence

4. Domicile
5. Deemed Domicile
6. Residence of Individuals
7. Residence of Trustees

Volume 2

8. Residence of Companies
9. Treaty-Residence
10. Split Years
11. Temporary Non-residence
12. Exit Taxes
13. UK Arrival or Departure: Tax Checklist

Income tax: Principles & remittance basis

14. Income Categorisation
15. Income Recognition: Received /Entitled/Arise/Paid
16. Source/RFI/Territorial Principles
17. The Remittance Basis
18. The Meaning of Remittance
19. Remittance Reliefs
20. Mixed Funds

Income by category

21. Trading Income

Volume 3

22. Trading in Land
23. Performers
24. Property Income
25. Deduction of Interest from Property Income

26. Interest Income
27. Exempt Interest of Non-Residents
28. Accrued Income Profits
29. Deeply Discounted Securities
30. Dividend Income
31. Annual Payments
32. Intellectual Property Income
33. Misc Sweep-Up Income
34. Employment Income
35. Travel Expenses: Employment Income
36. PAYE
37. Employment Income: DT Relief

Volume 4

38. Pension and Annuity Income
39. Benefit in Kind: Family Home and Chattels
40. Benefit in Kind: Loans from Non-Resident Companies

IT: general

41. Discretionary Trusts: Income Tax

Cross references

The following topics are considered elsewhere:
11.18 (TNR: life policies)
101.1 (Statutory tax indemnity)
102.25 (Insurance policy)
103.15 (Insurance policy)
131.26 (TRS: UK trust holding Irish bond)

The taxation of policies held by UK resident companies is not discussed.

70.1 Policies: Introduction

This chapter considers:
(1) life insurance policies
(2) life annuity contracts
(3) capital redemption policies

ITTOIA refers to these as “policies and contracts”. I abbreviate that to **“policies”**. In the insurance industry the asset is often described as an investment bond, or just a bond; statute adopts that term in the expressions “personal portfolio bond” and “guaranteed income bond”. I prefer not to use the word “bond” since it is also used to describe debentures and indeed strictly includes any obligation undertaken by deed; but no difficulty arises as long as the meaning is clear.

Policies fall within Chapter 9 Part 4 ITTOIA, sometimes called the “chargeable event” regime. This contains almost 100 sections: it is the longest chapter in ITTOIA. The reader will not be surprised if I say that a full discussion needs a long book to itself. This chapter focuses on matters closest to the themes of this work.

One can effectively opt into the chargeable event regime by framing an investment as a capital redemption policy, or a life policy (which need have only a nominal element of life insurance); and this is common practice.

70.1.1 *Navigation*

The layout of the provisions is as follows:

Topic	**ITTOIA sections**
Charge to tax	461 - 463
Person liable	464 - 472
Policies within Chap 9	473 - 483
Chargeable events	484 - 490

Calculating gains	491 - 497
Part surrenders; excess events	498 - 509
Transaction-related calculations	510 - 514
Personal portfolio bonds	515 - 526
Deductions	527 - 529
Tax treated as paid; reliefs	530 - 538
Deficiencies	539 - 541
Supplementary	542 - 546

70.2 Definitions

70.2.1 *"Policy"*

The IPT Manual provides:

> **IPTM1115 Fundamental Concepts: what is a life policy** [Jun 2016]
> The word policy in connection with insurance has a long history. It is the formal document in which an insurer (that is, insurance company or friendly society) sets out the terms of its obligations in consideration of the stipulated premiums. For an insurance contract to be made, or varied, between an insurer and policyholder requires the completion of the standard contract law offer and acceptance. There is no practical distinction between contract and policy; the latter simply evidences the former. Lord Donaldson confirmed this in the judgment referred to at IPTM1110 [*Scher v Policyholders Protection Bond* [1994] 2 AC 57.]

70.2.2 *"Life insurance"*

The definition of life insurance[1] needs a chapter to itself. IPT Manual provides:

[1] A note on terminology. The General Insurance Manual provides:
"**GIM1060. Legal basis of insurance: Indemnity** [Jun 2016]
It used to be said that there was a distinction between
[1] insurance, meaning insurance against a financial loss, and
[2] assurance, meaning the assurance of a fixed or minimum sum upon the occurrence of a specified event that is bound to occur.
The text of the [Policies of Assurance] Act 1601, however, shows that the term "assurance" was applied to what is manifestly indemnity insurance. More recently the distinction has faded further under the influence of the EU, where the official English texts of the relevant Directives consistently use the term "life insurance". For most practical purposes therefore insurance and assurance can be treated as interchangeable terms. In tax legislation, however, the term "assurance" is usually confined to life business.

> **IPTM1115. What is a life policy?** [Jun 2016]
> According to the 1774 Life Assurance Act, a policy of life insurance is an insurance policy on life. There is no further definition in the Taxes Acts. If a policy pays benefits on the death of an individual, either whenever it happens, or within a specified term, then it is potentially within the scope of the chargeable event legislation.
> It is not relevant for tax purposes that such a policy may also provide insurance against other risks, such as disability and critical illness, although that might affect its regulatory or accounting treatment.
> Funeral plan contracts where a customer pays a sum to a funeral provider to provide a funeral in due course are not contracts of insurance, although similar arrangements if made with an insurer as a whole of life policy are, according to the regulatory rules of the Financial Services Authority.[2]

70.2.3 *"Capital redemption policy"*

Section 473(2) ITTOIA provides:

> In this Chapter—
> "capital redemption policy" means a contract made in the course of a capital redemption business, within the meaning given by section 56(3) of FA 2012.

The definition is only for the purpose of Chapter 9 Part 4 ITTOIA (the "chargeable event" regime) but it is applied by reference elsewhere.[3] That takes us to s.56(3) FA 2012 which provides:

> Business is "capital redemption business" if it consists of
> [a] the effecting on the basis of actuarial calculations, and the carrying out, of contracts
> [b] under which, in return for one or more fixed payments, a sum of a specified amount (or a series of sums of a specified amount) become payable at a future time or over a period.

IPT Manual provides:

> **IPTM1120. What is a capital redemption policy?** [Nov 2018]
> Capital redemption policies, though issued by insurance companies, are not strictly speaking insurance products. They were once known as investment bond

[2] There is also an interesting discussion in:
General Insurance Manual GIM1010 (Legal and economic basis of insurance)
Part 7 of the Law Commission paper "Insurable Interest" (2008)
PERG 6 (Guidance on the Identification of Contracts of Insurance)
https://www.handbook.fca.org.uk/handbook/PERG.pdf

[3] Eg s.432(3) ITTOIA (DDS code).

contracts, which is more descriptive but needs to be distinguished from the type of life policy investment bond described at IPTM1100. Under capital redemption policies, one or more fixed sums is paid to an insurer under a contract pursuant to which one or more specified amounts is paid out at some later time or times, on the basis of an actuarial calculation. Typically the contracts take the form of

- an annuity certain, where a capital sum is used to buy an annuity for a fixed term not contingent on life, see IPTM4200,[4] or
- a sinking fund where regular sums are paid in to secure a capital sum at some later date, for example against the need to find a premium payment to renew a lease.

The statutory definition of capital redemption business is at [s.56 FA 2012]. Contracts within such business are long term insurance business but not life business. A capital redemption policy that creates a debtor/creditor relationship, with an agreement to return the sum advanced, is known as a capital redemption bond and is similar in nature to a relevant or deeply discounted security, see SAIM3000. However, such bonds, which may only be sold by an insurer, are removed from the scope of the deeply discounted securities income tax charge of Section 427 ITTOIA onwards.[5] ...

70.2.4 *"Life annuity"*

Section 473(2) ITTOIA provides:

> In this Chapter... "life annuity" means—
> (a) an annuity that—
> (i) is a purchased life annuity for the purposes of Chapter 7 of this Part (see section 423),[6] and
> (ii) is not specified in section 718 (annuities excluded from the exemption for part of purchased life annuity payments

[4] See 38.17.3 ("Annuity certain").

[5] See too the explanatory notes to the draft legislation published in the Pre-Budget Report, 5 December 2005:

> 15. A capital redemption policy is a contract, issued by an insurer, which is made in the course of capital redemption business. Under a capital redemption policy, for consideration of a sum or sums of money, the issuer of the policy guarantees to pay out a larger sum on a specified future date or to make a series of payments. Payment is independent of any contingency linked to human life.
>
> Examples of such contracts include—
>
> - an annuity certain - an annuity payable for a set period not contingent upon the survival of a life,
> - a leasehold redemption policy - which builds up a fund to be used in some way on the expiry of a lease, and
> - a sinking fund policy - this accumulates a fund for the eventual replacement of a wasting asset.

[6] See 38.17.2 ("Purchased life annuity").

under section 717)

Section 718 ITTOIA provides the list of exceptions:

> (2) The annuities are—
> (a) an annuity the whole or part of the consideration for which consisted of sums satisfying the conditions for relief under section 266 of ICTA (life assurance premiums),
> (b) an annuity purchased following a direction in a will, and
> (c) an annuity purchased to provide for an annuity payable as a result of a will or settlement out of income of property disposed of by the will or settlement.
> (3) For the purposes of subsection (2)(c), it does not matter whether or not capital could also be used to pay the annuity.

70.2.5 *"Surrender"*

In this chapter:

"A full surrender" is a surrender of all the rights under the policy.

"A part-surrender" is a surrender of part of the rights under the policy.

Section 500 ITTOIA provides:

> The following events are treated for the purposes of this Chapter as a surrender of a part of the rights under the policy or contract in question—
> (a) the falling due of a sum payable as a result of a right under a policy or contract to participate in profits where further rights remain under it,
> (b) in the case of a contract for a life annuity which provides for a capital sum to be taken as an alternative in part to the annuity payments, taking the capital sum,
> (c) the making of a loan to which section 501 applies, and
> (d) the making of a payment to which section 504 applies (payments by insurers under guaranteed income bonds etc.).

Para (c)(d) (loans and guaranteed income bonds) are specialist topics and not discussed here.

70.2.6 *"Insurance year"*

Section 499(1) ITTOIA provides:

> In this Chapter "insurance year", in relation to a policy or contract, means the 12 months beginning with—
> (a) the date on which the insurance or contract is made, or

> (b) any anniversary of that date.

Special rules apply on the termination of a policy:

> (3) An event referred to in section 484(1)(a)(i) or (iii) or (b) to (e)[7] ... is treated as ending the insurance year in which it occurs.
> (4) In this Chapter "final insurance year" means an insurance year that is ended as a result of subsection (3).
> (5) But if, as a result of subsection (3), an insurance year would begin and end in the same tax year—
> (a) that insurance year and the previous insurance year are treated as one insurance year, and
> (b) "final insurance year" needs to be read accordingly.

The IPT Manual provides:

> **IPTM3505 Chargeable events: calculating gains: 'insurance year'** [Jun 2016]
> 'Insurance year' - sometimes called policy year - begins on the day a policy is taken out and on the same date in subsequent years. It ends on the day before the anniversary of the start date and each subsequent year.
> For example, a policy taken out on 1 June 2004 has an 'insurance year' ending on 31 May 2005. A part surrender giving rise to an 'excess event' taking place on 1 April 2005 would fall in tax year 2004-05. But the gain on the 'excess event' would be treated as arising at the end of the 'insurance year', on 31 May 2005, and consequently would be assessable for tax year 2005-6.
> If an event brings a policy or contract to an end - full surrender of rights, death, maturity or taking a capital sum as a complete alternative to annuity payments - the 'insurance year' is treated as ended on that date. It is then referred to as the 'final insurance year'.
> If that rule would result in an 'insurance year' beginning and ending within the same tax year, then the 'final insurance year' is extended to include the previous 'insurance year'.
> For example, if there is an 'insurance year' running from 1 June 2004 to 31 May 2005 and the policy is fully surrendered on 30 June 2005, the 'final insurance year' runs from 1 June 2004 to 30 June 2005.
> The extended period of a 'final insurance year', coupled with the requirement on the insurer to issue a chargeable event certificate broadly within three months of the event, may result in the issue of a certificate

[7] This is a terminal event: see 70.3.3 (Types of chargeable event).

> for an event that turns out not to be chargeable. This may happen where the event is swept up in a calculation for a terminal event that brings the 'final insurance year' to an end, see IPTM3570. In this case the insurer should notify the policyholder that the earlier certificate should be disregarded - see IPTM7210.

70.2.7 *Rights, parts and shares*

Section 464(3) ITTOIA provides:

> If there has been a surrender or assignment of only a part of or share in rights under the policy or contract, the references in this section and those sections to the rights are references to that part or share.[8]

EN ITTOIA comments:

> 417. *Subsection (3)* provides that references in sections 464 to 467 to a surrender or assignment of rights refer, where appropriate, to a surrender or assignment of a part of, or share of, the rights. A *part* of the rights means one or more discrete rights provided by the policy or contract. A *share* in the rights means part of the ownership, where there are multiple owners, of such a discrete right or rights or of all the rights in the policy or contract.

70.3 The charge

The charge is in s.461(1) ITTOIA:

> Income tax is charged on gains treated as arising[9] from policies and contracts to which this Chapter applies.

Section 463(1) ITTOIA provides:

> Tax is charged under this Chapter on the amount of the gains arising in the tax year.

70.3.1 *Policies within charge*

This takes us to s.473(1) ITTOIA:

[8] This is repeated in s.468(6) ITTOIA. (If s.464(3) had ITTOIA-wide application this would have been unnecessary.)

[9] The general usage of tax legislation is that chargeable gains "accrue" but income "arises". In the chargeable events legislation, gains are regarded as income and so the word used is "arise". There is no difference in meaning.
In the chargeable events legislation, gains are sometimes said to "arise" and sometimes "treated as arising". Again, there is no difference in meaning.

> This Chapter applies to—
> (a) policies of life insurance,
> (b) contracts for life annuities, and
> (c) capital redemption policies.

Sections 478–483 ITTOIA (not discussed here) specify various types of policies to which the provisions do not apply.

70.3.2 *When gains arise*

The time that the gain arises is particularly important for a beneficiary who becomes or ceases to be UK resident, as a gain arising to a non-resident (or in the overseas part of a split year) is not taxable.

Section 462(1) ITTOIA provides:

> For the purposes of this Chapter, a gain from a policy or contract arises when a chargeable event occurs in relation to the policy or contract (see section 484).

For full surrenders the chargeable event occurs, and the gain arises, at the time of the surrender.

For part-surrenders the event occurs, and the gain arises, at the end of the insurance year[10] for the policy concerned. The reason is perhaps so that only one chargeable event computation is needed, even if there are several part-surrenders during the year.

70.3.3 *Types of chargeable event*

"Chargeable event" is a label which brings in a complex set of rules. Section 484(1) ITTOIA sets out the starting point:

Chargeable event: text of s.484	**Type**
The following are chargeable events—	
(a) in the case of any kind of policy or contract—	Terminal Event
(i) the surrender of all rights under the policy or contract,	
(ii) the assignment of all those rights for money or money's worth,	
(iii) the falling due of a sum payable as a result of a right under a policy or contract to participate in profits, if there are no remaining rights under it	

[10] See 70.2.6 ("Insurance year").

(iv) a chargeable event treated as occurring under section 509(1) (chargeable events in certain cases where periodic calculations show gains),	
(v) a surrender or assignment treated as a chargeable event under section 514(1) (chargeable events where transaction-related calculations show gains), and	Calculation Event
(vi) a chargeable event treated as occurring under section 525(2) (chargeable events where annual personal portfolio bond calculations show gains)	
(b) in the case of a policy of life insurance, a death giving rise to benefits under it,	
(c) in the case of a policy of life insurance or a capital redemption policy, its maturity,	
(d) in the case of a contract for a life annuity which provides for the payment of a capital sum on death, the death, and	Terminal Event
(e) in the case of a contract for a life annuity which provides for a capital sum to be taken as a complete alternative to the annuity payments (or any further annuity payments), taking the capital sum.	

Thus there are ten types of chargeable event. They fall into two categories:

(1) **Calculation events:** s.491(4) ITTOIA provides the terminology:

> In this Chapter—
> "calculation event" means
> [a] an excess event,
> [b] a part surrender or assignment event or
> [c] a personal portfolio bond event

Thus there are three types of calculation event: Section 491(4) then defines these three types:

> [a] "excess event" means a chargeable event within section 509(1),
> [b] "part surrender or assignment event" means a chargeable event within section 514(1), and
> [c] "personal portfolio bond event" means a chargeable event within section 525(2).

The terminology of [a] is opaque, and [b] is misleading, but it is hard to think of better labels for the tortuous statutory rules. Calculation events are therefore within s.484(1)(a)(iv), (v) or (vi).

(2) Other events: that is, chargeable events other than calculation events. Statute calls these "**terminal events**".[11] Terminal events are those within s.484(1)(a)(i)-(iii) and (b)-(e), in short:
(a)(i) full surrender
(a)(ii) full assignment
(a)(iii), (e) final payment
(b)(d) death giving rise to benefits
(c) maturity

Logically there should be two stages, first to ascertain whether there is a chargeable event and secondly to compute the gain. But in the three calculation event cases the two stages overlap, because the question of whether there is a chargeable event depends on whether there is a gain.

It should be noted that an assignment for no consideration is not a chargeable event. This is the opposite of the CGT position.

Sections 484-489 ITTOIA contain exemptions. These are not discussed here, but s.487 is important because it contains an exemption for inter-spouse transfers (based on the CGT spouse exemption).

70.3.4 *Computation of gains*

The computation of gains is complex and artificial, and sometimes bears no relation to the commercial gain. *Mayes v HMRC* noted:

> This is legislation which does not seek to tax real or commercial gains.[12]

The rules are not the same as the computation of gains for CGT purposes, so one must take care not to confuse:
(1) chargeable gains (the CGT term) and
(2) gains under the chargeable events legislation

It is confusing that the legislation calls them both "gains". The term "**chargeable-event gains**" is used when one needs to distinguish the two types of gains.[13]

There are five different methods of computation for different types of chargeable event. The computation rules are not discussed here.

SA904(Notes) (Notes on Trust and Estate Foreign, 2022/23) comments

[11] This convenient term was introduced in s.465B ITTOIA.

[12] *Mayes v HMRC* [2011] STC 1267 at [60].

[13] The tern is occasionally used in statute, eg in a heading in sch 45 FA 2013 ("New special rule: chargeable event gains").

on how to compute foreign currency gains:

> Calculate gains on foreign life insurance policies, life annuities and capital redemption policies in the currency in which the policy or life annuity is denominated. Then convert the gain into sterling at the rate of exchange applicable at the time of the chargeable event (which may not be at the time the transaction occurred).[14]

This is different from method of computation of chargeable gains. In cases where the CGT method suits the taxpayer, it might well be questioned.

70.3.5 *Partial surrender trap*

The provisions are sometimes very crude and partial surrender is a particular trap.

In practice, properly advised taxpayers avoid the problem by taking out a cluster of separate policies, instead of one single policy, and making a full surrender of some of them when they want. So the problem tends to affect those who come to the UK, who have taken out a policy when non-UK resident and without considering the tax issues.

[14] Similarly, the IPT Manual provides:

> **IPTM9220 Calculation of gains and other amounts for policies in foreign currencies** [Jun 2016]
>
> Where a tax representative or insurer reports a gain in sterling, it should compute the gain by calculating the amount of the chargeable event gain in the currency in which the policy is denominated and then convert it into sterling at the conversion rate on the date of the event. This method ensures that currency fluctuations during the life of the policy are disregarded.
>
> Where a tax representative or insurer reports other amounts in sterling, for instance the premiums paid where there has been an assignment, they should be translated at the rate applying on the date of the chargeable event.

Similarly, IPT Manual:

> **IPTM3700 Foreign policies: differences in treatment** [Dec 2017]
>
> ... Some policies are denominated in a foreign currency. In such cases, any chargeable event gain should be computed in the foreign currency and then converted to sterling at the rate that applies at the date of the chargeable event. This method should be adopted rather than any other method such as converting each transaction to sterling at the rate applying on the date the transaction occurred.
>
> For instance, if premium of €10,000 was paid into a policy on 10 May 2002 and the policy was surrendered for €12,500 on 3 January 2005, the chargeable event gain on the surrender is €2,500. This should then be converted to sterling at the conversion rate applying on 3 January 2005 to arrive at the amount of taxable gain.

HMRC now have a discretion to recalculate the gain where the statutory computation gives a figure which is wholly disproportionate,[15] though well advised taxpayers would not want to rely on that.

70.4 Individuals and settlors

Once one has identified a chargeable event, and computed the chargeable-event gain, the next stage is to ascertain the person liable for the charge.

Section 464 ITTOIA provides an introduction:

> (1) The person liable for any tax charged under this Chapter is the person indicated by—
> section 465 (person liable: individuals),
> section 466 (person liable: personal representatives), and
> section 467 (person liable: UK resident trustees),
> according to how the rights under the policy or contract are owned or held immediately before the chargeable event in question occurs.
> (2) References in those sections to the ownership or holding of those rights are references to their ownership or holding at that time.

Section 465(1) ITTOIA provides:

> An individual is liable for tax under this Chapter if
> [a] the individual is UK resident for the tax year in which the gain arises and
> [b] condition A, B or C is met.

I call these conditions "**individual bond conditions A to C**".

70.4.1 *Individual beneficial owner*

Section 465(2) ITTOIA provides:

> Condition A is that the individual beneficially owns the rights under the policy or contract in question.

Individual bond condition A – gain charged on individual if they are beneficial owner – is natural and sensible.

Sections 469–471 ITTOIA deal with joint ownership.

70.4.2 *Individual is settlor*

Section 465(3) ITTOIA provides:

[15] See s. 507A, 512A, ITTOIA, enacted after the *cause célèbre* of *Lobler v HMRC* [2013] UKFTT 141 (TC) which is discussed at 2.5 (Attitudes to tax avoidance).

> Condition B is that those rights are held on non-charitable trusts which the individual created.

There are two strange features about individual bond condition B, where a policy or contract is held in trust. First, it does not refer to the "settlor", which is the normal tax and trust term, but to trusts "created" by a person. In practice, the settlor will usually be the creator.[16] I use the term "creator (settlor)".

Secondly the creator (settlor) is charged on the chargeable-event gain arising to their trust regardless of the identity of the beneficiaries. The individual has an indemnity against the trustees[17] so ultimately it is the beneficiaries who bear the burden of the charge, but they do so at the creator (settlor)'s marginal rates. At first sight this seems surprising: the approach more commonly adopted in taxation is only to charge the settlor in the case of settlor-interested trusts, ie if the settlor or (more or less) closely connected persons are beneficiaries. However:

(1) One approach is not necessarily better than the other.[18]
(2) The approach adopted for policies may favour the taxpayer, because chargeable-event gains may otherwise be taxed at the trust rate, ie the top rate; so in a very rough and ready way the rule can mitigate the unfairness of taxing trusts at the trust rate, whose beneficiaries may be lower taxpayers.

Section 545 ITTOIA provides a commonsense definition of a "trust":

> "non-charitable trust" means a trust other than a charitable trust.

What if X creates a bare trust for the benefit of Y, and the trust holds a policy on which a gain arises? Condition A is satisfied, so Y is taxed on the gain: condition A refers to beneficial ownership. At first sight, condition B is also satisfied! "Trust" is not defined; the usual tax term is

[16] The reason for the non-standard term was, possibly, (1) to avoid the rule that a "settlor" must have provided an element of bounty or (2) a concern that a company may not be a "settlor"; see 99.39 (Pension/employee benefit trust), or (most likely) (3) a rough and ready way to deal with the two-settlor situation. That is, if A created a trust and B added property, A alone was the creator and was formerly subject to tax on the whole of the gain. But s.472 ITTOIA now provides a more sensible rule in this case.

[17] See 101.1 (Statutory tax indemnity).

[18] See App 14.10.2 (Definitions of settlor-interested).

"settlement" or "settled property" (which excludes a bare trust). However the two conditions cannot both be satisfied, and the context shows that condition B is not intended to be satisfied. Bare trusts are invariably transparent for tax purposes. So a bare trust does not count as a trust for this purpose and "trust" has the same meaning as the usual tax term "settlement". HMRC agree. The IPT Manual provides:

> **IPTM3250 Person liable to charge: summary of the position in relation to trusts** [Jun 2016]
> **... Rights held on a bare trust - beneficiary chargeable**
> Here the beneficiary is absolutely entitled as against the trustee and the rights are vested in the beneficiary as beneficial owner. The bare trust is ignored and the beneficiary is chargeable by virtue of ITTOIA05/S465 (2). This applies equally where the beneficiary is a minor...

Section 472 ITTOIA deals with trusts with two or more settlors.

The IPT Manual discusses the meaning of "creator":

> **IPTM3250 Person liable to charge: summary of the position in relation to trusts** [Jun 2016]
> ... 'Settlor' or 'creator' of a trust has a wide meaning and includes any person who settles property on the trust. So, for instance, where a person pays sums to the trustees to use as current or future premiums for a policy held in the trust, that person is a creator of the trust.
>
> **IPTM3290 Person chargeable: multiple interests: trusts created by more than one person** [Jun 2016]
> ... If property is contributed by different persons at different times, for instance where property is added to an existing settlement, each is treated as a creator in relation to the trust and consequently as a sole settlor.
> The share is taken to be the same as the proportion of property contributed by the creator to the trust as it stands immediately before the chargeable event. Property is contributed for this purpose if it originates from the creator, meaning provided directly or indirectly by that person, unless under reciprocal arrangements with another person. A just and reasonable apportionment may be made where necessary.

I would have said that if A creates a trust, and B adds property to it, A alone is the "creator";[19] but the issue will not often arise.

[19] See too 79.3 (One IHT-settlement or more).

70.4.3 *Debt charged on policy*

Section 465(4) ITTOIA provides:

> Condition C is that those rights are held as security for the individual's debt.

Individual bond condition C – gain charged on individual if held as security for the individual's debt – is a rough and ready solution to the problem of imposing the tax charge where the economic ownership lies. CGT has the opposite rule: s.26 TCGA.

70.4.4 *Gains of non-resident*

The charge only applies "if the individual is UK resident for the tax year in which the gain arises": s.465(1) ITTOIA.

70.4.5 *Gains of split year*

Section 465(1A) ITTOIA provides the usual split-year rule:

> But if the tax year is a split year as respects the individual, the individual is not liable for tax under this Chapter in respect of gains arising in the overseas part of that year (subject to section 465B).[20]

70.5 No remittance basis

Section 465(5) ITTOIA provides:

> For the purposes of calculating the total income of an individual liable for tax under this Chapter, the amount charged is treated as income.

The drafting technique is that the gain is added to the individual's "total income". The gain is taxed on an arising basis. The remittance basis does not apply even if the individual is a remittance basis taxpayer and the gain arises from an offshore policy.

It follows that a policy or contract which will give rise to a gain under the chargeable event provisions is not a suitable form of investment for:

(1) an individual who is a remittance basis taxpayer or

(2) a trust whose creator (settlor) is a remittance basis taxpayer[21]

unless the individual expects to be non-resident in the year that the chargeable-event gain arises. If the individual has no short or medium

[20] The exception in brackets refers to the TNR rules: see 11.18 (TNR: life policies).

[21] But it may be suitable if held by a non-resident company held by the trust: see below.

term intention of realising a gain (ie the policy is a long term investment) then the tax disadvantage may be set against the practical convenience of the policy.

The RDR Manual correctly provides:

> **RDRM33540 Identifying Remittances: Chargeable Event gains** [Jan 2019]
> ... Gains arising on a chargeable event, for example, the surrender of all rights under a policy of life insurance are chargeable to tax on the arising basis regardless of whether the policyholder is domiciled in the UK or not. The remittance basis does not apply.
>
> ...
>
> **Withdrawals in excess of 5% or full surrenders**
> If the individual withdraws more than 5% of accumulated premiums then, the amount in excess of 5% or the actual gain if a full surrender, will be chargeable to income tax under the chargeable event legislation. It is charged on the arising basis whether it is remitted or not.

70.5.1 *Remittance basis: Critique*

This is at first sight a surprising inconsistency with the general scheme of taxation for foreign domiciliaries.

For completeness: some might suggest the following justification for taxing chargeable-event gains on an arising basis. A remittance basis taxpayer may take out a foreign policy, whose value is linked to a UK asset held by the life insurance company.[22] If the chargeable-event gain was taxed on the remittance basis, then use of a policy "wrapper" would allow what is in economic terms UK source income or gains to be taxed on a remittance basis. I doubt if that is the historical reason for the rule, which is probably due to oversight. However that may be, this possibility does not justify the rule. It is suggested that gains on foreign policies should be taxed on the remittance basis. The problem does not even call for a targeted anti-avoidance, for the planning which only amounts to deferral, and turns capital into income should be regarded as unobjectionable; deferral is in any case available in a number of different ways.

Long-term residents who pay the remittance basis charge and who have acquired foreign policies may well feel short-changed, though if the figures are large enough, there may be some scope for planning. As with

[22] For an example, see *Foulser v MacDougall* [2007] STC 973.

most anomalies, the rule should not affect the well-advised.

70.5.2 *Premium unremitted income/gain*

The RDR Manual provides:

> **RDRM33540 Chargeable Event gains** [Jan 2019]
> ...Under a special rule (ITTOIA05/s507) policyholders are able to make partial surrenders or assignments of broadly up to 5% of accumulated premiums with any tax charge postponed until maturity or other later realisation. This is known as the '5% deferral rule' or the 'excess rule'. When the policy comes to an end any earlier withdrawals are taken into account in calculating the end gain.
> However when considering the position of a remittance basis user you will need to consider what income or gains they used to pay the premium due under the contract or policy. Where an individual purchases an overseas life insurance, or other income-generating, policy and subsequently part of that policy is surrendered for a cash payment and that money is brought to the UK, such payments will be treated as taxable remittances to the extent that the purchase of the original premium was made with the individual's untaxed foreign income and gains that would have been taxed on the remittance basis if remitted to the UK.
> So if the premium was paid using the individual's foreign income or foreign gains that were untaxed when they arose, because the individual was a remittance basis user in that year, then any of the 5% withdrawal will be a taxable remittance if the money is brought to, or received or used in, the UK. The amount attributable to the '5% withdrawal' indirectly derives from the original premium paid, so Conditions A and B of s809L apply. ...

For mixed fund issues where a policy is bought out of foreign income/gains, see 20.4.7 (Finding income/capital for year).

70.6 Non-UK period relief

Section 528 ITTOIA provides relief for the individual who is UK resident in the year that the gain arises (so they are within the charge) but who has formerly been non-resident. I refer to this as "**non-UK period relief**".

The development of the current law can be traced from a Consultation document Life Insurance - Time Apportioned Reductions (2012).

EN FB 2013 summarises the 2013 changes:

> Current [pre-2013] rules only provide for time apportioned reductions where a life insurance policy has been issued by a foreign insurer. Time

apportioned reductions will be extended to life insurance policies issued by UK insurers.
Time apportioned reductions will be calculated by reference to the residence history of the person liable to income tax on the gains and not by reference to the residence history of the legal owner of the policy.

70.6.1 *Pre/post-2013 rules*

FA 2013 contains 2 sets of amendments:

(1) Para 3 sch 8:
  (a) deleted the former s.528, 529 ITTOIA ("pre-2013 provisions") and
  (b) inserted new s.528, 528A ITTOIA ("post-2013 provisions")

(2) Confusingly, para 87 sch 45 then amended the new s.528, 528A which the same act had just introduced. The significance of that, I think, is to preserve the pre-SLT residence rules where it is necessary to ascertain residence in years before the SLT.

Para 7 sch 8 FA 2013 deals with the transitional rules. Para 7(1) provides:

> (1) The amendments made by this Schedule have effect in relation to—
>   (a) any policy of life insurance issued in respect of an insurance made on or after 6 April 2013, or
>   (b) any contract constituting a capital redemption policy made on or after that date.

The starting point is that:

(1) The post-2013 provisions apply to post-2013 policies
(2) The pre-2013 provisions will continue to be relevant for a generation.

Para 7 sch 8 FA 2013 provides:

> (2) The amendment made by paragraph 3 above has effect in relation to any insurance or contract made[23] before 6 April 2013 if on or after that date—
>   (a) the policy or contract is varied with the result that there is an

[23] Para 7(4) sch 8 FA 2013 provides: "In the case of a policy or contract treated under section 473A of ITTOIA 2005 as a single policy or contract, for the purposes of sub-paragraphs (1) and (2) the date on which the insurance or contract is made is the date on which, as the case may be—
(a) the first insurance is made in respect of which the connected policies are issued, or
(b) the first of the connected contracts is made."

> increase in the benefits secured,
> (b) there is or was an assignment (or assignation) of rights, or a share of the rights, conferred by the policy or contract (whether or not for money's worth) to the individual or deceased, or
> (c) some or all of the rights conferred by the policy or contract become or became held as a security for a debt of the individual or deceased,
>
> and the other amendments made by this Schedule have effect in relation to the insurance or contract accordingly.
>
> (3) For the purposes of sub-paragraph (2)(a) an exercise of rights conferred by a policy or contract is to count as a variation of the policy or contract.

If the post-2013 regime is advantageous, it is possible to bring a pre-2013 policy within its scope. But if the pre-2013 regime is better, it is necessary to take some care to preserve it.

70.6.2 *Non-UK period relief: New law*

Post-2013(1) s.528 ITTOIA provides:

> Subsection (2) applies if—
> (a) an individual is liable for tax charged on a gain from a policy of life insurance or a capital redemption policy, and
> (b) there are one or more days in the material interest period that are foreign days.

70.6.3 *Relief for appropriate fraction*

Post-2013 s.528 ITTOIA provides:

> (2) In determining the individual's liability for tax, the gain[24] on which the tax is charged in the case of the individual is to be reduced by the appropriate fraction.
>
> (3) The appropriate fraction is A / B
>
> where—
>
> A is the number of days in the material interest period which are foreign days, and
>
> B is the number of days in the material interest period.

The key terms are "foreign days" and "material interest period".

[24] Section 528(4) ITTOIA provides: "In subsection (2) the reference to the gain is to be read in accordance with section 463A(4), 463D(4) or 463E(3) (which relates to restricted relief qualifying policies) if applicable."

70.6.4 *"Foreign days"*

Post-2013 s.528(1A) ITTOIA provides:

> "Foreign days" are—
> (a) days falling within any tax year for which the individual is not UK resident, and
> (b) days falling within the overseas part of any tax year that is a split year as respects the individual.

70.6.5 *"Material interest period"*

Post-2013(5) s.528 ITTOIA provides:

> In this section "the material interest period" means so much of the policy period as during which the individual meets condition A, B or C in section 465 in relation to the policy (subject to subsection (7)).

That is, in short, the individual is beneficial owner, settlor or mortgagee.[25]

70.6.6 *Inter-spouse transfer*

Post-2013 s.528 ITTOIA provides:

> (6) Subsections (7) and (8) apply if, before the chargeable event, there is an assignment falling within section 487(c) [inter-spouse transfer] in relation to the policy where the individual is the assignee.
> (7) There is to be added to the material interest period any part of the policy period falling before the assignment—
> (a) during which the assignor meets condition A, B or C in section 465 in relation to the policy, and
> (b) which is not included in the material interest period under subsection (5).
> (8) In relation to any period added to the material interest period under subsection (7), in subsection (1A)(a) and (b) the reference to the individual is to be read as a reference to the assignor.

70.6.7 *Minor provisions*

Post-2013 s.528 ITTOIA provides:

> (9) For the purposes of subsections (5) and (7), in section 465(2) to (4) references to the rights under the policy are to be read as including references to a share of those rights.

[25] See 70.4 Individuals and settlors).

(10) In this section "the policy period" means the period for which the policy has run before the chargeable event occurs.

(11) If the policy is a policy of life insurance which is a new policy in relation to another policy, for the purposes of subsection (10) the new policy is to be taken to have run—

(a) from the issue of the other policy, or

(b) if it also was a new policy in relation to an earlier policy, from the issue of the earlier policy,

and so on; and in subsections (5) to (9) references to the policy are to be read accordingly as including any relevant earlier policy.

(12) In subsection (11) "new policy" has the meaning given in paragraph 17 of Schedule 15 to ICTA.

70.7 Non-UK period relief: PRs/trustees

Section 528A ITTOIA provides equivalent relief for PRs:

(1) Subsection (3) applies if—

(a) personal representatives are liable for tax charged on a gain from a policy of life insurance or a capital redemption policy under section 466, and

(b) there were one or more days in the material interest period that were foreign days.

Section 528A ITTOIA provides equivalent relief for trustees:

(2) Subsection (3) also applies if—

(a) trustees are liable for tax charged on a gain from a policy of life insurance or a capital redemption policy under section 467 where—

(i) of conditions A to D in that section, only condition B is met, and

(ii) the absent settlor condition which is met is the one in subsection (4)(b) of that section (deceased settlor),

(b) there were one or more days in the material interest period that were foreign days, and

(c) the deceased died—

(i) in a tax year for which the deceased was UK resident but not one that was a split year as respects the deceased, or

(ii) in the UK part of a tax year that was a split year as respects the deceased.

(2A) "Foreign days" are—

(a) days falling within any tax year for which the deceased was not UK resident, and

> (b) days falling within the overseas part of any tax year that was a split year as respects the deceased.
>
> (3) In determining the liability for tax of the personal representatives or trustees, the gain on which the tax is charged in the case of the personal representatives or trustees is to be reduced by the appropriate fraction.
>
> (4) The appropriate fraction is—
>
> A / B
>
> where—
>
> A is the number of days in the material interest period which [were foreign days, and
>
> B is the number of days in the material interest period.
>
> (5) In subsection (3) the reference to the gain is to be read in accordance with section 463C(8) (which relates to restricted relief qualifying policies) if applicable.
>
> (6) In this section "the material interest period" means so much of the policy period falling before the deceased's death as during which the deceased met condition A, B or C in section 465 in relation to the policy (subject to subsection (8)).
>
> (7) Subsections (8) and (9) apply if, before the deceased's death, there was an assignment falling within section 487(c) in relation to the policy where the deceased was the assignee.
>
> (8) There is to be added to the material interest period any part of the policy period falling before the assignment—
>
> (a) during which the assignor met condition A, B or C in section 465 in relation to the policy, and
>
> (b) which is not included in the material interest period under subsection (6).
>
> (9) In relation to any period added to the material interest period under subsection (8), in subsection (2A)(a) and (b) the reference to the deceased is to be read as a reference to the assignor.

Section 528A(10)-(13) is the equivalent of s.528 (9)-(12), and need not be set out again here.

70.8 Pre-2013 non-UK period relief

For pre-2013 policies the legislation is as follows. Pre-2013 s.528 ITTOIA provides:

> (1) The gain from a foreign policy of life insurance or foreign capital redemption policy is reduced for the purposes of this Chapter if the policy holder was not UK resident throughout the policy period.
>
> (2) The amount of the reduction is the appropriate fraction of the gain.

> (3) The appropriate fraction is A/B
> where—
> A is the number of days on which the policy holder was not UK resident in the policy period, and
> B is the number of days in that period.
> [(4)(5)(6) are the equivalent of 528(10)(11)(12) in the post-2013 law]
> (7) This section is subject to section 529.

Pre-2013 s.529 ITTOIA provides:

> (1) Section 528 does not apply if, when the chargeable event occurs or at any time during the policy period, the policy is or was held—
> (a) by a non-UK resident trustee,
> (b) by non-UK resident trustees,[26] or
> (c) by a foreign institution.

70.9 Liability of UK trust

If the creator (settlor) of the trust is alive and UK resident, they will be taxed on the gain.[27] Section 467 ITTOIA provides for the situations where the creator (settlor) is not taxable:

> (1) Trustees are liable for tax under this Chapter if immediately before the chargeable event in question occurs they are UK resident and condition A, B, C or D is met.

I refer to **"trust policy conditions A, B, C or D"**. It is considered that these conditions must be satisfied immediately before the event, ie "immediately before" governs the phrase"they are UK resident" and "condition A, B, C or D is met".

> (1A) If trustees are liable for tax under this Chapter, the gain is treated for income tax purposes as income of the trustees.

The rate of tax is in principle 45%.[28]

An appointment to UK resident beneficiaries before the chargeable event may reduce the rate of tax and an appointment to non-resident

[26] Para (b) is otiose, but it does not matter. Section 529(2) deals with a detail of trustee residence:"section 110 of FA 1989 (residence of trustees) applies for the purposes of subsection (1)(b) despite section 110(6) of that Act (which provides that it only applies for 1989-90 and subsequent tax years)."

[27] See 70.4 (Individuals and settlors).

[28] Section 482 ITA type 7: see 41.2.3 (Trust-rate incomes).

beneficiaries may avoid tax altogether.

A trust migration may be effective if done before the chargeable event; it is not necessary to wait until the following tax year.

70.9.1 *Condition A: Charitable trust*

Section 467(2) ITTOIA provides

> Condition A is that the rights under the policy or contract are held by the trustees on charitable trusts.

See Kessler, Wong & Shah, *Taxation of Charities and Nonprofit Organisations*, (14th ed., 2024-25), para 4.14 (Life policies/annuities) online version *https://www.taxationofcharities.co.uk*

70.9.2 *Condition B: Absent settlor*

Section 467 ITTOIA provides

> (3) Condition B is that—
> (a) those rights are held by the trustees on non-charitable trusts, and
> (b) one or more of the absent settlor conditions is met.
> (4) The absent settlor conditions are that the person who created the trusts—
> (a) is non-UK resident,
> (aa) is UK resident but the gain arises in the overseas part of a tax year that is, as respects the person who created the trusts, a split year,
> (b) has died, or
> (c) in the case of a company or foreign institution (see section 468(5)), has been dissolved or wound up or has otherwise come to an end.

70.9.3 *Conditions C and D*

Section 467 ITTOIA provides:

> (5) Condition C is that—
> (a) the rights under the policy or contract are held by the trustees on non-charitable trusts,
> (b) condition B does not apply, and
> (c) neither section 465 nor section 466 applies.
> (6) Condition D is that the rights under the policy or contract are held as security for a debt owed by the trustees.

70.10 ToA: Chargeable-event gains

Non-resident trustees are outside the scope of the charge on a chargeable event because s.467(1) ITTOIA (which imposes the charge on trustees) applies only to UK-resident trustees.

A non-resident company is outside the scope of the charge under ITTOIA (which does not apply to companies). It is outside the scope of the charges in CTA 2009 (which only apply to corporation tax).[29]

In the absence of express provision, the chargeable-event gain would not fall within the ToA provisions because the receipt by the person abroad (assuming they are non-resident) is capital and not income or (more accurately) the chargeable-event gain is not income.[30] However, s.468 ITTOIA deals with this. It is helpful to consider trusts and companies separately.

70.10.1 *Non-resident trust*

Section 468 ITTOIA provides:

> (1) This section applies if a gain is treated as arising under this Chapter and ...
>
> (a) trustees who are non-UK resident would be liable for tax in respect of the gain as a result of section 467 if the trustees were UK resident immediately before the chargeable event in question occurs, ...
>
> (2) Chapter 2 of Part 13 of ITA 2007 (which prevents avoidance of tax where a UK resident individual benefits from a transfer of assets) applies with the modifications specified in subsection (3) or (4).
>
> (3) In a case within subsection (1)(a), Chapter 2 of Part 13 of ITA 2007 applies as if—
>
> (a) the gain were income becoming payable to the trustees, and
>
> (b) that income arose to the trustees in the tax year in which the gain arises. ...

This incorporates ss.720[31] and 731 ITA.

[29] This continues the position formerly governed by ESC C33.

[30] See 48.15 (Income of person abroad).

[31] Section 720 ITA is not needed here because a transferor within s.720 would normally be taxed as the creator of the settlement, but the overlap does not matter. It is similar to the overlap of s.624 ITTOIA and s.720 ITA.

70.10.2 *Non-resident co/institution*

Section 468 ITTOIA provides (so far as relevant):

> (1) This section applies if a gain is treated as arising under this Chapter and ...
> (b) immediately before that event occurs—
> (i) a foreign institution[32] beneficially owns *a share* in the rights,
> (ii) the rights are held for the purposes of a foreign institution, or
> (iii) *a share* in them is held as security for a foreign institution's debt.
>
> (Emphasis added)

It is curious that (i) and (iii) refer to *shares* in rights. Contrast ss.465(2) and 467(2) ITTOIA.[33] On a traditional approach to statutory construction the (i) and (iii) do not apply if the foreign institution beneficially owns the *entire* policy. The gap is more or less filled by s.468(1)(b)(ii), as if a foreign company owns a policy, the rights are held for its purposes. If necessary a court might decide there was a slip in the drafting, which on a modern approach to construction could be corrected. Perhaps the drafting will be corrected some time.

Assuming s.468(1)(b) ITTOIA is satisfied, we read on:

> (2) Chapter 2 of Part 13 of ITA 2007 (which prevents avoidance of tax where a UK resident individual benefits from a transfer of assets) applies with the modifications specified in subsection (3) or (4). ...
> (4) In a case within subsection (1)(b), Chapter 2 of Part 13 of ITA 2007 applies as if—
> (a) the gain were income becoming payable to the institution, and
> (b) that income arose to the institution in the tax year in which the gain arises.

Section 720 ITA is needed here, as the transferor would not otherwise be taxed on the gain.

[32] "Foreign" is defined in s.468(5) ITTOIA: "In this Chapter 'foreign institution' means a company or other institution resident or domiciled outside the UK." "Institution" is not defined.

[33] See 70.4 Individuals and settlors) and 70.9 (Liability of UK trust).

70.10.3 *Transferors: Pre-2005 gain*

Suppose:

(1) gains arose before 5 December 2005 to a foreign company or trust within s.731; the transferor was not subject to tax on those gains as they arose;[34] and

(2) the *transferor* receives a benefit.

A transferor is outside the scope of s.731.[35] Under the pre-5 December 2005 law, I suggested that the transferor's s.731 defence would not apply when s.720 did not apply. Now that s.720 does apply, the transferor's defence should apply even to pre-5 December 2005 gains. This could be something of a windfall for transferors; but since unrealised gains were brought within the s.720 charge from 5 December 2005, HMRC can hardly complain that realised gains now fall within the transferor's defence.

Following the restriction of the taxable-transferor defence in 2017, it is still possible to devise circumstances where this point arises, but in practice it would be very unusual.

70.10.4 *s.720 remittance basis/protected-trust relief*

A chargeable-event gain does not qualify for the s.720 remittance basis, and does not qualify for s.720 protected-trust relief, because the gain does not meet the requirement that the income of the person abroad "would be relevant foreign income if it were the individual's".[36]

For the same reason, a benefit which relates to the gain does not qualify for the s.731 remittance basis.[37]

70.10.5 *Income of life company*

So far we have considered the taxation of chargeable-event gains arising to non-resident trusts or companies which hold policies.

The payment to a non-resident life company (or a subsidiary of such a company) is in principle a transfer of assets within the ToA provisions. The ToA provisions would in principle apply if:

(1) Income arising as a result of the payment can be identified (ie if the

[34] See the 4th edition of this work, para 20.5.
[35] See 50.15 (Taxable-transferor defence).
[36] See 49.26 (s.720 remittance basis).
[37] See 50.39 (s.731 remittance basis).

premium paid is segregated)[38]; and

(2) the motive defence does not apply.

In a straightforward case, the application of the motive defence is well established: *IRC v Willoughby*.[39] If there were a tax avoidance purpose, however, the ToA provisions would in principle apply: the fact that a policy is taken out does not preclude the possibility of tax avoidance. As to whether this could lead to double taxation, see 51.18 (Life policies).

70.11 s.624: Chargeable-event gains

Section 624 ITTOIA never applies to a chargeable-event gain. To see why, it is helpful to distinguish:

(1) UK resident settlor

(2) Non-UK resident settlor:

  (a) non-resident trustees

  (b) UK resident trustees

Where the settlor is UK resident they are taxed on the gain under basic principles as a creator. Section 624 does not apply because the gain is not income of the trustees.

Where the settlor is non-resident and the trustees are non-resident, section 624 does not apply because the gain is not "income" and so it is not "income arising under a settlement".

Where the trustees are UK resident, but the settlor is not resident, the gain is deemed to be income of the trustees. In these circumstances the s.624 non-resident settlor defence will apply.[40]

70.12 Personal representatives

Section 466 ITTOIA provides:

> (1) Personal representatives are liable for tax under this Chapter if
>
> [a] the rights under the policy or contract are held by them and
>
> [b] the condition in subsection (2) is met
>
> (and accordingly the gain is treated for income tax purposes as income of the personal representatives in that capacity).

[38] See 48.9.5 (Transfer for issue of life policy).

[39] 70 TC 57.

[40] That is, the gain is such that if the settlor were actually entitled thereto, they would not be chargeable to income tax by reason of being non-resident: see 47.9 (Non-resident settlor).

> (2) The condition is that if an individual were liable for tax on a gain in respect of the policy or contract, section 530(1) (individual treated as having paid tax at the basic rate) would be disapplied as a result of—
>
> (a) section 531(1) (exceptions from section 530 for policies and contracts specified in section 531(3)), or
>
> (b) para 109(2) of Schedule 2 (contracts in accounting periods beginning before 1st January 1992).
>
> (3) For cases where the condition in subsection (2) is not met, see section 664 of this Act and [section 947 of CTA 2009] (under which the gain is treated as part of the aggregate income of the estate for the purposes of Chapter 6 of Part 5 of this Act and [Chapter 3 of Part 10 of CTA 2009] respectively).

The condition in subsection (2)(b) is a transitional rule now of limited scope.

In order to understand the condition in subsection (2)(a) one needs to follow a trail of statutory provisions. First, ss.530 and 531 ITTOIA:

> **530 Income tax treated as paid etc.**
>
> (1) An individual or trustees who are liable for tax on an amount under this Chapter are treated as having paid income tax at the basic rate on that amount.
>
> ...

I refer to this as a "**s.530 tax credit**".

> **531 Exceptions to section 530**
>
> (1) Section 530 does not apply to gains from the kinds of policies and contracts specified in subsection (3), except for the purposes of calculating relief under section 535 (top slicing relief).
>
> (2) Subsection (1) is subject to—
>
> section 532 (relief for policies and contracts with European Economic Area insurers), and
>
> section 534 (regulations providing for relief in other cases where foreign tax chargeable).
>
> (3) The policies and contracts are—
>
> (a) a policy of life insurance issued or a contract for a life annuity made by a friendly society in the course of tax exempt life or endowment business[41],
>
> (b) a foreign policy of life insurance that does not meet conditions A and B,

[41] Terms defined in subsection (4); the definitions need not be considered here.

> (ba) a contract the effecting or carrying out of which constitutes protection business within the meaning of section 62 of FA 2012,
> (bb) a contract which is not within paragraph (ba) but which, as a result of subsection (4) of that section, is treated for the purposes of that section as being made at any time,
> (c) a contract for a life annuity (other than one within para (a)) which has at any time not formed part of any insurance company's or friendly society's basic life assurance and general annuity business the income and gains of which are subject to corporation tax, and
> (d) a foreign capital redemption policy.

If we focus on foreign life policies, the relevant provision is (3)(b). The question is whether the foreign policy does not meet conditions A and B (which I will call "**foreign policy conditions A and B**"). Section 531(5) provides:

> Condition A is that the policy falls within para (a) of the definition of "foreign policy of life insurance" in section 476(3) (policy issued by a non-UK resident company).

So we turn to s.476(3) ITTOIA:

> In this Chapter—
> "foreign policy of life insurance" means—
> (a) a policy of life insurance issued by a non-UK resident company, and
> (b) a policy of life insurance which forms part of the overseas life assurance business of an insurance company or friendly society ...

A foreign policy will typically fall within that definition, so it will meet the condition in s.476(3)(a). The meaning of "overseas life assurance business" can be found in s.431D(1) ICTA:

> **431D Meaning of "overseas life assurance business"**
> (1) In this Chapter "overseas life assurance business" means so much of a company's relevant life assurance business as is with a policy holder or annuitant not residing in the UK (but not including the reinsurance of such business).

I think we conclude that most foreign policies will satisfy foreign policy condition A. That takes us to foreign policy condition B. Section 531(6)

ITTOIA provides:

> Condition B is that the conditions in para 24(3) of Schedule 15 to ICTA (conditions that are required to be met for certain policies issued by non-UK resident companies to be qualifying policies) are met throughout the period between—
> (a) the date on which the policy was issued, and
> (b) the date on which the gain arises.

It is easy to become tangled in the double double negatives, but I think the chain of reasoning goes as follows:

(1) Foreign policies will not (usually) satisfy condition B.
(2) So they fall within s.531(3)(b) ("a foreign policy of life insurance that does not meet conditions A and B").
(3) So they do not qualify for a s.530 tax credit.
(4) So they do meet the condition in s.466(2).
(5) So that PRs are liable for the chargeable-event gain.

This could be avoided by an assent to a beneficiary.

Section 466 ITTOIA is not expressed to be limited to UK resident PRs. However s.368 ITTOIA provides:

> (1) Income arising to a UK resident is chargeable to tax under this Part whether or not it is from a source in the UK.
> (2) Income arising to a non-UK resident is chargeable to tax under this Part only if it is from a source in the UK....
> (3) References in this section to income which is from a source in the UK include, in the case of any income which does not have a source, references to income which has a comparable connection to the UK.
> (4) This section is subject to any express or implied provision to the contrary in this Part (or elsewhere in the Income Tax Acts).

Thus non-resident PRs are not chargeable. EN ITTOIA confirms that this is intended:

> 421. Chapter 1 of Part 4 of this Act provides a general territorial limitation on the scope of the Part. As regards income arising outside the UK, it limits the charge to such income arising to a UK resident. See section 368 (territorial scope of Part 4 charges) and the related commentary on that Chapter. [Section 465 ITTOIA] overlaps and supplements that Chapter to ensure that a non-UK resident individual is not liable to tax under this Chapter on any gains, whether arising in the UK or elsewhere.

70.13 Planning for immigrant to UK

70.13.1 *Post-immigration planning*

The advisers of a foreign domiciled person who has recently come to the UK should check whether they or any trust they have created has a policy or contract. If so, the position needs to be reviewed.

An assignment of the policy or contract from an individual to a trust (resident or not) does not help, since the individual remains liable as creator.

One simple form of planning is to arrange there is no chargeable event in a year when the individual is UK resident. The part-surrender of up to 5% of the premium paid for the policy or contract per year is not a chargeable event. The surrender, assignment for money or money's worth and maturity of the policy or contract is normally a chargeable event but this can be anticipated and perhaps postponed to a year when the individual is non-resident. A death giving rise to benefits under the policy is also a chargeable event unless the policy is a qualifying policy. In such a case the individual may be at risk as death while UK resident may give rise to a tax charge.

Another course is for the individual to surrender their policy shortly after becoming UK resident; most of the gain will qualify for non-UK period relief.[42]

If a chargeable event is anticipated, the policy or contract could be assigned to a non-resident company, perhaps held by a trust. An assignment for no consideration is not a chargeable event. But the ToA rules will need consideration.

70.13.2 *Pre-immigration planning*

There are further possibilities if the individual acts before the tax year in which they become UK resident or in the overseas part of a split year. One possibility is to surrender the policy. A part-surrender may also be a possible option.

70.14 Personal portfolio bonds

A UK resident is not likely to acquire a personal portfolio bond (**"PPB"**), at least knowingly; but a non-resident who holds one may come to the UK.

Section 515 ITTOIA provides:

[42] See 70.6 (Non-UK period relief).

> (1) This section applies if a policy or contract to which this Chapter applies is a personal portfolio bond at the end of an insurance year.

In short, the charge arises if the bond is a PPB at the end of the insurance year.[43] The status of the bond at any other time does not matter.

Section 515(3) ITTOIA provides:

> A calculation is to be made in accordance with section 522 in relation to the policy or contract as at the end of the insurance year to determine—
>
> (a) whether a gain has arisen on the policy or contract in relation to that year, and
>
> (b) if so, the amount of the gain.

The computation of the PPB charge under s.522 is not discussed here. In short, the computation is penal. The tax regime designed not to tax PPBs, but to prevent them being used by UK residents.

I do not discuss the transitional rules for pre-1998 policies.

70.14.1 *Final insurance year*

Section 515(2) ITTOIA provides:

> But this section does not apply if the insurance year is the final insurance year.

70.14.2 *PPB: Critique*

The IPTM explains the rationale for the PPB regime:

> **IPTM7705 - Personal portfolio bonds: introduction** [Aug 2016]
> In law, it is the insurer not the policyholder that owns the property that determines the benefits under a life policy. Where the policyholder has the ability to select the property that determines the policy benefits, the policyholder retains nearly all the advantages of direct personal ownership of that property. But because the property is held in the 'envelope' of a life insurance policy, the policyholder does not have to pay income tax on dividend and interest income arising from the investments nor capital gains tax on disposals when the investments underlying the policy are altered. Tax on any gains on the policy can also be deferred until the policy comes to an end.
>
> **Personal portfolio bond legislation**
> The personal portfolio bond (PPB) legislation is an anti-avoidance

[43] See 70.2.6 ("Insurance year").

> measure which imposes a yearly charge to tax on life insurance and capital redemption policies and life annuity contracts in some circumstances where the property that determines the benefits is able to be selected by the policyholder...

This rationale of the PPB regime calls for critical examination. The tax advantage of deferral is more than compensated by other features of the regime, in particular, the IT charge on capital gains when the policy is realised, and the lack of a tax free uplift on death. The issue should be considered in the context of more fundamental questions on the basis of the taxation of savings, on which the Mirrlees review have done good work. The proposition that "the policyholder retains nearly all the advantages of direct personal ownership of that property" is highly debatable.

In short, it is doubtful whether there is a real problem; and the problem, so far as it exists, does not need a cure of this complexity. The professional bodies made the points when the PPB regime was introduced. The Tax Faculty described it as a "disproportionate response to a perceived problem"[44] and the reader may well agree. But no-one took any notice.

70.15 Definition of PPB

I discuss the definition in some detail; a full discussion would need a chapter to itself.

Section 516(1) ITTOIA provides:

> In this Chapter "personal portfolio bond" means a policy of life insurance, contract for a life annuity or capital redemption policy which meets conditions A and B.

I refer to **"PPB conditions A and B"**.

70.15.1 *Wrapper-type policy*

Section 516(2) ITTOIA provides:

> Condition A is that, under the terms of the policy or contract, some or all of the benefits are determined by reference to—
>
> (a) fluctuations in, or in an index of, the value of property of any description, or

[44] Tax Journal, 26 Oct 1998 (Issue 473), p.3.

> (b) the value of, or the income from, property of any description.

Where the value of the policy is linked to specific property, this is informally called a life insurance **"wrapper"**, though "wrapper" is not a legal or technical term with a fixed or precise meaning.[45] I refer to the property as the **"underlying property"**. It is sometimes said that the underlying property is "held in the bond"; that is not the strict legal analysis but (although the point has been contested[46]) it seems to me that is not so far from the commercial position.

Section 516(3) ITTOIA provides:

> For this purpose it does not matter whether or not the index or property is specified in the policy or contract.

Where policies are acquired by way of investment, PPB Condition A will be commonly be met. What matters then is condition B.

70.15.2 *Power to select*

Section 516(4) ITTOIA provides:

> Condition B is that the terms of the policy or contract permit the selection of the index or some or all of the property by—
> (a) the holder of the policy or contract,
> (b) a person connected with the holder,
> (c) the holder and such a connected person acting together,
> (d) a person acting on behalf of the holder,
> (e) a person acting on behalf of a person connected with the holder, or
> (f) a person acting on behalf of the holder and such a connected person acting together.

Section 516(5) ITTOIA deals with jointly held policies:

> In subsection (4) "holder", in the case of a policy or contract held by two or more persons, means any of them.

In the following discussion, I use the term **"policyholder"** to include any person within s.516(4), ie the actual policyholder, connected persons, etc.

[45] As far as I am aware, the 2011 Swiss Tax Agreement represents the first use of the word in tax legislation: see art (2)(i)(f) (the text is set out in the 2016/17 edition of this work at 97.3.3).

[46] See 3.20.7 (Economic consequences).

So the question is (in short) whether the terms of the contract permit the policyholder to select the underlying property.

The IPT Manual provides:

> **IPTM7715 Ability to select property: meaning** [Jun 2016]
> **Meaning of 'ability to select' is wide**
> [1] Under the PPB legislation, a policyholder's ability to select property or an index is defined to have a wide scope. It extends to circumstances where a policyholder has any say, even indirectly, in the selection of the property or index.
> [2] In particular, a policyholder will be treated as having the ability to select property or an index if under the terms of the policy or contract, the index or property in question may be selected by any of the following: [the Manual summarises the list in s.516(4)].
> [3] Where there is more than one policyholder, there will be an 'ability to select' if any of the policyholders have the ability to select property or an index.
> [4] Where the policyholder genuinely does not have the ability to select property or an index, even if that property or index is not within any of the permitted categories, the policy or contract will not be a PPB, although the presence of personal assets would test this analysis.
> [5] If, for instance, the insurer has complete discretion over the selection of the property or index determining the benefits then the policy would not be a PPB. But if the policyholder does have influence over the selection then the 'ability to select' lies with the policyholder.

The expression "ability to select" is a convenient paraphrase of the statutory wording of PPB condition B, and I adopt it here. On that basis, paragraphs [2] - [4] are correct. But paras [1] and [5] go too far. A policyholder has ability to select if they can choose an underlying investment, out of various possible underlying investments, and having chosen, their choice will be adopted. That might be extended to say that a policyholder has ability to select if their choice can be expected to be adopted, disregarding some exceptional cases. But a person does not have ability to select merely because they have "any say" or "influence". Influence, in its normal sense, is a matter of degree (one speaks of weak and strong influences). At the far end of the spectrum, strong influence shades imperceptibly into an ability to select. The word influence in its normal sense is not restricted to that end of the spectrum.[47]

[47] See 49.17 (Enjoyment condition E: Control).

The IPT Manual provides:

> **IPTM7715 Ability to select property: meaning** [Jun 2016]
> **...Options in a policy to select property**
> If a policyholder is entitled to exercise an option to select property or an index determining the benefits under the policy then the policyholder does have the 'ability to select' even if the option is not exercised. But if the insurer has discretion to offer the policyholder the right to select the property or index, the policyholder will have no ability to select until this discretion has been exercised by the insurer.
> Similarly, if the terms of the policy allow the policyholder to request a change in its terms to permit selection of property outside the scope of the permitted property, but subject to the agreement of the insurer, the policyholder lacks the ability to select until the insurer has agreed.
> A link to personal assets to determine policy benefits will indicate the existence of an ability to select.
>
> **IPTM7720 selection of property by insurers but level of risk selected by policyholder** [Jun 2016]
> It is common for policyholders to be able to adjust their level of risk in relation to policy investments by selecting one or more of the insurer's internal linked funds. Such ability does not, on its own, amount to a power to select property to determine the policy benefits. It is the insurer or its appointed manager that manages the investments in its internal linked funds and selects the property that determines the policy benefits. Units in an insurer's internal linked fund are not property for the purposes of the PPB legislation.
> There may be some cases where the ability to select property is shared between the insurer and the policyholder. Property that may be selected by the insurer alone is of no relevance in determining whether or not a policy is a PPB. The PPB legislation is only concerned with property that may be selected by the policyholder.
>
> **IPTM7725 circumstances where policy is not a PPB**
> **Broker-managed funds ('broker bonds')** [Jun 2016]
> Many companies offer policyholders the opportunity to invest in broker-managed funds. An intermediary or adviser chosen by the policyholder selects the assets in this sort of fund. The intermediary or adviser has an arrangement with the insurer to manage one of the insurer's internal funds and for this fund to be open to any client of the broker.
> The broker is regarded as an agent of the policyholder when advising on whether the client should take out the policy or 'broker bond' in the first

place. However, once the broker bond has been taken out, the broker manages the fund as an agent for the insurer and is remunerated by the insurer for doing so. The broker is not an agent of the policyholder when acting in the capacity of an investment adviser for the insurer.

Policyholders who have a policy under whose terms they are able to select a broker-managed fund to determine the value of benefits under the policy would not therefore normally be regarded as having a PPB. Exceptionally, arrangements may result in a policy described as a broker bond being a PPB because the policyholder retains the ability to select - see IPTM7730.

Investment advisers

Where the policyholder is unable under the terms of the policy to select the property to determine the policy benefits, there may nonetheless be an option to require the insurer to appoint an investment adviser. The insurer may offer the policyholder a menu of possible advisers it is willing to appoint. There will usually be a separate agreement in these cases between the insurer and the investment adviser.

A policy written in these terms would not in general be a PPB. In such a case, the adviser would be acting as an agent of the insurer under the agreement between them. That agreement is separate from the insurance contract between the insurer and the policyholder, and from any agreement between the policyholder and the investment adviser. The adviser would not therefore be acting on behalf of the policyholder. The position would be the same as with broker- managed funds, as described in the previous section.

However, as with broker bonds, in exceptional circumstances the arrangements may be such that the policyholder does retain an ability to select - see IPTM7730.

IPTM7730 circumstances where policy may be a PPB [Jun 2016]

Exceptionally, a policy may be a PPB even where there is a broker or investment adviser involved. The arrangements between the insurer and the adviser or broker, or between the adviser or broker and the policyholder, or in the case of a tripartite agreement among all three of them, could prove material.

The investment objectives of the policyholder in accordance with which the adviser or broker has to act may be so restricted that it is effectively the policyholder that is selecting the property held in the policy. In this case, the adviser or broker is no more than a conduit or agent through whom the policyholder gives the insurer its instructions. These may be instructions as to what new investments may be selected and, with a continuing policy, the scope and freedom for replacing investments by other investments.

> The terms of the legislation cannot be avoided simply by interposing an investment adviser or broker between the policyholder and the insurer. An insurer may, however, not be aware of an arrangement between a policyholder and an investment adviser or broker. It is not the responsibility of the insurer, when deciding whether a particular policy is a PPB, to review anything other than the contracts to which it is a party.

70.16 Whitelisted property

Section 517 ITTOIA provides exceptions to the general rule, where a policyholder may have power to select underlying property. The rules are set out twice, first for index linked bonds, and then for bonds linked to underlying property. I consider them in reverse order, as I think the underlying property rules are more important in practice.

Section 517(2) ITTOIA provides:

> A policy or contract is not a personal portfolio bond merely because its terms permit the selection of property as described in section 516(4) if all of the property which may be so selected—
>
> (a) falls within one or more of the categories listed in section 520, and
>
> (b) meets one or both of the property selection conditions (see section 521).

I refer to property within s.520 as **"whitelisted property"**. The ITPM refers to "permitted property".

Section 520 ITTOIA sets out 7 categories of whitelisted property. These are, in short, mutual funds:

> (1) The table in subsection (2) sets out the categories of property referred to in section 517(2).
>
> (2) This is the table—

Category	**Property**
1	property which the insurance company has appropriated to an internal linked fund[48]

[48] Defined s.520(4): "In this section ... "internal linked fund" has the meaning given by—

(a) the Interim Prudential Sourcebook for Insurers made by the Prudential Regulation Authority under FISMA 2000, or

(b) rules made by the Prudential Regulation Authority under FISMA 2000 and having effect for the time being in place of the Sourcebook".

2	units in an authorised unit trust
3	shares in an investment trust[49]
4	shares in an open-ended investment company[50]
5	cash[51]
6	a policy or contract to which this Chapter applies, other than an excluded policy or contract (see subsection (3))[52]
7	an interest in a collective investment scheme[53] constituted by— (a) a company which is resident outside the UK (other than an open-ended investment company), (b) a unit trust scheme the trustees of which are non-UK resident, or (c) any other arrangement which takes effect by virtue of the law of a territory outside the UK, and which under that law creates rights in the nature of co-ownership (without restricting that term to its legal meaning in any part of the UK)

HMRC have published a shallow consultation paper considering some

[49] Section 50(4) provides the standard definition.

[50] Section 50(4) provides the standard definition.

[51] Defined s.520(4): "In this section ... "cash"—
(a) includes any sum which is deposited—
(i) in a building society account (including a share account) or similar account, or
(ii) in a bank account or similar account, but
(b) does not include cash which is acquired wholly or partly for the purpose of realising a gain from its disposal".

[52] Defined s.520(3): "A policy or contract is "excluded" if—
(a) the policy or contract is itself a personal portfolio bond,
(b) the value of any benefits under the policy or contract is or has at any time been capable of being determined directly or indirectly by reference to a personal portfolio bond, or
(c) a personal portfolio bond is related property in relation to the policy or contract."

"Related property" is defined by reference in s.520(4): "In this section ... "related property" has the same meaning as in section 625 (see subsection (5))." That takes us to s.625(5) ITTOIA which provides: "In this section "related property", in relation to any property, means income from that property or any other property directly or indirectly representing proceeds of, or of income from, that property or income from it."

[53] Section 520(4) provides the standard definition.

extensions to these categories, but without considering wider issues.[54]

Section 521 ITTOIA sets out the property selection conditions. The IPTM has some relevant guidance, but it is too far from the themes of this book to discuss here.

70.16.1 *General selection condition*

Section 521 ITTOIA provides:

> (1) The property selection conditions are—
> (a) the general selection condition (see subsection (2)), and
> (b) the class selection condition (see subsection (3)).
>
> (2) Property meets the general selection condition if, at the time when it may be selected, the opportunity to select property falling within the same category is available to—
> (a) all policy holders of the insurance company, or
> (b) persons acting on behalf of those policy holders.

70.16.2 *Class selection condition*

Section 521 ITTOIA provides:

> (3) Property meets the class selection condition if, at the time when it may be selected, the opportunity to select property falling within the same category is available to—
> (a) a particular class or classes of policy holders of the insurance company, or
> (b) persons acting on behalf of the members of that class or those classes.
>
> (4) A group of policy holders to whom the opportunity to select property falling within a particular category is available is a "class" for the purposes of subsection (3) if—
> (a) neither membership of the class nor the opportunity are limited to connected persons,
> (b) the question whether a policy holder is a member of a class, or has the opportunity, is determined solely by the insurance company, and
> (c) the opportunity is clearly identified in marketing or other promotional material published by the insurance company to

[54] HMRC, "Personal Portfolio Bonds - Reviewing the Property Categories" (August 2016) *https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/544513/Personal_portfolio_bonds-reviewing_the_property_categories.pdf*

> members of the public, or members of the public who are intending investors, as available generally to any person falling within its terms.

The IPTM provides:

> **IPTM7715 Ability to select property: meaning** [Jun 2016]
> Where the policyholder is also an employee of a permitted fund such as a collective investment scheme or investment trust company – see IPTM7745 and IPTM7750 – and selects units or shares in that fund, that in itself would not cause the policy to be a PPB.
> However, the property selection conditions would still need to be met – see IPTM7780 onwards.

70.17 Whitelisted indices

Section 517(1) ITTOIA provides:

> A policy or contract is not a personal portfolio bond merely because its terms permit the selection of an index as described in section 516(4) if that index—
> (a) falls within one of the categories listed in section 518, and
> (b) meets one of the index selection conditions (see section 519).

I refer to indices within s.518 as **"whitelisted indices"**.
Section 518 sets out the whitelisted indices:

> (1) This section sets out the categories of index referred to in section 517(1).
> (2) Category 1 is the retail prices index.
> (3) Category 2 is any general index which—
> (a) is similar to the retail prices index, and
> (b) is published by the government of any foreign state or an agent of such a government.
> (4) Category 3 is any published index of prices of shares listed on a recognised stock exchange.[55]

70.17.1 *General selection*

Section 519(1) ITTOIA identifies the two index selection conditions:

> The index selection conditions are—
> (a) the general selection condition (see subsection (2)), and

[55] See App 2.18 (Listed/Recognised stock exchange).

(b) the class selection condition (see subsection (3)).

The conditions are the same as the property selection conditions set out above; the same wording is used (more or less) verbatim, just replacing *property* with *index* as appropriate.

Section 519(2) ITTOIA provides:

> An index meets the general selection condition if, at the time when it may be selected, the opportunity to select the same index is available to—
>
> (a) all policy holders of the insurance company, or
>
> (b) persons acting on behalf of those policy holders.

70.17.2 *Class selection*

Section 519(3) ITTOIA provides:

> An index meets the class selection condition if, at the time when it may be selected, the opportunity to select the same index is available to—
>
> (a) a particular class or classes of policy holders of the insurance company, or
>
> (b) persons acting on behalf of the members of that class or those classes.
>
> (4) A group of policy holders to whom the opportunity to select an index is available is a "class" for the purposes of subsection (3) if—
>
> (a) neither membership of the class nor the opportunity are limited to connected persons,
>
> (b) the question whether a policy holder is a member of the class, or has the opportunity, is determined solely by the insurance company, and
>
> (c) the opportunity is clearly identified in marketing or other promotional material published by the insurance company to members of the public, or members of the public who are intending investors, as available generally to any person falling within its terms.

70.18 Variation of policy

70.18.1 *Novation/variation distinction*

The starting point is to note that a policy is a contract, and like any contract, the parties to a policy can change its terms or to revoke it. A change of the terms of a policy may constitute:

(1) The termination (rescission) of the old policy in consideration for which the life insurance company enter into a new policy; the contract

law term for this is "**novation**." The IPT Manual uses the expression "fundamental reconstruction".

(2) A variation of the terms of a continuing policy (**"a variation"**).

The IPT Manual discusses the contract law/insurance law background:

> **IPTM8145 Significant variation: how and when variations occur** [Aug 2016]
> **Variation of a policy**
> The terms of a policy can normally only be varied by explicit agreement between the insurer and the policyholder or a person acting on behalf of the policyholder and the insurer should get written acceptance of the variation from the policyholder. It cannot in general be assumed that the variation is accepted simply because the policyholder does not respond.
> ... whether there has been a variation in the terms of a policy is a question of contract law.
>
> **IPTM8150 Significant variations: examples** [Jun 2016]
> ... **Date of a variation**
> The date of a variation follows the principles of contract law and will normally be the date that the party receiving the offer of a variation accepts that offer.
>
> **IPTM7335 Surrenders: fundamental reconstruction of the policy** [Aug 2016]
> ... **Surrender date of old policy and insurance year of new policy**
> In line with the general advice given in IPTM7325, the date of the surrender on a reconstruction is the date on which the insurer agrees to make the fundamental change.
> The new policy comes into existence on the same date and starts a new insurance year, see IPTM3505. So, following a reconstruction the insurance year will in future end on the day before the anniversary of the date on which the reconstruction happened, not the day before the anniversary of the date on which the original policy was taken out.

A *novation* has important consequences under the chargeable event regime; in particular:

(1) It constitutes a chargeable event (the surrender of all rights under the policy), on which a gain will in principle arise.

(2) The new policy may qualify for less, or no, non-residence period relief; will have a different insurance year end date; etc.

A *variation* is not in principle a chargeable event, but it may have important consequences under the chargeable event regime. In particular, a policy may become a PPB, or cease to be a PPB. The IPTM provides:

> **IPTM7710 Scope and outline of the PPB legislation** [Aug 2016]
> ...The test of whether a policy is a PPB is not limited to the terms of the policy at inception but is an ongoing test. Even if a policy was not a PPB when it was taken out, it could subsequently become a PPB through a change in its terms. The reverse situation could also apply if the policy was originally a PPB but its terms were varied so that it ceased to be a PPB.
>
> **IPTM7715 Ability to select property: meaning** [Jun 2016]
> **Variation of the terms of the policy**
> Even if the original terms of the policy provide only for the selection of property within the permitted categories, if the policyholder subsequently selects other property then that will indicate that the terms of the policy have been varied to allow selection of property wider than the permitted categories. Then the policy will be a PPB.

The annual PPB charge only arises if a policy or contract is a PPB on the last day of the insurance year.

The novation/variation distinction is a matter of contract law/insurance law, not tax law.[56] From a commercial (non-tax) point of view it usually makes no difference, and the courts avoid making the distinction if possible.[57] So the contract law cases are mostly antique. But in this and some other tax contexts, the distinction remains important, so more recent cases tend to be tax cases.[58]

The general principle is well established, that there is a novation if:

(1) The parties choose it, ie they expressly extinguish the old contract and substitute a new agreement; or

(2) The parties enter into a contract entirely inconsistent with the old contract, or, if not entirely inconsistent with it, inconsistent with it to an extent that goes to the very root of it.[59]

[56] See Clarke, *The Law of Insurance Contracts* (looseleaf ed) para 23-4B ff (Modification or Extension of Existing Insurance); *Chitty on Contracts* (34th ed., 2021), chapter 25 (Discharge by Agreement, Variation and Waiver).

[59] *British and Benningtons v NW Cachar Tea Co* [1923] AC 48 at p.62, 67.

The IPTM provides:

> **IPTM7335 - Surrenders: fundamental reconstruction of the policy** [Aug 2016]
>
> Where the terms of a policy are changed, those changes may be so fundamental as to constitute a reconstruction bringing to an end the old contract and bringing into existence a new policy in substitution. If so, then the ending of the old policy is treated as a full surrender of the rights under the policy, with all the chargeable event consequences that might follow...
>
> **What is a fundamental reconstruction?**
>
> Whether a change to a policy is fundamental is a question of contract law and can only be answered by reference to the particular facts and circumstances. But it is possible to give some general principles - see IPTM8110....Although the guidance in IPTM8110 specifically applies to qualifying policies, advice about the distinction between changes which are merely variations and those which are fundamental reconstructions has application to non-qualifying policies also.
>
> A variation of a policy, whether significant within the meaning of the qualifying policy rules, or not, has no chargeable event implications for non-qualifying policies.
>
> The main changes which are regarded as fundamental are:
>
> - addition or removal of a life assured under the policy
> - switch from an endowment policy to a whole of life policy or vice versa
> - change of contingency, for instance addition or removal of disability benefit and critical illness cover, or a change to the cover under a joint policy from first-to-die basis to last-to-die, or vice versa.
>
> A change in the way benefits are calculated, extending the term of the policy or making a regular premium policy paid up are not in most cases fundamental reconstructions ....
>
> A transfer of business from one insurer to another under the Part 7 FSMA2000 process sanctioned by the Court will not normally result in the fundamental reconstruction of the policies transferred but each case would need to be carefully considered on its own facts.
>
> **IPTM8110 - Substitutions: circumstances in which they arise** [Jun 2016]
>
> Where the change to a policy goes to the root of the original contract such that there is a fundamental reconstruction of it, the original policy is treated as surrendered and substituted by a new policy on the date of

> the change. Such a change may be by agreement between the policyholder and the insurer or by the exercise of an option in the original policy.
>
> A change in the contingency on which the policy pays out a capital sum would always give rise to a fundamental reconstruction but this is not the only example.
>
> **Changes of contingency**
>
> Examples of changes of contingency that give rise to a substitution are
>
> - adding a life assured to a single life policy or removing a life from a joint policy
> - changing the contingency on a joint policy so that death benefits are paid on the death of the last survivor rather than on the first death, or vice versa
> - adding to a policy that previously lacked it, disability or critical illness cover that would bring the policy to an end if paid, or removing such cover completely from a policy
> - converting a whole life policy to an endowment policy or vice versa
> - converting a term assurance policy to a whole life or endowment policy.
>
> **Other fundamental changes**
>
> - reducing the premium to a nominal amount, so-called 'peppercorn premiums'
> - making a number of changes simultaneously which separately may not be fundamental but together make a substantial difference to the contract
> - the addition or removal of an option, which if exercised would end the policy and bring into existence a substitute policy...

I would not agree that these changes necessarily constitute a novation; it depends on the facts. But in practice it should be possible to avoid changes of this kind and the issue will not arise.

The qualifying policy rules (not discussed here) distinguish between a significant variation and an insignificant variation. The distinction does not matter for PPBs, but the IPT Manual material is set out here, as anything which is classified as a variation (significant or not) does not constitute a novation.

> **IPTM8150 - Significant variations: examples** [Jun 2016]
>
> Examples of changes to a policy that are significant variations falling short of a reconstruction are
>
> - an extension or shortening of the term or premium spreading term
> - an increase or decrease in the premium

- an increase or decrease in the amount of death benefit assured
- the addition or removal of critical illnesses from the list of illnesses
  - covered under the policy where the insured person is charged in any way for that benefit: but note that
  - if there is no charge for the benefit then the change is an insignificant variation, see IPTM8160
- the addition of critical illness cover to a policy that did not have it before or the complete removal of critical illness cover is a fundamental reconstruction, see IPTM8110
- the addition, removal or significant alteration of an extra benefit for death by accident or of any other permitted benefit
- the addition or removal of a waiver of premium condition
- permitting the policyholder to take a premium holiday
- permitting the policyholder to make a part surrender of rights under the policy
- the addition or removal of an option to the policy, the exercise of which would itself be a significant variation in the terms of the policy.

A change in the way the benefits secured under the policy are determined, as for example between with-profits, without profits and unit-linked (or 'investment linked') was a significant variation before 7 October 2005. However, since that date, such a change is no longer treated as a significant variation - see IPTM8155.

Note that switches between different unit-linked funds are regarded in any event as insignificant variations ...

IPTM8155 - certain variations not treated as significant [Aug 2016]

There are some circumstances where a significant variation is disregarded for the purposes of the qualifying policy rules either by statute or by concession.

Changes in the way benefits secured under a policy are determined

Legislation was introduced for changes effected on or after 7 October 2005 that ensure that a change in the method for calculating the benefits under the policy, whilst still a variation in contract law, will be disregarded for the purposes of the qualifying policy rules. This encompasses, for instance, a change from with-profits to non-profit unit linked, which would otherwise be treated on first principles as a significant variation, as described in the penultimate paragraph of IPTM8150.

This will mean that changes of this kind can be made with no consequences for the qualifying status of the policies.

However, the new legislation does not extend, for instance, to changes in the premiums payable or the sum assured, as these are not changes to the method for calculating benefits.

Variations connected with an exceptional risk of death or disability
Certain variations of a policy are not treated as a variation for the purpose of the qualifying policy rules when there is an exceptional risk of death or disability - see IPTM8075 - even if they are significant. These are where

- a premium loading for the exceptional risk is added or removed from the policy (although this will require consideration of the annual premium limit for variations which increase the premiums payable from 21 March 2012)
- a provision is added, removed or altered because of an exceptional risk giving rise to a sum chargeable as a debt against the capital sum guaranteed by the policy on death or disability.

IPTM8160: Insignificant variations [June 2016]
Examples of insignificant variations are

- a one-off change in the payment of premiums if it relates only to a change in the frequency of the premiums, including for instance where annual premiums are changed to monthly premiums that, when annualised, are slightly higher to reflect the increased frequency
- a change in ownership of the policy
- a change to the names and addresses on the policy of the policyholder or lives insured, but not changes to the lives insured themselves
- any changes to the premium, sum assured or policy term because of a mis-statement of age on the proposal form
- addition or removal of a critical illness to the list of critical illnesses covered, where the cover on that illness is provided free by the insurer
- a switch between different unit-linked or investment linked funds
- the addition or removal of an option where if the option is exercised the policy is not regarded as having been significantly varied...

70.19 Converting PPB into non-PPB

There are two main ways to convert a PPB into a non-PPB:

(1) Vary the terms of the policy to restrict the underlying assets to whitelisted assets. It would be usual for the life company to dispose of underlying assets which were not on the whitelist.

(2) Vary the terms of the policy so that the policyholder has no power to select underlying property. Instead, selection would normally be made by an unconnected fund manager acting on behalf of the life

company, not on behalf of the policyholder. It may be necessary for the life company to dispose of underlying assets on the basis that the policyholder has selected them and may be said to retain the power to select until they are disposed of. But that depends on the circumstances.

It is possible to combine the approaches so:

(1) the policyholder has power to select whitelisted assets and

(2) other underlying property could be selected but by an unconnected fund manager, not the policyholder.

Drafting is crucial and the documentation needs to be reviewed by someone familiar with the tax background.

70.20 CGT exemption for policies

Sections 204 and 210 TCGA provide exemptions for policies. In outline, policies are exempt unless assigned for consideration (known as secondhand policies).

70.21 Tax return: Chargeable event

SA100 (notes) (2022/23) provides:

> You should fill in the 'Additional information' pages if you have any chargeable event gains.

70.22 DT relief: Chargeable-event gain

Suppose an individual who is UK resident and treaty-resident in a foreign state disposes of a policy so that chargeable-event gains arise directly to them. The position is similar to OIGs: see 67.25 (DT reliefs: OIG). It is an interesting question whether the individual claims relief under art.13 or art. 21 OECD Model Convention. At first sight chargeable-event gains are "gains" which arise from the alienation of property, even though not chargeable gains (in the CGT sense) and even though subject to income tax rather than CGT. But the gain is also "income" if that word is given its UK tax meaning. Of course it does not normally matter which of the articles apply, if the treaty has both. But if a particular treaty has an equivalent of art.21 (other income) but no capital gains article, then it is considered that treaty relief is still in principle available.

If a chargeable-event gain arises without an alienation, relief is not available under art 13 OECD Model, but should still be available under art 21.

70.23 Policy held by non-dom: IHT

Section 11 Revenue Act 1884 provides:

> ... where a policy of life assurance has been effected with any insurance company by a person who shall die domiciled[60] elsewhere than in the UK, the production of a grant of representation from a court in the UK shall not be necessary to establish the right to receive the money payable in respect of such policy.

The IHT Manual provides:

> **IHTM30039 - Policies effected by a person who dies domiciled outside the UK** [Sep 2018]
> [The Manual summarises s.11 Revenue Act[61] 1884 s.11 and continues:]
> For the purposes of this section, any policy under which a sum of money becomes payable on a death may be treated as a policy of life assurance, and any association of persons which issued policies in the ordinary course of its business, whether incorporated or not, may be treated as an insurance company.
> These provisions do **not** confer any exemption from IHT. Where policy moneys are situate in the UK, tax is nonetheless payable though the moneys may be receivable without the production of a UK grant of representation.
> The insurance company can however be liable for the tax where
> [1] it retains policy moneys for the benefit of the beneficiary for investment purposes, outside the terms of the life assurance contract, in which case IHTA s.200(1)(c) may apply to the company as a vestee, or
> [2] it received prior notice that the policy in question is subject to a statutory charge for tax under s.237 IHTA.[62]
> Where there is other estate in the UK in respect of which a UK grant is necessary, but the UK representatives are only administrators acting under a power of attorney and in point of fact have not intermeddled with the policy moneys and, without knowledge of the claim for tax in respect of such moneys, have parted with the assets collected by them to their principal (the foreign executor), the claim in respect of the policy moneys should not be pursued against the UK administrators.
> Similar conditions apply in Scotland to a Factor or Attorney authorised

[60] Deemed domicile does not apply for this purpose.

[61] The Manual wrongly refers to the Customs & Inland Revenue Act.

[62] Author's footnote: In practice it is unlikely that either [1] or [2] will be the case.

> by executors abroad to give up an Inventory (in such cases it is the executors who are confirmed, not the Factor or Attorney).
>
> Refer to Technical for consideration
>
> - all enquiries on this topic
> - any case where it is apparent that policy moneys have been paid out without a grant being produced.

The withheld text may well state that IHT in many cases is uncollectable and set out the circumstances in which no attempt should be made to collect it. In practice a well-advised foreign domiciliary (not deemed domiciled) will not acquire or retain a UK situate policy. However a person who is deemed UK domiciled may find this useful, as the executors can fund IHT more easily if they can first recover the money due under the policy and then pay the IHT and obtain a grant.

CHAPTER SEVENTY ONE

INTERMEDIATED SECURITIES

71.1 Securities law background
71.1.1 What is intermediation
71.1.2 Reason for intermediation
71.1.3 Depositary receipts
71.1.4 Central securities depositories
71.2 Transparent/contract-based securities
71.2.1 English law
71.2.2 Foreign law
71.2.3 US law
71.2.4 American depositary receipts
71.2.5 Belgium and Luxembourg
71.2.6 Denmark, Germany, Netherlands, Switzerland

71.11 Creditor repos
71.12 Company payor
71.13 DCC Holdings
71.14 Voting on intermediated securities
71.15 Intermediated securities: IHT BPR

71.1 Securities law background

There is a substantial literature on this topic. I refer to two Law Commission papers:

"Law Commission 2008 paper": The UNIDROIT Convention on Substantive Rules regarding Intermediated Securities Further Updated Advice to HM Treasury[1]
"Law Commission 2020 paper": Intermediated securities: who owns your shares?[2]
"Law Commission, Digital Assets Final Report" (2023)[3]

[1] *https://www.lawcom.gov.uk/project/property-interests-in-intermediated-securities*

[2] *https://www.lawcom.gov.uk/project/intermediated-securities*

[3] *https://lawcom.gov.uk/project/digital-assets/* See chapter 7 (Intermediated holding arrangements)

The 2008 paper addresses situs issues which are not considered in the 2020 paper, so I refer to both. The position has not materially changed since 2008. .

71.1.1 *What is intermediation*

The Law Commission 2008 paper provides:

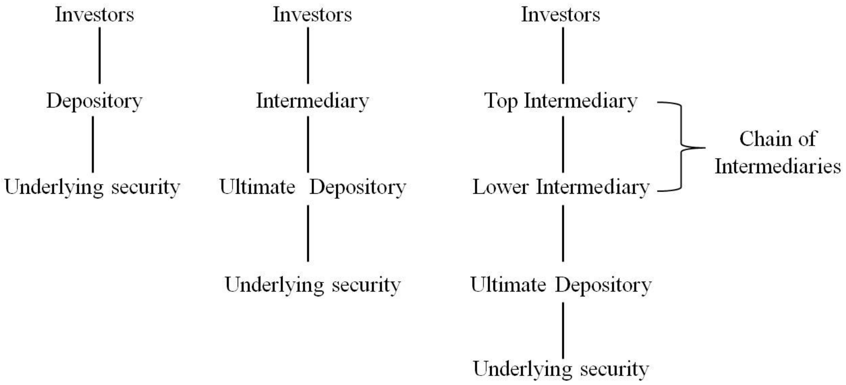
> 2.7 ...immobilisation entails depositing securities in paper form with a depository linked to a settlement system so that they are held indirectly. Where a new issue of securities is immobilised from the outset, the entire issue will be typically constituted by a single 'global' or 'jumbo' certificate which remains in the vaults of the depository.[4] The depository (or its nominee) becomes the owner of the securities either by registering the securities in its name with the issuer (in the case of registered securities) or by physical possession of the global certificate (in the case of bearer securities).
>
> 2.8 Participants in the settlement system keep interests in the immobilised securities by holding an account with the securities depository. These account holders are able to transfer and pledge their interests in the securities through book entries on the depository's books rather than by re-registration or by delivery of the underlying securities. Following the computerisation of settlement systems in the late twentieth century, the depository's 'books' that record ownership are now electronic records....
>
> **Pooled Accounts**
>
> 2.17 ... Where an intermediary holds fungible securities for more than one investor it will typically pool these securities in a single client account. To do so, the intermediary opens an account with the issuer or intermediary above it in its own name and records in its own books each individual investor's allocation in the pooled account. In most legal systems, the only reference to an investor's specific allocation is made in its intermediary's accounts and not in the accounts of any higher-tier intermediary or in the register of the issuer...

There is no agreed terminology:

[4] Footnote original: Interests in the global note may be exchangeable for definitive certificates, so that the investor can acquire a direct relationship with the issuer. Usually, however, the global note is intended to be permanently immobilised and cannot be split into definitive certificates other than in extreme circumstances, such as the failure of a bond trustee to act on the instructions of the investors upon a default.

My term (*term also used)*	**Meaning**
Ultimate depository *(Holder)*	Holder of legal title to security for intermediary or investor
Intermediary *(Account keeper)*	Holder of security for intermediary/investor[5]
Underlying security	Asset held by the ultimate depository
Immobilised *or*	Ultimate depository holds a certificate *or*
Dematerialised	Where there is no certificate
Investor *(Ultimate account holder)*	Holder of securities through intermediaries, not intermediary for another person

Diagrammatically:



Investors
Depository
Underlying security
Investors
Intermediary
Ultimate Depository
Underlying security
Investors
Top Intermediary
Lower Intermediary
Chain of Intermediaries
Ultimate Depository
Underlying security

I refer in this chapter to securities but similar points apply to other fungible assets, such as cryptoassets, or a bank account, if the cryptoassets or money in the account is pooled and held through intermediaries.

71.1.2 *Reason for intermediation*

The Law Commission 2008 paper provides:

> 2.11 Recording investors' interests in securities as electronic bytes of information enables these interests to be transferred with ease from one account holder to another simply by a credit and debit in the computerised accounts of an intermediary. As long as the legal system recognises this as a valid transfer of an interest in securities, traditional formalities associated with the transfer of underlying securities (for example, the execution of stock transfer forms and the issuance of new certificates) can be avoided. Greater transferability of securities

[5] The "depository" is in a sense also an "intermediary" as they come between the asset and the investor.

enhances liquidity and consequently their value.

71.1.3 *Depositary receipts*

Benjamin, *Interests in Securities* (1st ed, 2008) provides:

> 11.05 ... DRs were originally developed by US banks in order to facilitate cross border investment, by repackaging foreign securities as US law interests in securities. DRs permit local investors to acquire an interest in foreign securities in circumstances where direct investment would not have been possible or attractive, for example because of investment restrictions, the inconvenience of local settlement and/or receipt of dividends in local currency. ...
>
> 11.06 In a DR programme, the underlying foreign shares are acquired by a financial institutions (usually a bank) acting as depositary, and (usually) registered in its name (or that of its nominee) in the register of the issuer of the shares. A share certificate representing the depositary's holding is held for the depositary by the custodian, which is responsible for administering the shareholding locally. As registered shareholder, the depositary holds legal title to the underlying shares.
>
> The depositary issues new securities in the form of DRs. DRs are registered securities, and the depositary maintains a register of DR holders and issues DR certificates. The depositary holds its title to the underlying shares on trust for DR holders.[6] The deposit agreement specifies the arrangements whereby the depositary passes on benefits associated with the shares such as dividends and (possibly) voting rights. The beneficiaries of the trust are DR holders from time to time; where a DR holder transfers its DRs, the depositary ceases to hold the relevant proportion of underlying shares for the transferor, and instead holds it for the transferee. Thus, a DR constitutes a beneficial interest in the underlying shares. DRs are governed by the law of the jurisdiction in which the depositary operates (in many cases, New York law or English law) and are settled through the major electronic settlement systems. ...
>
> 11.08 In many DR programmes, the number of DRs in issue varies from time to time. Investors are permitted (subject to local law ownership restrictions affecting the issuer of the shares) to have shares transferred out of the name of the depositary into their name or as they direct. At the same time, the corresponding number of DRs are cancelled. Conversely, in some cases investors are permitted to arrange for new shares to be transferred into the name of the depositary, and for new DRs to be issued to them or as they direct. ...
>
> 11.10 DRs were originally developed in the early part of the twentieth century by US banks as American Depositary Receipts or ADRs. ADRs are issued into the US markets. A later development was the Global Depositary Receipt or GDR. GDRs are issued both into the US and European markets. The term European Depositary Receipts, or EDRs, is sometimes used for DRs issued into Europe only. ...
>
> 1.13 An important legal advantage of repackaging securities in a DR programme is that it changes the governing law of the asset which investors hold. Where the investment powers of institutional investors restricts their ability to hold foreign assets, the use of a

[6] Footnote original: In English law arrangements the depositary holds the underlying shares as trustee. In New York law arrangements, the depositary holds as bailee.

local law DRs programme enables them to acquire or increase an exposure to foreign markets. Other institutions have other reasons to wish to convert foreign assets into local law assets in this way. ...
11.14 A second significant legal result of a DR programme is to change the situs of the asset ... DRs are a form of registered security. The situs of registered securities is (broadly) the place where the relevant register is maintained. ... One technique for avoiding the requirements of an unhelpful jurisdiction in relation to local shares which are used as collateral, is to establish a DR programme and place the DR register in a robust jurisdiction. ...
11.16 The first point is of course that, as against the depositary, this interest is proprietary. DR holders acquire the beneficial interests in the underlying shares, which the depositary holds on trust for them, under the terms of the deposit agreement. ...
11.17 The interest of DR holders in the underlying shares is beneficial and not legal, arising under a trust. As discuss in Chapter 2, the interest of a beneficiary in trust assets is indirect, in the sense that in the normal course there is no direct recourse against the underlying assets. Where the trust assets consist of shares, the trustee (in this case the depositary) is the shareholder and, in the normal course, the beneficiary (in this case the DR holder) has no direct right of action against the issuer.
11.19 As an indirect property interest, the interest of the DR holder equates with that of the client of a global custodian or a participant in an electronic settlement system.

Unallocated

11.20 A further point of similarity between the interests of clients of electronic custody and settlement arrangements and those of DR holders, is that both are unallocated. There is no allocation between any particular DR holder and any particular underlying share.

The CG Manual also discusses the nature of depository receipts:

> **CG50240 Depository receipts** [May 2020]
> You may come across assets referred to as Depository Receipts (DRs). The commonest are American Depository Receipts (ADRs).
> DRs are used as substitute instruments indicating ownership of securities such as shares. Although DRs may be owned by anyone, they are designed primarily to enable investors to hold and deal in shares of companies located in countries other than their own. Such activities might otherwise be inhibited by difficulties in transferring original share certificates from one country to another. The investors hold or trade the DRs rather than the share certificates themselves.
> A person holding shares for which DRs are available can convert them into DR form by depositing the share certificates with a local branch of a depository (a financial institution such as a bank). The depository issues a DR. This document certifies that the depository, or an appointed custodian in the country of the underlying shares, holds the share certificates and that the owner of the DR is entitled to the share certificates on surrender of the DR. The precise detail of the arrangements may vary, but the holder of a DR will generally have

> many of the benefits associated with share ownership. In particular:
>
> - the DR can be exchanged for the underlying shares on demand by the DR holder
> - any dividends, subject to a handling fee, flow through to the DR holder.
> - the holder of shares in DR form may at any time cancel the arrangement by asking for delivery of the share certificates in respect of their underlying shares, and surrendering the DRs at a local branch of the depository.
>
> This guidance applies to DRs that display such characteristics.

A difference between depositary receipts and intermediated securities as described by the Law Commission is that the purpose of intermediation is to facilitate transfers; the main purpose of depositary receipts may be to create a US law asset from a foreign law asset. Benjamin calls this "repackaging". But the differences are not material for UK tax purposes, and depository receipts should for present purposes be regarded as a type of intermediated securities.[7]

71.1.4 *Central securities depositories*

The Law Commission 2008 paper provides:

> 2.19 The efficiencies generated by intermediation led the Group of Thirty to recommend in 1989 that each domestic market should establish a central securities depository (CSD) to hold both physical and dematerialised securities in the relevant market. Immobilisation of securities is therefore centralised in a single depository (or through a nominee of the CSD). An indirect holding system based on the immobilisation of securities in a domestic CSD is the most common model in advanced countries and there are about thirty systems operating in this manner in Europe alone.

CREST may be regarded as the UK CSD. But securities registered on CREST are registered in the name of the legal owner (ie not registered in the name of CREST).[8] So CREST is not a depository, and the securities are not intermediated securities unless the legal owner is itself an intermediary.

National CSDs do not usually raise issues for situs, as the situs of the

[7] See Benjamin, *Interests in Securities,* (1st ed 2008) para 11.02 ("the legal result in both cases is the same").

[8] See 102.10 (CREST).

register of the CSD is usually the same as the situs of the underlying securities. However the issue does arise for international CSDs and other intermediaries.

> 2.20 In addition to national CSDs, Euroclear in Brussels and Clearstream in Luxembourg operate as international central securities depositories (ICSDs). ICSDs were originally established to manage clearing and settlement of Eurobonds for which there was no supporting market infrastructure. Since their creation over thirty years ago, the business of ICSDs has expanded to also cover most domestic and internationally traded securities....

71.2 Transparent/contract-based securities

In order to determine tax treatment of an asset one must identify the asset and its legal nature.

There are in principle two types of intermediated security:

(1) The intermediary may hold the underlying security in such a manner that the investors have a proprietary interest in it. In a common law jurisdiction, that will involve the depository holding the underlying security on trust for the investor. In a civil law jurisdiction the relationship will not be described as a trust, but the investors may have a proprietary interest and the end result is the same. I refer to that as a **"proprietary"** intermediated security,.

(2) The intermediary may hold the underlying security beneficially, and have a merely contractual obligation to transfer money or assets to the investor. I refer to that as a "**contract-based**" intermediated security.

The Law Commission Digital Asset Report uses different terminology:[9]

> **"Intermediated holding"** by a **"holding intermediary"**: arrangements for the holding of crypto-tokens or crypto-token entitlements by an intermediary on behalf of or for the account of others. These are further divided between the following two sub-types of intermediated holding arrangement
>
> (1) **Custodial intermediated holding** by a **custodial holding intermediary**: arrangements under which users retain superior legal title or equitable title to the crypto-tokens or crypto-token entitlements held on their behalf or for their account. In the event of the custodial holding intermediary entering an insolvency process, these entitlements

[9] Para 7.17, 7.26 (footnotes omitted).

> would ordinarily not form part of the holding intermediary's estate and would not be available to meet the claims of its general creditors. In practice, we anticipate that such arrangements under the current law of England and Wales will likely and most commonly be structured as trusts....
>
> (2) **Non-custodial intermediated holding** by a **non-custodial holding intermediary**: arrangements under which the holding intermediary acquires (or retains) superior legal title to the crypto-tokens or crypto-token entitlements that they hold (or acquire) on behalf of or for the account of users. Under this model, users have primarily personal contractual claims to the return of assets equivalent to those held. In the event of a non-custodial holding intermediary entering insolvency proceedings these claims would consequently rank as unsecured claims only and would give rise to no priority right of recourse to any specific crypto-tokens or token entitlements.

I do not adopt this terminology here, but it may catch on.

Where there is a chain of intermediaries, each may hold their interest on a proprietary or contract-based obligations in favour of the next in the chain, or some may hold on one basis and others on another.

Whether an intermediated security is transparent or contract-based depends on the documentation and the law which governs it. This subject is made more complicated by the variety of jurisdictions which may be involved. Also the relevant documentation is not generally available to the investors. But in practice intermediated securities usually are, and may be assumed to be, proprietary.

71.2.1 *English law*

The Law Commission 2020 paper provides:[10]

> 2.63 Under the law of England and Wales, it is now "reasonably well settled" that the arrangements between parties in an intermediated securities chain are characterised as a "series of trusts and sub-trusts"[11]. This may be agreed expressly by the parties or implied. As Mr Justice Briggs (as he then was) said in *Re Lehman Brothers*:[12]

[10] I omit most of the footnote references in this quote.

[11] Footnote original: *Re Lehman Brothers International (Europe) (in administration)* [2012] EWHC 2997 (Ch) at [163].

[12] Footnote original: *Re Lehman Brothers International (Europe) (in administration)* [2010] EWHC 2914 (Ch) at [226] and *Re Lehman Brothers International (Europe) (in administration)* [2012] EWHC 2997 (Ch) at [163]. See also *SL Claimants v Tesco plc* [2019] EWHC 2858 (Ch), at [6].

> It is common ground that a trust may exist not merely between legal owner and ultimate beneficial owner, but at each stage of a chain between them, so that, for example, A may hold on trust for X, X on trust for Y and Y on trust for B. The only true trust of the property itself (ie of the legal rights) is that of A for X. At each lower stage in the chain, the intermediate trustee holds on trust only his interest in the property held on trust for him. That is how the holding of intermediated securities works under English law, wherever a proprietary interest is to be conferred on the ultimate investor. In practice, especially in relation to dematerialised securities, there may be several links in that chain.

2.64 In our simple example above, the company issues shares, which are purchased by the custodian bank, a CREST member. According to the trusts law analysis, the custodian bank is the legal owner of the shares and, as trustee, holds the shares on trust for its account holders, including the broker. The broker is both the beneficiary of the trust with the custodian bank, and a sub-trustee, holding an interest in the shares on trust for the ultimate investor.

2.65 As well as trusts and sub-trusts between the parties, the relationships in the chain are regulated by individual contracts entered into between the relevant parties at each stage in the chain...

2.66 ... For debt securities, the top of the chain differs, although the general structure, from the company to the holder of debt securities, is similar. Where there is a bond or note issue, it is usual for there to be only one global bearer note, which represents the entire issue.[13] That note is physically held by a custodian bank permanently on behalf of an international central securities depositary (this process is referred to as "immobilisation"). The chain then proceeds as above, with intermediaries between the custodian bank and the ultimate investors.

An ultimate investor has both proprietary and personal rights in relation to the securities

2.67 As we have seen, the relationships between the parties in an intermediated securities chain are characterised as trusts, overlaid with contracts agreed between parties at each level of the chain. This analysis has two effects. The first effect is that an ultimate investor does not own securities. Instead, they hold a beneficial interest in securities.

2.68 The second effect is that an ultimate investor has a combination of both proprietary and personal rights in relation to intermediated securities. By "proprietary" rights, we mean that an ultimate investor has a right of ownership in the property held on trust (in this case, the beneficial interest in the securities held by the intermediary, rather than the securities themselves). Proprietary rights are enforceable against third parties.

2.69 For example ... if an intermediary becomes insolvent, the interest in the securities will not form part of the insolvent intermediary's estate. Beneficial ownership of the property remains with the ultimate investor...

[13] Footnote original but abbreviated: Most bonds are now held through these global custodian arrangements: J Payne, *Intermediation and Beyond* (2019) p 177. R Goode and L Gullifer, *Goode and Gullifer on Legal Problems of Credit and Security* (6th ed 2017) para 6-08.

2.70 Where an intermediary uses an omnibus account, which may contain millions of intermediated securities, the ultimate investor does not have a proprietary right in respect of specific intermediated securities in that account. Rather, the ultimate investor has a proprietary right in the form of beneficial co-ownership in the pool of intermediated securities. This means that the ultimate investor cannot point to certain intermediated securities which they own. Instead, they own a proportion of the intermediated securities in the account.[14]

2.71 Along with proprietary rights, an ultimate investor has personal rights. By "personal" rights, we mean that an ultimate investor would be able to claim compensation from an intermediary for breach of their duties under contract or the trust. For example, the intermediary, as trustee, may have a duty to transfer the intermediated securities upon instruction or perform other duties.[15] If the intermediary fails to carry out these duties, the ultimate investor may have a claim against the intermediary. However, unlike proprietary rights, personal rights are not enforceable against third parties. Therefore, an ultimate investor's claim against an intermediary may be worth little or nothing if the intermediary has become insolvent.

71.2.2 *Foreign law*

So far as the topic raises issues of foreign law I necessarily rely on limited material available to an English lawyer. I would be interested to hear from readers with expertise on entities discussed in this chapter.

For Scots law, see the Law Commission 2020 paper para 2.72. But perhaps in practice intermediation is not governed by Scots law.

71.2.3 *US law*

Section 8 [US] Uniform Commercial Code[16] sets out a code for intermediated securities. It has a vocabulary and concepts of its own. The right of the investor ("entitlement holder") is a "security entitlement". This confers personal rights against the "securities intermediary" and an interest in the financial asset held by the intermediary. Section 8-503 Uniform Commercial Code provides:

(a) To the extent necessary[17] for a securities intermediary to satisfy all

[14] The Law Commission give references, including *Goode and Gullifer on Legal Problems of Credit and Security* (6th ed 2017) para 6-15.

[15] Footnote original: R Goode and L Gullifer, *Goode and Gullifer on Legal Problems of Credit and Security* (6th ed 2017) para 6-18.

[16] *https://www.law.cornell.edu/ucc*

[17] This formulation reflects the fact that US intermediaries do not generally segregate securities so one cannot identify particular securities as the ones held for customers; Official Comment 1 to §8-503.

> security entitlements with respect to a particular financial asset, all interests in that financial asset held by the securities intermediary are held by the securities intermediary for the entitlement holders, are not property of the securities intermediary, and are not subject to claims of creditors of the securities intermediary...
>
> (b) An entitlement holder's property interest with respect to a particular financial asset under subsection (a) is a pro rata property interest in all interests in that financial asset held by the securities intermediary, without regard to the time the entitlement holder acquired the security entitlement or the time the securities intermediary acquired the interest in that financial asset.
>
> (c) An entitlement holder's property interest with respect to a particular financial asset under subsection (a) may be enforced against the securities intermediary only by exercise of the entitlement holder's rights under Sections 8-505 through 8-508.

This is not a common law trust, or at least, it does not use trust law vocabulary, but I think it comes to the same thing.

However, a security representing other securities does not create a security entitlement, so depository receipts (or units in a fund) are not governed by article 8. Instead the holder's rights are determined by the relevant document.[18]

71.2.4 *American depositary receipts*

The CG Manual provides:

> **CG50240 Depository receipts** [May 2020]
>
> ... **DRs issued outside UK**
>
> Where a DR is issued outside the UK the question of whether the holder of the DR is the beneficial owner of the underlying shares will be determined by reference to the law of the territory in which the DR is issued. ...

More accurately, whether the holder of the DR is the beneficial owner of the underlying securities will depend on the terms of the deposit agreement construed in accordance with the law governing the agreement.

The CG Manual rather optimistically provides:

[18] Financial Markets Law Committee, "Report on research into the 1994 revisions to Article 8 of the Uniform Commercial Code" para 2. *http://fmlc.org/wp-content/uploads/2018/02/Issue-3-Background-paper-on-Article-8-of-the-Uniform-Commercial-Code.pdf*

> Information on beneficial ownership may be provided to investors by the depository.

It seems unlikely that a foreign depository would give UK tax advice, or sufficient information to determine the UK tax issues.

In *Chembulk Management Pte Ltd v Vedanta Ltd*:[19]

> an American Depositary Receipt ("ADR") or ADS program[20] divides the ownership of a foreign stock between the depositary and/or custodian, which act as the title owner, and the ADS holder, who holds a beneficial interest, the exact parameters of which are delineated in the governing ADR agreement, in the stock.

In *Carver v Bank of New York Mellon*:[21]

> A careful reading of the Deposit Agreement confirms that BNYM, as *title* owner, holds the Deposited Securities for the Plans, which in turn have a beneficial ownership interest in the underlying Deposited Securities. ... With the exception of the obligation to hold the Deposited Securities, the [Deposit Agreement] seems to allocate all other relevant rights with respect to the Deposited Securities to the Plans. These include the right to redeem ADRs by exchanging them for the underlying Deposited Securities; the right to receive cash distributions in USD; and the right to instruct BNYM regarding the voting of shares. The Court concludes that these equitable rights give rise to, at least, a beneficial ownership interest in the Deposited Securities by the Plans.

These American depositary receipts would be IT/CGT transparent, and there is no reason to think that they were untypical, so unless the documentation was non-standard, that would be the UK tax position. Until 2012 that was, I think, generally accepted, and this was the view expressed in the CG Manual.

HSBC Holdings v HMRC[22] concerned ADRs governed by the law of New York. It suited HMRC to argue that HSBC depository receipts were contract-based. The tribunal heard expert evidence and preferred the view that the ADRs, which were "fairly typical",[23] were contract-based, though

[19] Nos. 16 CV 9827-LTS-KHP, 16 CV 9799-LTS-KHP United States District Court (2018)

[20] Footnote original: ADSs [American Depositary Shares] are also referred to as ADRs.

[21] United States District Court , New York (2017).

[22] [2012] UKFTT 163 (TC)

[23] at [97].

the conclusion is tentatively expressed:

> 148. Overall our conclusion is that we are not satisfied as a matter of fact that under the law of the State of New York the holder of an HSBC ADR has a beneficial interest in the underlying fund of HSBC shares.

In the HSBC litigation it suited HMRC to argue for contract-based ADRs, but that conclusion would sometimes favour the taxpayer. Accordingly HMRC now seek to return to what was formerly understood to be the position:

> Where beneficial ownership of the underlying shares cannot conclusively be determined by reference to the law governing the arrangements relating to the issue of the DRs, for tax purposes HMRC will continue to determine beneficial ownership according to its understanding of the principles of UK law.[24] This means that HMRC will continue to apply its longstanding practice of regarding the holder of a DR as holding the beneficial interest in the underlying shares and the treatment will be the same for UK issued DRs.
> The ADRs referred to in the HSBC decision fall into this category.

Thus HMRC first disregarded their longstanding practice, and now disregard the tribunal's decision which was based on HMRC's expert evidence. The reader may think this a not very impressive display of administration. Now it is done, the genie is not so easily returned to the bottle. If it suits them, taxpayers may properly proceed on the basis of HMRC's view that the HSBC ADRs, and others in standard form, are contract-based. Though taxpayers may also properly proceed on the basis that the HMRC statement is correct, the ADRs are proprietary, and I expect that is the usual practice.[25]

71.2.5 *Belgium and Luxembourg*

Belgium and Luxembourg are important as they are the homes of Euroclear and Clearstream. The Law Commission 2008 paper provides:

[24] Author's footnote: The UK has three legal systems. Scots trust law is quite different from English law, though whether these differences lead to a different outcome is less clear.

[25] See Cooklin, "UK companies listing in the US", Tax Journal 14 March 2014: "Many US lawyers expressed surprise at the expert witness evidence on the effects of the underlying New York law documentation on which the FTT's finding of facts was based."

LEGAL ANALYSIS OF INTERMEDIATED SECURITIES

2.31 Belgium[26] and Luxembourg[27] are each home to major ICSDs (Euroclear and Clearstream respectively) ... Investors that hold securities through an intermediary in an omnibus account are treated as having a co-ownership right in the pool of fungible securities, exercisable only against the intermediary. Should the intermediary fall insolvent, the investor is given a right of revendication, that is to say, a claim for the return of property enforceable against the intermediary and its creditors...

Direct enforcement versus indirect enforcement

2.35 In all common law jurisdictions (such as the UK and the US) and a number of civil law countries (for example Belgium and Luxembourg), an investor that holds through an intermediary is unable to exercise the rights it may have in the underlying securities directly against the issuer of those securities.[28] The investor can only enjoy the fruits of its investment by enforcing its rights against its intermediary. Furthermore, the investor will be generally prohibited from making a claim against securities held in the account of a higher tier intermediary but must rely on the contractual and fiduciary obligations of its own intermediary to pursue such claims....

2.49 The effect of commingling securities in a pooled account is generally to preclude the continuing existence of direct property rights of individual owners in the specific securities held prior to commingling...

LEGAL PROTECTION BASED ON CO-OWNERSHIP

2.51 In a number of EU Member States, account holders are given proprietary rights (or the equivalent protection) by treating their interests in a commingled account as co-ownership (or co-proprietary) interests in a fungible pool.

2.52 In Belgium[29] and Luxembourg,[30] statute converts what would otherwise be

[26] Footnote original: Belgian Royal Decree No. 62, as co-ordinated by Royal Decree of 27 January 2004.

[27] Footnote original: Luxembourg Law of 1 August 2001 on the circulation of securities and other fungible instruments, Articles 6.7 and 15.

[28] Footnote original: Unless the issuer permits otherwise by contract or provisions in a deed poll or trust deed.

[29] The footnote refers to Belgium Royal Decree No 62, which is headed: Coordonné relatif au dépôt d'instruments financiers fongibles et à la liquidation d'opérations sur ces instruments. [Facilitating the Circulation of Securities], Article 2.
http://eur-lex.europa.eu/n-lex/legis_nl/overheid_form_en.htm or
http://justice.belgium.be/fr/

[30] Article 3(1) [Luxembourg] Securities Act 2001 *http://www.cssf.lu* provides:

Le titulaire de compte bénéficie, à concurrence du nombre de titres inscrit s en son compte titres, d'un droit réel de nature incorporelle sur l'ensemble des titres de même genre, tenus en compte par son teneur de compte pertinent, des	The account holder benefits - up to the amount of securities held on its securities account - from an intangible interest in all the securities of the same description held on an account by the relevant account keeper, from the rights

> a mere contractual claim against the intermediary into an intangible co-ownership right in a pool of fungible book-entry securities held by the intermediary.[31]

This is not called a trust, but it comes to the same thing. So intermediated securities held by Euroclear and Clearstream are transparent, not contract based.

71.2.6 *Denmark, Germany, Netherlands, Switzerland*

The Law Commission 2008 paper provides:[32]

> An investor may be granted a right to enforce its claim against an upper tier intermediary in circumstances where its own intermediary has acted in breach of duty or is insolvent. This is the case in Denmark and Germany[33] and possibly also in the Netherlands.[34]

Thus it seems that intermediated securities in these jurisdictions are also transparent.

For Switzerland, see the Loi fédérale sur les titres intermédiés (Federal Act on Intermediated Securities).[35]

71.3 Situs of transparent intermediated security for IHT & IT

There are no relevant statutory provisions, so the common law rules apply

droits attachés aux titres et des droits prévus par la présente loi. Sous réserve de dispositions légales contraires, it ne peut faire valoir ses droits qu'á l'égard du teneur de comptes pertinent.	attached to the securities and from the rights provided for in this law. Unless otherwise provided by law, the account holder may only exercise its rights against the relevant account keeper

[33] Footnote original: If an intermediary refuses to enforce a claim against the intermediary above for the return of securities, German law permits the investor to bring a direct action for return against the upper tier intermediary under the Securities Deposit Act, sections 7-8.

[34] Footnote original: Sections 7:420 and 421 of the Netherlands Civil Code which relate to agency contracts could give the investor a right against an upper tier intermediary in the event of a breach of duty or insolvency of its own intermediary.
The Netherlands Civil Code is available in English on *http://www.dutchcivillaw.com*

[35] *https://www.admin.ch/opc/en/classified-compilation/20061735/index.html*

for IHT.

The relevant principle is that a security is situate where it can be dealt with, which is where the security register is kept.[36] An intermediated security is dealt with (ie transferred) where the intermediary's register is kept. That is the jurisdiction where litigation over the transfer of the intermediated security would normally take place. So that is the situs of the intermediated security; the situs of the underlying security is irrelevant.

It might be argued that in the case of a transparent intermediated security, the situs of the investor's asset (the intermediated security) must be that of the underlying security, on the basis that:

(1) intermediation constitutes a bare trust (or more accurately, a series of bare trusts) over the underlying security, and
(2) the situs rule for bare trusts is always that the bare trust should be disregarded.[37]

However the trust (if any) is unlike a straightforward bare trust since (inter alia):

(1) Ultimate investors can only make claims against their immediate intermediary, not against the company which issues the securities, or against another intermediary (the "no look-through principle").
(2) The interests of the ultimate investors are pooled.
(3) Change of title is effected by registration.

In fact intermediation is not properly described as a bare trust in the older sense of that expression.[38] If it is described as a bare trust, then the expression is being used widely, and there is no reason that all bare trusts (if the term is used so widely) should be governed by the same situs rule.

Dicey agrees:[39]

> ... the *situs* of immobilised securities should be regarded as the place where the depository is established and where it keeps the database in which the entitlements of the depositors are recorded.

Re Bloom concerned intermediated securities, where:

(1) Securities were registered in the name of a nominee for Canadian

[36] See 102.4 (Situs of shares: General principle) ff.

[37] See 102.32 (Bare trust or nomineeship).

[38] See 87.7.1 ("Bare trust" and related terms).

[39] Dicey, Morris & Collins, Conflict of Laws (16th ed., 2022), para 23-041 (Immobilised securities). This view is enthusiastically supported by Benjamin, *Interests in Securities* (2000), Chap 7 and 11.14.

Depository for Securities Ltd (the ultimate depositary).[40]

(2) The ultimate depository held the securities on trust for Bank of Nova Scotia Trust Co (the intermediary).

(3) The intermediary held the securities on trust for the deceased.

> In a multi-tiered holding system, the account would be situated at the financial investment intermediary on whose books the interest of the debtor [ie ultimate owner] appears. This is the place where the record that determines title is to be found...
> Applying that test, the Applicant submits that the situs of the deceased's securities is "the financial investment intermediary on whose books the interest of the deceased is recorded and where her personal representative must go to effect the transmission, and that is the Securities Department of The Bank of Nova Scotia Trust Company in Toronto, Ontario." I agree with that submission.[41]

The Law Commission agree. The Law Commission 2008 paper provides:

> 21.6 The concentration of the investor's interests into one account *with a single situs* can also greatly simplify conflicts of laws issues. This is of particular benefit to lenders wishing to take security over a portfolio of securities. Provided that the choice of law rules applied to the different intermediated securities are clear, the lender need only concern itself with the perfection requirements of the jurisdiction in which the account is located rather than the requirements of each of the jurisdictions applicable to the various underlying securities.[42]

[40] [2004] BCSC 70 *http://www.canlii.org*

[41] [2004] BCSC 70 at [61] to [63]. In *Secure Capital v Credit Suisse* [2015] EWHC 388 (Comm) at [43] the interest of Secure Capital (the ultimate investor) in a bearer security (the underlying asset) was said to be situate in Luxembourg, on the basis that:
(1) The top intermediary (RBS) was situate there; or alternatively
(2) The ultimate depositary (Clearstream) was situate there
In the event, the situs of the interest was held to be irrelevant to the Secure Capital's claim, so the test of situs did not have to be determined, and was not discussed. So the case does tell us much about the test of situs; but it is noteworthy that no-one suggested that the situs of the interest of the ultimate investor was the same as the situs of the underlying security. The point was not discussed in the appeal.

[42] Similarly, Law Commission, refers to "PRIMA" principle which states that "certain issues governing intermediated securities should be governed by the "place of the relevant intermediated account". Its main attraction is the reduction in transaction costs. An exchange would not have to enquire where its customers are habitually resident. Instead, it could be assured that one system of law governed all its dealings.

Thus the situs of the intermediated security (the asset held by the investor) may be different from the situs of the underlying security.

It may seem surprising that situs of an intermediated security is different from the situs of the underlying security. However, situs is not (or not just) a matter of common sense, and that view cannot stand against the authorities set out above. The common law situs rules looks to the situs of the intermediated security, not the underlying security.

More fundamentally, differences between intermediated securities and directly held securities are not surprising. As the Law Commission 2020 paper observes:

> Holding investments through an intermediated securities chain can have a profound effect on the ability of ultimate investors to exercise rights... ultimate investors can generally only make a contractual or trusts claim against their immediate intermediary, and not against the company which issues the securities, nor against another intermediary (the "no look through principle").[43]

Investors may for practical purposes ignore the difference between intermediated and underlying securities, and may indeed ignore the even more fundamental question whether their interests are proprietary or contract-based; but the differences will emerge on the insolvency of an intermediary, as happened in the case of Lehman Brothers, and in any cases where the investor needed to exercise rights in relation to the securities.

71.3.1 *HMRC view*

HMRC may take a different view. They may regard intermediated securities which are transparent for income tax as transparent for situs; what matters is the situs of the underlying security. In 1994 HMRC said:

> ... where a financial institution or other intermediary has purchased Eurobonds or similar fungibles through Euroclear or Cedel [now Clearstream] on behalf of a client-investor, the Revenue will treat the financial institution or intermediary as the nominee or agent of the

See "Digital assets and ETDs in private international law: which court, which law? Call for evidence" at p.232

[43] Law Commission 2020 paper, para 1.23 -1.24. Likewise the 2008 paper: "2.24 Intermediation has had a substantial effect in transforming the legal nature of investor's rights in securities."

> client-investor, unless the terms of the particular issue prescribed otherwise. So, save in the excepted circumstances, the Revenue will look through the intermediary and treat the beneficiary-investor as owning the underlying Eurobonds or similar fungibles.[44]

The IHT Manual is obscure:

> **IHTM27077 Eurobonds and American depository receipts** [May 2020]
> We regard the situs of securities dealt with through computerised clearing systems (for example, Euroclear; CEDEL [which became Clearstream in 2002]) as determined by the terms of issue of the particular security. ...

This passage might perhaps be intended to say that HMRC look through the intermediary, but it does not say that. It actually says very little. It does not explain what constitute "the terms of issue": does that include intermediation? It does not explain how situs is decided once one knows what are the terms of issue. To say that "situs is determined by the terms of issue" is not a very accurate statement, or at least, not a very helpful statement, of the rules which apply to directly held (non-intermediated) securities. So it impossible to say from this passage what HMRC's position may be.

It must be frustrating for HMRC to see a significant part of the economy taken out of the scope of IHT by means of clearing systems and intermediated securities. But in practice the loss of tax should be (more or less) nil, because:

(1) UK resident foreign domiciliaries (if properly advised) will not usually hold investments in listed UK companies (for IT and CGT reasons as well as possible IHT).
(2) For non-residents, IHT on such assets is largely uncollectable.

Indeed the current law could aid the UK economy by encouraging foreign investment in UK incorporated companies, or at least it could if HMRC acknowledged it.

71.4 Proprietary intermediated security: Situs for CGT

In the absence of a statutory provision, the IHT situs rule will apply for CGT. Six statutory provisions need consideration: the co-ownership situs

[44] [1994] PCB 139. But it is open to question whether an obscure article of that age can be taken as a guide to current HMRC practice.

rules, the bare trust disregard, the UK-law rule, and the rules dealing with securities in s.275(1)(d)(da)(e).

71.4.1 *Intermediated securities of non-UK company*

Section 275(1)(e) TCGA provides:

> subject to paras (d) [government securities] and (da) [UK incorporated companies] above, registered shares or debentures are situated where they are registered and, if registered in more than one register, where the principal register is situated.[45]

In this paragraph I assume we are not concerned with government securities or UK incorporated companies within paras (d) or (da).

I first consider debentures and then shares.

As far as debentures are concerned, there are two questions:

(1) are intermediated debentures (the interests held by investors) properly described as "debentures" within the meaning of s.275(1)(e)?

(2) if so are intermediated debentures "registered" debentures?

Since debenture stock count as "debentures"[46] it seems reasonably clear that the intermediated debentures are properly described as "debentures".

Intermediated debentures are registered in the sense that the investors interests are recorded on the intermediary's register.[47] At first sight one might think that the register referred to in s.275(1)(e) must be a register kept by the company which issued the debentures. However a company does not have to keep a register of its debenture holders (unlike a shareholder register). The distinguishing feature of a register is that it determines or provides evidence of ownership.[48] So it is considered that intermediated debentures are "registered" on the intermediary's register. It follows that:

(1) If the underlying debenture is not registered, the intermediary's register is the only register, and the investors interests are situate

[45] See 103.6 (Registered security: non-UK co).

[46] See 103.2.4 ("Debenture").

[47] Benjamin, *Interests in Securities* (2000) para 2.91: "Interests in securities [Intermediated securities] may properly be characterised as a form of registered securities, even where the underlying securities are in bearer form."

[48] The intermediary's register is not open to inspection, unlike a register under s.744 Companies Act 2006, but open access is not an essential feature of a register, and there is no reason to expect foreign law to apply English company rule principles.

where the intermediary's register is situated.

(2) If the underlying debenture is registered, there are two registers:
   (a) The company's register of the underlying debenture (which will record the intermediary as the registered holder).
   (b) The intermediary's register of the intermediated debenture (which will record the investor as the registered holder).

It is considered that the company's register does not come into the picture, since the asset which the investor owns is the intermediated debenture and not the underlying debenture. But even if that is not correct, the intermediary's register should be regarded as the principal register so that is the one which governs situs.

For these reasons, an intermediated debenture of a non-UK incorporated company is situate where the intermediary keeps its register.

In practice it does not often matter whether the situs of an intermediated debenture (of a non-UK incorporated company) is in the place of the intermediary's register or the situs of the underlying debenture. Either way, the asset will not usually be UK situate. But it could matter, for instance, if the debenture is a bearer debenture and the document is in the UK. In such a case it is sensible to look to the intermediary's register rather than to the place of the document of the underlying debenture, since an investor could not be expected to know where the document of the underlying debenture is situated.

The same applies when the underlying security is shares in a non-UK incorporated company, rather than debentures.

71.4.2 *Securities of UK incorporated co*

It is considered that intermediated securities of UK incorporated companies are properly described as shares or debentures and so fall within the rules in s.275(1)(da) TCGA. If that is correct, the registered securities rule in 275(1)(e) does not apply: it does not matter whether the securities are regarded as registered. Intermediated securities of UK incorporated companies are UK situate for CGT purposes.

71.4.3 *Municipal/government securities*

For the same reason, intermediated securities of government or municipal authorities are situated in the authority concerned: s.275(1)(d) TCGA.

71.4.4 *Another view*

In the case of co-ownership interests the co-ownership situs rules[49] in s.275C TCGA provide:

> (2) The situation of the interest in the asset shall be taken to be the same as the situation of the asset, as determined in accordance with subsection (3) below.
> (3) The situation of the asset for the purposes of subsection (2) above shall be determined on the assumption that the asset is wholly-owned by the person holding the interest in the asset.

Do investors hold interests in the underlying securities as co-owners (within the meaning of the co-ownership rule)? That depends on the terms of the agreement with the intermediary but it is likely to be the case.[50] If so, it appears at first sight that these rules override the common law situs rule, so the situs of the investor's interest for CGT is that of the underlying security.

The CGT bare trust disregard[51] provides another route to the same destination. Does the intermediary hold for the investors as bare trustee (within the statutory sense of that expression)? That depends on the terms of the agreement with the intermediary but it is likely to be the case. If so, it appears at first sight that the effect of s.60 TCGA is to treat the investors as co-owners of the underlying security, so the situs of the investor's interest is that of the underlying security.

It is arguable however that these deeming provisions do not alter the fact that the investor's intermediated securities are "registered" so that s.275(1)(e) continues to apply. This also overrides the UK-law rule[52] even if the underlying security was subject to UK law, or if the intermediary arrangement was subject to UK law.

71.4.5 *Conclusion*

The CG Manual formerly stated that the situs of an intermediated security for CGT purposes is that of the underlying security rather than that of the intermediary's register.[53] That is correct for securities of UK incorporated

[49] See 103.3 (Co-owned assets).

[50] See 71.1 (Securities law background).

[51] See 87.7 (Bare trust/nomineeship).

[52] See 103.13.1 ("Intangible asset").

[53] See 71.3.1 (HMRC view). Curiously, the CG Manual in 2012 deleted the passage which formerly stated that the situs of the DR is the situs of the underlying security.

companies. It is considered that situs of securities of non-UK companies depends on the place of the intermediary's register. That could be different from the situs of the underlying security, though circumstances in which the difference matters will be rare.

71.5 Other CGT issues

The CG Manual discusses a number of CGT issues. The comments are in the context of depositary receipts, but the same will apply to other intermediated securities.

> **CG50240 Depository receipts** [May 2020]
> ... We have been asked to clarify how holding shares via DRs will affect liability to Capital Gains Tax or Corporation Tax on chargeable gains following the decision of the First Tier Tribunal in the Stamp Duty Reserve Tax case of *HSBC v Commissioners for HMRC*, [2012] UKFTT 163 (TC).

The CG Manual sets out some tax implications of the two types of depositary receipts, and it may be helpful to see this side by side:

UK-issued DRs	**Beneficial ownership determined by overseas law**	**See**
Where a DR is issued in the UK the HMRC view is that the holder of a DR is the beneficial owner of the underlying shares...[54] The practical implications include that:	Where the relevant law means that the holder of a DR is not the beneficial owner of the underlying shares the practical implications include that:	
[1] a transfer of shares by a shareholder to a depository in exchange for an issue of DRs is not a disposal of the shares for capital gains purposes because the shareholder retains beneficial ownership of the shares	[1] a transfer of shares by a shareholder to a depository in exchange for an issue of DRs is a disposal of the shares for capital gains purposes because the shareholder loses beneficial ownership of the shares	
[2] a disposal of the DRs is a disposal of both the DRs	[2] a disposal of the DRs is not a disposal of the underlying shares	

That might reflect a hesitant change of view or just an accident. But as far as I know, HMRC practice has not changed.

[54] Author's footnote: More accurately, whether a trust is created would depend on the terms of the deposit agreement construed in accordance with the law governing the agreement. But in the UK there will in practice be a trust.

themselves and a disposal of the underlying shares.[55] In practice the value of a DR will track the value of the underlying shares very closely and to that extent the consideration for the disposal of the DRs should be regarded as consideration for the disposal of the shares		
[3] in a share exchange or company reconstruction in which shareholders have an option to receive DRs instead of being issued with shares we accept that the shares are to be treated for the purposes of TCGA92/S135 as being issued to the shareholders, see CG52500+.	[3] in a share exchange or company reconstruction in which shareholders have an option to receive DRs instead of being issued with shares the conditions of TCGA92/S135 will not be met by shareholders who take DRs as they have not been issued with shares.	58.3
[4] if the holder of DRs converts them back into the underlying shares there is no change of ownership of those shares and so no disposal of the shares. There will have been a disposal of the DRs and the usual computational rules will apply. If no consideration is received for the disposal of the DRs there will be no chargeable gain.	[4] where a holder of DRs converts them into the underlying shares there will be a disposal of the DRs and an acquisition of shares. The usual computational rules will apply.	
[5] where a person holds the same class of shares directly and through DRs then they may be		56.12

[55] Author's footnote: This assumes that the investor holds two distinct assets, (1) "the DRs themselves", and (2) the underlying securities (or at least an interest in them). It is suggested that a DR should be regarded as a matter of general law as one asset and not two. Admittedly a DR confers a bundle of different rights, namely an interest in the underlying security and contractual rights; but many types of property, such as a share, a unit in a unit trust, an equitable interest, confer a bundle of rights, and are nevertheless regarded as single items of property and not as two or more distinct items. However, it does not matter as the Manual goes on to effectively ignore the two-asset analysis. In the view of the Manual, the beneficial interest in the underlying share is effectively the only asset.

> regarded as constituting a single
> holding for share identification
> purposes, see CG51500.

This passage does not address situs or source of income.

71.6 Manufactured payments: Introduction

The legislation is in part 11ZA ITA, sections 614ZA-614ZD.
I do not discuss REITs (s.918 ITA).
The CFM provides:

> **CFM46010 - Deemed loan relationships: manufactured interest and repos: overview** [Aug 2018]
> Manufactured payments normally arise under repos and stock lending arrangements where the transaction crosses an interest or dividend date, so that the temporary owner, instead of the original owner, receives the interest or dividend as the registered owner of the security.
> Where interest is received by the temporary owner in respect of a security and is paid to the original owner in the form of a manufactured payment ('manufactured interest'), the manufactured interest is taxed in the same way as if the original owner had received the actual interest. CTA09/PT6/CH9 brings manufactured interest within the loan relationships provisions. Further details are at CFM46050.
> Other legislation dealing with manufactured payments is in ITA07/PT11/CH2, ITA07/PT15/CH9 and CTA10/Part 17. The legislation aims to tax and relieve manufactured payments as far as possible in the same way as the underlying 'real' interest or dividends, and imposes a requirement to deduct tax from certain payments...

71.7 Manufactured payment relationship

This is the key term. Section 614ZB ITA provides:

> (1) For the purposes of the Income Tax Acts a person has a manufactured payment relationship if conditions A to C are met.
> (2) Condition A is that under any arrangements-
> (a) an amount is payable by or to the person, or
> (b) any other benefit is given by or to the person (including the release of the whole or part of any liability to pay an amount).
> (3) Condition B is that the arrangements relate to the transfer of securities.
> (4) Condition C is that the amount or value of the other benefit-
> (a) is representative of a dividend or interest on the securities, or

> (b) will fall to be treated as representative of such a dividend or interest when it is paid or given.
>
> (5) In subsection (2) the reference to an amount being payable, or other benefit being given, by the person includes a reference to an amount being payable, or other benefit being given, by another person on behalf of the person in question.

71.7.1 *Manufactured payment*

Section 614ZB ITA provides:

> (6) In this Part-
>
> "manufactured payment", in relation to a manufactured payment relationship, means an amount, or the value of a benefit, within subsection (2), and

71.7.2 *Securities*

Section 614ZB(6) ITA provides a commonsense definition:

> "securities" means-
>
> (a) shares in a company, and
>
> (b) loan stock or any similar security (whether the security is of the government of the United Kingdom, any other government, any public or local authority in the United Kingdom or elsewhere, or any other company or body).

71.8 Manufactured payment: Payor

Section 614ZC ITA provides:

> (1) This section applies where a person has a manufactured payment relationship under which a manufactured payment is paid by or on behalf of the person.
>
> (2) No deduction is allowed in respect of the manufactured payment in calculating any profits or other income of the person for income tax purposes (subject to subsection (3)).
>
> (3) Subsection (2) does not apply in relation to the person so far as the manufactured payment is brought into account under Part 2 of ITTOIA 2005 in calculating the profits of a trade carried on by the person.
>
> (4) But nothing in subsection (3) affects the question whether (apart from that provision) a deduction in calculating the profits of a trade carried on by the person is allowed.

71.9 Manufactured payment: Payee

Section 614ZD ITA provides:

> (1) Subsection (2) applies if a person has a manufactured payment relationship under which a manufactured payment is payable to the person.
> (2) For the purposes of the charge to income tax on the person's income, the Income Tax Acts apply to the person as if the manufactured payment were a dividend or interest on the securities (as the case may require).
> (3) Subsection (2) is subject to subsections (4) and (5).

The exceptions relate to trading income and to DTR. Section 614ZD ITA provides:

> (4) Subsection (2) does not apply in relation to the person so far as the manufactured payment is brought into account under Part 2 of ITTOIA 2005 in calculating the profits of a trade carried on by the person.
> (5) Subsection (2) does not apply in relation to the person for the purposes of determining entitlement to double taxation relief[56] in respect of any dividend or interest.

71.10 Manufactured interest: UK payor

Section 919 ITA provides:

> (1) This section applies if—
> (a) a person pays a manufactured payment as mentioned in section 614ZC(1),
> (b) the amount payable is representative of interest on UK securities ("manufactured interest"), and
> (c) the person—
> (i) is UK resident, or
> (ii) pays the manufactured interest in the course of a trade carried on in the UK through a branch or agency.
> (1A) But this section does not apply if—
> (a) the manufactured interest is paid by a UK resident company in the course of a trade carried on through a permanent establishment in a territory outside the UK, and
> (b) section 18A of CTA 2009 has effect in relation to the company for the accounting period in which it is paid.

Assuming these conditions are met, deduction at source rules apply. Section 919 ITA provides:

[56] Section 614ZD(7) ITA provides a commonsense definition: "For the purposes of this section "double taxation relief" means any relief given under or as a result of Part 2 of TIOPA 2010."

> (2) The payer of the manufactured interest must, on making the payment, deduct from the gross amount of the manufactured interest a sum representing income tax on it at the basic rate in force for the tax year in which the payment is made.
> (3) The "gross amount" of manufactured interest is equal to the gross amount of the interest of which it is representative.
> ...
> (6) In subsection (1) "UK securities" means securities of—
> (a) the government of the UK,
> (b) a local authority in the UK,
> (c) another public authority in the UK, or
> (d) a UK resident company or other UK resident body.
> (7) But "UK securities" does not include shares in a UK resident company.
> (8) In this section "securities" includes loan stock or any similar security.

71.11 Creditor repos

Section 925A ITA provides:

> (1) Subsection (2) applies if a company ("the lender") has a creditor repo for the purposes of Chapter 10 of Part 6 of CTA 2009 (see section 543 of that Act).
> (2) Sections 918, 919 and 921 have effect in relation to the lender while the arrangement is in force as if—
> (a) the lender paid the borrower amounts which are representative of the income payable on the securities that are initially sold,
> (b) the payments were made under requirements of the arrangement, and
> (c) the payments were made on the dates on which the income is payable.
> (3) For the purposes of subsection (2), an arrangement is in force from the time when the securities are initially sold until the earlier of—
> (a) the time when the subsequent sale of the securities, or similar securities, takes place, and
> (b) the time when it becomes apparent that that sale will not take place.

71.12 Company payor

CFM46050 - Deemed loan relationships: manufactured interest
Manufactured interest treated as interest on a loan relationship [Aug 2018]
Where a company pays or receives manufactured interest (either on UK or

overseas securities), CTA09/S540 applies to

- treat the company as being a party to a loan relationship
- treat the manufactured interest as interest under a loan relationship (and, in the case of the recipient, as though it were under the loan relationship under which the real interest is payable)

Because the company is treated as being party to a loan relationship, other loan relationship provisions also apply, such as late interest (CFM35800) and the unallowable purposes rules (CFM38100).

Provisions such as CTA10/S812 deem manufactured payments to be made in certain circumstances. Where the deemed payment constitutes interest, it is also brought within the loan relationships provisions by virtue of CTA09/S541(1). However, this does not override the rule in CTA10/S812 disallowing a deduction for deemed manufactured payments. The equivalent rule for income tax purposes is now in ITA07/S596.

Whether receipts and payments of manufactured interest (either real or deemed) are loan relationships credits or debits depends generally on their accounting treatment. See CFM46060 and CFM46070.

Example

LY Ltd borrows loan stock from TW Ltd for 2 months to enable it to settle a short sale. During that period interest of £500 arises on the security. LY Ltd does not receive the real interest because it does not hold the security, but still has to pay manufactured interest of £500 to TW Ltd as compensation for the fact that TW Ltd did not receive the real interest.

If LY Ltd debits the manufactured interest payment of £500 to its profit and loss account in accordance with GAAP, it will be a loan relationship debit. For TW Ltd, the manufactured interest receipt is treated as though it were the real interest on the loan stock that it has lent to LY Ltd.

For repos, the treatment of manufactured interest is dealt with under the issue of income arising on securities during the period of the repo. See CFM46260 and CFM46380.

71.13 DCC Holdings

The CFM provides:

CFM46060 - Deemed loan relationships: manufactured interest: DCC Holdings [Aug 2017]

In a 'net-paying' repo, the transaction crosses a coupon or dividend date and the purchaser does not pass on any income it receives by means of a manufactured payment. Instead the repurchase price is reduced to reflect the fact that the seller has, in effect, repaid part of the loan. The purchaser in a net-paying repo is deemed to make a manufactured payment: manufactured interest where the securities are loan relationships.

In a transaction predating the FA 2007 rules (see CFM46200), DCC Holdings purchased and resold gilts in a number of net-paying repos in which it received gilt interest of £28.8m. It made an economic profit of £1.8m (the 'interest' under the repo), but claimed that the transactions resulted in a loan relationships debit of £27m, on the basis that the gilt interest received was not taxable and that it was entitled to a 'freestanding' deduction for full amount of the deemed manufactured interest payment.

The Supreme Court found in HMRC's favour in December 2010 ([2010] UKSC 58). There was no freestanding deduction for the deemed payment of manufactured interest; instead there must be symmetry between the credit for the interest received and the debit for the manufactured interest deemed to be paid. Both should be £2.9m, the amount of the coupon that accrued during the period of the repo. As a consequence, DCC was taxed on its economic profit of £1.8m.

CFM46070 - Deemed loan relationships: manufactured interest: DCC Holdings: FA 2009 changes [Aug 2018]

DCC Holdings: FA 2009 changes

The High Court in the DCC Holdings case had earlier found (in October 2008) that the company was entitled to a freestanding deduction for the deemed payment of manufactured interest. In response, CTA09/S540(3) and FA96/S97(2) were amended by paragraph 5 Schedule 30 FA 2009 to ensure that the tax treatment of manufactured interest (both real and deemed) accords with its economic effect. Only amounts that are recognised in determining a company's profit or loss in accordance with GAAP are brought into account as loan relationships debits and credits.

The changes applied to real payments of manufactured interest whenever made, and to payments of manufactured interest deemed to be made on or after 27 January 2009. The Supreme Court judgment in the DCC Holdings case means that for such payments and deemed payments, the 2009 changes restate the existing law that their tax treatment accords with their economic effect. For payments of manufactured interest deemed to be made before 27 January 2009 (which were not covered by the 2009 changes), the DCC judgment upholds HMRC's view that the law means that their tax treatment accords with their economic effect.

CTA09/S545 means that there is no general relief for manufactured interest under repos entered into on or after 1 October 2007 (CFM46260), and relief for deemed manufactured payments (including manufactured interest) in stock loans is statutorily prohibited under CTA10/S812 (CFM46050).

71.14 Voting on intermediated securities

The holder of intermediated securities may or may not have the voting rights attached to the shares: that depends on the documentation. Normally it makes no difference for tax purposes, but occasionally that matters.

Section 169S(3) TCGA defines "personal company" for the purposes of business asset disposal relief:

> For the purposes of this Chapter "personal company", in relation to an individual, means a company—
> (a) at least 5% of the ordinary share capital of which is held by the individual, and
> (b) at least 5% of the voting rights in which are exercisable by the individual by virtue of that holding.

So where BAD relief may be applicable, care needs to be taken or the relief may be lost.

71.15 Intermediated securities: IHT BPR

The IHT Manual provides:

> **IHTM25193 American Depositary Receipts** [Apr 2023]
> [The manual outlines the nature of ADR/ADS and continues:] ADSs are usually listed on major US exchanges such as the New York Stock Exchange or the Nasdaq. Shares and securities listed on these markets are regarded as 'listed' for HMRC purposes, including Inheritance Tax (IHT) (IHTM18061). These shares and securities are 'quoted' for IHT purposes and only qualify for business relief at 50% if they give the transferor control of the company immediately before the transfer, IHTA84/S105(1)(cc) (IHTM25202).
> Shares in unquoted companies (IHTM25192) may sometimes be exchanged for Depositary Receipts, most commonly ADRs. When this happens, it is necessary to consider whether the property held is the ADSs, as evidenced by the ADRs, or the underlying shares in the company they ultimately represent.
> If the law of the territory or state where the ADRs are issued conclusively determines that the holder of the ADRs is the beneficial owner of the underlying shares, then IHT relief will be available under IHTA84/S104(1)(a).
> If it does not, our approach is that the owner of the ADRs is not the beneficial owner of the underlying shares for IHT. The asset in their estate is the ADSs, evidenced by the ADRs, and business relief is not available unless they gave the owner control of the company as mentioned above.
> This approach follows the decision of the First-Tier Tax Tribunal in the Stamp Duty Reserve Tax case of *HSBC v Commissioners for HMRC* [2012] UKFTT 163 where the tribunal concluded that it was not satisfied that under the law of the State of New York, the holder of an

> HSBC ADR had a beneficial interest in the underlying fund of HSBC shares.

Section 104(1) IHTA provides business property relief:

> Where the whole or part of the value transferred by a transfer of value is attributable to the value of any relevant business property, the whole or that part of the value transferred shall be treated as reduced—
>
> (a) in the case of property falling within section 105(1)(a) [(b) or (bb) below, by 100 per cent;
>
> (b) in the case of other relevant business property, by 50 per cent;

Section 104-105 IHTA defines relevant business property, and (so far as relevant) provides:

> (1) ... "relevant business property" means, in relation to any transfer of value ...
>
> (bb) any unquoted shares in a company;
>
> (cc) shares in or securities of a company which are quoted and which (either by themselves or together with other such shares or securities owned by the transferor) gave the transferor control of the company immediately before the transfer;

There are three points here.

(1) If the ADR is listed, HMRC regard the shares as listed. Whatever the technical analysis, that seems right on a purposive construction.

(2) If the holder of the ADR has a beneficial interest in the securities, the ADR is disregarded for the purposes of BPR; and that is not contentious.

(3) If the holder of the ADR does not have a beneficial interest in the securities, HMRC say that BPR is not available. I doubt if that is consistent with *HMRC v Nelson Dance Family Settlement*[57] but the point will not often arise.

72.15.11 Critique

72.1 Investment manager exemptions

This chapter considers three related exemptions where an investment manager or broker ("**broker/IM**") acts for a non-resident client.

In order to understand the exemptions, it is helpful first to note the tax issues which a non-resident person would face (in the absence of relief) if it carried on a trade in the UK through a broker/IM. It is necessary to consider separately (1) a non-resident company and (2) a non-resident individual or trust.

In the absence of these exemptions, if a non-resident *company* carried on a trade in the UK through a UK broker/IM, the non-resident company would face a UK tax charge arising from the fact that it might be trading in the UK through a permanent establishment (ie the broker/IM might be an agency PE). If so:

(1) The non-resident company would (in short) be subject to corporation tax on its profits.[1]
(2) The broker/IM would be a "UK representative" and that tax could be collected from it.[2]

Similarly, in the absence of these exemptions, if a non-resident *individual or trust* carried on a trade in the UK through a UK broker/IM, the non-resident would face a UK tax charge arising from the fact that it might be trading in the UK through a branch or agency (ie the broker/IM might be a branch or agency). If so:

(1) The non-resident individual or trust would (in short) be subject to income tax and CGT[3] on its profits.
(2) The broker/IM would be a "UK representative" and that tax could be collected from it.[4]

Alternatively the position might be that the broker/IM was not a branch or agency or PE of the non-resident, but nevertheless the non-resident was trading in the UK. In that case (whether a company or an individual or trust) the non-resident person would in principle[5] be subject to income tax on its trading profits.

Clearly, if there were no relief, non-residents would not use a UK broker/IM (at least if there were a risk that their activities might be characterised as trading). The investment management exemptions override these tax charges. Assuming the various requirements are met the exemptions are as follows:

(1) *IME PE relief:* A broker/IM is not a permanent establishment of a non-resident company. The main significance of this is:
    (a) to disapply the corporation tax charge which applies when a non-resident company trades through a UK PE.

[1] See 21.6 (CT territorial limit: Trading).

[2] See 124.3 (UK representative).

[3] See 56.7 (Trade through UK branch/PE).

[4] See 106.26 (Why branch/agency matters).

[5] In practice a DTA would often provide relief.

(b) to disapply the provisions allowing collection of tax from a PE (as its "UK representative").

(2) *IME UK-representative relief:* A broker/IM is not a UK representative for IT and CGT. The main significance of this is to disapply the rules allowing the collection of IT/CGT from UK representatives of non-residents. This exemption is in chapter 2B part 14 ITA and chapter 7A TCGA.

(3) *IME non-resident IT relief :* UK source income generated through a broker/IM is one of the classes of income which qualifies for non-resident IT relief.[6] This exemption is part of the code of non-resident IT relief set out in Chapter 1 Part 14 ITA. I refer to it as "**IME non-resident IT relief**".

Relief	**Section**
IME PE relief	ss.1145-1151 CTA 2010
IME UK-representative relief	835H-835S ITA
IME non-resident IT relief	816-828 ITA

I refer to the exemptions together as the "**investment manager exemptions**" abbreviated to "**IME**" . (References to investment managers in this label include brokers.) The term used in the HMRC Manuals is "investment management exemption", in the singular. But they are best regarded as three separate (though linked) exemptions.

The rules are written out *four* times in four different places.[7] The rules for brokers are similar to investment managers, but are set out separately each time, so there are eight sets of rules. This does make a coherent exposition rather difficult. Where the rules repeat or overlap, I set out the text of IME non-resident IT relief, citing the statutory equivalents for the other rules in footnotes, unless there are material differences.

It would be simpler and shorter if branch/agency were abolished and the PE rules applied to non-companies just as to companies.[8]

72.1.1 *Policy background*

SP 1/01 explains the policy considerations behind the investment management exemptions:

[6] See 45.1 (Non-residents IT relief: Introduction).

[7] The fourth iteration of the IME is in part 8B CTA 2010 (Northern Ireland Rate), not discussed here.

[8] See 106.28 (Branch/agency: Critique).

> 1. There are two policy objectives underlying the Investment Managers Exemption. These objectives are
> [a] firstly, that an overseas investor should not be brought into UK tax in relation to investment transactions simply because they are conducted on their behalf by a UK resident investment manager, and
> [b] secondly, that any fees earned by a UK resident investment manager for services performed for the non-resident investors should be fully chargeable to UK tax.

The first objective rests on tax competition considerations.[9]

> 2. The UK tax system seeks to achieve these objectives by granting what is termed the Investment Manager Exemption. The exemption enables non-residents to appoint UK based investment managers without the risk of UK taxation and is one of the key components of the UKs continuing attraction for investment managers. HMRC is committed to maintaining this environment by improving the exemption to meet developments in the investment management industry through providing greater flexibility and better explanations for investment managers and expanding the scope of exempt activities.

Other countries adopt the same approach:

> The highly mobile nature of the funds management business suggests that income from portfolio foreign investments flowing to non resident investors should not be taxed in Australia. Even modest amounts of Australian tax on these investors is likely to impede the growth of this business. Only the income of the Australian funds manager should be subject to Australian tax.[10]

72.2 IME PE relief

I discuss IME PE relief in this chapter, though to see the topic in the round one needs to be familiar with the meanings and functions of PE, for which see 106.2 (PE: UK-law/OECD Model meanings).

The key points to bear in mind for present purposes are as follows. Firstly, the term "permanent establishment" is used in different places with different definitions. It is strictly necessary to distinguish between:

(1) "**UK-law PE**" defined in s.1141 CTA 2010.

[9] See 1.3 (Other tax competition).

[10] See "A Platform for Consultation" (Australia, 2010) para 30.61.

(2) "**OECD-model PE**" defined in OECD Model.

Secondly, an independent agent is not a PE (the "**independent agent exemption**"). The wording of the independent agent exemption differs slightly between UK-law PE and OECD-model PE so it is strictly necessary to distinguish between:

(1) "**UK-law independent agent exemption"** defined in s.1142 CTA 2010.

(2) "**OECD Model independent agent exemption**" defined in OECD Model.

Section 1142 CTA 2010 provides:

> (1) A company is not regarded as having a permanent establishment in a territory by reason of the fact that it carries on business there through an agent of independent status acting in the ordinary course of the agent's business.
> (2) Sections 1145 to 1151 apply for the purpose of supplementing subsection (1) in relation to transactions carried out on behalf of a non-UK resident company by a person in the UK acting as—
> (a) a broker (section 1145),
> (b) an investment manager (sections 1146 to 1150)...

Section 1145 CTA 2010 provides IME PE relief for a broker:

> (1) This section applies if a transaction is carried out on behalf of a non-UK resident company in the course of the company's trade by a person in the UK acting as a broker.
> (2) In relation to the transaction, the broker is regarded for the purposes of section 1142(1) as an agent of independent status acting in the ordinary course of the broker's business if (and only if) each of conditions A to D is met. ...

Section 1146 CTA 2010 provides IME PE relief for an investment manager:

> (1) This section applies if an investment transaction is carried out on behalf of a non-UK resident company in the course of the company's trade by a person in the UK acting as an investment manager.
> (2) In relation to the investment transaction, the investment manager is regarded for the purposes of section 1142(1) as an agent of independent status acting in the ordinary course of the investment manager's business if (and only if) each of conditions A to E is met ("the independent investment manager conditions"). ...

If the conditions for IME PE relief are met:
(1) The broker/IM is not a UK-law PE.
(2) It will not normally matter whether the broker/IM is an OECD-model PE.[11]

If the conditions for IME PE relief are *not* met, the broker/IM is not "an agent of independent status acting in the ordinary course of the investment manager's business" and does not qualify for the UK-law independent agent exemption. Thus the broker/IM may be a UK-law PE – if the general requirements of a PE are met, that is, if the broker/IM is "an agent acting on behalf of the non-resident company and has and habitually exercises there authority to do business on behalf of the company". In other words, failure to meet the conditions for IME PE relief disapplies the independent agent exemption, but it does not necessarily follow that the broker/IM is a UK-law PE:
(1) If the broker/IM is not a UK-law PE, it will not normally matter whether the broker/IM is an OECD-model PE.
(2) If the broker/IM is a UK-law PE, it is possible that it is not an OECD-model PE, in which case treaty relief may apply.

These are the complications which arise from having two definitions of PE.

In short, IME PE relief offers a safe harbour, in which a company can be reasonably sure it does not have a PE. SP 1/01 explains:

> 10. The Investment Manager Exemption legislation now only has relevance for corporation tax by providing greater clarity about what constitutes independence of investment managers in relation to the non-residents for which they act.

72.3 IME non-resident IT relief

I discuss the IME aspects of non-resident IT relief in this chapter, though to follow it one needs to be familiar with the background rules of non-resident IT relief, for which see 45.1 (Non-residents income tax relief: Introduction).

SP 1/01 explains:

[11] For completeness: where the conditions for IME PE relief are met, (1) it is likely that the broker/IM is an independent agent, and so not an OECD-model PE; (2) It is not likely that HMRC would seek to argue to the contrary.

> 10. ... For income tax it raises the threshold for chargeability so that the same criteria apply when there is no treaty protection in the form of a permanent establishment article.[12]

For individuals and trustees, non-resident IT relief applies to "disregarded income".[13] This term includes "disregarded transaction income". This is where IME non-resident IT relief comes into play. For individuals and trusts, s.814(1)(2) ITA provides relief for a broker:

> (1) Subsection (2) applies if a non-UK resident carries on (alone or in partnership) a business through a broker in the UK.
> (2) Income is "disregarded transaction income", subject to subsection (6), if—
> (a) it is transaction income, and
> (b) the independent broker conditions are met in relation to the transaction in question.

For individuals and trusts, s.814(3)(4) ITA provides relief for an investment manager:

> (3) Subsection (4) applies if a non-UK resident carries on (alone or in partnership) a business through an investment manager in the UK.
> (4) Income is "disregarded transaction income", subject to subsection (6), if—
> (a) it is transaction income, and
> (b) the independent investment manager conditions are met in relation to the transaction in question.

For non-resident companies the drafting is similar and the result is the same. Non-resident IT relief applies to "disregarded company income". Section 816 ITA provides:

> (1) For the purposes of this Chapter income arising to a non-UK resident company is "disregarded company income" if it is ...
> (c) income arising from a transaction carried out through a broker in the UK acting as an agent of independent status in the ordinary course of the broker's business,
> (d) income arising from a transaction carried out through an

[12] That is, IME non-resident IT relief provides roughly the same relief as article 7 OECD Model: "The profits of an enterprise carried on by a resident of a Contracting State shall be taxable only in that State unless the enterprise carries on business in the other Contracting State through a permanent establishment situated therein."

[13] See 45.5 (Disregarded income).

> investment manager in the UK acting as an agent of independent status in the ordinary course of the investment manager's business, ...

72.4 IME UK-representative relief

I discuss IME UK-representative relief in this chapter, though to see it in the round one needs to be familiar with the UK representative rules, for which see 124.2 (Tax collected from UK representative).

Section 835H ITA provides relief for brokers:

> (1) This section applies if a non-UK resident carries on (alone or in partnership) a business through a broker in the UK.
> (2) The broker is not the UK representative of the non-UK resident in relation to an amount within section 835E(2) if—
> (a) the amount is transaction income in relation to a transaction carried out through the broker in the UK on behalf of the non-UK resident, and
> (b) the independent broker conditions are met in relation to the transaction (see section 835L).

Section 835I ITA provides relief for investment managers:

> (1) This section applies if a non-UK resident carries on (alone or in partnership) a business through an investment manager in the UK.
> (2) The investment manager is not the UK representative of the non-UK resident in relation to an amount within section 835E(2) if—
> (a) the amount is transaction income in relation to an investment transaction carried out through the investment manager in the UK on behalf of the non-UK resident, and
> (b) the independent investment manager conditions are met in relation to the investment transaction (see section 835M).

72.5 IME definitions

72.5.1 *"Investment manager"*

Section 827(1) ITA provides a commonsense definition:

> In this Chapter "investment manager" means a person who provides investment management services.[14]

An investment manager who merely gives advice would not be a PE. However an investment manager with discretionary management powers

[14] The equivalent for IME PE relief is s.1150(1) CTA 2010.

would be a PE, at least if the principal was carrying on a trade.

72.5.2 *"Broker"*

There is no statutory definition. The former International Tax Handbook provided:

> **926. NRs: Machinery of assessment: commodity markets: broker**
> A few words are called for about an important market operator, the broker. London has been a great market for centuries. Until a few decades ago vast amounts of produce were landed in, or trans-shipped in London docks and it was here and in other ports that the markets grew. They are run by Trade Associations which lay down rules designed to secure a fair, orderly and open market; to provide for membership, and to consider things like rates of brokerage. The actual constitution of the different markets varies but one would normally find as members some big producers, some major users, both of whom may have a seat in the market ring, the place of business. But the central character is the broker. A broker is a negotiator for commission, who will sell or buy for clients. Brokers have a long history, but, in modern usage, Bowstead, the writer of the standard work on agency, describes the broker in this way–
>
> > "A broker is an agent whose ordinary course of business is to negotiate and make contracts for the sale and purchase of goods and other property of which he is not entrusted with the possession or control."[15]
>
> Payne, a writer on British Commercial Institutions, says this of an import broker–
>
> > "The function of a broker is to bring two parties together for the purpose of concluding a contract. Brokers are generally produce brokers with whose aid very large transactions take place at the chief importing ports. They are often specialists who, through long experience of markets ... are able to buy and sell to better advantage than could the general import merchant ... he (the broker) is not associated with the physical movement of the goods, nor with clearing them through Customs. After selling a consignment by auction, or by private treaty, the broker is paid a commission or fee (brokerage) which, with the other expenses of sale is deducted from the gross selling price."
>
> Brokers are thus associated with the great commodity markets and exchanges, professional negotiators who will act for buyers and sellers and have nothing to do with the work-a-day business of handling or insuring the goods. They constitute an essential link in the market mechanism, in making the function of the market-place in determining price, available to their clients. Another odd quality of brokers is that the same broker can, by the custom of certain markets, act both for buyer and seller.
>
> This means in practice that if A has asked a broker to sell something and B has asked the same broker to buy the same thing, the broker can match the two. The market rules would require that the broker does this business in the open (so that

[15] Bowstead and Reynolds on Agency, (19th ed., 2013), 1.035.

> any other broker can step in if he wishes) and that preserves the idea of open market dealing and the natural protection which it gives to buyer and seller. Although the broker has acted for both parties the open nature of the market mechanism ensures that the price is a fair market price. ...
>
> **939 NRs: when to accept the TMA 70 s.82 broker exemption - General**
>
> Brokers and general commission agents take a very limited part in the marketing process. They are there to make the advantages of the market-place available to their clients. Whatever the terms mean, we do not accept as a broker or as a general commission agent a man who does everything the client himself would do in running the business were he himself here to do it, even if the agent acts for more than one client. Both expressions are primarily to do with commodity markets and that is what they were really intended for.
>
> But over the years the application of the broker and general commission agent exemption has been extended. Stockbrokers, for example, will generally fall within Section 82(1) [TMA].[16] We have certainly accepted that there can be general commission agents and brokers in the field of shipping and that the exemption is sometimes appropriate. In insurance, on the other hand, we resist the suggestion that an underwriting agent can be a general commission agent. Insurance brokers will not normally be carrying on a non-resident's trade. If it seems that they do then they will arguably be acting in the capacity of underwriting agents and we would deny the exemption. If, in Districts, there are cases outside the usual commodity markets, where exemption under Section 82(1) appears to have been given but this treatment has not definitely and fairly recently, say within the last twenty years, been approved or condoned by International Division, it would be sensible to consider asking for advice on the next convenient occasion.

72.5.3 *"Transaction income"*

Section 814(5) ITA provides the definition:

> In this Chapter "transaction income", in relation to a transaction carried out through a broker or investment manager in the UK on behalf of a non-UK resident, means income which arises to the non-UK resident from—
>
> (a) so much of the non-UK resident's business carried on (alone or in partnership) through the broker or investment manager as relates to the transaction, or
>
> (b) property or rights which, as a result of the transaction, are used by, or held by or for, the broker or investment manager on behalf of the non-UK resident.

[16] Section 82 (now repealed) provided: "Nothing in this Part of this Act shall render a non-resident person chargeable in the name of a broker ...In this subsection, 'broker' includes a general commission agent."

72.6 Investment transaction list

The law is in the following regulations:[17]

Investment Manager (Investment Transaction) Regs 2014 ("IMITR 2014")
Investment Transactions (Tax) Reg 2014 ("ITTR 2014")

The definition of investment transaction comes in two versions:

Definition (my term)	**Regs**	**Applies to**
Funds definition	ITRR	UK tax regimes for funds[18]
IME definition	ITTR & IMITR	IME

HMRC refer to the definition as the "investment transaction list".

72.6.1 *Scope of funds definition*

Reg 2(1) ITTR provides:

> These Regulations specify certain kinds of transactions as investment transactions for the purposes of-
> (a) the Authorised Investment Funds (Tax) Regulations 2006,
> (b) the Offshore Funds (Tax) Regulations 2009,
> (c) the Investment Trust (Approved Company) (Tax) Regulations 2011, and
> (d) the Unauthorised Unit Trusts (Tax) Regulations 2013.

72.6.2 *Scope of IME definition*

Section 827(2) ITA provides:

> In this section "investment transaction" means any transaction of a description specified for the purposes of this section in regulations made by HMRC.[19]

Reg 2 IMITR 2014 provides:

[17] The background can be traced in consultation and response papers "Investment Management Exemption and Collective Investment Schemes - expanding the 'white list'" (2013). A consultation paper proposes to add cryptoassets to this list: HMRC, "Expanding the Investment Transactions List for the Investment Management Exemption and other fund tax regimes" (2022) *https://www.gov.uk/government/consultations/expanding-the-investment-transactions-list-for-the-investment-management-exemption-and-other-fund-tax-regimes*

[18] The regimes are not discussed here. They are: (1) diversely owned authorised investment funds; (2) exempt unauthorised unit trusts; (3) diversely owned reporting offshore funds; (4) approved investment trusts;

[19] IME PE relief equivalent is s.1150(1) CTA 2010.

> (1) Any transaction which falls within the meaning of investment transaction in the Investment Transactions (Tax) Regulations 2014 is specified for the purposes of-
>
> (a) section 827 of the Income Tax Act 2007,
> (b) section 835S of the Income Tax Act 2007, and
> (c) section 1150 of the Corporation Tax Act 2010.
>
> This is subject to paragraphs (2) to (5).

The sections referred to are:

Section	**Topic**
s.827 ITA	IME non-resident IT relief
s.835S ITA	IME UK-representative relief
s.1150 CTA 2010	IME PE relief

Para (2)-(5) lightly amend ITR:

> (2) References in the Investment Transactions (Tax) Regulations 2014 to "fund" are to be treated as references to "non-UK resident" (and the definition of "fund" in regulation 2(3) of those Regulations is to be ignored).
> (3) References in the Investment Transactions (Tax) Regulations 2014 to "manager" are to be treated as references to "investment manager".

72.6.3 *The definitions*

Reg 2 ITTR : Funds definition	**ITTR as amended: IME definition**
(2) An investment transaction means-	[identical]
(a) any transaction in stocks and shares,	[identical]
(b) any transaction in a relevant contract,	[identical]
(c) any transaction which results in a fund[20] becoming a party to a loan relationship or a related transaction in respect of a loan relationship	(c) any transaction which results in a non-UK resident[21] becoming a party to a loan relationship or a related

[20] Reg 2(3) ITTR provides: "For the purposes of these Regulations, "fund" means an authorised investment fund, an offshore fund, an investment trust or an exempt unauthorised unit trust, as the case may be."

[21] Reg 2(4) IMITR provides: ""Non-UK resident" has the meaning given in section 989 of the Income Tax Act 2007 or section 1119 of the Corporation Tax Act 2010, as the case may be."

	transaction in respect of a loan relationship,
(d) any transaction in units in a collective investment scheme,	[identical]
(e) any transaction in securities of any description not falling within paragraphs (a) to (d),	[identical]
(f) any transaction consisting in the buying or selling of any foreign currency,	[identical]
(g) any transaction in a carbon emission trading product,	[identical]
(h) any transaction in rights under a life insurance policy.	[identical]

The definition(s) of investment transaction are identical, with amendments only to fit the different contexts.

The label "*investment* transaction" is not strictly appropriate: the transaction will be a *trading* transaction and the so-called investment will be trading stock.[22] But it does not matter, and perhaps the objection is pedantic.

Terms used in the definition(s) are in turn defined as follows:

Term	**ITTR reg**	**Amended IMITR**
Relevant Contract	3	-
Loan relationship[23] & related transaction	4	-
Units in CIS	5	2(5)
Carbon emission trading product	6	-

I do not consider these definitions here.

72.7 Investment manager conditions

For IME non-resident IT relief, s.818(1) ITA provides:

> The independent investment manager conditions are met in relation to an investment transaction carried out on behalf of a non-UK resident by an investment manager in the UK if conditions A to E are met.

[22] See 72.15.1 ("Investment": Terminology).

[23] See 64.5.1 ("Loan relationship").

For IME PE relief, s.1146 CTA 2010 provides:

> (1) This section applies if an investment transaction is carried out on behalf of a non-UK resident company in the course of the company's trade by a person in the UK acting as an investment manager.
> (2) In relation to the investment transaction, the investment manager is regarded for the purposes of section 1142(1) as an agent of independent status acting in the ordinary course of the investment manager's business if (and only if) each of conditions A to E is met ("the independent investment manager conditions").

I refer to these as "**investment manager conditions A to E**".

72.8 Cond. A/B: Investment manager

Section 818 ITA provides:

> (2) Condition A is that at the time of the transaction the investment manager is carrying on a business of providing investment management services.
> (3) Condition B is that the transaction is carried out in the ordinary course of that business.[24]

These are the equivalent of broker conditions A and B.

72.9 Cond. C: Independence test

Section 818(4) ITA provides:

> Condition C is that, when the investment manager acts on behalf of the non-UK resident in relation to the transaction, the relationship between them, having regard to its legal, financial and commercial characteristics, is a relationship between persons carrying on independent businesses dealing with each other at arm's length.[25]

SP 1/01 calls this the independent capacity test.

The requirement is equivalent to the rule that an independent agent is not a PE. According to the INTM, an agent's "legal financial and commercial characteristics" is relevant to determine whether the agent has "independent status" (so as to qualify for the independent agent exemption to the PE rule). So guidance on what is an independent agent for PE is relevant to condition C.[26]

[24] The equivalent for IME PE relief is s.1146(3)(4) CTA 2010.

[25] The equivalent for IME PE relief is s.1146(5) CTA 2010.

[26] See 106.16 (Independent agent exemption).

This is imprecise, so the SP offers two (relatively) bright line tests which may offer a safe harbour for collective funds:

(1) widely held funds
(2) 70% test

If neither bright line test is satisfied, one is back to the vagueness of the law. SP 1/01 provides:

> 41. If none of the above tests are satisfied HMRC will have regard to the overall circumstances of the relationship between the non-resident and the investment manager in determining whether they are carrying on independent businesses that deal with each other on arms length terms. It is not possible to describe every scenario in which the relationship may still meet this test but the guidance in this Statement of Practice should provide certainty to the vast majority of non-residents trading in the UK through an investment manager and HMRC will also continue to provide advice for any other circumstances.

72.9.1 *Widely held fund*

SP 1/01 provides:

> 36. The relationship will be considered to be independent if the non-resident has the following characteristics:
> (a) the non-resident is a widely held collective fund or, if not,
> (b) the non-resident is not a widely held collective fund but is either being actively marketed with the intention that it become one or is being wound up or dissolved.
>
> 37. A fund will be regarded as widely held if
> [a] either no majority interest in the fund is ultimately held by five or fewer persons and persons connected with them, or
> [b] no interest of more than 20% is held by a single person and persons connected with that person.
>
> A fund may need to establish a track record before new investors are obtained and will therefore have 18 months from the commencement of trading in the UK to meet the widely held test.
>
> Where investment management services are provided to a collective investment scheme constituted as a partnership, participants in the scheme will not be regarded as connected persons for this purpose if their only connection is membership of the partnership. This means that if the investment manager is a partner in the fund it will not be treated as connected with the other partners in the fund for the purpose only of the Independent Capacity Test, although there may still otherwise be connection under s 993 ITA 2007 between the participants, for example

as partners in another capacity.

38. Actively marketed means there must be evidence of ongoing genuine attempts to obtain third party investment into the fund in order to meet the widely held test and that the terms on which interests in the fund are offered are not prohibitive or discriminatory for that class of business.

39. If the fund has one of the above two characteristics the independent capacity test will be met without the need to refer to any other factors.

72.9.2 *70% test*

SP 1/01 provides:

> 40. In other cases the independent capacity test will be met:
>
> (a) where the provision of services to the non-resident and persons connected with the non-resident is not a substantial part of the investment management business. Where that part does not exceed 70% of the investment managers business, either by reference to fees or to some other measure (where that would be more appropriate), it will not be regarded as substantial.

There is special provision for start-ups. SP 1/01 provides:

> 40. In other cases the independent capacity test will be met ...
>
> (a) ... Further, if in the first 18 months from the start of a new investment management business the services provided to the non-resident exceed 70% of the business, they will not be treated as a substantial part of the business provided that they are consistently below 70% in subsequent periods.
>
> (b) where the provision of services to the non-resident represents more than 70% of the investment managers business 18 months after the start of a new investment management business but
>
> [i] that was for reasons outside the managers control and
>
> [ii] the manager had taken all reasonable steps to bring it below 70%.
>
> The investment manager will be expected to provide all relevant information to support a contention that the services are a substantial part of the manager's business for reasons beyond the managers control and to demonstrate what steps have been taken to rectify that position.

72.9.3 *Feeder funds and sub-funds*

SP 1/01 provides:

> 42. Some funds adopt a master/feeder structure. Where the investment

> manager manages an opaque master fund, such as a company, which has feeder funds then the independence test will be applied as if the master fund were transparent by looking at the beneficial ownership of each feeder fund (and applying the provisions of this Section A to the aggregate interests in the feeder funds) to determine whether the master fund is independent.
>
> 43. Similarly, if the investment manager acts for one or more sub-funds of an umbrella fund it is the beneficial ownership of the latter (applying the provisions of this section A to the interests in the umbrella fund) that will determine whether the independence test is met.

72.9.4 *Parent/subsidiary*

SP 1/01 provides:

> 44. It should be noted that a subsidiary may be considered independent of its parent company for the purposes of the test, notwithstanding the parents ownership of the share capital.

See 106.17.1 (Control by principal).

72.10 The 20% rule

Section 818(5) ITA provides:

> Condition D is that the requirements of the 20% rule are met (see s.819).[27]

SP 1/01 calls this "the 20% test". A clearer label would be the 20% beneficial owner rule; but it is best to use the wording of the statute. Section 819(1) ITA provides:

> The requirements of the 20% rule are met if conditions A and B are met.[28]

I refer to these as "**20% rule conditions A and B**". Section 819(2) ITA defines condition A:

> Condition A is that in relation to a qualifying period[29] it has been or is

[27] The equivalent for IME PE relief is s.1146(6) CTA 2010.

[28] The equivalent for IME PE relief is s.1147(1) CTA 2010.

[29] Section 820 ITA provides:

> "(1) This section applies for the purposes of this Chapter.
>
> (2) If section 819 applies for the purposes of section 813, a "qualifying period" means—
>
> (a) the tax year in which the transaction income is chargeable to income tax, or

> the intention of the investment manager and the persons connected with the investment manager that at least 80% of the non-UK resident's relevant disregarded income should consist of amounts to which none of them has a beneficial entitlement.

Section 819(3) ITA defines condition B:

> Condition B is that, so far as there is a failure to fulfil that intention, that failure—
>
> (a) is attributable (directly or indirectly) to matters outside the control of the investment manager and persons connected with the investment manager, and
>
> (b) does not result from a failure by any of them to take such steps as may be reasonable for mitigating the effect of those matters in relation to the fulfilment of that intention.[30]

SP 1/01 provides:

> 48. The 20% test is treated as satisfied throughout any period, not exceeding five years, for which it is met in respect of the total taxable income of the period arising from transactions carried out through the investment manager. It is also treated as satisfied if the manager intended to meet that test but failed to do so, wholly or partly, for reasons outside the managers control, having taken any reasonable steps to fulfil that intention. This means that the manager must fulfil the intention to keep its beneficial entitlement within 20% of the total taxable income for the period insofar as it is reasonable to do so, but is not required to get within that figure at any cost, for instance where there are good commercial reasons for not achieving.

72.10.1 *"Relevant disregarded income"*

For IME non-resident IT relief, s.821 ITA provides:

> (1) This section applies for the purposes of this Chapter.

(b) a period of not more than 5 years comprising two or more tax years including that one.

(3) If section 819 applies for the purposes of section 816, a "qualifying period" means—

(a) the accounting period of the non-UK resident company in which the transaction in question is carried out, or

(b) a period of not more than 5 years comprising two or more complete accounting periods including that one."

[30] The equivalent for IME PE relief is s.1147(2)(3) CTA 2010.

There are two definitions, one for individuals/trusts and another for companies. It is easier to follow if they are read side by side:

s.821(2)(4): trusts/individuals	**s.821(3)(5): companies**
(2) If section 819 applies for the purposes of section 813,[31]	(3) If section 819 applies for the purposes of section 816,[32]
the "relevant disregarded income" of the non-UK resident for the qualifying period is the total of the non-UK resident's income for the tax years comprised in the qualifying period which derives from the transactions mentioned in subsection (4).	the "relevant disregarded income" of the non-UK resident company for the qualifying period is the total of the non-UK resident company's income for the accounting periods comprised in the qualifying period which derives from the transactions mentioned in subsection (5).
(4) The transactions referred to in subsection (2) are investment transactions—	(5) The transactions referred to in subsection (3) are transactions—
(a) carried out by the investment manager on the non-UK resident's behalf, and	(a) [identical]
(b) in relation to which the independent investment manager conditions are met, ignoring the requirements of the 20% rule.	(b) in relation to which the investment manager does not fall to be treated as a permanent establishment of the non-UK resident company, ignoring the requirements of the 20% rule.

Section 1148(4)(5) CTA 2010 provides the equivalent for IME PE relief in identical wording.

72.10.2 *"Beneficial entitlement"*

For IME non-resident IT relief, s.822(1) ITA provides:

> This section applies for the purposes of this Chapter.

In fact the expression "beneficial entitlement" only appears in 20% rule

[31] This applies to individuals and trusts: see 45.5 (Disregarded income).

[32] This applies to companies: see 45.5 (Disregarded income).

condition A, so the definition is only needed for that purpose.

> (2) A person has a "beneficial entitlement" to relevant disregarded income if the person has or may acquire a beneficial entitlement that is, or would be, attributable to the relevant disregarded income as a result of having an interest or other rights mentioned in subsection (3).
> (3) The interests and rights referred to in subsection (2) are—
> (a) an interest (whether or not an interest giving a right to an immediate payment of a share in the profits or gains) in property in which the whole or any part of the relevant disregarded income is represented, or
> (b) an interest in, or other rights in relation to, the non-UK resident.

Section 1148 CTA 2010 provides the equivalent for IME PE relief.

72.10.3 *20% rule: HMRC practice*

SP 1/01 provides:

> 45. In essence the requirement is that the investment manager and persons connected with it, including connected charities, must not have a beneficial entitlement to more than 20% of the non-residents chargeable profit arising from transactions carried out through the investment manager. The definition of connected persons is that in s 993 ITA 2007.
> 46. Management fees paid to the investment manager and persons connected with it are not included in the chargeable profit provided they would be allowable in computing the profit of the non-resident were it chargeable to UK tax. This applies equally to incentive fees, performance fees or incentive allocations which are calculated by reference to any increase in the net asset value or profits of the relevant non-resident. This treatment of incentive allocations is explained further below...
> 49. This is an example of how the test may be met throughout a period of five years:

Years	**1**	**2**	**3**	**4**	**5**
Taxable income of non-resident	£100	£200	£200	£250	£250
Entitlement of manager to above	£32	£58	£40	£35	£5
Expressed as % for each year	32%	29%	20%	14%	2%
Average % over qualifying period	32%	30%	26%	22%	17%

> It may be assumed that the test is satisfied for year one because (a) in this example it was the managers intention to have a beneficial entitlement to an average of 20% or less in aggregate over a five year

period and (b) that intention was fulfilled. Had the 20% beneficial entitlement been achieved before the five years were up, then that shorter period would have been the qualifying period. A second qualifying period of up to five years could include years 2, 3, 4, 5 and 6 and so on.

50. As with any other tests for the exemption, unless specified otherwise, the UK tax rules regard companies, including LLCs, as opaque and the CTA 2010 rules apply. Partnerships (including LLPs to which s 863 ITTOIA/1273 CTA 2009 apply) are transparent for income and corporation tax purposes: CTA 2010 rules will apply to partners within the charge to CT and ITA 2007 to partners within the charge to IT. In addition, the rule for non-resident companies at s1149 CTA 2010 treats partnership collective investment schemes in which they invest as assumed companies for the purposes of the 20% test.

51. Non-UK resident investors in a fund which is structured as a partnership will be partners and participants in the fund. Where a non-resident is connected to the investment manager the 20% test would be automatically broken since all the non-resident participants would be connected to the investment manager under s 993(4) ITA 2007 by virtue of their being partners in the same partnership. The investment manager and connected persons would then be entitled to all the income of that non-resident. Accordingly, where the investment management services are provided to a collective investment scheme (as defined in the Financial Services and Markets Act 2000) the 20% test is applied by looking at the scheme as a whole rather than at the individual participators. It is not then relevant that the investment manager may be connected to the non-resident as partner (s.835Q ITA 2007 and s.1149 CTA 2010) or that the non-resident participants themselves carry on a financial trade as the availability of the exemption is instead tested solely by reference to the nature of the activities of the notional company represented by the scheme.

52. In certain circumstances the investment manager may be connected with the participants because both are partners in one or more partnerships which have an interest in the fund in question. Where the 20% test is failed as a consequence of aggregating the managers income with that of certain partners who are not connected persons otherwise than as a result of s 993(4) ITA 2007, ie by being partners in a partnership, the failure will be regarded as a failure under s.835N ITA 2007 and s.1147 CTA 2010 to fulfil an intention to satisfy the test. But in certain situations that failure will be considered as:

(a) attributable to matters outside the control of the manager and persons connected with it; and

(b) as not being the result of a failure to take reasonable steps to

> mitigate the effect of those matters in relation to the fulfilment of that intention.
>
> In those situations the 20% test will be met. The legislation will be applied in this way where:
>
> – the connected persons are partners other than solely in a fund under consideration; and
>
> – partnership is the only reason that the manager is connected with them.

This is a fudge to avoid undesirable consequences of the ultra-wide definition of connected person.[33]

> 53. Where overseas pension funds are set up under trust the trustees do not have beneficial ownership of the pension fund income although they may be the legal owners. The 20% test will not therefore apply where the trustee is connected to the UK investment manager. In practice it would be unusual for an overseas pension fund to be carrying on a financial trade.
>
> ...[34]
>
> 55. Some non-residents remunerate investment managers with profit or incentive allocations and in consultations HMRC, investment managers and advisors reached a consensus that these are performance fees in substance. As such, these are income in nature and where they are recognised by the UK manager as fee income the allocations may be treated as fees payable by the non-resident when computing the chargeable profit. Furthermore, where HMRC is satisfied that some of the allocations are due to an overseas service provider as remuneration for those services at the arms length rate those allocations will have the same treatment in computing relevant excluded income.
>
> 56. Deferred fees, or securities or interests provided as reward, may in turn generate some form of return. The legislation draws no distinction between the forms in which the profits of the fund are attributed to deferred fees or other investments as the test is based on beneficial entitlement to the chargeable profits of the non-resident and if the managers beneficial entitlement to those profits, including the return on the securities, interests or deferred fees, exceeds 20% the test will not have been met.
>
> 57. Options to acquire any securities or interests in the non-resident, within the meanings at s 420 ITEPA 2003, need only be considered in the context of the 20% test when the options are exercised.

[33] See 104.8 (Width of definition).

[34] The paragraph omitted here discusses “control”; see 104.3.3 General control).

> 58. Some investments in a non-resident may be linked to structured products issued to customers which provide a return based on the performance of the non-resident, an example of which would be a bank investing in a non-resident fund and selling a product to a customer on which the return is linked to the performance of the fund. In such circumstances the beneficial entitlement to the income of the non-resident remains with the investor in the non-resident, in this example the bank, and not the holder of the structured product, such as the customer.

72.10.4 *Position if 20% rule not met*

Section 823 ITA provides:

> (1) This section applies in the case of an investment transaction in relation to which the independent investment manager conditions are met, except for the requirements of the 20% rule.
>
> (2) This Chapter has effect as if the requirements of that rule were met in relation to the transaction but only in relation to—
>
> (a) so much of the transaction income of the non-UK resident as falls within subsection (3), if this section applies for the purposes of section 813, or
>
> (b) so much of the income of the non-UK resident company deriving from the transaction as falls within subsection (3), if this section applies for the purposes of section 816.
>
> (3) Income falls within this subsection if it does not represent income—
>
> (a) which is relevant disregarded income of the non-UK resident, and
>
> (b) to which the investment manager or a person connected with the investment manager has or has had any beneficial entitlement.

SP 1/01 provides:

> 47. Where the 20% threshold is exceeded, the part of the income of the non-resident to which the investment manager and connected persons are beneficially entitled is excluded from the limitation of charge. The limitation of charge will apply to the part to which they are not beneficially entitled provided the other tests in the investment manager provisions are met.

72.10.5 *20% rule: mutual funds*

Section 824 ITA provides:

(1) This section applies if amounts arise or accrue to the non-UK resident as a participant in a collective investment scheme.[35]

(2) It applies for the purposes of determining whether the requirements of the 20% rule are met in relation to a transaction carried out for the purposes of the scheme [(so far as the transaction is one in respect of which such amounts so arise or accrue)]1.

(3) In applying this section make the following assumptions—

(a) that all the transactions carried out for the purposes of the scheme are carried out on behalf of a company ("the assumed company") which is—

(i) constituted for the purposes of the scheme, and

(ii) non-UK resident, and

(b) that the participants do not have any rights in respect of the amounts arising or accruing in respect of those transactions, other than the rights which, if they held shares in the assumed company, would be their rights as shareholders.

(4) If the scheme is such that the assumed company would not be regarded for tax purposes as carrying on a trade in the United Kingdom in relation to the appropriate relevant period,[36] the requirements of the 20% rule are treated as met in relation to a transaction carried out for the purposes of the scheme.

(5) If the scheme is such that the assumed company would be so regarded for tax purposes, sections 819 to 823 have effect in relation to a transaction carried out for the purposes of the scheme with the modifications in subsection (6).

(6) The modifications are—

(a) for references to the non-UK resident substitute references to the assumed company, and

(b) for references to the non-UK resident's relevant disregarded income for a qualifying period substitute references to the sum of the amounts that would, for relevant periods[37] comprised in

[35] Section 824(7) incorporates the FSMA definitions of participant and CIS; see 66.2 (Participant/participate); 66.3 (Mutual fund/CIS/OIEC).

[36] Section 824(7) provides: "In this section—
"the appropriate relevant period" is—
(a) the tax year in which the transaction income is chargeable to income tax, if this section applies for the purposes of section 813, or
(b) the accounting period in which the transaction is carried out, if this section applies for the purposes of section 816,"

[37] Section 824(7) provides: "In this section—
"relevant period" means—

> the qualifying period, be chargeable to tax on the assumed company as profits deriving from the transactions—
> (i) carried out by the investment manager, and
> (ii) assumed to be carried out on behalf of the company.

72.10.6 *20%/independence test interaction*

SP 1/01 provides:

> 59. The independence test and the 20% test apply quite separately. For example, a UK investment manager acts for an overseas trading fund constituted as a company. If the investment manager is not acting in an independent capacity in relation to the fund company then the whole of the income of the fund is liable to assessment. If the independence test is satisfied, then the 20% test must be separately addressed. If the investment managers interest in the fund company is 25% then that share of the funds trading income is liable to assessment.

72.11 Cond. E: Customary remuneration

Section 818 ITA(6) provides:

> Condition E is that the remuneration which the investment manager receives in respect of the transaction for the provision of investment management services to the non-UK resident is not less than is customary for that class of business.

SP 1/01 calls this "the customary rate test"

This is the equivalent of broker condition C. It overlaps with investment manager condition C since an arm's length relationship would normally involve customary remuneration.

SP 1/01 explains the meaning of "customary remuneration":

> 60. The UK investment manager must receive remuneration at a rate that is not less than customary for the services. The legislation does not define what is customary nor does it specify from whom remuneration must be received although, as already explained, HMRC will not regard a UK investment manager as acting in an independent capacity on behalf of the non-resident unless the relationship between them is that of persons carrying on independent businesses and dealing with each other at arms length.
> 61. HMRC will be guided by the OECD Transfer Pricing Guidelines for

(a) a tax year, if this section applies for the purposes of section 813, or
(b) an accounting period, if this section applies for the purposes of section 816.

Multinational Enterprises and Tax Administrations when determining whether a pricing structure applies the customary rate and will look at whether the net effect of any provision made or imposed by means of a transaction or series of transactions provides the UK investment manager with a level of remuneration which would have been achieved at arms length. All circumstances will be taken into consideration, including whether that remuneration has been reduced below the arms length rate in any way either before or after payment to the UK investment manager.

62. HMRC recognises that remuneration structures through which the non-resident pays fees in a particular class of investment management take numerous forms, with variations including, for example, investment terms intended to attract certain investors or to lock in an investment. The arms length definition of customary rate for the independent investment manager means that such arrangements between unconnected parties would not jeopardise this test. Transactions made at arms length may include directly or indirectly reduced or rebated fees for unconnected investors in the non-resident. Similarly, rebated, reduced or zero fee arrangements which are made between the manager and the unconnected non-resident for genuine commercial reasons, such as where the manager is receiving a separate fee in respect of the assets in which the non resident is investing, would be regarded as transactions made at arms length.

63. In determining whether remuneration has been reduced below the arms length rate in any way HMRC will consider both the remuneration received by the UK investment manager and any amounts payable to any person:

- for services provided to the non-resident, or
- in connection with the non-resident, or
- that relate to the performance of the non-resident.

These amounts, which may be payable by either the non-resident or the UK investment manager, will be treated as reducing the remuneration received in the UK below the customary rate unless they can be shown to be at an arms length rate.

64. HMRC consider that in order to meet the customary rate test fees payable to a UK investment manager should be recognised for UK tax purposes when earned. A cash payment may be deferred or reinvested in the fund but this should not affect the recognition of the fee income. As a result, the UK manager would pay tax on the fee for the period when earned and no difficulty with the customary rate test is envisaged in these circumstances. If cash settlement of management fees is deferred the manager may have effectively made a loan to, or investment in, the non-resident, as a result of which the return on that loan or investment

> would be attributable to the manager and may need to be taken into account for the 20% test.

Paras 64 onwards do not stand up to much examination.

> 65. Where a UK investment manager, a partner, LLP member, director or employee of that manager, or a person connected with any of these, acquires a security or an interest of some other kind, in the non-resident or in another entity, for services provided by the manager:
> – to the non-resident
> – in connection with the non-resident
> the customary rate test will only be met if it can be shown that the manager, partner or LLP member brings the security or other interest into charge to UK tax at its market value or, in the case of a director or employee, that the security or other interest is taxed as employment income in accordance with Part 7 ITEPA 2003. The definition of security here will be that found in s420 ITEPA 2003. An interest is intended to apply to an interest in a security or securities and any other interest not within the s420 ITEPA definition.
> 66. Where an option is brought into UK tax charge at full market value at the time it is exercised HMRC will not regard this remuneration as less than the arms length rate for the purposes of the customary rate test.
> 67. Preferential investment terms involving reduced or rebated fees for directors or staff of the investment manager may be a benefit provided by reason of employment and thus may give rise to an employee income tax charge under ITEPA 2003. Similarly, where the investment manager is a partnership, preferential fee terms may be offered to partners who acquire interests in the non-resident, in which case the ensuing personal tax consequences will apply. HMRC will not ordinarily regard these terms as reducing the investment managers fees for services below the arms length amount unless significant UK tax avoidance or evasion is suspected, in which case all the facts and circumstances will be considered to determine whether the rate of remuneration is below the arms length amount.
> 68. The vast majority of non-residents easily meet the customary rate test. However, HMRC has occasionally encountered structures in which offshore arrangements have been used to evade or avoid UK tax. Commonly, such structures involve arrangements whereby fees charged to the non-resident are diverted to an offshore vehicle at a non-arms length rate. Such arrangements represent an abuse of the exemption, place compliant[38] UK managers at a competitive disadvantage and may

[38] For this contested use of the word “compliant” see App 1.4 (“Compliant”).

> result in a non-resident failing to meet the terms of the exemption unless remedial action is taken.

The SP then turns to consider what evidence may be required:

> 69. HMRC has published guidance in its International Manual on what documentation and evidence is required to demonstrate an arms length reward. At the time of publication of this Statement that guidance appears at INTM483030 and it is advisable to check that the most up to date advice is being followed.
>
> 70. The legislation considers the obligations and liabilities of the non-resident and whether the non-resident is exempt from UK tax on its UK trading profits. A non-resident may be a taxable person and in considering whether that is the case, and whether the UK agent has been rewarded with an arms length rate, it may be appropriate in some circumstances for HMRC to ask for information such as statutory financial statements of the non-resident and its agents and a full and factual functional analysis of all services provided to the non-resident.
>
> 71. In circumstances where such information is requested to ascertain whether the remuneration has been at the customary rate HMRC would normally ask the UK investment manager, but in some circumstances may ask the non-resident, to provide such information as may reasonably be considered necessary. The information powers available to HMRC would include those relevant to the tax liabilities of the non-resident but where reasonable co-operation is provided by the UK investment manager and/or, where appropriate, the non-resident it is intended that a reasonable opportunity will be given to supply the information voluntarily before the use of information powers is considered.
>
> 72. Where appropriate documentation, including a factual functional analysis and an acceptable transfer pricing methodology, is in place to support a tax return, the investment manager will have an opportunity to agree an adjustment to the return to meet the customary rate test or for any other reason, or to have adjustments determined through litigation where such an agreement has not been reached, without the non-resident having thereby failed the customary rate test.
>
> 73. However, where the investment manager does not have the appropriate documentation and methodology in place at the time of making a return and the remuneration for that period is less than the arms length rate, it is possible that the customary rate test has not been met. HMRC would expect the non-resident and the investment manager to ensure that adequate measures are taken to prevent the fund or its investors being exposed to UK tax and will give reasonable notice of possible action, and the reasons for it, to both the non-resident and its

> agents if it discovers any circumstances in which the non-resident may not have met the Investment Manager Exemption tests.
> 74. Each case will be considered on its own facts and it is possible that appropriate corrective action through adjustment to the customary rate will still enable the test to be met. It is not possible to describe every scenario but this general approach is intended to provide certainty on what the legislation requires and to reassure non-residents that a disproportionate outcome will not arise from a corrected failure to meet the test.

72.12 Independent broker conditions

Section 817 ITA provides:

> (1) The independent broker conditions are met in relation to a transaction carried out on behalf of a non-UK resident by a broker in the UK if—
> (a) conditions A to D are met, if this section applies for the purposes of section 813 [individuals/trustees], or
> (b) conditions A to C and E are met, if this section applies for the purposes of section 816 [companies].

I refer to these as "**broker conditions A to E**".

72.12.1 *Cond. A/B: Broker business*

Section 817 ITA provides:

> (2) Condition A is that at the time of the transaction the broker is carrying on the business of a broker.
> (3) Condition B is that the transaction is carried out in the ordinary course of that business.

The former International Tax Handbook provided:

> **940. NRs: accepting TMA 70 s82 broker exemption: in course of business**
> The exemption in Section 82(1) applies only to transactions which the broker carries out (on behalf of the non-resident) "in the ordinary course of his business as such". In modern times it has become common for brokers to extend their business beyond mere "broking" but it does not follow that, just because what they do is now customarily done by brokers, they do it in the ordinary course of their business as brokers. Thus stockbrokers and commodity brokers often provide investment management schemes for clients. But investment management does not thereby become an ordinary function of a broker. However, there are

> special provisions for investment managers which are considered in ITH951.

72.12.2 *Condition C: Remuneration*

Section 817(4) ITA provides:

> Condition C is that the remuneration which the broker receives in respect of the transaction for the provision of the services of a broker to the non-UK resident is not less than is customary for that class of business.

72.12.3 *Cond. D: UK representative*

Section 817(5) ITA provides:

> Condition D is that the broker does not fall for the purposes of Chapter 2B of this Part, or of Chapter 1 of Part 7A of TCGA, to be treated as a UK representative of the non-UK resident in relation to
> [1] any other income which is chargeable to income tax, or
> [2] amounts which are chargeable to capital gains tax,
> for the same tax year as the transaction income.

This condition applies to individuals/trustees and not to companies.

72.12.4 *Cond. E: Permanent establishment*

Section 817(6) ITA provides:

> Condition E is that the broker does not fall to be treated as a permanent establishment of the non-UK resident company in relation to any other transaction of any kind carried out in the same accounting period of the non-UK resident company as the transaction in question.

The wording is the equivalent of broker condition D for companies (using the company tax concept of PE rather than the individual/trustee concept of branch/agency).

72.13 Transactions through broker

Section 828 ITA provides:

> (1) For the purposes of this Chapter a person is regarded as carrying out a transaction on behalf of another if the person—
> (a) undertakes the transaction, whether on behalf of or to the account of the other, or
> (b) gives instructions for it to be so carried out by another.

> (2) In the case of a person who acts as a broker or investment manager as part only of a business, this Chapter has effect as if that part were a separate business.

72.14 Relevance of trading to IME

The question whether the non-resident client is trading is crucial for the IME. Unless the non-resident client is trading, the three IME exemptions are not needed:

(1) In the absence of a trade, a non-resident company is not subject to CT even if it has a permanent establishment and so the company does not have to rely on IME PE relief.

(2) In the absence of a trade, there can be no UK representative and the non-resident does not need to rely on IME UK-representative relief.

(3) In the absence of a trade, non-residents may qualify for non-resident IT relief and do not have to rely on IME non-resident IT relief.

SP 1/01 acknowledges this:

> 14. The Investment Manager Exemption legislation has no relevance unless the non-resident is trading in the UK.
> 15. If the transactions carried out through the investment manager are part of the trade carried on by the non-resident then, unless the [IME] tests ... are satisfied ... the income from that trade, including any profit from the realisation of securities, for example, is taxable. ...

72.15 What is a financial trade?

For general discussion of the concept of trade, see App.2.23 (Trade). I consider here when there is a trade of dealing in securities, options and futures (which I abbreviate to securities, "financial assets" or "financial transactions"); and the related question of when gambling is a trade.

The trading/non-trading distinction is important here, for non-resident individuals, trusts and companies; but it is elusive.

72.15.1 *"Investment": Terminology*

"Investment" or "investing" is a word with several meanings.[39]

[39] For discussion of this terminology in a commercial context see Graham & Dodd, *Security Analysis* (6th ed., 2009), chap 4 (distinctions between investment and speculation). For discussion in a UK tax context, see Kessler, Wong & Shah, *Taxation of Charities and Nonprofit Organisations*, (14th ed., 2024-25), para 6.8 (Investment) online version *https://www.taxationofcharities.co.uk*

In one sense all securities are "investments". We have investment managers, investment brokers and investment companies or trusts. This is convenient and common usage. However two distinctions are sometimes drawn which narrow the meaning of "investment":

Investment/gambling distinction: A distinction is sometimes drawn between:
(1) investing in securities and
(2) gambling or speculating.

I discuss the meaning of "gambling" and "speculating" below. The point here is that gambling or speculating (whatever that means) is not (in some sense of the word) investing.

Investment/trading distinction: For tax purposes a distinction is drawn between:
(1) investing in securities and
(2) *trading* in securities. (In tax terminology "dealing" is an informal synonym of trading, but I think it is clearer to use the statutory term.)

The point here is that trading (whatever that means) is not investing (in some sense of the word). In this sense, which is strictly correct tax terminology, a trader is not "investing" and holds securities as trading stock and not as "investments". I stress this because one often finds the word "investment" used in a trading context.[40] HMRC agree. The Crypto Manual provides:

> **CRYPTO20250: What is trading** [Apr 2021]
> It's often the case that individuals and companies entering into transactions consisting of buying and selling tokens will describe them as 'trades'. However, the use of the term 'trade' in this context is not sufficient to be regarded as a financial trade for tax purposes.

This is not surprising because in the finance industry, the terms "investing", "trading" and "dealing" are all used as synonyms: brokers and investment managers do not draw the tax distinction.

In the absence of trade, a financial transaction is usually investment, and the trading/non-trading tax distinction can be described as a trading/investment distinction. This has been doubted:

> [Counsel for HMRC] mildly criticised para 11 for having posed the

[40] See 72.6 (Investment transaction list).

> question 'trade or no trade?' but then, having treated that as equivalent to 'trade or investment?' I think there is some force in that criticism, since the word 'investment' has many shades of meaning, both in taxing statutes and elsewhere ....[41]

This is strictly correct. Non-financial transactions may easily be non-trade and non-investment. The purchase of a lunch-time sandwich, for instance, is neither trade nor investment. Financial transactions may also be non-trading and non-investment. There may be a gap. (In particular, financial transactions have sometimes been described as "gambling" and classified as neither trading nor investment.) However, for most practical purposes that can be disregarded, and in the context of financial transactions, the trade/non-trade distinction can be regarded as equivalent to trade/ investment distinction.

This discussion of terminology does not identify the dividing line between trading and investment, but it is a necessary start if we are to know what we are talking about.

72.15.2 *Principles*

The principles are summarised in *Cooper v C & J Clark*:

> [1] First, marketable securities, being income-yielding assets usually capable of appreciating in value, are prima facie purchased and sold by way of investment and not by way of trade.
> [2] Secondly, a series of purchases and sales may sometimes, if carried out pursuant to a deliberate and organised scheme of profit-making, amount to a trade.
> [3] Thirdly, it is easier to characterise a series of purchases and sales as a trade in a case where they are made by a trading entity[42] as opposed to an individual.
> [4] Fourthly, in the case of a trading entity that characterisation is more easily made where the purchases and sales are substantial in relation to

[41] *Wannell v Rothwell* 68 TC 719 at p.730.

[42] By "trading entity" it is not entirely clear whether the judge had in mind:
(1) an entity carrying on a trade apart from any financial transactions (such as the taxpayer company in *C&J Clark*, which manufactured shoes); or
(2) any company entitled to carry on a trade, whether or not it carries on any activity apart financial transactions.
The general rule is that it is easier to characterise a series of purchases and sales as a trade in any case where they are made by a company entitled to carry on a trade. See 72.15.4 ("Gambling").

> its other activities, all the more so where they are of frequent occurrence and extend over a long period of time.[43]

This is uncontentious and helpful as far as it goes.

72.15.3 *"Speculative" transactions*

Cooper v C & J Clark continues:

> Fifthly, it is sometimes helpful, although not decisive, to ask whether a series of sales and purchases is speculative or not. The reason why the question is sometimes helpful is that the answer may throw light in one direction or the other, but it is not decisive because according to the circumstances either a trade or a course of investment may be speculative.[44]

What does speculative mean? Graham & Dodd canvas various possible definitions, and suggest the following "as in harmony with the popular understanding of the term and the requirements of reasonable precision":

> An investment operation is one which, upon thorough analysis, promises safety of principal and a satisfactory return. Operations not meeting these requirements are speculative.[45]

[43] 54 TC 670 at p.676.

[44] 54 TC 670 at p.676.

[45] Graham & Dodd, *Security Analysis* (6th ed., 2009), p.106.
Fred Schwed Jr gives a similar explanation of this slippery word in *Where are the Customers' Yachts?* (1940) Chapter 8:

> "Investment and speculation are said to be two different things, and the prudent man is advised to engage in the one and avoid the other. This is something like explaining to the troubled adolescent that Love and Passion are two different things. He perceives that they are different, but they don't seem quite different enough to clear up his problems.
>
> Investment and speculation have been so often defined that a couple more faulty definitions should do no harm, the science of economics having reached a point where further confusion is impossible. Thus,
>
> - Speculation is an effort, probably unsuccessful, to turn a little money into a lot.
> - Investment is an effort, which should be successful, to prevent a lot of money from becoming a little.
>
> If you take a thousand dollars down to Wall Street and attempt to run it up to $25,000 in the course of a year, you are speculating. If you take $25,000 down there and attempt to earn a thousand dollars a year with it (by buying twenty-five four per cent bonds) you are investing. ..."

Sometimes the word "speculative" is used to describe a transaction made with a view to profit (as opposed to a transaction intended to hedge a financial risk). In that sense

In short, a financial transaction is described as "speculative" if it is risky and especially if the purchaser stands to make or lose money depending on how the market moves in the short term. I use the expression "speculative (high-risk)".

In that sense, financial transactions are often if not mostly speculative (high-risk) though it is a question of degree and some transactions are more speculative (high-risk) than others.

The passage from *C&J Clark*, while describing the issue of whether a transaction is speculative as "sometimes helpful" does not inform us whether a positive answer supports a conclusion of trading or non-trading. I think the inference is that speculative (high-risk) transactions are more likely to be trading. But it is considered that to ask whether a transaction is speculative (high-risk) is rarely if ever going to be helpful. See *Lewis Emanuel v White*:

> The word 'speculation' is not, I think, as a matter of language, an accurate antithesis either to the word 'trade' or to the word 'investment': either a trade or investment may be speculative.[46]

But *Eclipse Film Partners No. 35 v HMRC* took a different view:

> [Counsel for the taxpayer] criticised the FTT's statement ... that the transactions entered into by Eclipse did not have the speculative aspect which the FTT would expect to see in trading transactions. He submitted that they were wrong to view speculation as a critical ingredient of trade. ... We agree that carrying on a trade does not necessarily require that there must be risk. It is apparent, however ... that the FTT's view was that speculation is an indication of trade, not that it is essential. That is a perfectly legitimate approach.[47]

But the question in *Eclipse* was not trade or investment. It was trade or non-trade/non-investment, and in that context the element of speculation is perhaps more relevant.

it is relevant to ask whether a transaction is speculative, in hedging transactions the important question is the tax treatment of the liability which is hedged. However hedging is a special case, and I do not think that is what the judge had in mind in *C&J Clark* when he said that it is relevant to ask whether a series of sales and purchases is speculative.

[46] 42 TC 369 at p.377; this passage was cited with approval in *Wannell v Rothwell* 68 TC 719 at p.730.

[47] [2015] STC 1429 at [143].

72.15.4 *"Gambling"*

In order to avoid confusion, it is essential to bear in mind that the word "gambling" may be used in two senses.

In the strict sense:

(1) Gambling[48] contracts were formerly unenforceable
(2) Gambling transactions are not a trade

I refer to this as the "**gaming/wagering sense"**. The Gambling Act 2005 abolished the former contract law rule that gaming/wagering contracts were unenforceable in English law.[49] However the rule remains that the activity of gaming/wagering is not a trade, and the profits (if any) are not subject to income tax;[50] or CGT.[51]

[48] Also called gaming, wagering and betting.

[49] Section 63 Financial Services Act 1986 had already restricted the rule that bets on stock market movements were unenforceable.

[50] *Hakki v Secretary of State for Work and Pensions* [2014] EWCA Civ 530 (professional poker player not carrying on trade). BIM provides:

> **BIM22015 Meaning of trade: betting and gambling - introduction** [Jan 2019]
> The basic position is that betting and gambling, as such, do not constitute trading. Rowlatt J said in *Graham v Green* [1925] 9 TC 309:
> 'A bet is merely an irrational agreement that one person should pay another person on the happening of an event.'
> This decision has stood the test of time. In an Australian case, *Evans v FCT* [1989] 20 ATR 922, 89 ATC 4540 Hill J said:
> 'There has been no decision of a court in Australia nor, so far as I am aware, in the UK where it has been held that a mere punter was carrying on a business.'
> However, an organised activity to make profits out of the gambling public will normally amount to trading.
> Although over time new forms of games of chance have evolved, these principles remain the same. The taxpayer placing a spread bet is not normally carrying on a trade (see BIM22020 for exceptions). They are not taxable on the profits, nor do they receive relief for their losses. The bookmaker organising the spread bet is taxable on their profits."

In Northern Ireland, gaming was legalised more recently: the Betting, Gaming, Lotteries and Amusements (Amendment) Act (Northern Ireland) Act 2022. It seems right that changes to gaming law in individual countries of the UK should not affect the issue of whether gaming constitutes a trade, which should be the same across the whole of the UK.

On the policy issues, see Royal Commission on the Taxation of Profits and Income, Final Report (1953) Cmd 9474 chapter 13.

[51] Section 51(1) TCGA. The reason for IT/CGT exemption is (1) that losses are generally more likely than profits, and one could not tax profits without allowing

In a loose sense, "gambling" means (more or less) the same as speculative, in the sense discussed above: that is, high-risk. I refer to this as the **"loose (high-risk) sense"**. Thus the purchase of a future or option, or bitcoin, say, may constitute gambling in the loose (high-risk) sense, but it is not gambling in the strict (gaming/wagering) sense.[52]

In *Lewis Emanuel v White* the court said:

> ... it is certainly true, at any rate in the case of an individual, that he may carry out a whole range of financial activities which do not amount to a trade but which could equally not be described as an investment, even upon a short-term basis. These activities include betting and gambling in the narrow sense. They also include, it seems to me, all sorts of Stock Exchange transactions. For want of a better phrase, I will describe this class of activities as gambling transactions.

It seems a little strange to describe "all sorts of stock exchange transactions" as gambling, but the passage makes sense if one bears in mind that it was written in 1965, when the cult of the equity had only just begun, and before it had received judicial notice.[53] Before then, the only assets recognised as investments were gilts and mortgages, and equities would not be regarded as investments: they were felt to be too risky. They would not naturally be regarded as trading, so they were put into the category of non-trading non-investments.

some relief for losses; (2) betting duty may apply instead.

In relation to financial bets (as opposed to betting such as sports betting) the commercial effect of a bet is (more or less) the same as a cash settled option or future, so the existence of two distinct tax regimes is somewhat odd; but there it is. For spread betting, see 18.18.18 (Betting).

[52] HMRC agreed:

CRYPTO10450: Why HMRC does not consider buying and selling cryptoassets to be gambling [Apr 2021]

HMRC does not consider the buying and selling of cryptoassets to be the same as gambling. The term 'gambling' is not defined in the Income Tax or Corporation Tax Acts, or in the Taxation of Chargeable Gains Act 1992. Whether a transaction can be characterised as betting or gambling is a question of fact. It will be down to the caseworker to consider the particular facts of any transaction involving cryptoassets and conclude whether that transaction had the character of betting or gambling. Where a customer considers that their transactions involving cryptoassets amounted to gambling please make a referral following the process at CRYPTO100500.

[53] *Sinclair v Lee* [1993] Ch 497 at p.512: "The cult of the equity ... did not really begin until the mid or late 1950s."

It is considered that to ask whether or not transactions are gambling (in the loose (high-risk) sense) is the same as to ask whether or not transactions are speculative (high-risk): it is not helpful in determining whether or not transactions are to be classified as trading.[54]

72.15.5 *Trading: companies/individuals*

It is well established that the test for whether a company is trading in financial assets is different from the test of whether an individual is trading, and that companies are more likely to be trading than individuals. The reason is said to be that companies (unlike individuals) are usually entitled only to trade or to invest. They cannot carry on non-trading non-investment activities of the kind categorised as "gambling" (in the loose (high-risk) sense). The passage cited above continues:

> It seems to me, however, that in general it is much more difficult to bring the activities of a company within this class of gambling transactions. An individual may do as he pleases: a corporation must act within the limitations of its memorandum of association. All companies have power to invest; many companies have power to deal [ie trade] in securities; few companies can have power to enter into gambling transactions - i.e., by [the judge's] definition, transactions otherwise than by way of investment or trade. Where a transaction can be brought within the scope of an authorised object - e.g., investment or dealing - one would not readily treat the transaction as having been carried out ultra vires in pursuit of an unauthorised object - e.g., gambling. In other words, one expects a trading company's activities, apart from capital investment, to be by way of trade.

The reasoning is now invalid:

(1) Nowadays one would not readily describe normal equity investment as "gambling" even in the loose (high-risk) sense.

(2) Companies powers have increased.

The BI Manual notes point (2). It cites *Lewis Emanuel v White* and comments:

[54] Of course (in the absence of trade) it does not matter for individuals whether one describes financial transactions as investment or as gambling (in the loose high-risk sense), since the tax consequence is the same: the profits are subject to CGT and not IT.

> **BIM56870 Financial traders - instruments and shares: case law and companies** [Jun 2016]
>
> ... **Recent developments**
>
> Since the *Lewis Emanuel* case was heard, company law has been amended. S39 Companies Act 2006 now says:
>
> > 'The validity of an act done by a company shall not be called into question on the ground of lack of capacity by reason of anything in the company's constitution.'
>
> Furthermore, there is judicial approval for the right of a company to engage in speculative transactions. In *Hazell v Hammersmith & Fulham London Borough Council* [1991] 2 WLR 372 at p.372, Lord Templeman said:
>
> > '... Individual trading corporations and others may speculate as much as they please or consider prudent.'
>
> Although it is unlikely that a company would ever enter into a gambling transaction, there is no reason why its activities could not include speculative transactions which, while not being investments, might also not amount to trading.

It is considered that the rule continues to be valid that companies (assuming their articles authorise trading) are more easily held to be trading than individuals.[55] However the basis of that rule cannot now be the reason given in *Lewis Emanuel* (that financial transactions carried out by individuals should generally be classified as non-trading non-investment transactions but companies, unlike individuals, must either trade or invest, so they are more likely to be trading). One could simply say that the rule is now established and continues to hold even if its reasons have ceased to be sound. However, if needed the rule has another, sounder basis. This is that one badge or indication of trade is "trading structure" and companies (if their articles authorise trading) have that element of "trading structure" which individuals do not.[56]

Business Income Manual provides:

> **BIM56850 Financial traders - instruments and shares: case law and individuals** [Jan 2019]
>
> In the past, the approach taken in deciding whether a company is

[55] See 72.15.2 (Principles) item [3].

[56] Similarly, what may constitute a business if carried on by a company may not be a business if carried on by an individual: *American Leaf Blending Co v DG of Inland Revenue* [1978] UKPC 18, [1979] AC 676.

> carrying on a trade of buying and selling shares and other financial instruments has been different from that adopted for individuals....

Despite the words "in the past" I do not think the author intends to suggest the position is any different today.

Since different tests apply to determine whether companies and individuals are trading, I consider the cases for individuals and for companies separately.

72.15.6 *Trading by individual*

There have been five UK cases discussing whether individuals are trading in financial assets. The first is *Salt v Chamberlain* 53 TC 143 where Oliver J said:

> Where the question is whether an individual engaged in speculative dealings in securities is carrying on a trade, the prima facie presumption would be ... that he is not. It is for the fact-finding tribunal to say whether the circumstances proved in evidence or admitted take the case out of the norm.

In *Salt v Chamberlain* the individual relied on the following matters to justify a conclusion of trading. There were about 50 sale/purchase transactions per annum, over a four-year period. A substantial proportion of the transactions concerned options (rather than securities yielding income). One-third of purchases and sales were within the settlement period, and many others were within a short period thereafter. The purchases were financed in part by borrowing. On these facts the General Commissioners found that the taxpayer was not trading, and on appeal the court held that the Commissioners were entitled to reach that conclusion.

A similar approach was applied in Hong Kong Inland Revenue Board of Review Decision *Case No. D 42/90*. The following aspects of the matter might have justified a conclusion of trading. The individual's transactions were in Hang Seng Index futures contracts which had a short lifespan and produced no income. The individual ran an "active" account (the number of transactions is not recorded). The Board found that the taxpayer was not trading.[57]

The next UK case is *Wannell v Rothwell* 68 TC 719. In this case there were about 60 sale/purchase transactions per annum. The assets traded

[57] *https://www.info.gov.hk/bor/en/decisions/docs/d4290.pdf*

were shares and commodities. Some of the money used was borrowed. The taxpayer was aiming at quick profits and had no intention of taking possession of the commodities or (with rare exceptions) of holding shares. The Special Commissioner did not decide whether the taxpayer was trading, but the Judge found that the Special Commissioner would have been "almost bound" to reach the conclusion that the taxpayer was trading. I think it was significant that the assets traded included commodities as well as securities.

In assessing the significance of turnover of assets, one should take into account that active portfolio management is more common now than in the past. In *Manzur v HMRC*[58] transactions numbered between 240 and 300 per annum, which was described as "not numerous". Shares were sometimes held for as long as six months. This was held to be investment, not trade.

The most recent case is *Ali v HMRC*.[59] The facts were extreme. The individual conducted about 1000-2000 transactions each year. Shares were held for a few hours, or for a day or two. He worked a 40-hour week on his share dealing activities. Even that was held to fall within the no-man's land of fact and degree, but unsurprisingly the tribunal found it was trading.

The BI Manual provides:

> **BIM56860 Financial traders - instruments and shares: three cases involving individuals** [Jun 2016]
>
> An activity of buying and selling shares and other financial instruments undertaken by an individual will normally amount to investment or speculation falling short of trading unless there are factors which take the case 'out of the norm' (see BIM56850). ...
>
> **Salt v Chamberlain**
>
> The Commissioners in this case found that Mr Salt was not trading, and Oliver J held in the High Court that the facts entitled the Commissioners to come to this conclusion.
>
> Mr Salt was a mathematics graduate who used his knowledge of computers to forecast the movements in share prices. In the period 11

[58] [2010] UKFTT 580 (TC). However little weight should be given to this brief first tier tribunal decision, in which the taxpayer was not represented by counsel and the taxpayer's best case *Wannell v Rothwell* was not cited.

[59] [2016] SFTD 335. A disturbing feature of this case was that HMRC had sought penalties, contending that the Taxpayer's view was not merely incorrect but negligent. But neither side was represented by counsel.

December 1968 - 31 March 1973 he entered into approximately 200 transactions for the purchase and sale of securities, which included put and call options and settlements at the end of an account for balances only. He used his own funds as well as borrowings from the bank and against life assurance policies.

Wannell v Rothwell

Mr Wannell had previously worked for a commodity futures dealer as a trader prior to the commencement of his activity. His duties had included advising clients on long-term investments and short-term trading opportunities in commodity futures and options. He had obtained qualifications relevant to his duties and, in the course of his own activity, had access to market reports and analysis but not a full screen service. All the transactions were placed with a broker. There were 11 purchases and sales of commodities between May and October 1986 and 46 purchases and 49 sales of shares between October 1985 and August 1987. He dealt on his own account and there were no customers.

The Deputy Special Commissioner said:

> 'The essential point in the present case is that of organisation. Was the Appellant, doing two or three deals a month from home through brokers, but doing them with the benefit of experience, training and contacts which he had, organised in a way that a trader could be said to be organised? The case is very close to the borderline, and if the only question I had to decide were whether the Appellant was trading, I might be inclined to give him the benefit of the doubt and find that he fell, by a hair's breadth, on the trading side of the dividing line.'

This case considered not only the question of whether Mr Wannell was trading but whether he was trading commercially for the purposes of relief for losses (see BIM85705), and the Deputy Special Commissioner concluded that:

> 'a case which is so close to the trading borderline because of its lack of commercial organisation is bound to be on the wrong side of the [loss relief] borderline.'

When this case came before the High Court, Robert Walker J found that the Deputy Special Commissioner must be taken to have found that Mr Wannell was trading, but also that he had had sufficient evidence before him to come to the conclusion that the activity was not carried on commercially, so the losses could not be set off against general income...

Manzur

Mr Manzur was a retired surgeon. He used his own savings to begin acquiring stocks and shares. He made between 240 and 300 trades in a year using an online stockbroker. Some of the shares were turned over very quickly but others were retained for six months or more.

The tribunal held that Mr Manzur's buying and selling amounted to the management of a portfolio of investments rather than trading. They upheld the view in *Salt v Chamberlain* that the badges of trade were of limited value and said there was no definitive checklist which could be used to say whether someone was trading or not. The number and frequency of transactions, and the short-term nature of the holdings alone did not establish trading. Other factors taken into account were:

- the time spent on the activity (about two hours a day);
- the fact that Mr Manzur did not entirely rely on his own expertise but used the advice of brokers;
- that the activities were not characteristic of established share dealers, for example Mr Manzur had no customers and was dependent on market movements alone to make a profit.

Conclusion

The cases discussed above show that no one factor can determine whether an activity has been taken 'out of the norm'. Some factors may be more relevant in some cases than in others. You have to take a view after considering the relevant circumstances as a whole.

72.15.7 *Trading by trust*

There are no tax cases on whether trustees of a private trust are trading, but it is considered that their position is in principle similar to individuals.

In *Smith v Anderson* (a non-tax case discussing an early unit trust) James LJ said:

> In my opinion, nothing that is to be done under this deed by the trustees comes within the ordinary meaning of "business", any more than what is done by the trustees of a marriage settlement who have large properties vested in them, and who have very extensive powers of disposing of the investments, changing the investments, and selling them and reinvesting in other investments, according to their discretion and judgment ... That is not a business. No doubt there is power ... to dispose of the investments and reinvest in some similar securities ... This appears to me to be no more than the power of varying investments which you would find in an ordinary trust deed ...[60]

SP1/01 states that "In practice it would be unusual for an overseas pension fund to be carrying on a financial trade."

[60] 15 Ch D 247 at p.276.

72.15.8 *Trading by company*

There have been two cases discussing whether companies are trading in financial assets. Each concerned a trading company using spare cash to carry out stock exchange transactions.

In *Lewis Emanuel v White* 42 TC 369 the company carried out over 100 transactions per annum (described as "a very large number"). The majority were sold in the same year, often within a matter of weeks. It was held that the only possible conclusion was trading.

In *Cooper v C & J Clark* 54 TC 670 the company made only 13 transactions over nine months. The commissioners findings of trade were upheld, though only just (the judge would not have found there was a trade). So I think we can say that is an example of a non-trade.

It is considered the company's own classification of its activity as trading/non-trading (in the company's constitution, board resolutions and accounts) is a matter which in an otherwise marginal case ought to be decisive.

An activity may constitute a trade even it the activity is ultra vires the company. *Lewis Emanuel* was such a case: 42 TC at p.377. But in the light of subsequent changes to company law, this issue is not now likely to arise.

UK resident companies also need to consider the derivative contract rules in part 7 CTA 2009, which are not discussed here.

72.15.9 *Trading by partnership*

The same principles apply to partnerships as to companies.

The CT Manual provides:

> **CTM36580 BVCA statement and guidelines** [Feb 2018]
> ... Where the general partner provides management assistance to the companies in which investments are held by the partnership, such assistance would not, of itself, cause the limited partnership to be treated as trading.

That seems self-evident.

72.15.10 *SP 1/01*

SP 1/01 provides some heavily guarded generalities, and anyone who tries to use this guidance will find that it does not take them very far.[61] For

[61] There is similar (qualified) guidance in SP 3/02.

what it is worth, the material is set out here:

> 16. Whether or not a taxpayer is trading is a question to be determined by reference to all the facts and circumstances of the particular case. This applies as much to financial transactions as to other activities.
> 17. In determining the question of trading, any transactions carried out through an investment manager are to be considered in the context of the status and world-wide activities of the non-resident. It is not possible in this statement to consider every possible set of circumstances but, for example, an individual is unlikely to be regarded as trading as a result of purely speculative transactions.[62]
> 18. For a company, a transaction will generally be either trading or capital in nature (this may also be the case for non-corporate collective investment vehicles whether open-ended or closed-ended.)

The point of para 18 is that the transaction will not give rise to misc sweep-up income; see 33.12 (Futures and Options).

> If the main business of a non-resident company is a trade outside the financial area, or an investment holding business, the activities in the UK would normally amount to trading only if they constituted or were part of a separate financial trade. But if, exceptionally, activities which are an integral part of the profit earning activities of a non-financial trade are carried out through a UK investment manager (for example, hedging on the London terminal markets by a non-resident dealer in physical commodities) then that might amount to trading here. The view to be taken on a particular case will depend on all the facts of that case.
> 19. The active management of an investment portfolio of shares, bonds and money market instruments such as bills, certificates of deposit, floating rate notes and commercial paper does not constitute a trade.

The use of the term "investment" (if it carries its normal tax meaning) makes para 19 tautologous. Presumably the word is used in the wider sense, in which case the sentence makes an important point. But the author adds a qualification to neutralise that:

> But every case must be considered in the light of its own facts.
> 20. HMRC view short positions as conceptually the same as long positions and synthetic positions as conceptually the same as the equivalent real positions. Neither going short nor taking synthetic positions using derivatives are in themselves indicative of trading. Furthermore, synthetic positions that give exposure to part of an asset

[62] Likewise SP 3/02 para 8.

> are conceptually the same as synthetic positions that give exposure to the whole of an asset. Thus a synthetic position that gives exposure only to a bonds credit risk is no more or less likely to be a trading transaction than a synthetic or real position that gives exposure to the bonds coupon, liquidity, credit and currency risks. These techniques may constitute investment in themselves or may form part of an investment activity.
>
> 21. Where futures and options are used by non-residents who are collective investment vehicles (whether open-ended or closed-ended), pension funds and other bodies which either do not trade or whose principal trade is outside the financial area, Statement of Practice 03/02 Tax Treatment of Derivative Transactions will be applied.
>
> 22. ... [63] The criteria for deciding whether a non-resident financial company is an investment company or a trading company are the same as those which apply to a resident company.

BI Manual expands on this:

> **BIM20250 - Trade: badges of trade: income producing assets** [Mar 2022]
>
> ... *Financial assets*
>
> Normally transactions by individuals and companies in financial assets, such as shares, options and futures, do not amount to trading for tax purposes. Shares are generally held for investment, either to gain from income or capital growth. Short-term transactions, which cannot be classed as investments, usually fall short of trading, being in a class of transaction analogous to gambling or speculation.
>
> Whether an activity of buying and selling shares, securities and other financial instruments amounts to a trade is considered further at BIM56800 onwards.
>
> **BIM56910. Financial traders - instruments and shares: synthetic positions** [Jun 2016]
>
> Financial transactions include the acquisition, holding, dealing with, and disposal of financial assets such as shares and bonds. They also include taking synthetic positions in relation to such assets or corresponding indices, or discrete components of them. In our view, using synthetics is not itself indicative of trading. There is no conceptual difference between a 'real' and a synthetic financial transaction (for example, buying a share or entering into a derivative contract that replicates the risks and rewards of ownership). All of these approaches may form part of an investment strategy and some of them may constitute investment in themselves.
>
> ***Short positions are conceptually the same as long positions***
>
> Buying a share because you take the view that its price will rise and shorting a share because you think its price will fall are conceptually the same. In simple

[63] The omitted text discusses whether the financial trade is carried on in the UK; see 21.13.3 (Buying/selling through agent). This is distinct from the question of whether there is a trade.

terms, a view is merely being taken on the direction of movement. It follows that synthetic long and short positions are conceptually the same as one another and the equivalent real transactions.

Derivatives that give exposure to part of an asset are conceptually the same as derivatives that give exposure to the whole asset

A view may be expressed on a bundle of components embedded in an instrument, for example the coupon, liquidity, credit risk and currency of a bond, or alternatively a view may be expressed on one or a combination of these components. There is no conceptual difference between taking a view on all components by buying the instrument or entering a derivative contract that replicates ownership, or taking a view on one or a combination of the components via derivatives. There is no conceptual difference between taking a view on the direction of movement (as with simply long and short positions) or taking a view on the magnitude or timing of movements, or other components. Multi-derivative or hybrid strategies should not be unbundled.

Given the wide range of situations this principle can apply to, three examples are set out below. These are intended to be illustrative and not a definitive list.

In all cases involving any such 'bundling' we would expect there to be evidence that the transactions were executed in pursuit of a clear prior strategy.

Two or more derivatives

Where, for example, the view is that the price will increase but only within a certain band, and the most efficient way to express that single view is via a series of derivative transactions, those transactions should be considered as a whole and not each in isolation.

A derivative and another financial asset (for example shares)

Where the view is that an asset would not be acquired at current value but would be at a set lower value, a put option is written at that lower value, i.e. as a cost efficient method of acquisition. The writing of the option and the potential acquisition of the asset should be considered as a whole and not each in isolation.

A sequential series of similar derivative strategies

A derivative that is close to maturity generally has greater liquidity than a derivative identical in every way, other than having a longer period to maturity. 'Rolling' short dated derivative strategies such that there is a sequential series of similar derivatives should be viewed as a whole and not each in isolation.

72.15.11 *Critique*

The trading/non-trading distinction in financial assets raises three difficulties:

(1) *Uncertainty*: The leading cases are old and investment practice has since changed. The cases do not address the many varieties of transaction carried out by hedge funds and other sophisticated investors/traders, and even in the case of straightforward transactions, it is often unclear whether or not there is a trade.

(2) *Complexity*: There are some complex and narrow exemptions which

recognise and address this problem and (more or less) treat financial transactions as non-trading:

(a) The IME discussed in this chapter
(b) An exemption for authorised investment funds (introduced in an attempt to stop funds relocating to Ireland or Luxembourg)[64]
(c) Chapter 6 part 3 OFTR[65]

(3) *Irrationality*: The line drawn between trading/non-trading in transactions in financial assets (so far as it is discernible) is arbitrary.

These three difficulties follow from one underlying problem: there is no clear *economic* line to be drawn between trading and non-trading, in the context of financial transactions. The distinction is not drawn for accountancy purposes. Financial reporting standards require the use of fair value for investments in shares which are publicly traded or where the fair value can be measured reliably.[66] Movements in this fair value are recognised in profit or loss, whether the person concerned is trading or not. It is of course possible that tax and accountancy standards may define profit in different ways. But in this case the accountancy standards are right not to draw the distinction. There is an economic distinction between buying for short term and buying for long term holding[67] and to the extent that this intuition underlies the trading/non-trading distinction it is not irrational. However this economic distinction is nowhere close to the tax trading/non-trading distinction; and there is no reason why the two activities should be taxed differently. As far as I am aware, most other jurisdictions sensibly do not attempt to draw a comparable distinction.

It is suggested that all transactions in financial assets, defined along the lines of the IME, should in principle be deemed non-trading for tax purposes.[68] The IME, AIF and offshore fund exemptions can be repealed. That would be a simplification with little if any tax loss.

[64] Authorised Investment Funds (Tax) (Amendment) Regulations, SI 2009/2036 (31 pages of regulations accompanied by 107 pages of draft guidance).

[65] See 68.8 (Fund treated as non-trading).

[66] *https://www.frc.org.uk/Our-Work/Publications/Accounting-and-Reporting-Policy/FRS-102-The-Financial-Reporting-Standard-applicab.pdf* Para 2.47

[67] "We believe that according the name investors to institutions that trade actively is like calling someone who repeatedly engages in one-night stands a romantic." (Attributed to Warren Buffet - I would be grateful to any reader who could supply the reference).

[68] There would be some limited exceptions, eg if a company elects for trading treatment, and the hedging of trading risks.

CHAPTER SEVENTY THREE

INVESTMENT MANAGEMENT FEES & CARRIED INTEREST

73.1 Investment management fees & carried interest
73.1.1 Navigation
73.2 DIMF: history and guidance
73.2.1 Outline of industry practice
73.2.2 Outline of DIMF code

73.30 Interest ceases to be deferred
73.30.1 “Enjoyment conditions”
73.31 Income-based carried interest
73.32 IBCI: Returning non-resident
73.33 Returns and compliance

73.1 Investment management fees & carried interest

The topics of this chapter are:

(1) Disguised investment management fees (**“DIMF”**)[1]
(2) Carried interest

The layout of the chapter is as follows:

(1) Major definitions
(2) DIMF code
(3) Carried interest code
(4) Income-based carried interest

A full discussion requires a book to itself. I go beyond the themes of this book and address the topic as a whole.

73.1.1 *Navigation*

The legislation is as follows:

Chap	Part	Sections	Act	Topic
5E	13	809EZA-809EZH	ITA	Disguised investment management fees
5F	13	809FZA-809FZZ	ITA	Definition of “Income-based carried interest”
1	1	1H	TCGA	Rate of CGT on carried interest gain
5	3	103KA-103KH	TCGA	Carried interest code

The definitions are mainly in Chapter 5E and incorporated by reference elsewhere.

The system of numbering sections is idiosyncratic. In the ITA, section numbering begins with 809, followed by the Chapter letter, ie one of 809E/809F. The sections are then numbered ZA, ZB, etc. Hence:

- the 1st section of Chapter 5E is s.809EZA and the last is s.809EZH
- the 1st section of Chapter 5F is s.809FZA and the last is s.809FZZ

[1] HMRC sometimes use the abbreviation “DMF”.

Subsequent sections are slotted in, such as s.809EZDA and s.809EZDB.

In the TCGA, the sections begin 103K, and are numbered starting from A, so the first section is s.103KA and the last is s.103KH.

This is due to a misguided application of OPC drafting guidelines; see App.13.3 (Section numbering system).

73.2 DIMF: history and guidance

The legislation was introduced in 2015, amended in 2016 and 2017.

The development of the current rules can be traced through:

- HMRC Guidance "Investment managers: CGT treatment of carried interest (2015)[2]
- HMRC Technical Note "Investment Managers: Disguised Fee Income" (2015)[3]
- Draft guidance informally circulated (2016) (**"DIMF draft guidance"**)[4]

73.2.1 *Outline of industry practice*

The IF Manual outlines industry practice:

> **IFM36120: Overview: Introduction** [Oct 2020]
> **Introduction**
> ... Many investment management businesses only charge a management fee for the services they provide. However, those who provide services to private equity funds and other funds with alternative strategies typically negotiate:
>
> - a 'management fee' based on funds (or assets) under management generally at a rate of 1.5-2%; and
> - a share of the funds' profits once the investments have grown by an agreed percentage (hurdle) which is commonly referred to as 'carried interest' (IFM36500).
>
> In a typical model, management fees are due irrespective of how well an investment fund performs. They can be paid monthly, quarterly or annually.

[2] *https://www.gov.uk/government/publications/investment-managers-capital-gains-tax-treatment-of-carried-interest-july-2015/investment-managers-capital-gains-tax-treatment-of-carried-interest-july-2015*

[3] *https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/417049/Disguised_Investment_Management_Fees_Guidance.pdf*

[4] Investment Managers: Disguised Fee Income, CGT Treatment of Carried Interest *https://www.bvca.co.uk/LinkClick.aspx?fileticket=n5CPCclpPFo%3d&portalid=0&timestamp=1524063247595*

> Carried interest is only paid when the fund performs to a pre-agreed standard. It is performance-related payment typically paid indirectly, through a special purpose vehicle to the individuals who provided investment management services to a fund. Meeting the 'hurdle' (or 'preferred return') typically means that those involved in managing the fund share 20% profits above a hurdle rate equivalent to an annualised rate of approximately 8%. These amounts vary depending on the agreement entered into with the investors.
>
> Other funds that are not partnerships may agree to pay a performance fee in addition to a management fee. These sums should also be considered under the DIMF rules.

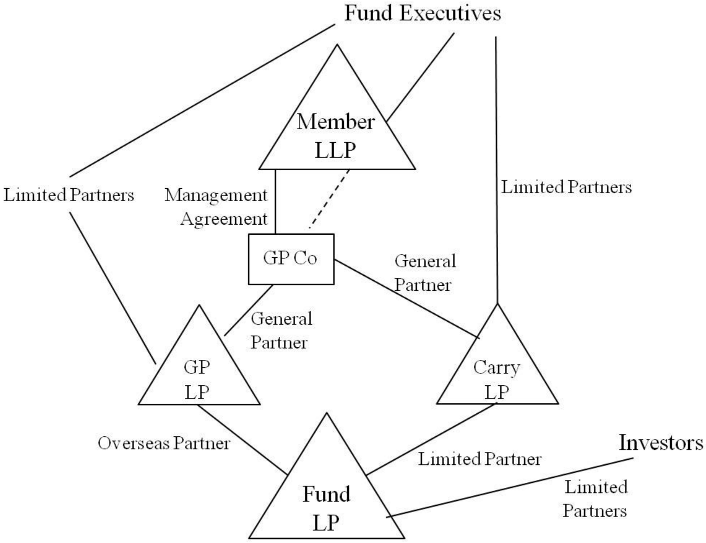
73.2.2 *Outline of DIMF code*

The IF Manual then outlines the DIMF code:

> The tax treatment of an investment management fee is covered by the DIMF rules. The main aim of these rules is to ensure that management fees received for managing an investment scheme (and which are not calculated by reference to the performance of the underlying investments) are charged to income tax where they arise to individuals. This is because the amounts in question are in substance income paid in return for the provision of investment management services.
>
> Broadly, the DIMF rules ensure that where sums arise from a fund to an individual providing investment management services, those sums are charged to income tax where they are not:
>
> - carried interest; or
> - a return of capital; or
> - a return on sums invested
>
> The tax treatment of the first management fee described above (generally 1.5-2% of funds under management), as detailed throughout this guidance applies to any fund which is an investment scheme (IFM36230) irrespective of its structure.
>
> New rules for the tax treatment of carried interest took effect from 8 July 2015. Carried interest is subject to taxation under specific capital gains tax (CGT) rules which are covered in separate guidance, starting at IFM37100. Carried interest is defined in ITA07/S809EZC, which is in Chapter 5E, and sums meeting this definition are excluded from DIMF rules unless the amounts are Income Based Carried Interest (IBCI). Income Based Carried Interest is explained in detail in separate guidance, starting at IFM38000. (reference currently not active - manual awaiting completion)

DIMF draft guidance provides:

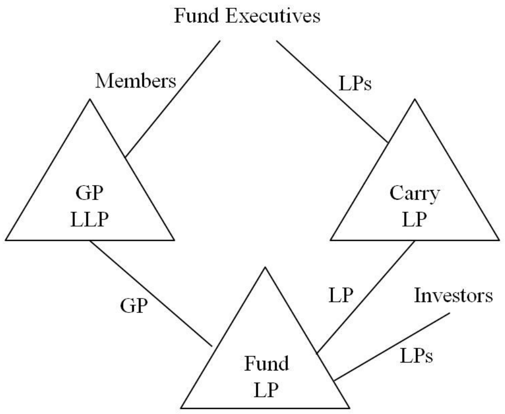
> **GP LP and GP LLP planning**
> 5. The effects of the measure are not limited to any one avoidance structure or category of asset manager. However the types of planning at which they were initially aimed are sometimes described as GP LP and GP LLP planning.
> 6. In both cases, the investments of the fund are held in a limited partnership (LP), the fund partnership. In GP LP planning, the general partner of this LP is itself a limited partnership (GP LP) (See Fig 1).



Fund Executives
Member LLP
Limited Partners
Management Agreement
Limited Partners
GP Co
General Partner
General Partner
GP LP
Carry LP
Overseas Partner
Investors
Limited Partner
Fund LP
Limited Partners

> 7. The annual fee[5] is paid as a priority profit share by the fund LP to the GP LP.
> Some of the fee may be paid on to a management company or limited liability partnership, i.e. the traditional structure. However the individual partners in the GP LP may allocate some of the annual fee to themselves without passing it via the management company. GP LLP planning (Fig 2) is broadly similar.

[5] Footnote original: The fee based on assets under management is referred to for convenience in this document as the annual fee, although in practice the fee may be paid at different intervals, for example quarterly or semi-annually. In most private equity funds the fee will strictly be calculated by reference to the sums committed by investors to the fund, even before those sums have been drawn down.



8. The effect of this planning is that annual fees for investment management are not being taxed in full. Since the annual fees are clearly a return for services provided, they should be charged to income tax. Chapter 5E has therefore been introduced to ensure that these fees are charged to income tax.

73.3 "Disguised fee"

Section 809EZA(3) ITA provides:

> For the purposes of this Chapter [Chapter 5E] a "disguised fee" arises to an individual in a tax year from an investment scheme if-

A set of three conditions then follows which I call **"disguised-fee conditions (a) to (d)"**. In outline:

Para	**Requirement**
(a)	Investment management services
(c)[6]	Management fee from investment scheme
(d)	Management fee untaxed

73.4 Disguised-fee c^n (a): IM services

Section 809EZA(3) ITA provides:

> For the purposes of this Chapter [Chapter 5E] a "disguised fee" arises to an individual in a tax year from an investment scheme if-
> (a) the individual at any time performs or is to perform investment management services directly or indirectly in respect of the scheme

[6] There is no para (b).

under any arrangements[7]

I refer to these arrangements as **"investment-services arrangements"**.

73.4.1 *Timing*

The IF Manual provides:

> **IFM36310: Performs investment management services** [Oct 2020]
> **Timing of the services performed**
> The investment management services do not necessarily have to be provided in the year in which the fee arose to meet this condition. Where an individual has performed investment management services in the past or will perform such services in the future this also meets the requirements of condition 1.

The Manual provides a straightforward example:

> *Example (Amelia)*
> A is a recently retired fund manager. She received a disguised fee for investment management services provided in the run up to her retirement. This fee was received in the year after which A retired and no longer provides investment management services.
> Despite the investment management services relating to the fee being undertaken in a previous year, the fee is still received in relation to the performance of investment management services, and condition 1 would be met...

73.4.2 *In respect of an investment scheme*

The IF Manual continues:

> The scope of ITA07/S809EZA(3)(a) is intentionally wide but, if it can be demonstrated that shares or an interest in an asset manager firm have been granted solely to incentivise executives and the award is not in relation to the performance of the fund, then the DIMF rules may not apply. If however, the award has been made as part of a wider remuneration scheme to avoid the application of the DIMF rules, then the amount may still be charged as income. All facts and circumstances must therefore be taken into consideration in order to evaluate whether the DIMF rules apply.

[7] Section 809EZE ITA provides the standard (unnecessary) IT definition of "arrangements"; see App 2.2.3 (Definitions of "arrangement"). The definition is applied to CGT by s.103KH(1) TCGA.

> *Example 1 (Frances)*
> An individual fund manager, F, works for a US headquartered group, whose shares are listed on the US stock exchange.
> F is a member of a UK LLP (controlled by a corporate member owned by the group) which acts as the UK sub-advisor in relation to some of the funds managed by the group. The UK LLP has appropriate commercial substance (staff, contracts and other assets) and receives an arm's length fee for the services it provides to other group companies.
> F receives a profit share from the LLP in line with market expectations and holds rights to receive carried interest in the funds she is involved with.
> Separately, F receives an award of shares in the listed US parent under a global share plan designed to incentivise and reward staff (including employees and members of LLPs) across the worldwide group in growing the business.

The HMRC analysis is as follows:

> If F and the group are able to demonstrate that the share award in the listed US parent is not part of a wider scheme to deliver a disguised fee (IFM36300) to her, then neither the DIMF rules nor the carried interest rules (IFM37100) will apply to the holding of the shares or any resultant dividends received in respect of those shares.
>
> *Example 2 (Sam)*
> An individual fund manager, S, works for a UK based fund management group with full commercial substance in the UK (staff, contracts and other assets). S is one of four founders of the business and holds a 25% stake in the parent company of the group. S receives an arm's length remuneration (salary, bonus and other benefits) for his work, which is taxed as employment income, and has a carried interest in the funds operated by the group in line with industry standards. The shares S owns in the business carry an entitlement to a 25% share in the residual profits of the business. The group receives priority profit shares, management fees and a small amount of carried interest from the funds it operates as per the contractual arrangements with the investors.

The HMRC analysis is as follows:

> Dividends paid to S in respect of his shareholding in the parent company do not constitute a disguised fee (IFM36300). Later, when S disposes of his shareholding, the disposal proceeds will not constitute a disguised fee.
> The DIMF rules may apply however if S's equity participation is part of

a wider arrangement designed to deliver a disguised fee.

73.5 Disguised-fee c^{n} (c): from investment scheme

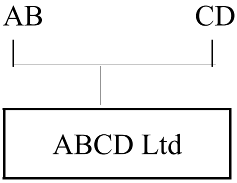
Section 809EZA(3) ITA provides:

> For the purposes of this Chapter [Chapter 5E] a “disguised fee” arises to an individual in a tax year from an investment scheme if ...
> (c) under the arrangements, a management fee arises[8] to the individual from an investment scheme in the tax year (see section 809EZB)

Chapter 3 DIMF draft guidance (Examples) provides:

> *Example 4 - [accountancy company]*
> AB is a director and 50% shareholder in ABCD Limited, an accountancy firm.

Diagrammatically:



> AB provides corporate finance advice on a potential acquisition by RS LP, an unconnected private equity fund [ie an investment scheme]. ABCD receives a fee for doing so and this increases ABCD’s profits. ABCD’s profits are subject to corporation tax. AB receives a dividend from ABCD. CD has not provided any services to RS LP and also receives a 50% dividend.

The HMRC analysis is as follows:

> Corporate finance services fall within the “investment management services” definition.
> The fee is included in the calculation of the profits of ABCD and not AB and so is “untaxed”.
> However the dividend is not regarded as arising from the collective investment scheme, and so does not fall within the scope of [the DIMF] charge.

More analytically, the dividend does not meet disguised-fee condition (c).

[8] See 73.15 (To whom DIMF arises);15.5.9 (Disguised investment management fees).

73.6 Disguised-fee c^n (d): Untaxed

Section 809EZA(3) ITA provides:

> For the purposes of this Chapter [Chapter 5E] a "disguised fee" arises to an individual in a tax year from an investment scheme if...
> (d) some or all of the management fee is untaxed;
> and the amount of the disguised fee is so much of the management fee as is untaxed.

Section 809EZA(4) ITA provides an artificial definition of "untaxed":

> For the purposes of subsection (3) the management fee is "untaxed" if and to the extent that the fee would not (apart from this section)-
> (a) be charged to tax under ITEPA 2003 as employment income of the individual for any tax year, or
> (b) be brought into account in calculating the profits of a trade[9] of the individual for the purposes of income tax for any tax year.

In short, "untaxed" means not taxed as trading/employment income in the hands of the individual. A fee is "untaxed" even if it is subject to tax in the hands of the actual recipient (but not the individual); or if is a dividend subject to tax in the hands of the individual at the dividend rates. It would be appropriate to write "untaxed" with an initial capital or scare quotation marks.

DIMF draft guidance provides:

> 72. The effect of the definition is that sums arising to employees which are taxed as benefits or under the employment related securities legislation will not be untaxed for the purposes of Chapter 5E.
> 74. Section 809EZA(4) makes clear that the charge to tax as employment or trading income does not need to occur in the same year as the charge that would otherwise arise under Chapter 5E. This means that the charge under Chapter 5E could occur in a later or earlier tax year than the other tax liability. For example, an individual performing investment management services could be engaged as an employee and receive a deferred bonus which does not fall within the definition of carried interest. Under the statutory definition of arise which applies from 22 October 2015, this amount is likely to have arisen to the individual. When the amount is released from the deferral structure however, it will

[9] s.809EZA(5) ITA provides: "In subsection (4) "trade" includes profession or vocation."

> be charged to income tax and National Insurance contributions in full as employment income. It will not, therefore, be treated as "untaxed". However, where an individual is or expects to be outside the charge to UK tax when the sum would otherwise be liable to income tax in respect of the sum, this treatment will not apply: section 809EZA requires that the sum is charged to tax as employment income under ITEPA 2003 or that it is brought into account when calculating the profits or a trade for the purposes of UK income tax.

The IF Manual provides a straightforward example:

> **IFM36325 The sum arising must be untaxed** [Oct 2020]
> ...Example 1 - accountancy partnership (Ali)
> A is a partner in CD LLP, a large accountancy firm. A carries out due diligence on a potential acquisition by RS LP, an unconnected private equity fund. CD LLP received a fee from the fund for doing so and this increases CD LLP's profits. A receives a share of those profits.

The HMRC analysis is as follows:

> Due diligence falls within (b) of the "investment management services" definition found at ITA07/S809EZE(1).
> The fee is included in the profits of CD LLP, ITA07/S809EZA(4)(b) advises that a sum will not be considered as 'untaxed' if it has been brought into account in calculating the profits of an individual and, as A has received a share of those profits, which will be chargeable to income tax, the sum will not be considered as 'untaxed' in her hands.

As the fee is not "untaxed" it is not a disguised investment management fee, because disguised-fee condition (d) is not met.

73.7 "Management fee"

This term is used in the definition of "disguised fee": disguised-fee condition (d).

Section 809EZB(1) ITA provides:

> Subject as follows, for the purposes of section 809EZA "management fee" means any sum (including a sum in the form of a loan or advance or an allocation of profits) except so far as the sum constitutes-
> (a) a repayment (in whole or part) of an investment made directly or indirectly by the individual in the scheme,
> (b) an arm's length return on an investment made directly or indirectly by the individual in the scheme, or
> (c) carried interest which is not income-based carried interest (see

> sections 809EZC and 809EZD for carried interest, and Chapter 5F for income-based carried interest).

If a management fee is "any sum", almost anything is a management fee. The price paid for this book is a management fee, if the definition is taken literally.[10] The concept is brought down to size by disguised-fee condition (d) which requires links between the "management fee" and the fund: the sum must in short arise from an investment scheme.

The significance of the definition of management fee is in paras (a)-(c) I refer to this as **"management-fee exclusions (a) to (c)"**:

Exclusion	**Topic**	**See para**
(a)	Scheme investment: Repayment	73.12.4
(b)	Scheme investment: Arm's length return	73.7.1
(c)	Carried interest	73.8

73.7.1 *Management-fee exclusion (b): "Arm's length return"*

Section 809EZB(1) ITA provides that "management fee" means any sum

> ... except so far as the sum constitutes...
> (b) an arm's length return on an investment made directly or indirectly by the individual in the scheme

Section 809EZB(2) ITA provides an artificial definition:

> For the purposes of subsection (1)(b) a return on an investment is "an arm's length return" if-
> (a) the return is on an investment which is of the same kind as investments in the scheme made by external investors,[11]
> (b) the return on the investment is reasonably comparable to the return to external investors[12] on those investments, and
> (c) the terms governing the return on the investment are reasonably comparable to the terms governing the return to external investors on those investments.

DIMF draft guidance provides:

> 88. For example, arrangements could be made for the managers' capital to receive an excessive return, and to pay the annual fee in that way.

[10] Though if needed, one might argue that the label "disguised fee" itself imposes some implied restriction on the concept.

[11] See 73.12.6 ("External investor").

[12] See 73.12.6 ("External investor").

> Please note this could be a purely commercial arrangement with external investors negotiated at arm's length. The test does not require an "arm's length return" to be paid in a subjective sense as would be tested, for example, under the transfer pricing rules. The term is a term of art for these purposes and subject to the comments below on "reasonably comparable", that return must be the same as the return paid to external investors. An agreement, for example, which gives the management team enhanced upside and enhanced downside exposure would take the return on that co-investment outside the exclusion even if this was agreed between the managers and unconnected investors at arm's length as part of their genuine commercial bargain.
>
> 89. If the return does not meet the arm's length test, then sums arising will be treated entirely as disguised fees, and subject to income tax.
>
> 90. It is accepted that the return to internal and external investors will not be identical. In particular, where a private equity fund manager invests in a fund on the same terms as external investors but is not liable to the management fee or carried interest in respect of that investment, HMRC accept that it will still meet the reasonably comparable tests above

73.7.2 *"Reasonably comparable"*

This term is used in the definition of an arm's length return. It is not definable, but that does not deter the drafter. Section 809EZB(2A) ITA provides:

> For the purposes of subsection (2)(b), the return on the investment is reasonably comparable to the return to external investors on the investments referred to in subsection (2)(a) if (and only if)-
>
> (a) the rate of return on the investment is reasonably comparable to the rate of return to external investors on those investments, and
>
> (b) any other factors relevant to determining the size of the return on the investment are reasonably comparable to the factors determining the size of the return to external investors on those investments.

DIMF draft guidance provides:

> 91. The wording "reasonably comparable" is intended to allow for this sort of difference, i.e. where there are genuine commercial reasons for the difference and they do not materially affect, in substance, the return received by managers compared to that accruing to external investors. For example, the "fee and carry free" terms referred to above prevent capital provided by the fund management team "going in a circle" and returning to them in the form of management fee chargeable to tax as

income.

92. While it is not set out as such in the legislation, HMRC would accept that where an individual invests capital in a scheme which has been lent to the individual on arm's length terms, it can still meet the above requirements.

93. HMRC also accept that a management team may take out debt to fund their co-investment commitment indirectly via another vehicle. For example, debt may be advanced by a bank to a company owned by, or partnership comprised of, the management team. This entity would then meet the co-investment commitment required from the management team with the third party debt subsequently being repaid, with an appropriate return, from the sums allocated in respect of that investment at fund level. Such a structure will not preclude the investment made by managers giving rise to a return which is within the exception provided that return is still, having regard to all the circumstances, reasonably comparable to the return received by external investors (i.e. the return is the same as it would have been if the managers had taken out the debt directly on arm's length terms as described in paragraph 92).

94. However, where the investment has been made through a leveraged co-investment vehicle which gives the fund manager(s) an effective deduction for the interest costs on any debt, this would not meet the above requirements. For example, this could involve a partnership with third party borrowing where the financing cost reduces profits on which the managers would otherwise be chargeable. The return from such a structure would no longer be comparable with the return to external investors.

95. Where a co-investment is awarded to an employee at a discount and that discount is fully charged to income tax and National Insurance contributions as employment income, then the return on that investment (for the purposes of applying section 809EZB(2)) should be determined by reference to the amount brought into charge to tax plus any amounts actually paid by the individual. This would be the same where the co-investment is awarded to an employee in return for no monetary consideration.

96. For example, if an individual receives a co-investment interest of £100, but only pays £20, with the remaining £80 being funded from sums taxed as employment income of the individual, the co-investment treated as made by the individual when applying section 809EZB(2) and determining the return on that co-investment is one of £100. In the round this employee is in the same financial position as another employee who funded their co-investment of £100 out of taxed employment income. HMRC do not believe, in the absence of attempts to avoid or reduce an

individual's total tax liability, section 809EZB(2) should be interpreted strictly so as to treat these two employees differently.

...

98. In some situations a fund manager will not make a personal contribution to the fund in question as their co-investment. Instead they will acquire their co-investment from another person. This could arise where a fund manager joins a pre-existing team, or where the entire team managing a fund changes (for example, because of poor performance or due a wider business take-over).

99. The repayment of, and return on, such a co-investment is capable of coming within the exclusions from the definition of disguised fee contained in section 809EZB(1)(a) and (b). In HMRC's view, having regard to the purpose of this legislation, the specific reference to an investment made directly or indirectly includes such acquired co-invest. In the context of investment schemes constituted as a limited company section 809EZE(3) makes specific reference to secondary acquisitions. This should not be read as restricting the meaning of section 809EZE(2) which applies more generally in determining what amounts to an investment in investment scheme. Section 809EZE does not include specific reference to the secondary acquisition of such an interest because it is aimed at partnership situations where the investment, in effect and very broadly, takes the form of a proportionate direct interest in the underlying assets for most direct tax purposes in the UK. It is therefore possible to "step into the shoes" of another in respect of a contribution to the property held by the scheme. The wording "whether by way of capital, loan *or otherwise*" (emphasis added) shows that section 809EZE(2) is not to be read in an overly narrow manner. Section 809EZE(3) puts beyond doubt in the situation where the investment scheme is constituted as a limited company (which will be beneficially owner of the underlying assets and where investors acquire shares in that company) the same treatment is available as regards acquired co-invest. It is designed to make sure that the same rules apply regardless of how a scheme is constituted, rather than applying specifically relaxed rules to corporate schemes over other types of investment vehicle.

100. However, while the repayment of and return on an acquired co-investment can fall within section 809EZB(1)(a) and (b), the analysis of whether the conditions for an arm's length return in sections 809EZB(2) and (2A) can be more difficult. In particular the value of drawn co-investment is likely to have moved since the original investment was drawn down from the person now selling their interest in the fund. If the fund has performed poorly, the co-investment may be worth less than the vendor originally contributed to the scheme. If the

fund has performed well, however, the value may have increased. In both situations regard must be had to the strict formulation of sections 809EZB(2) and (2A) described in more detail above.

a. Where the co-investment has declined in value, if the fund manager purchases the investment for an amount equal to its market value, the fund manager will then receive a return which exceeds that paid to external investors (whose return will, in effect, be calculated of the original amount contributed to the fund). In this case it is therefore necessary for the fund manager to pay at least the "par value" of the co-investment, even if this exceeds the market value.

b. Where the fund has performed well and the co-investment has appreciated in value, if the fund manager acquires the co-investment for the amount originally contributed to the fund, it will receive a return which exceeds that flowing to external investors and which therefore falls outside section 809EZB(2) and (2A). For the entire return to fall within the exclusion, the fund manager will need to pay a price which equals the increase in value of the investment in the fund. Generally where the fund manager pays the unrestricted market value of the co-investment at the point of acquisition as part of a genuine commercial arrangement negotiated at arm's length, HMRC will accept that the return arising on that co-investment is capable of falling within sections 809EZB(2) and (2A) provided the return otherwise meets the conditions set out in those provisions.

No comparable funds

101. Where an investment fund is entirely "in house" it may have no external investors. In these situations, the comparison to be made for the purposes of s809EZB (2) is with a fund of a similar nature which does have external investors, taking all factors into account.

73.7.3 *"Sum"*

Section 809EZB(3) ITA provides:

> In this Chapter [Chapter 5E] "sum" includes any money or money's worth (and other expressions are to be construed accordingly).

73.7.4 *Payment for scheme asset*

Section 809EZB(4) ITA provides:

> Where-
>
> (a) a sum in the form of money's worth arises to the individual from the scheme in the ordinary course of the scheme's business, and
>
> (b) the individual gives the scheme money in exchange for the sum,
>
> the sum constitutes a "management fee" only to the extent that its

market value at the time it arises exceeds the amount of the money given by the individual.

73.8 "Carried interest"

73.8.1 *Why carried interest matters*

Carried interest matters because:

(1) It is in principle not a management fee, under management-fee exclusion (c),[13] and so not subject to IT as DIMF

(2) Special CGT rules apply[14]

73.8.2 *Carried interest: definition(s)*

Broadly, "carried interest" refers to a share of the profits which arise to managers of the fund where the investments in a fund perform above a certain level.

Prior to the introduction of the DIMF rules, there was no statutory definition. However the term, and the typical structures used, were explained in two statements:

Statement (my term)	Structure explained in:
BVCA Statement 1987[15]	Para 2 schedule A
BVCA MOU 2003[16]	Para 7, 8

I do not think there is any significant difference in the explanations in these two statements.

The definition of carried interest is now in two sections:

ITA	Content	See para
s.809EZC	General definition	73.9
s.809EZD	BVCA statements: Subordinated interest	73.10

[13] See 73.7 ("Management fee").

[14] See 73.19 (Carried interest: CGT); 43.13 (CGT rates: Introduction).

[15] The full title is: "British Venture Capital Association: Statement approved by the Inland Revenue and the Department of Trade and Industry on the use of limited partnerships as venture capital investment funds" *https://www.bvca.co.uk/Portals/0/library/Files/StandardIndustryDocuments/UseofLPsasPEVCfunds.pdf*

[16] The full title is: Memorandum of Understanding between the BVCA and Inland Revenue on the income tax treatment of Venture Capital and Private Equity Limited Partnerships and Carried Interest (2003) *https://www.bvca.co.uk/Portals/0/library/Files/StandardIndustryDocuments/PDF_2.pdf?ver=2013-06-14-112836-650*

I prefer to think of this as a single (if complex) definition, though one might regard the sections as two distinct definitions. DIMF draft guidance explains why the legislation takes this form.

> 103... Section 809EZD sets out the definition of carried interest which follows the description of typical carried interest arrangements in [the BVCA MOU 2003 and BVCA Statement 1987].
> 104. However, some investment funds use models of carried interest which do not fit within the description in the MOU. For example, venture capital funds may have a lower hurdle rate, and some funds will pay carried interest out of unrealised profits.
> 105. Since genuine carried interest is intended to be exempted from the [DIMF] charge, an alternative definition of carried interest is also used in the legislation.
> 106. The legislation is set out in this way so that funds which are using the model set out in the MOU can be satisfied that the carried interest will be exempt without needing to study the broader definition in s809EZC. (This model of carried interest is defined as meeting the requirements of s809EZC).
> 107. The wider definition of carried interest used in s809EZC should not be taken as an indication that any particular arrangement necessarily falls within the definition of carried interest in the Memorandum of Understanding; that is a separate issue which must be considered on the facts of the case.

Section 103KH TCGA applies the definition(s) for CGT:

> In this Chapter ... "carried interest", in relation to arrangements referred to in section 103KA(1)(a), has the same meaning as in section 809EZB of ITA 2007 (see sections 809EZC and 809EZD of that Act).

73.9 Carried interest: general definition

Section 809EZC(1) ITA provides:

> For the purposes of section 809EZB "carried interest" means a sum which arises to the individual
> [a] under the [investment-services] arrangements
> [b] by way of profit-related return.[17]

[17] The second sentence signposts exceptions: "This is subject to subsections (3) to (8) (sums where no significant risk of not arising); and see also section 809EZD (sums treated as carried interest)."

73.9.1 *"Profit-related return"*

This is the key element in the definition of carried interest. Section 809EZC(2) ITA provides:

> A sum which arises to the individual under the [investment-services] arrangements does so by way of "profit-related return" if under the arrangements-

There follows a set of 3 requirements, each of which must be satisfied:

> (a) the sum is to, or may, arise only if-
>   (i) there are profits for a period on the investments, or on particular investments, made for the purposes of the scheme, or
>   (ii) there are profits arising from a disposal of the investments, or of particular investments, made for those purposes,
>
> (b) the amount of the sum which is to, or may, arise is variable, to a substantial extent, by reference to those profits, and
>
> (c) returns to external investors[18] are also determined by reference to those profits;
>
> but where any part of the sum does not meet these conditions, that part is not to be regarded as arising by way of "profit-related return".

73.9.2 *"Profits"*

Section 809EZE(1) ITA provides:

> In this Chapter [Chapter 5E] ... "profits", in relation to an investment made for the purposes of an investment scheme, means profits (including unrealised profits) arising from the acquisition, holding, management or disposal of the investment (taking into account items of a revenue nature and items of a capital nature).

The IF Manual provides:

> **IFM36520: Meaning of carried interest** [Dec 2021]
> ... The profits to be considered are the profits based on the period set out in the arrangements. For example, if a fund draws up annual accounts, and a decision on whether to pay carry is based on those accounts, (for example by comparing the net asset value with the net asset value at the start of the accounts period), then the period in question would be the

[18] See 73.12.6 ("External investor").

> year that this condition is tested against.
>
> Condition 1 may still be met in some circumstances where a fund has made a loss.
>
> **Example**
>
> A fund is arranged over a 2 year period, it has made a loss in the second year. However, due to substantial profits in the previous year the fund has made a sufficiently high profit over a two-year period.
>
> As the specified period is 2 years, the above situation would meet the first condition despite making a loss in one of the years.

73.9.3 *Vary by reference to profits*

The IF Manual provides:

> **IFM36520 Meaning of carried interest** [Dec 2021]
>
> ... **Example**
>
> A fund manager is entitled to a fixed fee which will equate to 2% of the value of a fund, payment will be deferred until the fund has positive profits or a capital return.
>
> Just because the fee is conditional (on profits) does not mean that the fee would be carried interest. The amount in this case may be conditional but it does not vary in relation to profits, the value is determined only by the value of the fund - condition 2 is therefore not met.

73.9.4 *Risk-free return*

In short, a risk-free return is not carried interest.

Section 809EZC(3) ITA provides:

> Where-
>
> (a) one or more sums ("actual sums") arise to the individual under the [investment-services] arrangements by way of profit-related return in a tax year, and
>
> (b) there was no significant risk that a sum of at least a certain amount ("the minimum amount") would not arise to the individual,
>
> so much of the actual sum, or of the aggregate of the actual sums, as is equal to the minimum amount is not "carried interest".[19]

The IF Manual provides:

[19] The following sentence flags ss(7)(8): "(See subsections (7) and (8) as to how the minimum amount is to be apportioned between the actual sums where more than one actual sum arises in the tax year.)"`

IFM36531 The "no significant risk" test: Overview [Dec 2021]

... 'Significant risk' is not defined in legislation, but the intention is to only capture disguised fees; that is, sums which are highly likely to arise. Passing the 'no significant risk' test means that there must be significant risk that the sum will not arise. The intention is that, any attempt to make a fee appear as if it is linked to profits while actually being fixed in substance, will be ineffective.

Purpose of the 'no significant risk' test

The intention of the "no significant risk" test is to ensure that sums awarded to individuals, which in reality are highly likely to arise, are not categorised as carried interest. Instead such sums should be caught by the DIMF rules and charged to income tax. Whether the sum is likely to arise will depend on the facts and circumstances of each case.

Example (Ayo)

A, an individual providing investment management services is due to be paid £1m, or £1m plus 10% of profits if the fund profits exceed a certain level.

The £1m is not carried interest as it does not vary by reference to profits and there is not a significant risk that it will not arise. The 10% of profits above a certain profit level could be carried interest as the amount appears to vary. We still have to be mindful that the three profit-related return conditions of ITA07/S809EZC(2) (IFM36300) are met and the requirements of the "no-significant risk" test are fulfilled. For instance, the profit level may have been set at an unrealistically low level where there is no significant risk that it would arise, this could mean that the "no significant risk" test would not be met. Whether the amount meets the profit-related return conditions or the "no significant risk" test will depend on the facts and circumstances at the time.

In practice it should be clear to fund managers, through management agreements entered into whether sums arising to them represent their fixed management fee as opposed to carried interest. This test is intended to catch all amounts which, viewed realistically, represent a largely fixed entitlement based on the amount of assets under management. HMRC may challenge any attempt made to circumvent this test or any of the profit related conditions of ITA07/S809EZC(2) (IFM36300).

Where arrangements do not meet the "no significant risk" test, the sum arising to the fund manager is not carried interest even if the three-profit-related conditions are met.

Application of the "no significant risk" test to the arrangements

The no significant risk test applies to sums arising to an individual under arrangements by way of a profit related return, not to the investments made by the fund.

Example

Fund A invests in risky investments but puts arrangements in place which provide a certain payment every year to the fund managers. Fund B invests in relatively safe investments but set a high hurdle rate that must be exceeded before any carried interest was paid.

Despite the nature of the investments, Fund A may not meet the significant risk test, and therefore the fees would be caught by the DIMF rules. Should it be the case that in Fund B it was by no means guaranteed that a manager would ever receive carried interest this may pass the significant risk test despite the less risky investments held.

A history of good performance (e.g. 5 out of 6 previous funds have delivered high returns) does not in itself mean there is no significant risk attached to the sums arising to the fund manager. If funds have to deliver a high enough performance to repay loans to external investors and meet the hurdle rate before any carried interest is paid, it is likely that at the outset there would be a significant risk that carried interest would not be paid. This is not an automatic qualification however and whether the "no significant" risk test has been met would have to be based on the facts and circumstances at the time.

73.9.5 *Time to assess risk*

Section 809EZC(5) ITA provides:

> For the purposes of subsection (3)(b) assess the risk as at the latest of-
> (a) the time when the individual becomes party to the [investment-services] arrangements,
> (b) the time when the individual begins to perform investment management services directly or indirectly in respect of the scheme under the [investment-services] arrangements, and
> (c) the time when a material change is made to the [investment-services] arrangements so far as relating to the sums which are to, or may, arise to the individual.

The IF Manual provides:

> **IFM36534 Timing of significant risk tests** [Dec 2021]
> ... In practice, where there is more than one sum paid in a year each sum should be considered individually then consider all the sums together. It is expected that where sums are taken together, there would only be a different outcome in circumstances where a fund had invested in a series of investments which when taken together, deliver a certain return

to the managers.

Generally, this means that for a fund with a defined lifespan (closed ended fund) the test is likely to be applied at an early stage in the life of the fund. Later in the life of a fund that has been successful, it may be certain that sums will arise to the managers under the arrangements. This does not mean that a sum does not qualify as carried interest, so long as there was significant risk that the sum would arise when the arrangements were entered into.

Where an individual leaves a management team and that individual's entitlement to a sum is wholly or partly reallocated between the remaining managers, this will generally not be considered a material change, provided that:

- the individuals receiving the allocation were previously entitled to a portion of the carried interest in respect of the scheme; and
- the reallocation does not materially distort the proportions in which those individuals will share the carried interest between themselves.

If an individual receives a re-allocated award of carried interest that is greater than the pro-rata amount, then a material change will generally not be considered to have occurred in relation to the original carried interest amount as long as the new carried interest addition has no bearing on the calculation, right to receive or previous arrangement. If the new carried interest addition does have any bearing on the previous arrangement then a material change will have deemed to have occurred for all of the individual's carried interest balance.

There is no legislative definition for material change. Whether a "material change" has occurred or not will depend on the facts.

73.9.6 *Insolvency risk*

Section 809EZC(6) ITA provides:

> For the purposes of subsection (3)(b) ignore any risk that a sum is prevented from arising to the individual (by reason of insolvency or otherwise).

The IF Manual provides:

> **IFM36536 Prevention of a sum arising** [Dec 2021]
> ... The intention of this sub-section is to prevent individuals claiming that the scheme that they provide services to is taking risks and therefore there is significant risk that sums will not arise to them as individuals.

DIMF draft guidance provides:

> 147. It does not mean that a risk of insolvency in the underlying

investments of the fund must be ignored; rather this is one of the elements which is taken into account in assessing whether a payment is carried interest or not. It is understood that investment funds may invest in risky ventures where insolvency of an investee company is a real[20] risk.

73.9.7 *Tests of risk*

Section 809EZC(4) ITA provides:

> For the purposes of subsection (3)(b) assess the risk both-
> (a) in relation to each actual sum (and the investments to which it relates) individually, taking into account also any other sums that might have arisen to the individual under the [investment-services] arrangements instead of that sum, and
> (b) in relation to the actual sum or sums and any other sums that might have arisen to the individual under the [investment-services] arrangements by way of profit-related return in the tax year (and the investments to which all those sums relate) taken as a whole;
>
> (so that, in a particular case, some of the minimum amount may arise by assessing the risk in accordance with paragraph (a) and some by assessing it in accordance with paragraph (b)).

DIMF draft guidance provides:

> 140. ... the key point is to look at the arrangements as a whole. As explained above, it would be possible for arrangements using safe investments nonetheless not to give a certain return to managers, if the managers had to meet a high hurdle rate before getting any return. The essential is that these clauses are intended to target arrangements to get round the rules by delivering a certain return.
> 141. HMRC would accept any reasonable qualitative assessment of the risk attached to the carried interest; there is no requirement for a quantitative (e.g. Black Scholes or Monte Carlo method) to be used.

The IF Manual provides:

> **IFM36531 The "no significant risk" test: Overview** [Dec 2021]
> *Example* (Dipti)
> D, an individual providing investment management services is to

[20] Note how "real" is used here as a synonym of the statutory term significant; see App 7.4 (Real used as intensifier).

receive £1m if there are no profits, and 20% of any profits above £50m. There is a 30% chance that profits will exceed £50m.
If profits are £60m, D receives £3m. There is no risk attached to the £1m fee but there was a risk that the extra £2m may not have arisen. £2m is considered carried interest and the £1m fee is a disguised fee charged to income tax.
If the profits were instead £45m, then no additional sum arises. The carried interest is nil and the disguised fee is £1m.
The consideration of the sums together is not intended to catch normal diversification arrangements by funds as it is not unusual for funds to spread investments to give a safer return overall. Sums taken together would only be applicable if avoidance arrangements are in place to give investment managers disguised fees where there was no significant risk.

73.9.8 *Apportionment*

Section 809EZC ITA provides:

> (7) Where more than one actual sum arises in the tax year, the minimum amount is to be apportioned between the actual sums as follows for the purposes of subsection (3)-
> (a) so much of the minimum amount as is attributable to a particular actual sum is to be apportioned to that actual sum, and
> (b) so much of the minimum amount as is not attributable to any particular actual sum is to be apportioned between the actual sums on a just and reasonable basis.
>
> (8) For the purpose of subsection (7) any part of the minimum amount is attributable to a particular actual sum to the extent that there was no significant risk that that part would not arise to the individual in relation to that actual sum, assessing the risk in accordance with subsection (4)(a).

73.10 Subordinated carried interest

In short, a subordinated interest is treated as carried interest.

Section 809EZD ITA provides:

> (1) A sum falling within subsection (2) or (3)-
> (a) is to be assumed to meet the requirements of section 809EZC [definition of carried interest], and
> (b) accordingly, is to be treated as constituting "carried interest" for the purposes of section 809EZB.[21]

[21] Is para (a) otiose or does it add anything to the meaning?

It is helpful to read ss (2)(3) side by side:

s.809EZD(2) ITA	**s.809EZD(3) ITA**
A sum falls within this subsection if, under the [investment-services] arrangements, it is to, or may, arise to the individual out of profits on the investments made for the purposes of the scheme, but only after-	A sum falls within this subsection if, under the [investment-services] arrangements, it is to, or may, arise to the individual out of profits on a particular investment made for the purposes of the scheme, but only after-
(a) all, or substantially all, of the investments in the scheme made by the participants have been repaid to the participants, and	(a) all, or substantially all, of the relevant investments made by participants have been repaid to those participants, and
(b) each external investor[22] has received a preferred return on all, or substantially all, of the investor's investments in the scheme.	(b) each of those participants who is an external investor has received a preferred return on all, or substantially all, of the investor's relevant investments;
	and for this purpose "relevant investments" means those investments in the scheme to which the particular investment made for the purposes of the scheme is attributable.

The IF Manual provides:

> **IFM36540 Sums treated as carried interest** [Dec 2021]
> ... The reference to "substantially all" of the investments being repaid acknowledges that capital contributions to the investment scheme (rather than loan commitments to the investment scheme, which will comprise the vast majority of the investment made by managers and third party investors) will rarely be repaid until the investment scheme is wound up. Therefore the carried interest may be paid when the capital investment is still outstanding.

[22] See 73.12.6 ("External investor").

73.11 "Investment scheme"

This term is used in the definitions of "disguised fee"[23] and "carried interest".

Section 809EZA(6) ITA provides:

> In this Chapter [Chapter 5E] "investment scheme" means-
> (a) a collective investment scheme, or
> (b) an investment trust.

73.11.1 *Collective investment scheme*

Section 809EZE ITA incorporates the FSMA definition:[24]

> In this Chapter [Chapter 5E]
> ... "collective investment scheme" has the meaning given by section 235 of FISMA 2000.

However, s.809EZA(7) ITA extends this definition to deal with (a) managed funds and (b) parallel structures. It may be helpful to read them side by side:

> The reference in subsection (6)(a) to a collective investment scheme includes-

[ss(7)(a): Managed funds]	*[ss(7)(b): Parallel structures]*
(a) arrangements which permit an external investor[25] to participate in investments acquired by the collective investment scheme without participating in the scheme itself,	(b) arrangements under which sums arise to an individual performing investment management services [i] in respect of the collective investment scheme [ii] without those sums arising from the scheme itself.

The IF Manual discusses managed funds:

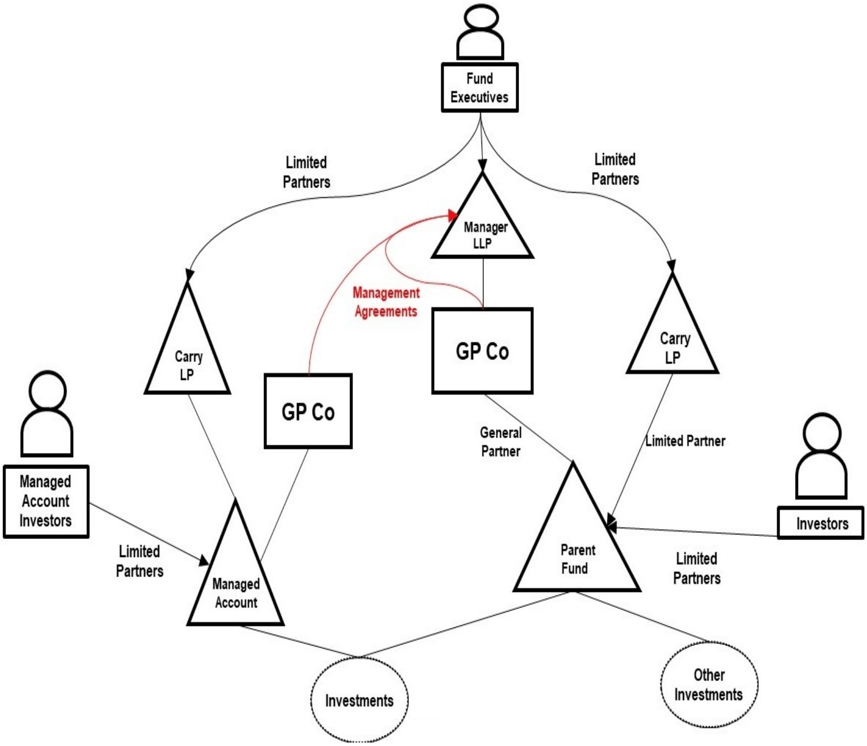
> **IFM36367: Managed accounts** [Dec 2021]
> Managed accounts in their simplest form can be thought of as a fund comprising one investor, usually known as the 'managed account

[23] See 73.3 ("Disguised fee").

[24] See 66.3 (Mutual fund/CIS/OIEC).

[25] See 73.12.6 ("External investor").

investor' providing the capital which is managed by the fund management team. These managed accounts may operate and invest alongside a more mainstream fund vehicle, typically referred to as the 'parent fund' which is managed by the same team. See the diagram below for a simplified example. A managed account may resemble a smaller version of the parent fund and may have the same carried interest structure. However, a variety of vehicles can be used to implement such an arrangement.



Fund Executives
Limited Partners
Limited Partners
Manager LLP
Management Agreements
GP Co
Carry LP
Carry LP
GP Co
General Partner
Limited Partner
Managed Account Investors
Investors
Limited Partners
Managed Account
Parent Fund
Limited Partners
Investments
Other Investments

A common reason for this approach is where an investor has particular requirements which cannot be catered for if it invests in the parent fund vehicle alongside a range of other investors. Such an example would be an institutional investor which may not want to invest in certain industries such as tobacco or alcohol.

Investing through a managed account allows such an investor to decline participation in any investments which fall outside their requirements. This is why on the above diagram most of the fund's investments are also investments made by the managed account, but there is likely to be disconnected investments where the managed account declines to

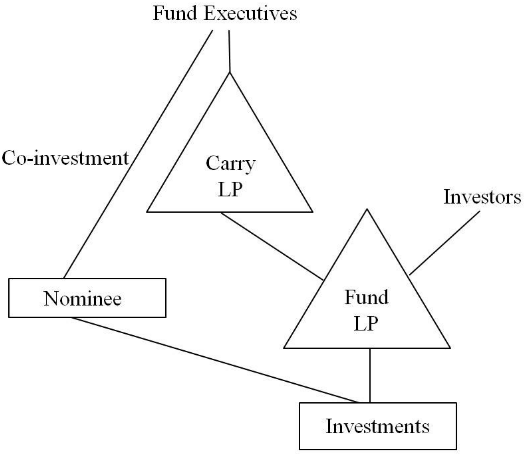
> participate.
>
> There may be other reasons for a managed account. It allows the managed account investor to negotiate a separate deal with the fund management team, potentially around carried interest and management fees, which is kept private from other investors. Some managed account investors may also want more control over the investments made, perhaps retaining the right to refuse certain opportunities even if they do not violate any ethical guidelines or, conversely, to take a disproportionately bigger stake in an investment it feels particularly positive about.

The IF Manual provides a straightforward example of a parallel structure:

> **IFM37220: Carried interest from other funds and retired funds managers** [Oct 2020]
>
> *Example (Kofi)*
>
> A fund management house provides investment management services to three separate collective investment schemes known as A Fund, B Fund and C Fund.
>
> K, a fund manager who works for the fund house has provided investment management services for A Fund. The carried interest hurdle for A Fund has been met. However, the proceeds have not been released to the carried interest holders.
>
> Arrangements are put in place within the fund management business so that carried interest from B Fund which is ready to pay out is passed to K.
>
> Even though K has not provided investment management services for B Fund, the carried interest rules may still apply as the fund manager has received carried interest under arrangements where they have provided investment management services to a collective investment scheme.

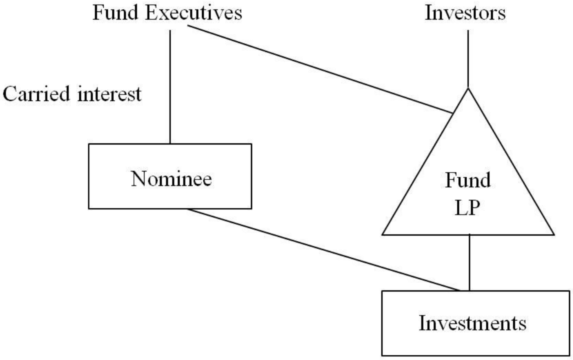
DIMF draft guidance provides:

> 82. It is possible that the managers of a particular fund will not make their co-investment (i.e. the amounts they are required to put into the scheme of their own money on the same terms as investors to give them "skin in the game") in the fund vehicle itself, but through a parallel structure. This structure could simply be a nominee that acquires the agreed proportion of any underlying investment made by the fund using the fund managers' own resources. A simplified example is illustrated below.



Fund Executives
Co-investment
Carry LP
Investors
Nominee
Fund LP
Investments

83. HMRC is also aware that such a structure could be used for less benign ends. For example, the fund managers' "carried interest" could be achieved not by a special class of interest in the fund limited partnership as has historically been the case, but through a direct interest in the underlying investments which replicates the same economic terms. Again, a simple diagram to illustrate this issue is shown below.



Fund Executives
Investors
Carried interest
Nominee
Fund LP
Investments

84. To avoid any doubt that the rules apply to these structures as they would to a more conventional fund set-up, a new sub-section 809EZA(7)(b) was inserted by Finance Act 2016 which provides that "Collective Investment Scheme" for the purposes of the DMF Rules, includes arrangements under which sums arise to a fund manager in respect of a collective investment scheme without the sums arising from

> the collective investment scheme itself. Please note that the wording "in respect of" is intentionally wide and could catch any arrangement (including one seeking to avoid these rules) where sums are in any sense structured so that they do not arises from a collective investment scheme...

73.11.2 *Investment trust*

"Investment trust" matters as it is used in the definition of investment scheme.

Section 809EZE(1) ITA provides a definition by reference:

> In this Chapter [Chapter 5E] ... "investment trust" means a company[26] in relation to which conditions A to C in section 1158 of CTA 2010 are met (or treated as met).

That takes us to s.1158 CTA 2010:

> (2) Condition A is that all, or substantially all, of the business of the company is investing its funds in shares, land or other assets with the aim of spreading investment risk and giving members of the company the benefit of the results of the management of its funds.
> (3) Condition B is that the shares making up the company's ordinary share capital (or, if there are such shares of more than one class, those of each class) are admitted to trading on a regulated market.[27]
> (5) Condition C is that the company is not—
> (a) a venture capital trust (within the meaning of Part 6 of ITA 2007), or
> (b) a company UK REIT (within the meaning of Part 12 of this Act).

Section 1158(6) CTA 2010 provides for further rules:

> The Treasury may by regulations provide—

[26] Section 809EZE(1) ITA provides: "for this purpose "company" has the meaning given by section 1121 of CTA 2010." That incorporates the standard CT definition of company; see 90.8.1 (Company: Standard tax sense).

[27] Defined in ss(4): "For this purpose "regulated market" means—
(a) a UK regulated market within the meaning given by Article 2.1(13A) of Regulation (EU) No 600/2014 of the European Parliament and of the Council of 15 May 2014 on markets in financial instruments,
(b) an EU regulated market within the meaning given by Article 2.1(13B) of that Regulation, and
(c) a Gibraltar regulated market within the meaning given by Article 26(11)(b)(i) of that Regulation."

> (a) for one or both of conditions A and B to be treated as met in the cases, and subject to any conditions, specified in the regulations, and
> (b) for the period for which the condition or conditions are treated as met.

See the Investment Trust (Approved Company) (Tax) Regulations 2011 Chapter 2 (Cases Where Eligibility Conditions Treated As Being Met). This concerns relatively minor points:
(1) Delay in admission of shares to trading on a regulated market and
(2) Winding up of company approved as investment trust.

I do not consider these topics here.

73.12 Misc definitions

73.12.1 *Investment management services*

This term is used in the definition of "disguised fee"[28] and carried interest. Section 809EZE(1) ITA provides a wide definition:

> In this Chapter [Chapter 5E] ...
> investment management services", in relation to an investment scheme, includes-
> (a) seeking funds for the purposes of the scheme from participants or potential participants,
> (b) researching potential investments to be made for the purposes of the scheme,
> (c) acquiring, managing or disposing of property for the purposes of the scheme, and
> (d) acting for the purposes of the scheme with a view to assisting a body in which the scheme has made an investment to raise funds.[29]

DIMF draft guidance provides:

> 54. ... HMRC's starting position will always be that a person in receipt of disguised fees (or carried interest) is performing investment management services. Apart from in extremely unusual situations, HMRC would always seek to argue that if investors/the management team have agreed to share part of the remuneration for managing the

[28] See 73.3 ("Disguised fee").

[29] The definition is applied to CGT by s.103KH(1) TCGA.

> fund with an individual the reason for that arrangement must be that the individual is performing investment management services in respect of that fund. Otherwise HMRC struggles to see the commercial rationale for the individual receiving either a disguised management fee or carried interest. If an individual works in a business which involves performing investment management services and receives a disguised fee or carried interest, HMRC would say that fact is compelling evidence in and of itself that the individual him or herself performs investment management services directly or indirectly. HMRC would expect the only persons who are not within this category to be remunerated purely through salary and bonus rather than a direct interest in the performance of the underlying fund vehicles.

73.12.2 *"Market value"*

Section 809EZE(1) ITA incorporates the CGT rules:

> In this Chapter [Chapter 5E] ... "market value" has the same meaning as in TCGA 1992 (see sections 272 and 273 of that Act).

73.12.3 *"Participant"*

Section 809EZE(1) ITA provides:

> In this Chapter [Chapter 5E] ...
> "participant"-
> (a) in relation to a collective investment scheme, is construed in accordance with section 235 of FISMA 2000;[30]
> (b) in relation to an investment trust, means a member of the investment trust;

73.12.4 *"Investment in scheme"*

Section 809EZE ITA provides:

> (2) In this Chapter [Chapter 5E] a reference to an investment made by a person in an investment scheme is a reference to a contribution by the person (whether by way of capital, loan or otherwise) towards the property subject to the scheme (but does not include a sum committed but not yet invested).
> (3) For the purposes of subsection (2) a person who holds a share in an investment scheme which is a company limited by shares and who acquired the share from a person other than the scheme is to be taken to have made a contribution towards the property subject to the scheme

[30] See App 7.2 (Participant/participate).

> equal to-
> (a) the consideration given by the person for the acquisition of the share, or
> (b) if less, the market value of the share at the time of the acquisition.

73.12.5 *"Repayment or return"*

Section 809EZE(4) ITA provides:

> In this Chapter [Chapter 5E], in relation to an investment scheme which is a company limited by shares-
> (a) references to a repayment of, or a return on, an investment in the scheme include a repayment of, or a return on, an investment represented by a share in the scheme resulting from-
> (i) the purchase of the share by the scheme,
> (ii) the redemption of the share by the scheme,
> (iii) the distribution of assets in respect of the share on the winding up of the scheme, or
> (iv) any similar process;
> (b) references to a return on an investment in the scheme include a dividend or similar distribution in respect of a share in the scheme representing the investment.

73.12.6 *"External investor"*

This term is used in various places, including the definition of arm's length return, profit-related return, and subordinated carried interest.

Section 809EZE(1) ITA provides:

> In this Chapter [Chapter 5E] ...
> "external investor", in relation to an investment scheme and any arrangements, means a participant in the scheme other than-
> (a) an individual who at any time performs or is to perform investment management services directly or indirectly in respect of the scheme, or
> (b) a person through whom sums are to, or may, arise directly or indirectly to such an individual from the scheme under the [investment-services] arrangements.[31]

73.13 DIMF: Deemed trade

Armed with the definition of disguised fees, we turn to the rules which

[31] The definition is applied to CGT by s.103KH(1) TCGA.

govern them.

Section 809EZA(1) ITA provides:

> Where one or more disguised fees arise to an individual in a tax year from one or more investment schemes (whether or not by virtue of the same arrangements), the individual is liable for income tax for the tax year in respect of the disguised fee or fees as if–
>
> (a) the individual were carrying on a trade for the tax year,
>
> (b) the disguised fee or fees were the profits of the trade of the tax year, and
>
> (c) the individual were the person receiving or entitled to those profits.[32]

The IF Manual provides:

> **IFM36210: Deemed trade: Introduction** [Oct 2020]
>
> **Consequence of a disguised fee arising**
>
> ... the disguised fees are brought into account for the purposes of both income tax and Class 4 National Insurance Contributions (NICs).
>
> As disguised fees are treated as the profits of the deemed trade and not as receipts, no losses or expenses can be set against the disguised fees. For this reason the deemed trade cannot give rise to a loss, as it only applies to fees arising.
>
> However the DIMF rules only re-characterise the nature of the receipt arising to an individual. They do not alter, for tax purposes, the nature of the underlying activities carried out by the individual which give rise to the disguised fee. Nor do the DIMF rules alter the nature of the activities of any entity or arrangement by virtue of which the disguised fee arises.
>
> For example, where a disguised fee arises from a typical General Partner Limited Partner (GP-LP) structure (IFM36132), although the individual receiving the fee is treated as carrying on a deemed trade, the rules do not re-classify that partnership as carrying on a trade (as may be relevant, for example, to entrepreneurs' relief and interest relief). The GP LP is carrying on an investment business; sums received by the GP LP are not therefore reclassified as trade income.

DIMF draft guidance provides:

> 28. Please note that as amounts of disguised fee are treated as the profits

[32] Para (c) reflects the standard ITTOIA rule that the person liable is the person receiving/entitled to income; see 15.2.1 (Receipt/entitlement basis of liability).

of a trade (which then come into charge under Part 2 of ITTOIA 2005 without more) they also comprise "relevant UK earnings" for the purposes of determining relief for contributions to registered pension schemes.

73.14 DIMF: Territorial limitation

Section 809EZA(2) ITA provides:

> For the purposes of subsection (1) the trade is treated as carried on-
> (a) in the UK, to the extent that the individual performs the relevant services in the UK;
> (b) outside the UK, to the extent that the individual performs the relevant services outside the UK;
> and for this purpose "the relevant services" means the investment management services by virtue of which the disguised fee or fees arise to the individual in the tax year.

The IF Manual provides:

> **IFM36220: Territorial scope of the deemed trade** [Oct 2020]
> ... Where an individual who is resident in the UK for tax purposes performs services both within and outside the UK, the entirety of the profits from the deemed trade are chargeable to UK tax in accordance with ITTOIA05/S6.[33]
> For an individual who is non-resident in the UK for tax purposes, the trade is regarded as carried on in the UK when the services are performed in the UK and carried on outside the UK where the services are performed outside the UK.
> Even where an individual only performs very limited services in the UK, for example coming to the UK for a small number of business meetings during the course of the year, the legislation provides that a deemed trade exists for that individual.

73.14.1 *DT relief*

The IF Manul provides:

> **FM36220: Deemed Trade: Territorial scope of the deemed trade** [Oct 2020]
> **Territorial scope of the deemed trade**
> **Location of the deemed trade**
> ... This means that the business profits article of most double taxation

[33] See 21.4 (IT territorial limit: Trading).

> treaties could apply, and so a tax charge will only arise if a permanent establishment (PE) exists (INTM264050).[34]
>
> *Example (Thomas and Sam)*
>
> ABC LLP is a US limited liability partnership. T is one of three partners who live and work in the US and has not been to the UK in the tax year. S is a fourth partner who lives and works in the US but has visited the UK for three days in relation to the acquisition of a UK business by a collective investment scheme (IFM36900) to which ABC LLP provides investment services. Neither T nor S is UK resident for tax purposes. Each of the four partners received £10,000 that would, if the individuals had lived and worked in the UK, be treated as a disguised fee.

The HMRC analysis is as follows:

> T has not performed any services in the UK, so is not brought into charge under the DIMF rules. S has performed services in the UK, so is potentially within the charge. It is unlikely that a few days in the UK will have the effect of creating a UK PE but S will have to consider this carefully and make a decision based on the facts. If there is no PE, then a charge will not arise under the DIMF rules.

"Unlikely" seems an understatement - but HMRC did not wish to give any hostage to fortune. The Manual continues:

> Many asset manager firms are international businesses with operations in more than one financial centre. Where an individual performs any investment management services in the UK they are potentially within the scope of the DIMF rules. Therefore, this may cause concern to non-resident individuals who come to the UK very rarely and do not perform any significant investment management activity whilst in the UK.
>
> Each case will be a question of fact. However, where individuals have little or no presence in the UK it is not expected that a situation will be created in which they will be subject to the DIMF rules. This is the case even where the wider business or group they work for does have a substantial UK operation. For example:
>
> A fund management business headquartered outside the UK has a UK operation and an individual from the headquarters occasionally visits the UK; or
>
> A fund management business that is UK headquartered has fund management divisions based in other jurisdictions and an individual

[34] See 21.23 (DT relief: Trading income).

involved in such offshore operations occasionally comes to the UK.

Where an individual is resident in a country with a double taxation agreement with the UK, even where they perform some investment management services in the UK, it does not follow that they will automatically be charged under the DIMF legislation. The general approach and practices followed in relation to double taxation treaties applying to the taxation of trade profits also apply to the individual's deemed trade.

In the context of DIMF, the deemed trade concerned is a trade of the individual rather than being the same trade as carried on by the entity which engages the individual. In considering whether the individual has a PE for the purposes of a relevant double taxation treaty you must consider the individual's deemed trade, not that of the entity that engages them.

Whether the engaging entity itself or its wider group already has a UK PE is therefore a separate question entirely. This means it is possible for the entity which engages the individual to have a UK PE while the individual fund manager will not be treated as having a personal PE for the purposes of the relevant treaty. An individual may therefore be able to rely on that treaty to be out of scope of liability under the DIMF rules.

Further advice on permanent establishments and double taxation treaties is available in the International Manual (INTM260000).

Where the activities of an individual do amount to a PE such that a double taxation treaty does not preclude liability from UK tax, it will be necessary to determine the amount of profit attributable to that PE. Establishing the extent to which the individual is performing investment management services in the UK will be a fact specific question which needs to be determined, given reference to all the facts and circumstances.

73.15 To whom DIMF arises

The rules are in the appallingly numbered s.809EZDA and s.809EZDB:

ITA	Applies to	Enjoyment conditions	See para
s.809EZDA	Connected non-co	No	73.16
s.809EZBB	Connected co/unconnected person	Yes	73.17

73.16 809EZDA: Connected non-company

Section 809EZDA ITA provides:

> (1) This section applies in relation to an individual ("A") if-
>
> (a) a sum arises to a person ("B") who is connected with A,

> (b) B is not a company,
> (c) income tax is not charged on B in respect of the sum by virtue of this Chapter [Chapter 5E, DIMF],
> (d) capital gains tax is not charged on B in respect of the sum by virtue of Chapter 5 of Part 3 of TCGA 1992 [carried interest], and
> (e) the sum does not arise to A apart from this section.
>
> (2) The sum referred to in subsection (1)(a) arises to A for the purposes of this Chapter [Chapter 5E].
>
> (3) Where a sum arises to A by virtue of this section, it arises to A at the time the sum referred to in subsection (1)(a) arises to B.

73.16.1 *"Connected person"*

Section 809EZDA(4) ITA tweaks the standard definition:

> Section 993 (meaning of "connected") applies for the purposes of this section, but as if-
> (a) subsection (4) of that section were omitted, and
> (b) partners in a partnership in which A is also a partner were not "associates" of A for the purposes of sections 450 and 451 of CTA 2010 ("control").[35]

Thus:

(a) Partners are not connected persons.[36]

(b) A partner is not connected with a company held by the partnership.[37]

This is only a section-wide definition, but it is repeated elsewhere: s.809EZDB(10) ITA, s.103KG(15) TCGA so it applies for the whole DIMF code.

73.17 809EZDB: Company/unconnected person

Section 809EZDB(1) ITA provides:

> This section applies in relation to an individual ("A") if-
> (a) a sum arises to-
> (i) a company connected with A, or

[35] See 104.15.3 (Person controls company).

[36] See 104.18 (Connected: Partners).

[37] Please note, if any individual partner does have direct or indirect control of a company through a partnership, that company will still be a connected person to that individual for these purposes, it is only the aggregation of interests when judging control which is modified.

> (ii) a person not connected with A,
>
> (b) any of the enjoyment conditions is met, and
>
> (c) the sum does not arise to A apart from this section.

73.17.1 *"Enjoyment conditions"*

Section 809EZDB(2) ITA provides:

> The enjoyment conditions are-
>
> (a) the sum, or part of the sum, is in fact so dealt with by any person as to be calculated at some time to enure for the benefit of A or a person connected with A;
>
> (b) the arising of the sum operates to increase the value to A or a person connected with A of any assets which-
>
> (i) A or the connected person holds, or
>
> (ii) are held for the benefit of A or the connected person;
>
> (c) A or a person connected with A receives or is entitled to receive at any time any benefit provided or to be provided out of the sum or part of the sum;
>
> (d) A or a person connected with A may become entitled to the beneficial enjoyment of the sum or part of the sum if one or more powers are exercised or successively exercised (and for these purposes it does not matter who may exercise the powers or whether they are exercisable with or without the consent of another person);
>
> (e) A or a person connected with A is able in any manner to control directly or indirectly the application of the sum or part of the sum.

The drafting is based on the ToA enjoyment conditions.[38] But the ToA rules apply where the individual transferor has a *personal* power to enjoy; the rules here apply if A *or a person connected with A* has power to enjoy.

[38] See 49.15 ("Power to enjoy"). Section 809EZDB(5) ITA adds: "In determining whether any of the enjoyment conditions is met in relation to a sum or part of a sum-
(a) regard must be had to the substantial result and effect of all the relevant circumstances, and
(b) all benefits which may at any time accrue to a person as a result of the sum arising as specified in subsection (1)(a) must be taken into account, irrespective of-
(i) the nature or form of the benefits, or
(ii) whether the person has legal or equitable rights in respect of the benefits."
This is also based on the ToA provision; see 49.15.1 (Substance).

That is of course much wider.[39]

The last paragraph of s.809EZDB(1) tweaks the definition of connected person in the context of Power to Enjoy:

> In this subsection, in a case where the sum referred to in subsection (1)(a) arises to a company connected with A, references to a person connected with A do not include that company.

Assuming the conditions in s.809EZDB(1) are met, we move on. Section 809EZDB ITA provides:

> (3) There arises to A for the purposes of this Chapter [Chapter 5E] -
> (a) the sum referred to in subsection (1)(a), or
> (b) if the enjoyment condition in subsection (2)(a), (c), (d) or (e) is met in relation to part of the sum, that part of that sum, or
> (c) if the enjoyment condition in subsection (2)(b) is met, such part of that sum as is equal to the amount by which the value of the assets referred to in that condition is increased.
>
> (4) Where a sum (or part of a sum) arises to A by virtue of this section, it arises to A at the time it arises to the person referred to in subsection (1)(a)(i) or (ii) (whether the enjoyment condition was met at that time or at a later date).

73.17.2 *Relief for taxable company*

Section 809EZDB(6) ITA provides:

> The enjoyment condition in subsection (2)(b), (c) or (d) is to be treated as not met if it would be met only by reason of A holding shares or an interest in shares in a company.

What matters then is whether enjoyment conditions (a) and (e) are met. Section 809EZDB(7) ITA provides:

> The enjoyment condition in subsection (2)(a) or (e) is to be treated as not met if the sum referred to in subsection (1)(a) arises to a company connected with A and-
> (a) the company is liable to pay corporation tax in respect of its profits and the sum is included in the computation of those profits.

The IF Manual provides:

[39] In this respect the DIMF code follows the approach of the mixed partnership code: see 86.10.1 (PtoE condition (c): Enjoyment conditions).

> **IFM36335 special provisions for companies** [Sep 2021]
> Special provision is made in relation to companies. This is because a fund management business could be set up as a wholly onshore corporate structure, with the fees and any carried interest arising from the underlying funds being charged in full to corporation tax. If, for example, an individual owned more than 50% of that business they would be connected (IFM36330) with the company and charged in full on amounts arising to that company but for this rule.
> This would be the case even if the company was a genuine vehicle of substance carrying on the entire investment management trade, the profits of which are charged fully to corporation tax.

Section 809EZDB(7) ITA provides:

> The enjoyment condition in subsection (2)(a) or (e) is to be treated as not met if the sum referred to in subsection (1)(a) arises to a company connected with A and ...
> (b) paragraph (a) does not apply but-
> (i) the company is a CFC[40] and the exemption in Chapter 14 of Part 9A of TIOPA 2010 [foreign tax at least 75% of corresponding UK tax] applies for the accounting period in which the sum arises, or
> (ii) the company is not a CFC but, if it were, that exemption would apply for that period.

The IF Manual provides:

> **IFM36335: special provisions for companies** [Sep 2021]
> ... In effect this means that the CFC is liable to pay an amount of tax in its country of residence equal to at least 75% of the amount that would have been due if it had been chargeable to the tax in the UK. The tax exemption contains detailed rules as to how the comparison is to be undertaken. These rules are designed to prevent manipulation of the tax due in the country of residence. Guidance on these rules can be found at INTM226000+.
> Furthermore if the company is not a CFC (for example because it is controlled by persons outside the UK), the exclusion can still apply if the conditions for the tax exemption in the CFC rules are otherwise met (for example, if the company were a CFC it would qualify for exemption because the tax it pays is equal to at least 75% of the amount that would have been due if it had been chargeable to UK tax).

[40] Section 809EZDB(7) ITA incorporates a definition by reference: “In this subsection “CFC” has the same meaning as in Part 9A of TIOPA 2010.”

Section 809EZDB ITA then restricts the exceptions with a TAAR, which takes somewhat non-standard form:

> (8) But subsections (6) and (7) do not apply if the sum referred to in subsection (1)(a) arises to
> [i] the company referred to in subsection (1)(a)(i) or
> [ii] the person referred to in subsection (1)(a)(ii)
> as part of arrangements where-
> (a) it is reasonable to assume[41] that in the absence of the arrangements the sum or part of the sum would have arisen to A or an individual connected with A, and
> (b) it is reasonable to assume that the [investment-services] arrangements have as their main purpose, or one of their main purposes, the avoidance of a liability to pay income tax, capital gains tax, inheritance tax or corporation tax.

The IF Manual provides:

> **IFM36335: special provisions for companies** [Sep 2021]
> ... Where a UK based manager has a very small shareholding in the ultimate (often quoted) parent vehicle of a large multi-national corporate asset management group, it will generally be obvious that the sums which represent the management fee would not arise to them in the absence of those arrangements.
> On the other hand, an individual manager or small management team interposing a corporate entity with no substance will be caught.
> In between the two extremes it is harder to define a clear line where it will become reasonable to assume that in the absence of those arrangements, the sum would have arisen to A or an individual connected with A. The factors below, which are non-exhaustive, may help in considering what is reasonable:
>
> - What structures were used by the fund management house in relation to prior funds (this may not just be their immediately preceding fund);
> - Whether the company was put in place in response to advice to minimise a tax burden or achieve tax efficient co-investing funding;
> - Whether the fund management business operates (and has always operated) as a wholly corporate group;
> - Whether a company in the corporate group carries on a trade of providing investment management or advisory services on a commercial basis with a view to profit and the individual receives an

[41] See App 2.24 (Reasonable-to-assume).

> arm's length rate of remuneration from his or her employment by that company. That company has sufficient substance to carry on the management activity and actually does so i.e. with its own employees, contracts and other assets;
>
> - The size of the management team;
> - The international spread of the management team;
> - What happens when an individual joins or leaves the management team – both in terms of prior agreements and understandings, as well as legal agreements (if the expectation is that the manager will receive a reward which in any sense reflects or is calculated by reference to amounts which have arisen or profits which have accrued to the corporate).
>
> The above list contains suggestions of what could be considered when deciding if it is reasonable to assume that a sum would have arisen to A in the absence of the arrangements. No factor is deemed to be decisive; the analysis depends on the facts and circumstances.
>
> (b) It is reasonable to assume that the arrangements have as their main purpose, or one of their main purposes, the avoidance of a liability to pay income tax, capital gains tax, inheritance tax, or corporation tax.
>
> This test does not require the purpose of the arrangements to involve the avoidance of the DIMF rules. Seeking to avoid any income tax, capital gains tax, inheritance tax or corporation tax advantage will be sufficient. In particular, HMRC understands that some of the structures set up historically by nom-domiciled fund managers were designed to manage their liability to inheritance tax rather than secure any income tax advantage and this will be sufficient to fail this test.
>
> This test will be deemed to be met where the management fee is used (whether directly or indirectly) to make an investment in a collective investment scheme (ITA07/S809EZB(9)). This will be the case even if there is, in fact, no tax avoidance motive to the arrangements in any sense.

Section 809EZDB(9) ITA provides:

> The condition in subsection (8)(b) is to be regarded as met in a case where the sum is applied directly or indirectly as an investment in a collective investment scheme.

The IF Manual provides:

> **IFM36335: special provisions for companies** [Sep 2021]
>
> ... This responds to structures which were common before the DIMF rules were introduced which sought to meet fund manager's co-investment commitments in a tax efficient way. Many of these

structures sought to apply management fees which would otherwise arise to a fund manager to pay up his or her co-investment commitment. While this provision (ITA07/S809EZDB(9)) is targeted at co-invest funding structures, please note this can include investments in any collective investment scheme, not just those managed by the individual in question. If taxpayers argue that the sums are not arising from a collective investment scheme in a way which undermines the clear policy rationale behind this legislation, HMRC will consider making a challenge, this includes applying the targeted anti-avoidance rules (ITA07/S809EZF) (IFM36600).

73.18 DIMF double taxation

DIMF could give rise to multiple charges on the same income. Section 809EZG ITA provides relief in two situations:

s.809EZG(1)	**s.809EZG(2)**
This section applies where-	This section also applies where-
(a) income tax is charged on an individual by virtue of section 809EZA in respect of a disguised fee, and	(a) income tax is charged on an individual by virtue of section 809EZA in respect of a disguised fee which arises to the individual under the [investment-services] arrangements by way of a loan or advance,
(b) at any time, a tax (whether income tax or another tax) is charged on the individual or another person otherwise than by virtue of section 809EZA in relation to the disguised fee.	(b) at any time, a tax (whether income tax or another tax) is charged on the individual in relation to another sum which arises to the individual under the arrangements, and
	(c) some or all of the loan or advance has to be repaid as a result of the other sum having arisen to the individual.

Where these conditions are satisfied, we move on to the relief:

> (3) In order to avoid a double charge to tax, the individual may make a claim for one or more consequential adjustments to be made in respect of the tax charged as mentioned in subsection (1)(b) or (2)(b).
> (4) On a claim under this section an officer of Revenue and Customs

> must make such of the consequential adjustments claimed (if any) as are just and reasonable.
>
> (5) The value of any consequential adjustments must not exceed the lesser of the income tax charged on the individual as mentioned in subsection (1)(a) or (2)(a) and-
>
> (a) where subsection (1) applies, the tax charged as mentioned in subsection (1)(b);
>
> (b) where subsection (2) applies, the tax charged as mentioned in subsection (2)(b) in relation to so much of the other sum as does not exceed the amount of the loan or advance that has to be repaid as mentioned in subsection (2)(c).
>
> (6) Consequential adjustments may be made-
>
> (a) in respect of any period,
>
> (b) by way of an assessment, the modification of an assessment, the amendment of a claim, or otherwise, and
>
> (c) despite any time limit imposed by or under any enactment.

The IF Manual provides:

> **IFM36730: Avoidance of double taxation: Claim under the first provision** [Oct 2020]
>
> ...
>
> *Example: Fund disposal of an investee company*
>
> A fund disposes of an investee company. The proceeds from the disposal are, as a matter of fact, allocated to the individual at the level of a General Partner Limited Partner (GP-LP) entity and used to meet an annual fee. This gives rise to a charge under the DIMF rules. The individual's share of the proceeds are £2m. The individual is also liable to capital gains tax on the share disposal.
>
> The individual has been taxed twice as a result of the DIMF rules and the CG charge on disposal. The individual may therefore be able to make a claim for a consequential adjustment to the CGT charge.
>
> Example: Following the change in the definition of fees 'arising' from 22 October 2015
>
> Following the changes made to the definition of arise with effect from 22 October 2015 (discussed below) a disguised fee arises to a fund manager's husband (the fund manager having procured that part of the interest in the GP-LP to which she was entitled was instead issued to her husband). The gains and income which the husband is allocated at the level of GP-LP are taxable in his hands in accordance with their original characteristic for tax purposes, for example as a capital gain or dividend income. However, the sum is also treated as arising to the fund manager by virtue of the DIMF rules and is charged in her hands as a disguised

fee to trading income.

The provision gives relief in respect of the ‘other tax’ which is the tax paid by the fund manager’s husband in this example. In order to facilitate a just and reasonable claim an officer of HMRC may deem the fund manager’s DIMF charge to have been paid by her husband as an administrative easement. This easement, however, is only for administrative purposes and in no way should the application of the easement provide a tax advantage for either party. If a tax advantage is achieved then this may lead to penalties.

In both examples, if the claim is allowed, then the adjustment will be limited by ITA07/S809EZG(5) to the lower of:

- the tax charge under the DIMF rules; and
- the other tax involved.

IFM36740: Avoidance of double taxation: Claim under the second provision [Oct 2020]

Claim under the second provision

ITA07/S809EZG(2)

ITA07/S809EZG(5)

This provision applies where income tax is charged to an individual in respect of a disguised fee under the disguised investment management fees (DIMF) rules and this fee has been paid by way of a loan or advance. If this loan or advance is then discharged by using some of the profits of the fund then there may be a further DIMF charge.

Example: Loan advance paid to manager

An individual investment manager gets a loan from an investment scheme. Three years later, profits arise in a way that means the profits are not included as profits of a trade and this profit is used to discharge the outstanding loan. The DIMF rules determine that an untaxed management fee arises both at the time the loan is made and again when the profits are used to repay the individual’s loan.

The individual has been taxed twice despite the latter profits offsetting the amount that would have at some point been repayable under the individual’s loan. Relief can be given against the DIMF charge which is due in respect of the latter profit payment.

73.18.1 *Expenses*

The IF Manual provides:

IFM36720: Avoidance of double taxation: Consequential adjustment [Oct 2020]

...Expenses

In circumstances where the General Partner Limited Partner (GP-LP) or

> the General Partner Limited Liability Partner (GP-LLP) structures are in place in a limited partnership fund (LP Fund) some of the monies flowing through the GP-LP or GP-LLP may be applied in meeting genuine commercial expenses of the LP Fund. The amount applied to these expenses will not be treated as arising to the individuals managing the fund, provided they would be deductible when calculating the profits of a trade of the GP-LP or GP-LLP under normal UK tax principles.
>
> However, in most cases it is unlikely that such expenses would be deductible from investment income and gains arising to members of the GP-LP or GP-LLP from the LP Fund.
>
> The fund manager may therefore be charged to capital gains tax, for example, on the gross gain treated as arising under Statement of Practice D12. Only the net amount actually arising after genuine expenses have been paid is charged under DIMF rules.
>
> HMRC accept that the CGT charged on the gross gain can be reduced under ITA07/S809EZG (up to the amount of tax charged under the DIMF rules in the unlikely situation that the CGT charge exceeds the former). This is the case even though the charge under the DIMF rules will be on the net sum arising.
>
> This treatment will only be permitted as just and reasonable in relation to genuine commercial expenses where those expenses would have been deductible in calculating the profits of a trade of providing investment management expenses in line with the clear purpose of the DIMF rules. It cannot be used to access relief on expenses which would not have been deductible when calculating trading profits.

73.19 Carried interest: CGT

Armed with the definition of carried interest,[42] we can turn to the CGT rules for carried interest. The drafting draws on the definition of disguised fee, and it is helpful to see them side by side:

Carried interest: s.103KA(1) TCGA	**Disguised fee: s.809EZA(3) ITA**
This section applies where–	For the purposes of this Chapter a "disguised fee" arises to an individual in a tax year from an investment scheme if—
(a) an individual ("A") performs	(a) the individual at any time performs or is to perform

[42] See 73.8 ("Carried interest").

investment management services directly or indirectly in respect of an investment scheme	investment management services directly or indirectly in respect of the scheme under any arrangements,
involving at least one partnership, and	[No equivalent]
(b) carried interest arises to A under the arrangements.	(c) under the arrangements, a management fee arises to the individual from an investment scheme in the tax year (see section 809EZB), and
[No equivalent]	(d) some or all of the management fee is untaxed;

Thus some of the discussion on s.809EZA(3) is relevant here.[43]

I refer to the arrangement as as an “investment-services arrangement”.

DIMF draft guidance provides:

> 15. ... section 103KA(1)(a) does not refer to carried interest arising from any particular investment scheme. Section 103KA therefore applies to any carried interest which arises to an investment manager, even if it arises from another investment scheme in relation to which no investment management services are in fact provided. The only condition is that the carried interest arises to the fund management under the arrangements by which he or she provides investment management services to a collective investment scheme ...
>
> 16. In virtually all situations, HMRC considers that carried interest (given its commercial rationale) will only arise to individuals where this condition is met. To give an example, a fund manager may manage Fund X at an asset management house. The fund manager may also be given carried interest in another fund managed by a different team (Fund Y). This is part of the remuneration structure at the business where the fund managers are given cross-exposure to the performance of each other’ funds.
>
> Here, the carried interest is arising to the fund manager from Fund Y because he or she is performing investment management services to Fund X and so the carried interest arising from both funds falls within section 103KA.
>
> 17. Section 103KA also applies where a fund manager has retired or has

[43] See 73.3 (“Disguised fee”).

ceased to perform investment management services and is still in receipt of carried interest. Section 103KA(1) does not include any requirement that the individual is still performing investment management services when the carried interest arises provided the fund manager is performing, or has previously performed, investment management services. If the fund manager has at some point performed investment management services in respect of a collective investment scheme and the carried interest arises under those arrangements, it comes within the scope of these rules.

73.19.1 *Carried-interest charges*

There are two charging provisions which I call **"partnership CI charge"** and the **"general CI charge"**; and the two charges together are the **"carried-interest charges"**.

s.103KA(2): partnership CI charge	**s.103KA(3): general CI charge**
If the carried interest arises to A	If the carried interest arises to A
in connection with the disposal of one or more assets of the partnership or partnerships–	in circumstances other than those specified in subsection (2),
(a) a chargeable gain equal to the amount of the carried interest less any permitted deductions (and no other chargeable gain or loss) is to be treated as accruing to A on the disposal, and	a chargeable gain of an amount equal to the amount of the carried interest less any permitted deductions is to be treated as accruing to A
(b) the chargeable gain is to be treated as accruing to A at the time the carried interest arises.	at the time the carried interest arises.

Comparing the two charges:

Partnership CI charge	**General CI charge**
Disposal of partnership asset	No disposal of partnership asset
CI gain accrues to A	*Same*
No other gain/loss accrues to A	No equivalent rule

The partnership CI charge typically arises when a partnership sells assets and a distribution is made to the partners including carried interest holders. The gain which is treated as arising is the **"carried interest gain"**. This is a notional (fictional) gain. It is computed according to carried interest rules, and not on CGT principles. It is distinct from the gain (if any) on any actual disposal. A carried interest gain arises even though the asset actually disposed of:

(1) is not a chargeable asset (eg it may be a qualifying corporate bond) or
(2) is a foreign asset (otherwise qualifying for the CGT remittance basis)
(3) is sold at a loss (applying CGT computation principles)

DIMF draft guidance provides:

> *Section 103KA(2) – disposals property of a partnership*
> 20. ... HMRC expect that section 103KA(2) will apply to most carried interest arising from most "classic" fund structures, where the fund is structured as limited partnership and the carried interest awarded to fund managers is held through another limited partnership (which is a limited partner in the fund limited partnership as shown in the diagram at paragraph 6 of section 1 above.) Section 103KA(2) is therefore also the primary means by which the legislation counters "base cost shift" and "cherry picking" as these both required carried interest to arise through partnership structures.
> 21. As outlined above, where carried interest arose to an individual from the disposal of assets held in a partnership (such as the disposal of an investment held by a fund limited partnership) the quantum of the gain treated as arising to the individual was previously calculated in accordance with SoP D12.[44] Section 103KA(2) supersedes SoP D12 where it applies and substitutes a new, statutory, method to determine the quantum of the gain treated as arising. Section 103KA(2)(a) provides that a gain equal to the amount of carried interest arising less any permitted deductions will arise. As noted below, "permitted deductions"are narrowly defined and section 103KA(2) will charge a fund manager on their true economic gain from the carried interest rather than the amounts calculated under SoP D12.
> 22. Please note, that section 103KA(2)(a) provides that the gain treated as arising under this section is the only chargeable gain (or loss) treated as arising in respect of that disposal of partnership property, and section 103KA(2)(b) also potentially alters the timing of when the gain accrues to the point at which the carried interest arises to the fund manager. Section 103KA(2) therefore acts to adjust both the timing and quantum of any gain arising to a fund manager which comprises carried interest.
> 23. In some circumstances a gain may accrue to an individual under SoP

[44] See 85.20 (Partnership transparency: CGT).

> D12 before section 103KA is invoked. This is because section 103KA is triggered by a sum arising to a fund manager, whereas a gain can be treated as accruing under the general scheme of CGT and SoP D12 when a partnership asset is disposed of, even if the proceeds are retained and no sum arises to the relevant individual. This is most likely to occur where a partnership asset is disposed of necessitating the calculation of a gain under SoP D12 but where the carried interest is placed into escrow (as discussed below at paragraphs 37-44) such that no sum "rises"to the fund manager at that time. There is nothing at this stage to prevent the gain calculated in accordance with SoP D12 accruing to the fund manager and he or she will be taxed on that gain in accordance with his or her own circumstances. However, once the sum is released from escrow and a sum "rises"to the fund manager, the chargeable gain accruing under section 103KA(2) vacates and supersedes the earlier gain at that point –section 103KA(2) putting beyond doubt that the gain calculated under that section is the only gain treated as arising to the fund manager.
>
> 24. Please note the exclusivity of section 103KA(2) also applies in respect of any loss that would otherwise accrue to a fund manager under SoP D12 (for example, where the hurdle has been hit and the fund manager is receiving carry which is paid out of the disposal of an asset at a loss). Here a gain accrues to the fund manager equal to the sum received, less any permitted deductions, and no loss is treated as accruing to the individual. Where there is the timing difference referred to above (i.e. an asset is disposed of at a loss some time before the proceeds are distributed in a way which prevents a sum "rising"to the fund manager until that later point) it may be prudent for a taxpayer not to claim that loss under section 16(2A), TCGA 1992. If the loss has been claimed as an allowable loss and section 103KA(2) is later invoked such that the loss is vacated and treated as never having arisen, the fund manager may find that his previous tax return(s) are incorrect and that tax has been underpaid.

DIMF draft guidance provides:

> 26. Please note, in common with other references in the TCGA, "asset" in section 103KA(2) refers to an asset the disposal of which could give rise to a chargeable gain. Where an asset is effectively exempt from capital gains tax under general principles, the carried interest will be charged under section 103KA(3) rather than section 103KA(2). This is most likely to arise in respect of qualifying corporate bonds (or QCBs) within section 116, TCGA 1992 which do not give rise to chargeable gains. The loan notes issued to funds to represent shareholder debt are

> often QCBs and so carried interest satisfied out of their repayment will come within section 103KA(3) rather than section 103KA(2).

Sections 103KFA - 103 KFE TCGA provide an elective accruals basis of taxation for carried interest. The object is to allow UK resident investment managers to accelerate their tax liabilities in order to align their timing with the position in other jurisdictions, where they may obtain double taxation relief. I do not discuss these provisions here.

73.19.2 *Who receives carried interest*

Section 103KG(1) TCGA provides:

> For the purposes of this Chapter [Chapter 5 Part 3], carried interest "arises" to an individual ("A") if, and only if, it arises to him or her for the purposes of Chapter 5E of Part 13 of ITA 2007.

See 73.15 (To whom DIMF arises).

The usual terminology is that income *arises* and gains *accrue*. Consistently with that, a carried interest gain is said to accrue, and carried interest is said to arise. The carried interest code adopts the DIMF code, which concerns income rather than gains, and so used the word "arises". But "arise" and "accrue" amount to the same thing.

The IF Manual provides:

> **IFM37268: Sums released from escrow** [Oct 2020]
> ... The deferred carried interest rules modify the application of the enjoyment conditions in relation to companies through TCGA92/S103KG(8)-(11). This mirrors the modification as part of the Disguised Investment Management Fees (DIMF) rules seen at ITA07/S809EZDB (6)-(9) (IFM36335).

73.19.3 *Carried interest trade receipt*

Section 103KA(4) TCGA provides:

> Subsections (2) and (3) [carried-interest charges] do not apply in relation to carried interest to the extent that–
> (a) it is brought into account in calculating the profits of a trade[45] of A for the purposes of income tax for any tax year

DIMF draft guidance provides:

[45] Section 103KA(8) TCGA provides: "In this section ... "trade" includes profession or vocation."

> This ensures that fund managers who receive a performance fee which is brought into account when calculating their trading profits do not need to claim relief from the CGT charge under this legislation to avoid double taxation.

73.19.4 *"Carried interest gain"*

The term "carried interest gain" matters because such gains are (in short) subject to tax at the higher, 28% CGT rate.[46] This is a convenient place to consider the definition, as it refers to provisions and wording discussed here.

Section 1H TCGA provides:

> (9) For the purposes of this section chargeable gains are "carried interest gains" if they accrue to an individual ("X")—
> (a) under section 103KA(2) or (3) (investment management services),
> (aa) under section 103KFA(3) (gains on deemed carried interest where election made), or
> (b) as a result of carried interest arising to X under arrangements
> [i] not involving a partnership
> [ii] under which X performs investment management services directly or indirectly in respect of an investment scheme.
> (10) A gain is not a carried interest gain under subsection (9)(b) if the carried interest constitutes a co-investment repayment or return.[47]

73.19.5 *Relevance of partnership*

The s.103KA charges only apply if the arrangement involves a partnership. A partnership is not needed for DIMF or for a carried interest gain (taxable at 28%). But in practice there usually is a partnership involved somewhere in the structure.

73.20 "Permitted deductions"

This term is used in the computation of carried-interest gains.

Section 103KA(5) TCGA provides:

> For the purpose of subsections (2) and (3) "permitted deductions" in relation to A means such parts of the amounts specified in subsection (6) as is just and reasonable.

[46] See 43.15.1(Residential/carried interest gain).

[47] Section 1H(11) TCGA provides referential definitions: "Expressions used in subsection (9) or (10) have the same meaning as they have in Chapter 5 of Part 3."

Permitted deductions are more narrowly defined than the usual rule for CGT deductions (in s.38 TCGA). There are three categories of permitted deduction. Section 103KA(6) TCGA provides:

> The amounts referred to in subsection (5) are–
>
> (a) the amount of any consideration in money given to the scheme by or on behalf of A wholly and exclusively for entering into the [investment-services] arrangements referred to in subsection (1)(a) (but not consideration in respect of co-investments),

The other two deductions deal with the overlap with employment income:

> (b) any amount that constituted earnings of A under Chapter 1 of Part 3 of ITEPA 2003 (earnings) in respect of A's entering into those arrangements (but not any earnings in respect of co-investments or any amount of exempt income within the meaning of section 8 of that Act), and
>
> (c) any amount which, by reason of events occurring no later than the time the carried interest arises, counts as income of A under the enactments referred to in section 119A(3) [employment-related securities] in respect of A's participation in the [investment-services] arrangements referred to in subsection (1)(a) (but not an amount counting as income of A in respect of co-investments); (and section 119A(5) applies for the purposes of this paragraph as it applies for the purposes of section 119A(4)).
>
> For the purposes of this Act no other deduction may be made from the amount of the carried interest referred to in subsection (2) or (3).

Section 103KA(7) TCGA allows a deduction where carried interest is acquired for consideration:

> Where the carried interest arises to A by virtue of his or her acquisition of a right to it from another person for consideration given in money by or on behalf of A, the amount of the chargeable gain accruing to A under subsection (2) or (3) is, on the making of a claim by A under this subsection, to be regarded as reduced by the amount of the consideration.

The IF Manual provides:

> **IFM37236: Permitted deductions** [Oct 2020]
>
> ... Deductions are not permitted for base cost contributed by other members of the partnership, or attributable to revaluations of the

> partnership assets, as was previously possible under Statement of Practice D12 (the "base cost shift", explained in IFM37160).

2017 Rebasing does not apply, because although there is a deemed disposal and re-acquisition, it is not deemed to be for money. HMRC agree.[48]

73.21 Co-investment

In short, co-investment is an amount of their own money that fund managers are required to put into the investment scheme, on the same terms as external investors, to give them "skin in the game".

Section 103KA(4) TCGA provides:

> Subsections (2) and (3) [carried-interest charges] do not apply in relation to carried interest to the extent that...
>
> (b) it constitutes a co-investment repayment or return.

Section 103KA(8) TCGA defines co-investment:

> In this section-
>
> "co-investment", in relation to A, means
>
> [a] an investment made directly or indirectly by A in the scheme,
>
> [b] where there is no return on the investment which is not an arm's length return within the meaning of section 809EZB(2) of ITA 2007;

Section 103KA(8) TCGA defines repayment or return:

> "co-investment repayment or return" means a repayment in whole or in part of, or a return on, a co-investment;

73.22 Disposal of carried interest

Section 103KB TCGA provides:

> (1) For the purposes of section 103KA [carried-interest charges], consideration received or receivable by an individual for the disposal, variation, loss or cancellation of a right to carried interest is to be treated as carried interest arising to that individual at the time of the disposal, variation, loss or cancellation.
>
> (2) But subsection (1) does not apply if and to the extent that the consideration is a disguised fee arising to the individual for the purposes of section 809EZA of ITA 2007.

[48] See 56.16.7 (Effect of 2017 rebasing), and Rebasing Q&As Question 1.

The IF Manual provides:

> **IFM37232: Operation of the charge: Disposals** [Oct 2020]
> **Disposal of partnership assets**
> ... The general rules in TCGA92, which determine whether a disposal has taken place and for what consideration, will also apply to this section. In particular, TCGA92/S17 will apply to treat an individual as having received market value for a right to carried interest when it is disposed of otherwise than at arm's length. In circumstances where an individual is forced to dispose of their right to receive carried interest, TGCA92/S17(1)(b) will not apply to the individual making the disposal, where the disposal is sufficiently disassociated to services rendered.

DIMF draft guidance provides:

> 54. When initially published, the draft Finance Bill contained provisions which would have disregarded restrictions which reduced the value of a right to carried interest for the purposes of section 17. The government was persuaded that this approach was not appropriate and with the expanded definition of "arise" no longer necessary. Such restrictions are not, therefore, disregarded on disposals of carried interest which come within section 17 under Finance (No.2) Act as enacted.
> 55. So if an individual disposed of their right to carried interest in favour of their child or to an unconnected entity but on non-arm's length terms (for example, as a gift to a trust structure from which only their adult children could benefit in an attempt to mitigate the impact of the new rules), the amount charged as a capital gain under this measure will equal the market value of the right to carried interest at that time taking into account any restrictions.

73.23 Carried-interest remittance basis

Section 103KC TCGA provides:

> In a case where section 103KA [carried-interest charges] applies, a chargeable gain accruing or treated as accruing to an individual in respect of carried interest is a chargeable gain accruing on the disposal of an asset situated outside the UK only to the extent that the individual performs the services referred to in section 103KA(1)(a) [investment management services[49]] outside the UK.

This restricts the remittance basis so far as the services are performed in

[49] See 73.19 (Carried interest: CGT).

the UK.[50]

Where possible, it is advantageous for investment activity to be performed abroad.

The approach to apportionment should be the same as for employment income.[51]

DIMF draft guidance provides:

> 59. This replaces the normal rule ... that defines a foreign chargeable gain by reference to the location of the assets disposed of. Given that carried interest arises in relation to the performance of investment management services, looking to the location where these are performed rather than the location of the assets used to satisfy the carried interest is more appropriate and reflects the "hybrid" nature of the receipt as having some characteristics of an investment return and others of a reward for services.
>
> ...
>
> 61. For some individuals' circumstances, a simple apportionment of their gain based on day-count may produce an acceptable result but in other cases, where more significant management duties are consistently performed in one territory than are performed in another, a simple time-apportionment will tend to under- or over-state the foreign chargeable gain which accrues. Please note that generally the focus will be on the services performed by the individual fund manager – a fund manager who performs the vast majority of their investment management services outside the UK would not be prejudiced by the activities of his or her UK focused colleagues.
>
> 62. For example, a UK-based German national may work for a UK headquartered fund. Her office is based in London where she and her family are based. However, her role in the fund is very much focused on Germany and Austria and she leads the teams responsible for investment in those jurisdictions. She spends, on average, 2-3 days a week in Germany but this misrepresents her input. In relation to most transactions on which she works, the fund manager spends an extended period of time setting up and negotiating the original acquisition and subsequently stays in Germany for, say, one week a month to support the management team before staying for a further extended period to negotiate the disposal. Here a day-count may not be appropriate and it is likely that a greater proportion than the c.25% produced by looking at

[50] Conversely, it extends the remittance basis to UK situate carried interest. In practice carried interest is usually non-UK situate, so the issue does not arise.

[51] See 34.31 (Earnings "in respect of" UK duties).

> one week out of four is the correct proportion treated as a foreign chargeable gain under the new section 103KC.
>
> 63. Similarly HMRC are aware that, for some types of closed-ended funds, carried interest will arise in one year which, in truth, reflects services performed by an individual over a longer period. In such a situation, it may be correct to look at where services have been performed over prior years although, again, this will depend on individual facts and circumstances. For example, an individual involved in fund-raising for a fund may spend the first few years of a fund's life travelling seeking to raise funds from investors outside the UK, only returning to the UK at irregular intervals and generally because it presents their personal home. Once the fund raising process is finished there may be a period where the individual is effectively based in the UK full-time, maintaining relations with investors. Subsequently, before the first fund has even begin to pay carried interest, the fund raiser may recommence travelling seeking to raise commitments for the next fund. Here, those early years largely spent overseas will probably carry more weight when determining what proportion of the carried interest represents a foreign chargeable gain. An additional example of such a situation is provided in Chapter 3.
>
> 64. These two examples are intended to be helpful and to show when HMRC will potentially accept a more generous split under section 103KC in favour of a foreign chargeable gain. However, section 103KC is a double-edged sword and will also operate to increase the proportion of carried interest taxable on a remittance basis user on the arising basis. As a general observation HMRC will be prepared to give weight to activities performed in the underlying jurisdictions where a fund invests.

The IF Manual provides:

> **IFM37330: Foreign chargeable gains: Low tax jurisdictions** [Oct 2020]
>
> The successful performance of a fund which generates carried interest does not arise from tax efficient holding structures but the management of genuine underlying business operations. This is especially true where services based in low tax jurisdictions are labelled as marketing services, investor relations or other vague descriptions which seek to disguise the real contribution of value by the management team in the offshore financial centres where they are normally based.
>
> The correct proportion of carried interest applicable to UK taxation will not be affected by the attempt to disguise the legitimate underlying investment management services.

73.23.1 *Record keeping*

The IF Manual provides:

> **IFM37340: Foreign chargeable gains: Record keeping requirements** [Oct 2020]
> HMRC recognises that carried interest may arise in relation to services performed prior to the introduction of the carried interest rules in Finance (No. 2) Act 2015 (IFM37150) and therefore individuals would not have been aware of the need to keep the relevant records.
> HMRC will adopt a pragmatic approach to record keeping and the evidence used to identify a just and reasonable split for foreign chargeable gains.
> For remittance basis users, HMRC would expect the customer to have already recorded the information required to determine their residency position and accurately return the income and gains eligible for taxation under the remittance basis.
> Additional information may be required to evidence specific duties performed, their location or duties performed over certain periods of time.

Records should be kept to show where the work was done. For periods before the legislation was introduced, taxpayers would not have expected to need this, and records may be difficult to recover; the rules operate with an element of retrospectivity. But there it is.

73.23.2 *Carried interest: Mixed funds*

The IF Manual provides:

> **IFM37350: Foreign chargeable gains: Mixed funds** [Oct 2020]
> In general where a remittance of a sum is made to the UK which comprises various items for tax purposes, the mixed funds rules determine the order in which sums are treated as remitted to the UK. Core mixed funds rules can be found at ITA07/S809Q.
> Carried interest may comprise foreign chargeable gains and "UK chargeable gains" (taxable on the arising basis when arising to a remittance basis tax payer). If a sum of carried interest was to be considered from a mixed fund, the foreign chargeable gain would be treated as remitted in priority to the UK chargeable gain being taxed under the arising basis. The individual would therefore be required to pay tax on that foreign chargeable gain when making a remittance, in addition to paying tax due on the chargeable gain being taxed under the arising basis. This is in line with ITA07/S809Q.

> In circumstances where a non-domiciled individual performs services that give rise to carried interest in the UK and one or more jurisdictions, the carried interest rules produce two separate gains, one relating to UK services and one relating to non-UK services. As two gains are brought into existence at the same time there is no mixed fund from the perspective of the individual in the account of the payor. It is therefore possible to split a sum of carried interest into two separate payments, with one being the foreign chargeable gain. If these two funds are never comingled, a mixed fund will not come into existence.
>
> This does not alter the application of the mixed funds rules to the extent that each of the two carried interest gains may represent a mixed fund of different items determined on general principles. It only applies to the joint effect of TCGA92/S103KA and TCGA92/S103KC with the result that the gains those sections give rise to will not constitute elements of a single mixed fund unless they are actually paid into a single account, thus making that account a mixed fund.
>
> This analysis derives from the terms of TCGA92/S103KC. HMRC do not consider it justifiable in respect of any other situation or potential mixed fund.

73.24 Non-residents

Non-residents are not in general subject to CGT, and this rule applies to carried interest. This is deliberate.[52]

73.25 Other anti-avoidance rules

The usual CGT anti-avoidance rules are not needed because of the rules as to who receives carried interest.[53] This was overlooked at the time of the introduction of the carried interest code, and so the following provisions were inserted with retrospective effect in 2017.

73.25.1 *Carried interest outside s.3*

Section 13(1A) TCGA formerly provided:

> *But this section does not apply if the gain is ...*
>
> *(c) a chargeable gain treated as accruing under section 103KA(2) or (3) (carried interest gains).*

This took carried-interest gains outside s.13 TCGA, now s.3 TCGA.

[52] 2015 carried-interest guidance para 41.

[53] See 73.19.2 (Who receives carried interest).

Where is the equivalent in the 2019 CGT rewrite?

73.25.2 *Carried interest outside s.86*

Section 86(4B) TCGA provides:

> Where (apart from this subsection) the amount mentioned in subsection (1)(e) would include an amount of chargeable gains treated as accruing under section 103KA(2) or (3) (carried interest gains), the amount of the gains is to be disregarded for the purposes of subsection (1)(e).

This takes carried-interest gains outside s.86 TCGA.

73.25.3 *Carried interest outside s.87*

Section 87(5B) TCGA provides:

> Where (apart from this subsection) the amount mentioned in subsection (4)(a) would include an amount of chargeable gains treated as accruing under section 103KA(2) or (3) (carried interest gains), the amount of the gains is to be disregarded for the purposes of determining the section 1(3) amount.

In short, carried-interest gains are not s.1(3) amounts (trust gains) and so are outside s.87 TCGA.

73.26 DIMF/Carried interest TAARs

The DIMF and carried interest codes are protected (or one might say, extended) with a TAAR:

s.809EZF ITA	**s.103KD TCGA**
In determining whether section 809EZA [DIMF code][54] applies in relation to an individual,	In determining whether section 103KA [carried-interest code] applies in relation to an individual,
no regard is to be had to any arrangements the main purpose, or one of the main purposes, of which is to secure that that section does not apply in relation to- (a) the individual, or (b) the individual and one or more	no regard is to be had to any arrangements the main purpose, or one of the main purposes, of which is to secure that that section does not to any extent apply in relation to- (a) the individual, or

[54] See 73.13 (DIMF: Deemed trade).

other individuals.	(b) the individual and one or more other individuals.

In my terminology, these are arrangement-disregard TAARs.[55]

The IF Manual provides:

> **IFM36600: Anti-avoidance clause: Anti-avoidance** [Oct 2020]
> ... Where steps are taken to ensure that arrangements fall within the definition of carried interest this will not in itself mean that the anti-avoidance clause will be invoked. For example, if the hurdle rate for a fund was increased from 5% to 6% to adhere with the condition for carried interest detailed at ITA07/S809EZD(4)(b), this would not necessarily be a reason for the anti-avoidance provision to be applied.

Is that law or concession?

73.27 Carried interest double taxation

73.27.1 *Conditions for relief*

Section 103KE TCGA provides:

> (1) This section applies where-
> (a) capital gains tax is charged on an individual by virtue of section 103KA in respect of any carried interest, and
> (b) Condition A or Condition B is met.
> (2) Condition A is that-
> (a) at any time, tax (whether income tax or another tax) charged on the individual in relation to the carried interest has been paid by the individual (and has not been repaid), and
> (b) the amount on which tax is charged as specified in subsection (1)(a) is not a permissible deduction under section 103KA(6)(b) or (c).[56]
> (3) Condition B is that at any time tax (whether income tax or another tax) charged on another person in relation to the carried interest has been paid by that other person (and has not been repaid).

It will almost always be the case that one or other of these conditions is satisfied.

The IF Manual provides:

[55] See 3.1 (TAAR/unallowable purpose test).

[56] Para (2)(b)(c) apply where the carried interest is earnings or employment-related security income: see 73.20 ("Permitted deductions").

IFM37240: Interaction with other taxes [Oct 2020

A charge under TCGA92/S103KA does not displace any charge to tax other than CGT that arises by reference to the carried interest. If carried interest represents an amount of income, for example dividends or interest, the fund manager will have two liabilities to tax. Firstly, a liability to income tax on the amount determined in accordance with the appropriate rules (e.g. dividend treatment). Secondly, a chargeable gain calculated in accordance with TCGA92/S103KA(2) or (3) as appropriate. Relief may be claimed for that other tax against the CGT charged under the carried interest rules (IFM37400). This is only applicable to taxes charged under the UK Taxes Acts.

IFM37420: Double taxation adjustment [Sep 2021]

The value of adjustments made will not exceed the lesser of:

- The capital gains tax charge in respect of the carried interest under the new legislation; and
- The other tax paid.

Note that, when considering an adjustment, the other tax must have been paid.

Subject to the next paragraph, an adjustment will not be made if the sum may become chargeable to another tax or if the other tax has only been charged and not paid. Where the other tax has been paid, the individual should file their tax return for the year in which the carried interest arises and claim under these rules for an adjustment to be made in that tax return. If another tax is paid after the capital gain tax (CGT) has been paid, the individual will be able to make a claim to avoid double taxation by amending their tax return or by other means in line with normal rules and time limits rather they relying on TCGA/ 103KE(7).

Where a sum of carried interest is charged to both CGT under these rules and also income tax in the same year (for example, where the sum represents interest or dividend income), resulting in two charges in respect of the carried interest, a claim can be made in the appropriate tax return so that the appropriate liability is paid and double taxation does not arise. HMRC will treat the income tax as paid by the payment made with the tax return for the year in question. In this particular scenario, it is therefore not required to have first paid the income tax before being able to claim relief. In all other instances, the other tax must have been paid before relief can be claimed.

Each component of the carried interest arising should be considered separately when determining relief due under TCGA92/S103KE. When a sum comprises a series of items, double taxation relief will be given on an item by item basis and not on a sum as whole. It will therefore only be possible to set the other tax due on a particular component of the sum arising against the CGT due on that component, rather than the CGT due on the sum as a whole. This is considered to be a just and reasonable approach, in accordance with TCGA92/S103KE(5).

Example 1

A sum comprises Item X, Item Y and Item Z. These will be dealt with as three individual items and not as one whole item. This would mean any other tax paid on Item X can only be set against the CGT due on Item X and not on the combined sum of CGT due on Item X, Item Y and Item Z.

Example 2

A sum of carried interest totals £2,000 and comprises debt principal of £1,000 and £1,000 of interest on that debt. Relief under TCGA92/S103KE would be given as follows:

The £1,000 of principal is "carried interest" and is charged to CGT at 28% under the carried interest rules amounting to £280.

The £1,000 of interest is also "carried interest" and so charged to CGT at 28% amounting to £280. Income tax charged at 45% will need to be paid and this amounts to £450.

Relief under TCGA92/S103KE allows full relief against the £280 of CGT due on the interest; the income tax payable of £450 effectively discharges the CGT liability due.

The income tax payable cannot also be set off against the CGT due on the principal. Income tax arises only in respect of the interest and not against the CGT of any other item within the £2,000 (£1,000 principal plus £1,000 interest) carried interest sum.

The net tax charge will therefore be £730:

CGT paid on principal:	280
CGT paid on interest:	280
Income tax paid on interest:	450
Total tax paid:	1,010
Double taxation relief:	-280
Net tax payable:	730

73.27.2 *Foreign tax*

DIMF draft guidance provides:

72. Please note that in contrast to the DMF Rules, section 103KE adjusts the CGT charge under section 103KA to eliminate double taxation (the DMF Rules preserve the charge under section 809EZA by contrast and adjust the "other tax"). As "tax" is not defined for the purposes of the TCGA, it is therefore possible for HMRC to make an adjustment to the charge under section 103KA in respect of non-UK tax to avoid double

> taxation. To give a very simple example, a US citizen fund manager will be chargeable to US tax on their worldwide income. That fund manager is resident in the UK for tax purposes however and receives carried interest through a partnership structure which is charged to tax under section 103KA(2). For US tax purposes however, the entities in that structure have made "check the box" elections such that it is treated as transparent for US tax purposes. The fund manager is therefore treated as receiving underlying dividend income for US tax purposes and this is charged to US Federal Income tax at a rate in excess of 28%. Here HMRC would accept that the US tax is suffered "in relation to" the carried interest and given the drafting of section 103KE, would be able to adjust down the UK charge under section 103KA to avoid tax. Please note that in situations where the UK has a primary taxing right over the carried interest (as would be likely on the above example) it will only be just and reasonable to grant relief where it is not possible to obtain a tax credit in the other relevant jurisdiction. Section 103KE only operates as a credit of the "last resort" in these cases.
>
> 73. If tax has been paid on amounts which are then treated as permitted deductions in computing the chargeable gain then no relief is available against CGT in respect of that tax under this provision.
>
> 74. The value of the adjustments made will not exceed the lesser of: a. the capitals gains tax charge in respect of the carried interest under the new legislation; and b. the other tax paid.

73.27.3 *"Paid"*

DIMF draft guidance provides:

> 75. The other tax in respect of which an adjustment is sought must have been paid by the individual. It is not sufficient that the sum is charged or may be chargeable to another tax. Often, this other tax will have been paid by the time the individual files his or her tax return for the year in which the carried interest arises: a claim under these rules for an adjustment should then be made in that tax return. Please note that, where a sum of carried interest is charged to capital gains tax under this measure but is also charged to income tax in the same tax year (for example, where the sums represent interest or dividend income to the underlying partnership), such that there are two charges in respect of that carried interest, a claim can be made in the appropriate tax return without the need to discharge both tax liabilities. HMRC will treat the income tax as having been "paid" by the payment made alongside the tax return for the year in question. It would not be necessary to pay both the income tax due and capital gains tax charged under this measure at the same time before requesting a repayment.

> 76. Where, however, another tax is paid after the CGT charged under the new rules has been paid, the individual will be able to make a claim to avoid double taxation through an amendment to their tax return (where possible) or by other means in accordance with the normal rules and time limits.
>
> 77. As explained above in paragraph 46, this legislation establishes a minimum level of tax on carried interest rather than a new regime which disregards the underlying receipts to the fund partnership. This means each component of the sum arising is looked at separately when determining what relief should be given under section 103KE. Where a sum comprises a series of items, double taxation relief will be given on an item by item basis (i.e. it will only be possible to set the other tax due on a particularly component of the sum arising against the CGT due on that component, rather than the CGT due on the sum as a whole). This is the only approach which will be considered "just and reasonable" in accordance with section 103KE(3) by HMRC.
>
> 78. Using the same figures as the example in paragraph 47, section 103KE would work as follows.
>
> - The £1000 of principal is "carried interest" and so is charged to capital gains tax at 28% under this measure (£280).
> - The £000 of interest is also "carried interest" and so charged to capital gains tax at 28% (£80). Income tax at 45% (£50) must still be paid.
>
> Section 103KE will allow full relief against the £80 of CGT technically due on the interest income under these rules. The income tax payable on the interest would effectively discharge CGT liability on the same sum. However, the income tax due on the interest income cannot also be set off against the capital gains tax due on the principal. The income tax arises in relation to the interest and so can only be relieved against the capital gains tax due on that interest, and not against the CGT due on any other item which is represented in the sum of carried interest.

73.27.4 *Double taxation adjustment*

Assuming these conditions are satisfied, we move on to the relief. Section 103KE TCGA provides:

> (4) In order to avoid a double charge to tax, the individual may make a claim for one or more consequential adjustments to be made in respect of the capital gains tax charged as mentioned in subsection (1)(a).
>
> (5) On a claim under this section an officer of Revenue and Customs must make such of the consequential adjustments claimed (if any) as are just and reasonable.

> (6) The value of any consequential adjustments made must not exceed the lesser of-
>
> (a) the capital gains tax charged as mentioned in subsection (1)(a), and
>
> (b) the tax charged as mentioned in subsection (2)(a) or (3).

This seems an unnecessarily complicated way to express the cap on the relief, but there it is.

> (7) Consequential adjustments may be made-
>
> (a) in respect of any period,
>
> (b) by way of an assessment, the modification of an assessment, the amendment of a claim, or otherwise, and
>
> (c) despite any time limit imposed by or under an enactment.

This is the equivalent of the DIMF rule: see 73.18 (DIMF double taxation).

73.27.5 *Claim to disregard losses*

Section 103KE(8) TCGA provides:

> Where-
>
> (a) an individual makes a claim under this section in respect of a year of assessment, and
>
> (b) apart from this subsection, an amount falls to be deducted under section 1(3)(b) [carried-forward losses[57]] from the total amount of chargeable gains accruing to the individual in that year,
>
> the individual may elect that the amount to be so deducted be reduced by any amount not exceeding the amount on which tax is charged as specified in subsection (2)(a) or (3).

This may be relevant where an individual receives a sum which is both income and carried-interest gain. Setting carried-forward capital losses against the carried-interest gain would be wasteful, because the gain qualifies for double taxation adjustment relief.

73.28 External investors

Section 103KF TCGA provides:

> (1) If-
>
> (a) a chargeable gain accrues to an external investor[58] in an

[57] See 65.2 (Relief for losses).

[58] See 73.12.6 ("External investor").

> investment scheme on the disposal of one or more partnership assets, and
>
> (b) the external investor makes a claim for relief under this section,
>
> then subsection (2) applies in relation to the disposal.
>
> (2) The amount of the chargeable gain is to be reduced by an amount equal to-
>
> I – C
>
> where-
>
> (a) I is an amount equal to such part of the sum invested in the fund by the external investor which on a just and reasonable basis is referable to the asset or assets disposed of, and
>
> (b) C is the amount deducted under section 38(1)(a) in respect of consideration given wholly and exclusively for the acquisition of the asset or assets.

This sets aside the base cost shift in favour of the external investors.

73.29 Deferred carried interest

Section 103KG(2) TCGA provides:

> But section 809EZDB of ITA 2007 (sums arising to connected company or unconnected person) does not apply in relation to a sum of carried interest arising to-
>
> (a) a company connected with A, or
>
> (b) a person not connected with A,
>
> where the sum is deferred carried interest in relation to A.

Section 103KG(3) TCGA provides:

> In this section, "deferred carried interest", in relation to A-
>
> (a) means a sum of carried interest where the provision of the sum to A or a person connected with A is deferred (whether pending the meeting of any conditions (including conditions which may never be met) or otherwise), and
>
> (b) includes A's share (as determined on a just and reasonable basis) of any carried interest the provision of which to A and one or more other persons, taken together, has been deferred (whether pending the meeting of any conditions (including conditions which may never be met) or otherwise).
>
> In this subsection, in a case where the sum referred to in subsection (2) arises to a company connected with A, the reference to a person connected with A does not include that company.

73.30 Interest ceases to be deferred

Section 103KG TCGA provides:

> (4) Where-
> (a) section 809EZDB of ITA 2007 has been disapplied in relation to a sum of deferred carried interest by virtue of subsection (2),
> (b) the sum ceases to be deferred carried interest in relation to A, and
> (c) the sum does not in any event arise to A apart from this subsection,
>
> the sum is to be regarded as arising to A at the time it ceases to be deferred carried interest.
>
> (5) But subsection (4) does not apply if-
> (a) none of the enjoyment conditions is met in relation to the sum when it ceases to be deferred carried interest, and
> (b) there is no reasonable likelihood that any of those conditions will ever be met in relation to the sum.

73.30.1 *"Enjoyment conditions"*

Section 103KG TCGA duplicates the definition in the DIMF legislation; see 73.17.1 ("Enjoyment conditions").

> (6) The enjoyment conditions are-
> (a) the sum, or part of the sum, is in fact so dealt with by any person as to be calculated at some time to enure for the benefit of A or a person connected with A;
> (b) the sum's ceasing to be deferred carried interest in relation to A operates to increase the value to A or a person connected with A of any assets which-
> (i) A or the connected person holds, or
> (ii) are held for the benefit of A or the connected person;
> (c) A or a person connected with A receives or is entitled to receive at any time any benefit provided or to be provided out of the sum or part of the sum;
> (d) A or a person connected with A may become entitled to the beneficial enjoyment of the sum or part of the sum if one or more powers are exercised or successively exercised (and for these purposes it does not matter who may exercise the powers or whether they are exercisable with or without the consent of another person);
> (e) A or a person connected with A is able in any manner to control directly or indirectly the application of the sum or part of the

> sum.
>
> In this subsection, in a case where the sum referred to in subsection (2) arises to a company connected with A, references to a person connected with A do not include that company.
>
> (7) In determining whether any of the enjoyment conditions is met in relation to a sum or part of a sum-
>
> (a) regard must be had to the substantial result and effect of all the relevant circumstances, and
>
> (b) all benefits which may at any time accrue to a person as a result of the sum ceasing to be deferred carried interest in relation to A must be taken into account, irrespective of-
>
> (i) the nature or form of the benefits, or
>
> (ii) whether the person has legal or equitable rights in respect of the benefits.

DIMF draft guidance provides:

> 44. ... the deferred carried interest rules also modify the application of the enjoyment conditions in the context of corporate structures. The relevant provisions at section 103KG(8)-(11) mirror subsections 809EZDB(6)-(9), ITA 2007 here.

Section 103KG TCGA provides:

> (8) The enjoyment condition in subsection (6)(b), (c) or (d) is to be treated as not met if it would be met only by reason of A holding shares or an interest in shares in a company.
>
> (9) The enjoyment condition in subsection (6)(a) or (e) is to be treated as not met if the sum referred to in subsection (2) arises to a company connected with A and-
>
> (a) the company is liable to pay corporation tax in respect of its profits and the sum is included in the computation of those profits, or
>
> (b) paragraph (a) does not apply but-
>
> (i) the company is a CFC and the exemption in Chapter 14 of Part 9A of TIOPA 2010 applies for the accounting period in which the sum arises, or
>
> (ii) the company is not a CFC but, if it were, that exemption would apply for that period.
>
> In this subsection "CFC" has the same meaning as in Part 9A of TIOPA 2010.
>
> (10) But subsections (8) and (9) do not apply if the sum referred to in subsection (2) arises to the company referred to in subsection (2)(a) or the person referred to in subsection (2)(b) as part of arrangements

where-

(a) it is reasonable to assume that in the absence of the [investment-services] arrangements the sum or part of the sum would have arisen to A or an individual connected with A, and

(b) it is reasonable to assume that the [investment-services] arrangements have as their main purpose, or one of their main purposes, the avoidance of a liability to pay income tax, capital gains tax, inheritance tax or corporation tax.

(11) The condition in subsection (10)(b) is to be regarded as met in a case where the sum is applied directly or indirectly as an investment in a collective investment scheme.

(12) Subsection (2) does not apply in relation to any sum in relation to which the condition in subsection (8)(b) of section 809EZDB is met by virtue of subsection (9) of that section.

(13) Subsection (2) also does not apply if-

(a) it is reasonable to assume that the deferral referred to in subsection (3)(a) or (b) is not the effect of genuine commercial arrangements, or

(b) that deferral is the effect of such arrangements but it is reasonable to assume that the [investment-services] arrangements have as their main purpose, or one of their main purposes, the avoidance of a liability to pay income tax, capital gains tax, corporation tax or inheritance tax.

(14) In subsection (13), "genuine commercial arrangements" means arrangements involving A (alone or jointly with others performing investment management services) and external investors in the investment scheme.

73.31 Income-based carried interest

The term "income-based" carried interest ("IBCI") is used in:

(1) Temporary non-resident rules

(2) The definition of "management fee"

The general rule is that IBCI, which would otherwise be taxed as capital, is taxed as income.

Section 809EZB(1) ITA provides (so far as relevant)

> ... "management fee" means any sum (including a sum in the form of a loan or advance or an allocation of profits) except so far as the sum constitutes ...
>
> c) carried interest which is not income-based carried interest.

The definition is in Chapter 5F Section 809FZA - 809FZY ITA, ie spread over 25 sections of ITA. So it cannot be covered here. Section 809FZA ITA provides an outline:

> (1) This Chapter [Chapter 5F] determines when carried interest arising to an individual from an investment scheme is "income-based carried interest" for the purposes of Chapter 5E (and, in particular, section 809EZB(1)(c)).
> (2) Section 809FZB contains the general rule, under which the extent to which carried interest is income-based carried interest depends on the average holding period of the investment scheme.
> (3) Sections 809FZC to 809FZP contain further provision relating to average holding periods.
> (4) Sections 809FZQ and 809FZR contain a particular rule for direct lending funds.
> (5) Sections 809FZS and 809FZT contain an exception to the general rule for carried interest which is conditionally exempt from income tax.
> (6) Sections 809FZU to 809FZZ contain supplementary and interpretative provision.
> (7) Nothing in this Chapter [Chapter 5F] affects the liability to any tax of-
> (a) the investment scheme, or
> (b) external investors in the investment scheme.

Section 809FZB ITA provides:

> (1) "Income-based carried interest" is the relevant proportion of a sum of carried interest arising to an individual from an investment scheme.
> (2) The relevant proportion is determined by reference to the investment scheme's average holding period as follows.

Average holding period	**Relevant proportion**
Less than 36 months	100%
At least 36 months but less than 37 months	80%
At least 37 months but less than 38 months	60%
At least 38 months but less than 39 months	40%
At least 39 months but less than 40 months	20%
40 months or more	0%

> (3) This section is subject to the following provisions of this Chapter.

We leave the reader to journey on, unaccompanied, to the end of the definition.

73.32 IBCI: Returning non-resident

Section 809EZA(2A) ITA provides:

> Subsection (2B) applies instead of subsections (1)[59] and (2)[60] where-
> (a) one or more disguised fees arise to an individual in a tax year ("the relevant tax year") from one or more investment schemes (whether or not by virtue of the same arrangements),
> (b) the disguised fees consist of carried interest which is income-based carried interest,
> (c) the individual is UK resident in the relevant tax year,
> (d) before the relevant tax year, the individual was not UK resident for a period of at least five consecutive tax years ("the period of non-residence"), and
> (e) either-
> (i) the relevant tax year is the first tax year immediately after the end of the period of non-residence, or
> (ii) the relevant tax year is the second, third, or fourth tax year after the end of that period and the individual has been UK resident in all the intervening tax years.

If these conditions are met, we move on.

Section 809EZA(2A) ITA provides:

> To the extent that the income-based carried interest arises by virtue of pre-arrival services, the individual is liable for income tax for the relevant tax year in respect of it as if-

The rules are in para (a) and (b): it is convenient to read them side by side:

(a) in relation to pre-arrival services[61] performed in the UK-	(b) in relation to pre-arrival services performed outside the UK-
(i) the individual were carrying on a trade for the relevant year consisting of the performance of those services,	[identical]
(ii) the income-based carried interest, so far as arising by virtue of those services, were profits of that trade, and	[identical]

[59] See 73.13 (DMIF: Deemed trade).

[60] See 73.14 (Territorial limitation).

[61] Section 809EZA(2C) ITA provides: "In subsection (2B) "pre-arrival services" means investment management services performed before the end of the period of non-residence."

(iii) the individual were the person receiving or entitled to those profits,	[identical]

Thus there are two deemed trades. I think the point is that the profits of the second may qualify for the remittance basis. But this relief does not apply if the individual is away for less than 5 years.

73.33 Returns and compliance

IFM provides

> **IFM36800: Returning sums chargeable under the disguised investment management fees (DIMF) rules** [Oct 2020]
> **Reporting period**
> Sums that arise and are subject to the disguised investment management fees (DIMF) rules should be reported in reference to the tax year. Calendar year reporting is not acceptable unless the disguised fee arises from a profit allocation from a partnership. In these circumstances, this can be returned on the same basis period as that partnership see (IFM36160).
> If a sum has been reviewed and DIMF is not believed to be applicable then a note should be included within the white space section that adequately explains why DIMF is not applicable in this case.
> For example, if accounts for a partnership are drawn up to the 31 December 2016, and it has been agreed that the profits shown in those accounts are taxed as profits of 2016/17, then the same basis can be applied to the deemed trade.
> **How to return sums chargeable under these provisions**
> Sums that arise and are subject to the DIMF rules should be entered on a separate Self-Employment page and returned within the Self-Assessment return.
> On the return, the following fields should be completed, with the individual entering:
> "Description of business" field: "sums arising under Chapter 5E of Part 13 ITA 2007".
> "Net profit or loss" field: The net profits under the DIMF rules.
> "Total taxable profits or net business loss" field: The net profits under the DIMF rules.
> "White space": Details of each sum of the fund in relation to the individual and structure from which the sum arises should be noted in the computations or as a 'white space' disclosure.
> In most cases HMRC expect that the sum will arise from a fund limited partnership potentially via a General Partner Limited Partner (GP-LP)

or similar. The exact wording of the necessary disclosure will depend on the structure and the number of entities through which the sum has passed.

Where disguised fees arise from more than one fund or partnership then an analysis should be provided showing the sums arising from each.

Example of a return of DIMF profits

Greg is a partner in CD LLP, Greg pays income tax and class 4 NICs on his share of CD LLP's profits. In addition £20,516 is treated as a disguised fee under the DIMF legislation.

Greg will need to report the fees as a separate trade on his tax return. He would enter the following on a separate Self-Employment page within his Self-Assessment:

Description of business field: sums arising under Chapter 5E of Part 13 ITA2007.

Net profit or loss field: £20,516.

Total taxable profits or net business loss field: £20,516.

White space: Disguised investment management fee arising from X Capital Fund LP via X Capital Fund GP LP.

CHAPTER SEVENTY FOUR

IHT TERMS & CONCEPTS

74.1 IHT terminology
74.1.1 "CTT" now refers to IHT
74.2 Estate
74.2.1 "Property"
74.3 Transfer of value/value transferred
74.3.1 Transfer of value: Extended definitions
74.4 Disposition
74.5 Omission: Deemed disposition
74.5.1 Diminution condition
74.5.2 Increased estate condition
74.5.3 Causation condition
74.5.4 Time of deemed disposition
74.6 Chargeable/exempt transfer
74.7 Qualifying interest in possession
74.8 Relevant property
74.9 Settlement commencement date
74.10 Settlement power
74.11 Associated operation
74.11.1 "Operation"
74.11.2 ToA/IHT assoc ops compared
74.12 Why associated operations matter
74.13 Arm's length transaction
74.13.1 Operation confers benefit
74.14 Relevant operation
74.15 Disposition by associated ops
74.16 Transfer of value by 2 operations
74.16.1 Channelling
74.16.2 Asset splitting
74.17 Gift followed by sale: APR/BPR

74.1 IHT terminology

IHT has a technical vocabulary. It is impossible to discuss any aspect of IHT without constantly using these terms, or at least, most of them, so it is necessary to consider them first.

This chapter considers:

Term	**See para**
General IHT terminology	
Estate	74.2
Property	74.2.1
Transfer of value	74.3
Value transferred	74.3
Disposition	74.4
Chargeable/exempt transfer	74.6
Associated operation	74.11
IHT trust terminology	
Qualifying interest in possession (IIP)	74.7

Relevant property	74.8
Settlement power	74.10

This chapter considers only the definitions of these terms, except for associated operations, where there is also a discussion of provisions where the expression is used.

The following IHT terms are considered elsewhere:

Term	**See para**
Excluded property	75.1
Settlement (for IHT purposes)	87.6

74.1.1 *"CTT" now refers to IHT*

Section 100(1) FA 1986 provides:

> On and after the passing of this Act, the tax charged under the Capital Transfer Tax Act 1984 (in this Part of this Act referred to as "the 1984 Act") shall be known as inheritance tax and, accordingly, on and after that passing,—
> (a) the 1984 Act may be cited as the Inheritance Tax Act 1984; and
> (b) subject to subsection (2) below,[1] any reference to capital transfer tax
> [i] in the 1984 Act,
> [ii] in any other enactment passed before or in the same Session as this Act or
> [iii] in any document executed, made, served or issued on or before the passing of this Act or at any time thereafter
> shall have effect as a reference to inheritance tax.

74.2 Estate

The word "estate" matters for the definition of "transfer of value".

Section 272 IHTA provides:

> In this Act, except where the context otherwise requires ... "estate" shall be construed in accordance with sections 5, 55 and 151(4) above.

The sections referred to are:

IHTA	**Topic**	**See**
s.5	Definition of estate	*Discussed here*

[1] Section 100(2) FA 1986 is a transitional provision now spent: "Subsection (1)(b) above does not apply where the reference to capital transfer tax relates to a liability to tax arising before the passing of this Act."

s.55	Reversionary interest acquired by beneficiary	*Not discussed*[2]
s.151(4)	IHT-exempt pension schemes	82.13.1

So the definition is in s.5 IHTA, and the other sections mentioned concern niche topics.

Section 5 IHTA provides:

> (1) For the purposes of this Act a person's estate is the aggregate of all the property to which he is beneficially entitled, except that ...

There follows a set of four exceptions, of which the most important is:

> (b) the estate of a person immediately before his death does not include excluded property...

"Estate" in IHT is a technical term. Outside IHT, the term is only used in discrete contexts (eg bankrupt's estate, deceased's estate) and in each case with a well understood meaning. In practice no confusion arises.

74.2.1 *"Property"*

There is of course a wide definition. Section 272 IHTA provides:

> "property"
> [a] includes rights and interests of any description but
> [b] does not include a settlement power

For settlement powers, see 74.10 (Settlement power).

74.3 Transfer of value/value transferred

Section 1 IHTA provides:

> Capital transfer tax [now IHT][3] shall be charged on the value transferred by a chargeable transfer.

The terms transfer of value/value transferred matter because:
(1) A transfer of value is required for a chargeable transfer
(2) The charge is on the value transferred

Section 3(1) IHTA provides (so far as relevant):

[2] For a discussion, see Kessler, Wong & Shah, *Taxation of Charities and Nonprofit Organisations*, (14th ed., 2024-25), para 24.22 (Acquisition of reversionary interest/settlement power from charity).

[3] See 74.1.1 ("CTT" now refers to IHT).

> [a] ... a transfer of value is
>
> [i] a disposition[4] made by a person (the transferor)
>
> [ii] as a result of which the value of his estate immediately after the disposition is less than it would be but for the disposition; and
>
> [b] the amount by which it [the estate] is less is the value transferred by the transfer.

The estate of a person does include excluded property except for the moment immediately before death. So if a person uses chargeable (non-excluded property) to purchase excluded property, for full value, the value of the estate is not reduced, and there is no transfer of value.

74.3.1 *Transfer of value: Extended definitions*

When the drafter wishes to impose a charge to IHT on an event which is not a transfer of value, as defined, two techniques may be used:

(1) a deemed transfer of value

(2) a freestanding charge to IHT

Section 3(4) IHTA extends the meaning of "transfer of value" to include case 1, deemed transfers of value:

> [a] Except as otherwise provided, references in this Act to a transfer of value made, or made by any person, include references to events on the happening of which tax is chargeable as if a transfer of value had been made, or, as the case may be, had been made by that person;
>
> [b] and "transferor" shall be construed accordingly.

Occasionally, the meaning is further extended to include cases 1 and 2 (deemed transfers and freestanding charges):

s.221(6) IHTA: Notice of determination	**s.239 IHTA: Certificate of discharge**
References in this section to transfers of value or to the values transferred by them shall be construed as including references to—	References in this section to a transfer of value, or to the value transferred by a transfer of value, shall be construed as including references to
(a) chargeable events by reference to which tax is chargeable under section 32 or 32A of this Act,	
(b) occasions on which tax is chargeable under Chapter III of Part III of this Act,	an occasion on which tax is chargeable under Chapter III of Part III of this Act (apart from section 79)

[4] See 74.4 (Disposition).

(c) disposals on which tax is chargeable under section 126 of this Act,	
or to the amounts on which tax is then chargeable.	or to the amount on which tax is then chargeable.

The provisions referred to here are:

Provision	**Topic**
s.32/32A IHTA	Conditional exemption/historic property
Chap III Part III IHTA	Relevant property trust tax
s.126 IHTA	Trees/Woodland

That is a little clumsy, perhaps, but it works.

74.4 Disposition

"Disposition" matters in particular because a disposition is a requirement of:

Concept	**See para**
Transfer of value	74.3
Exit charge	76.8
Settlement	79.3

Newlon Housing Trust v Alsulaimen discusses the natural meaning of the word:[5]

> "Disposition" is a familiar enough word in the law of property and ordinarily means an act by which someone ceases to be the owner of that property in law or in equity... In some contexts it may include the case in which the property ceases to exist... I feel sure that "disposition" was intended to include the surrender of a subsisting proprietary interest, such as a tenancy for years or for life, so as to merge in the reversion or remainder... But, be that all as it may, I think it is essential to the notion of a disposition of property in this context that there is property of which the disponor disposes, whether to someone else or not.

The IHT Manual provides:

> **IHTM04023: what is a disposition?** [Sep 2018]
> The word disposition has its wide natural meaning and we regard it as
> - including all forms of disposals and transfers of cash and other

[5] [1999] 1 AC 313 at p.317. I omit the references cited.
A disclaimer is not a disposition: see 99.18.1 (Disclaimer law background).

property, and

- including both the creation and the release or other extinguishment of any debt or other right enforceable against a person or his estate...

IHT tinkers with the natural meaning in various ways. Firstly, a disposition may be deemed to occur in the following cases:

Topic	**See para**
Omission to exercise right	74.5
Alteration of close company share/loan capital	81.7
Payment more than 1 year after transfer at undervalue[6]	*Not discussed*

Secondly, a disposition may be effected by associated operations; I discuss this below in the context of associated operations; see 74.15 (Disposition by associated ops).

74.5 Omission: Deemed disposition

An omission is not a disposition, in the normal sense of the word, and so would not be a transfer of value. Section 3(3) IHTA provides a limited exception to this rule:

> Where
> [A] the value of a person's estate is diminished, and
> [B] the value—
> (a) of another person's estate, or
> (b) of any settled property, other than settled property treated by section 49(1) below as property to which a person is beneficially entitled,[7]
> is increased
> [C] by the first-mentioned person's omission to exercise a right,
> [D] he shall be treated for the purposes of this section as
> [i] having made a disposition
> [ii] at the time (or latest time) when he could have exercised the right,
> [E] unless it is shown[8] that the omission was not deliberate.

This rule only applies for the purposes of s.3, but it is repeated or

[6] Section 262 IHTA.

[7] In the discussion below, for the sake of brevity, cases within (a) or (b) might both be referred to as "increases in a person's estate".

[8] The onus of proof is on the taxpayer. That is self-evident, though if authority is needed, see *Fryer v HMRC* [2010] UKFTT 87 (TC) at [37]; see too App 2.24.5 ("It is shown that").

incorporated in a few other places.[9]

I use the following terminology:

Term	**Meaning**
Diminution condition	Condition in s.3(3)[A]
Increased estate condition	Condition in s.3(3)[B]
Causation condition	Condition in s.3(3)[C]
Omittor	Person who omits to exercise right
Third party's estate	Other estate or trust whose value is increased

An omission may also be an associated operation.[10]

Several s.3(3) issues were discussed in *Fryer v HMRC*,[11] where the deceased omitted to take her pension rights at retirement date, when she was terminally ill. All the s.3(3) conditions were met, so the omission was treated as a disposition and was a chargeable transfer.

74.5.1 *Diminution condition*

The requirement is:

> the value of a person's estate [the omittor's estate] is diminished

In *Fryer v HMRC*:[12]

> Is it correct to describe a person's estate as being "diminished" by the omission to exercise a right where the result of the omission is that value which might potentially have been added to the estate is not, after all, so added? [The deceased]'s estate included the right to opt for retirement benefits under the pension plan. It did not include the benefits themselves.
>
> My conclusion is that the "loss" of a potential addition of value to the estate does not, as such, diminish it. However, that is not a complete answer to the "diminution" argument. [the deceased] had a valuable right; by not exercising it, she allowed the whole of its value to disappear from her estate. Her estate was therefore diminished by her omission to exercise that right, and therefore that condition for the application of s 3(3) IHTA 1984 is fulfilled.

If the pension scheme has the form of a trust, it is suggested that the right

[9] See 76.8.2 (Reducing value of trust property): exit charge; 74.13 (Arm's length disposal relief).

[10] See 74.11.1 ("Operation").

[11] [2010] UKFTT 87 (TC). See 84.11.3 (Omission to exercise rights).

[12] at [41], [42].

should be disregarded as a settlement power.[13] The point did not arise in *Fryer* where the pension scheme took the form of a contract with a Life Office.

74.5.2 *Increased estate condition*

The requirement is:

> [B] the value—
> (a) of another person's estate, or
> (b) of any settled property, other than settled property treated by section 49(1) below as property to which a person is beneficially entitled,[14]
>
> is increased

In *Fryer v HMRC:*

> The next question is whether the value of settled property ... was increased by [the deceased]'s omission to exercise her rights under clause 4.1. ... Clause 4.2 of the Scheme Rules provided that if the policyholder died before the "pension date" [which is what happened], NPI would pay to the trustees the death benefits specified in the Schedule. If instead of taking no action [the deceased] had exercised her right to take the pension benefits, the whole of the contract value would have been used to provide pension benefits... and the trust would have received nothing.
> It follows that [the deceased]'s omission to exercise the rights did increase the value of the settled property, as the omission resulted in the death benefits payable under the policy being paid to the trustees.

That must be right.

The increase condition may be satisfied after the diminution condition. In *HMRC v Parry*:[15]

> There is a correlation of substance between the reduction and the increase, in that one results from the other, but they need not occur at precisely the same time.

In *HMRC v Parry*:[16]

[13] See 74.10 (Settlement power).

[14] In the discussion below, for the sake of brevity, cases within (a) or (b) might both be referred to as "increases in a person's estate".

[15] [2020] UKSC 35 at [92].

[16] at [95].

> section 3(3) requires only that "another person's estate" is increased. It is not concerned with the identity of the other person. The benefits that were generated by Mrs Staveley's omission to draw her lifetime pension were undoubtedly going to increase "another person's estate", even if the scheme administrator had not exercised its discretion in favour of the sons, but instead chosen others from the list within the scheme rules. To my mind, this adds weight to an interpretation of the subsection which results in the omission in this case being deemed to be a disposition, and it deals also with the practical problem which the appellants suggested arose. The persons liable for tax might not have been identifiable, but it would have been clear from the date of Mrs Staveley's death that a charge to tax would arise by virtue of the omission.

I find it difficult to see the point of the diminution requirement. A charge should arise if the omission reduces the value of the omittor's estate, whether or not the estate of another is increased. That would be consistent with the basic rule that a transfer of value is disposition which reduces a person's estate, whether or not the estate of another is increased. But at present the IHT charge on omissions is slightly narrower than the IHT charge on dispositions. Though normally, if one estate is reduced, another will be increased, so the issue will not often arise.

74.5.3 *Causation condition*

The word "by" in s.3(3)[C] brings in a causation requirement: the decrease in the value of the omittor's estate, and the increase in the value of some other person's estate, must both be *by reason of* the omission.

This issue arose in *HMRC v Parry*[17] where:

(1) T (deliberately) omitted to claim a pension benefit.
(2) The pension scheme administrators later conferred benefits on T's children.

The children's estates were increased. T argued that this was not by reason of T's omission to claim the pension benefit. It was by reason of the scheme administrators' decision! That was clearly[18] wrong:

[17] [2020] UKSC 35. For another aspect of this case, see 74.13.1 (Operation confers benefit).

[18] I would have said untenable, but the argument actually succeeded in the Upper Tribunal. It might have helped if HMRC had cited the principle that a trust appointment merely fills in blanks left by the settlor; see 87.5.7 (Trust appointment:

> ... the omission yielded the death benefits that, in fact, increased the sons' estates and I do not see the limited discretion of the scheme administrator as breaking the chain connecting the two events. ... Putting it another way, the omission was the operative cause of the increase. ... it may be that the increase in the sons' estates could also be said to be brought about "by" the exercise of the administrator's discretion, but that does not preclude a finding that they were increased "by" the omission.[19]

Quite so.

74.5.4 *Time of deemed disposition*

The time of the deemed disposition is "the time (or latest time) when he could have exercised the right".

In *Fryer v HMRC* the latest time the right could be exercised was the moment before the death of the taxpayer.

In *Fryer v HMRC*:

> The fact that [the increase in the trust's value] occurred after her death does not prevent this condition in s.3(3) IHTA 1984 from being fulfilled, as there is no reference in the sub-section to the time at which the value of the settled property is increased.

But the increase did *not* occur after the death. Immediately from the moment of death, the trust had the valuable right to the pension payment; the fact that it was actually paid later did not matter.

Fryer suggests that if the increase condition is met at a later time, the deemed disposition is retrospectively regarded as taking place at the time specified. What if the transferor has died? How long do the executors remain at risk of a back-dated tax charge? Perhaps there could be a charge even before any estate is increased, on the basis that it is bound to happen sooner or later.

74.6 Chargeable/exempt transfer

Section 2(1) IHTA defines chargeable transfer. So far as relevant, this provides:

> A chargeable transfer is
> [a] a transfer of value

Filling blanks). But I think the point is self-evident.

[19] [2020] UKSC 35 at [94].

> [b] which is made by an individual
> [c] but is not (by virtue of Part II of this Act or any other enactment) an exempt transfer.

74.7 Qualifying interest in possession

The term "interest in possession" (IIP) is not defined (except in Scotland).[20] It has its trust law meaning. A full discussion of the expression requires a chapter to itself. I omit that here as I have considered it elsewhere.[21]

Qualifying IIP is defined in s.59(1) IHTA:

> In this Chapter [Chapter 3 Part 3 IHTA] "qualifying interest in possession" means—
> (a) an interest in possession—
> (i) to which an individual is beneficially entitled, and
> (ii) which, if the individual became beneficially entitled to the interest in possession on or after 22nd March 2006, is
> [A] an immediate post-death interest,
> [B] a disabled person's interest or
> [C] a transitional serial interest, or
> (b) an interest in possession to which, where subsection (2) below applies, a company is beneficially entitled.[22]

Qualifying IIP is an opaque term; for clarity I gloss it as "qualifying (estate) IIP, or just estate IIP, as the key feature of a qualifying IIP is that the individual entitled to the IIP is treated as entitled to the trust property, ie the trust property is treated as being in the individual's estate.

Although the definition is expressed to apply only for Chapter 3 Part 3 IHTA, it is incorporated by reference elsewhere, so it applies throughout the IHT legislation. On other occasions the wording of (i)(ii) is set out in full, rather than using the definition, which is somewhat clumsy drafting, but it works.

74.8 Relevant property

"Relevant property" is a key term for the Inheritance Taxation of trusts, because 10 year charges and exit charges are (in short) charges on

[20] See 90.11.1 (IIP in Garland trust).

[21] See Kessler et al, *Drafting Trusts & Will Trusts* (15th ed, 2023), Chapter 16 (Provisions Inconsistent with IP and IHT Special Trusts).

[22] The esoteric topic of company IIPs is not considered here.

"relevant property".

Section 58(1) IHTA provides:

> In this Chapter [Chapter 3 Part 3 IHTA] "relevant property" means settled property in which no qualifying interest in possession subsists, other than ...

When the drafter wishes to exempt specified property from these charges, they direct that it is not relevant property. So "relevant property" is a label which brings in a large number of rules. There are 8 exceptions altogether, of which the most important for this book is the last:

> (f) excluded property

"Relevant property" is an opaque term. "Chargeable trust property" might perhaps be better, but it is better to adopt the statutory term. For clarity I sometimes expand it to "**relevant (non-excluded) trust property**".

The term **"relevant property trust"** is often used to describe a trust with no qualifying IIP, and so which falls, or may fall, within the relevant property regime. Thus before 2006, relevant property trusts were, broadly, discretionary trusts; but post-2006, the term also includes non-estate IIP trusts.

74.9 Settlement commencement date

Section 48A IHTA provides:

> In this Act any reference to the commencement of a settlement is to the time when property first becomes comprised in it.

An English law trust does not exist until property is held in trust. A Scots law trust may exist before a transfer of property to it.[23] But that entity is not an IHT-settlement, which requires that *property* is held in trust for persons in succession (etc). So s.48A IHTA is otiose, but it does no harm. It serves as a reminder that the date a trust deed is executed, as recorded on the trust deed, may be before the date when property is first transferred to the trust; and it is the latter date which matters for IHT.

[23] Scottish Law Commission *Discussion Paper on the Nature and the Constitution of Trusts* (2006) para 3.1ff
https://www.scotlawcom.gov.uk/files/1312/7892/7069/dp133_trusts.pdf
Scottish Law Commission *Report on Trust Law* (2014) para 3.6
https://www.scotlawcom.gov.uk/files/4014/0904/0426/Report_on_Trust_Law_SLC_239.pdf

74.10 Settlement power

"Settlement power" is a defined term for IHT. Section 47A IHTA provides a wide definition:

> In this Act "settlement power" means any power over, or exercisable (whether directly or indirectly) in relation to, settled property or a settlement.

That includes a right of revocation. It includes a power arising:
(1) Under the terms of a settlement
(2) Under common law principles, eg when a settlement is voidable under rules relating to capacity of the settlor, mistake, undue influence
(3) Under foreign law forced heirship rules, eg legitime and Sharia, where family of the testator may have power to set aside a testamentary or lifetime gift to a settlement[24]

It does not include a contractual right (eg repayment of a loan) or a right of reimbursement from trustees (statutory indemnities). This is for two reasons (either would suffice):
(1) The right is not a "power".
(2) The right is a right against the trustees not arising under the settlement, and (in the relevant sense) it is not exercisable "in relation to"[25] the settlement or settled property.

The term "settlement power" matters because it is not property for IHT purposes.[26] I refer to this rule as **"settlement-power relief"**. It follows that for IHT purposes:
(1) A settlement power is not an asset in the estate of the powerholder
(2) The non-exercise or release of the power is not a transfer of value

74.11 Associated operation

The definition is very wide,[27] as one might expect. Section 268(1) IHTA provides:

[24] See 77.7 (Forced heirship/legitime/Sharia).

[25] See App 2.4.3 (Relating to).

[26] See 74.2.1 ("Property").

[27] This is self-evident, but if authority is needed see *IRC v Macpherson* [1989] AC 159 at p.175: "extremely wide and ... capable of covering a multitude of events affecting the same property which might have little or no apparent connection between them".

> [1] In this Act "associated operations" means, subject to subsection (2) below, any two or more operations of any kind, being—
>
> (a) [i] operations which affect the same property, or
>
> [ii] one of which affects some property and the other or others of which affect property which represents,[28] whether directly or indirectly,
>
> [A] that property, or
>
> [B] income arising from that property, or
>
> [C] any property representing accumulations of any such income, or
>
> (b) any two operations of which
>
> [i] one is effected with reference to the other, or
>
> [ii] with a view to enabling the other to be effected or
>
> [iii] facilitating its being effected,
>
> and any further operation having a like relation to any of those two, and so on,
>
> [2] whether those operations are effected by the same person or different persons, and whether or not they are simultaneous; ...

The IHT Manual describes paragraphs (a)/(b) of the definition as objective/subjective:

> **IHTM14822 Definition** [June 2016]
>
> ...You must specifically consider two alternative tests to determine whether separate events are associated operations. One of these tests must be satisfied if the associated operations provisions are to apply.
>
> - The (first) objective test looks at the relationship between items of property affected by the events - IHTA84/S268(1)(a).
> - The (second) subjective test looks at the relationship or connection between the events concerned - IHTA84/S268(1)(b).

Rysaffe v IRC concerned an arrangement under which an individual transferred 5 parcels of shares to 5 newly created settlements. So there were 5 operations, but they were not associated as:

(a) they did not relate to the same property; and

(b) they were not (in short) effected with reference to each other.[29]

74.11.1 *"Operation"*

Section 268(1) IHTA provides:

[28] See App.2.9 ('Representing' assets).

[29] [2002] EWHC 1114 (Ch) at [36]. For other aspects of this case see 79.3.2 (*Rysaffe*).

> ... "operation" includes an omission.

The IHT Manual provides:

> **IHTM14826 Definition Of Terms** [Sep 2018]
> **Operation**
> Under IHTA84/S268(1) the term 'operation' expressly includes an omission but is otherwise undefined. It applies to all forms of dispositions (IHTM04023), for example a gift, a sale, a purchase or an exchange.
> You can also consider the term to extend to wider activities such as making of a will or the exercise of votes as a controlling shareholder at a company meeting. However it does not cover automatic events like birth, death or the attainment of any specific age.

See too 48.11.1 ("Operation").

An omission may also constitute a disposition and so a transfer of value.[30]

There is a transitional relief for pre-1974 operations[31] but that is not now likely to arise.

74.11.2 *ToA/IHT assoc ops compared*

The term "associated operations" is also used in ToA.[32] The definition is similar in part. Clearly the drafter of the IHT definition in 1940 had in mind the ToA definition from 1936:

ToA definition	**IHT definition**
"associated operation", in relation to a transfer of assets, means an operation of any kind effected by any person in relation to—	"associated operations" means, ... any two or more operations of any kind, being—
(a) any of the assets transferred,	(a)[i] operations which affect the same property, or
(b) any assets directly or indirectly representing[33] any of the assets transferred,	[ii] one of which affects some property and the other or others of which affect property which represents, whether directly or indirectly, that property, or
(c) the income arising from any assets	income arising from that property, or

[30] See 74.5 (Omission: Deemed disposition).

[31] Section 268(2) IHTA.

[32] See 48.11 (Associated operation: Definition)

[33] "Representing" is elaborately defined in s.717(b) ITA.

within para (a) or (b), or (d) any assets directly or indirectly representing the accumulations of income arising from any assets within para (a) or (b).	any property representing accumulations of any such income ...

Strictly, one should not use the term "associated operations" without specifying which definition applies, but context will generally make that clear.

Cases on one definition will sometimes be helpful for the other; thus the IHT case *Macpherson* refers to the ToA case *Herdman.*

74.12 Why associated operations matter

It is not enough to establish that there are associated operations. This is just a first step. One must then go on to ask what (if anything) follows.[34]

Associated operations matter for various IHT purposes. The list includes:

Topic	**See para**
Definition of disposition, relevant for	
Definition of transfer of value	74.16
Definition of settlement	79.3
Arm's length transaction relief	74.13
Restriction on freedom to dispose:	*Not discussed;* see s.163 IHTA
Reservation of benefit	78.6.6
s.103 disallowance of debts	80.12.10
Pre-owned assets: excluded liability	83.17.1

So it is necessary to address associated operations as a discrete topic.

74.13 Arm's length transaction

Section 10(1) IHTA provides (so far as relevant):

[34] This is self-evident, but if authority is needed, see *Rysaffe v IRC* [2002] EWHC 1114 (Ch) at [28]:

> "s 268 [IHTA] is not an operative provision which of itself imposes inheritance tax liabilities. It is a definition of an expression (associated operations) which is used elsewhere. The definition only comes into effect in so far as the expression 'associated operations' is used elsewhere, and then only if the expression in another provision is relevant to the way in which that other provision applies to the facts of the particular case."

This decision was approved on appeal.

> A disposition[35] is not a transfer of value if
> [A] it is shown that it
> [i] was not intended, and
> [ii] was not made in a transaction intended,
> to confer any gratuitous benefit on any person and
> [B] either—
> (a) that it was made in a transaction at arm's length between persons not connected with each other, or
> (b) that it was such as might be expected to be made in a transaction at arm's length between persons not connected with each other ...

I refer to this as **"arm's length transaction relief"**.

Section 10(1)[A] IHTA is otiose, because if there is an intention to confer a gratuitous benefit, the disposition will not satisfy the condition in [B]; but it does not matter.

IRC v Spencer-Nairn[36] considers *s.*10(1)[B](b). In this case an asset worth £200k was sold for £100k to a connected person. One might think the undervalue alone is enough to say this transaction was not "such as might be expected to be made in a transaction at arm's length". But that is not so:

> It is plain from an examination of these two subsections that [IHT arm's length relief] has no function in cases where the disposition takes place at full value, with the result that immediately after it there is no diminution in the value of the transferor's estate. Its only purpose is to deal with cases where the value of his estate is less than it was before the transfer because the disposition was for a price less than the open market value of the property ... That being its purpose, it is also plain that transactions which are gratuitous or which were for less than the open market value of the property may nevertheless be taken out of charge if they satisfy the tests which it lays down. The fact that the transaction was for less than the open market value cannot be conclusive of the issue at this stage, otherwise the subsection would be deprived of its content. The gratuitous element in the transaction becomes therefore no more than a factor, which must be weighed in the balance with all the other facts and circumstances to see whether the onus which is on the

[35] Section 10(3) IHTA provides: " In this section "disposition" includes anything treated as a disposition by virtue of section 3(3) above"; see 74.5 (Omission: Deemed disposition).

[36] [1991] STC 60.

> transferor has been discharged

There are circumstances where a transaction at arm's length may be expected to be an undervalue. This was the case in *Spencer-Nairn,* but the facts were unusual.[37]

74.13.1 *Operation confers benefit*

Associated operations enter the picture through the definition of "transaction". Section 10(3) IHTA provides:

> In this section ... "transaction" includes a series of transactions[38] and any associated operations.

If the extended meaning of 'transaction' is read into the opening words of s.10, the wording becomes:

> a disposition is not a transfer of value if it is shown that it
> [a] was not intended, and
> [b] was not made in a transaction including a series of transactions and any associated operations intended,
> to confer any gratuitous benefit ...

In *Macpherson v IRC*:[39]

> ... the intention to confer gratuitous benefit qualifies both transactions and associated operations.

That does seem clear. But which associated operations must meet this requirement? Not all of them, but only some:

> If an associated operation is not intended to confer such a benefit it is not relevant for the purpose of the subsection. That is not to say that it must necessarily per se confer a benefit but it must form a part of and contribute to a scheme which does confer such a benefit.

Macpherson concerned a series of two operations:
Step 1: Trustees granted an arm's length chattel lease[40] to B1
Step 2: Trustees appointed the chattels to B2, subject to that lease

Step 1 reduced the value of the chattels, so it was a transfer of value unless

[37] See App 4.10.4 (Bad bargain).

[38] "Series of transactions" does not add anything to "associated operations".

[39] [1989] AC 159 at p.175.

[40] For another aspect of this case, see App.4.9.2 (Market value/full consideration).

arm's length transaction relief applied. It was found as a fact not to be intended to confer any gratuitous benefit on B1[41] so requirement [a] was met. But arm's length transaction relief did not apply at step 1 because requirement [b] was not met:

(1) Step 2 was an associated operation and
(2) Step 2 *was* intended to confer gratuitous benefit on B2.

> the appointment would not have been made if the [chattel lease] had not been [made]. It follows that the [chattel lease] was not only effected with reference to the appointment but was a contributory part of the scheme to confer a benefit on [B2]. So viewed there can be no doubt that the [chattel lease]... was made in a transaction, consisting of the [lease] and the appointment, intended to confer a gratuitous benefit on [B2].

Suppose the two steps had been made in the opposite order, that is:

Step 1: Trustees appointed the chattels to B2 (intending to confer a benefit)

Step 2: B2 granted the chattel lease to B1 (reducing the value of the chattels but not intending to confer a benefit)

Arm's length transaction relief would have applied at step 2:

> The [chattel lease] would undoubtedly have been associated with the appointment within the definition ... but it would not have been a relevant associated operation since it would have contributed nothing to the conferment of the gratuitous benefit which had already been effected by the appointment. It could alternatively be said that the transaction intended to confer gratuitous benefit had already been completed before the [chattel lease] had been entered into, therefore although it was an associated operation it could not be said to have been made in that transaction.

One might today call that a purposive construction. On these facts, IHT is charged on full value at step 1, not on depreciated value. So there is no need for a further charge at step 2.

The issue arose again in *HMRC v Parry*[42] which concerned a set of 2 operations:

[41] That seems implausible, but it was a question of fact and could not be challenged on appeal.

[42] [2020] UKSC 35. For another (rather more important) aspect of this case, see 74.5 (Omission: Deemed disposition).

Step 1: T transferred funds from one pension fund to another, reducing the value of her estate.

Step 2: T omitted to take pension benefits, thus increasing the funds distributed in due course to her children.

Step 1 was found not to have the intention to confer a gratuitous benefit.[43] The Supreme Court somehow found that step 2 did not form part of a scheme with step 1.[44] So arm's length transaction relief did apply at step 1. But the facts were unusual.

Suppose A sells an asset to B and leaves the purchase price outstanding. Arm's length transaction relief does not apply because the omission to call in the purchase price is an associated operation with gratuitous intent. But if the sale is at market value, the disposition is not a transfer of value and arm's length transaction relief is not needed.

74.14 Relevant operation

The IHT Manual provides:

> **IHTM14828 Restrictions On Association** [Sep 2018]
> Several operations may be associated under the definition in IHTA84/S268. However, as the decision of the House of Lords in *Macpherson v IRC* [1989] AC 159 made clear, it may not be possible to take all of those operations into account.
> The decision in *Macpherson* established that only operations which together are relevant to the tax charge being considered are to be taken into account as associated operations.
> As a result, when applying the associated operations rules you may only take account of operations
> - which are 'associated' within the statutory definition, and
> - which are relevant for the purposes of the tax charge that you are considering.
>
> Whether any given associated operation is also a relevant operation will depend on the statutory context in which it is being considered. However an operation will usually be a relevant operation if
> - it forms part of and
> - contributes to
>
> a scheme or plan which gives rise to the tax charge under consideration for IHT purposes.

[43] That seems implausible, but it was a question of fact, and the issue is not likely to arise very often.

[44] A 3:2 decision. The reader may find the minority view more persuasive.

In short, the definition of associated operation is so wide that the Courts have had to restrict its operation. A similar issue arises with association operations for ToA.[45]

74.15 Disposition by associated ops

Section 272 IHTA provides:

> In this Act, except where the context otherwise requires ...
> "disposition" includes a disposition effected by associated operations

Associated operations are therefore relevant where the word disposition is used, which is quite common, in particular:

Concept	**See para**
Transfer of value made by associated operations	74.16
Settlement made by associated operations	79.3

74.16 Transfer of value by 2 operations

Associated operations enter the picture through the definition of "disposition". If the extended meaning of 'disposition' is read into the definition of transfer of value in s.3(1) IHTA,[46] the wording becomes:

> ... a transfer of value is a disposition including a disposition effected by associated operations made by a person ... as a result of which the value of his estate immediately after the disposition including a disposition effected by associated operations is less than it would be but for the disposition

Section 268(3) IHTA addresses issues of timing and quantification of the value transferred by a transfer effected by associated operations:

> [1] Where a transfer of value is made[47] by associated operations carried out at different times it shall be treated as made at the time of the last of them;
> [2] but
> [a] where any one or more of the earlier operations also constitute a transfer of value made by the same transferor, the value

[45] See 48.11.5 (Mere historical association).

[46] See 74.3 (Transfer of value/value transferred).

[47] Section 268(3) uses the expression "made by associated operations" and s.272 uses the expression "effected by associated operations". It would have been better drafting to use the same word, but there is no difference between *made* and *effected*.

> transferred by the earlier operations shall be treated as reducing the value transferred by all the operations taken together,
>
> [b] except to the extent that the transfer constituted by the earlier operations but not that made by all the operations taken together is exempt under section 18 above [spouse exemption[48]].

The IHT Manual provides:

> **IHTM14828 Restrictions On Association** [Sep 2018]
> **Relevant operations**
> In the case of a transfer of value under IHTA84/S3 (1), every associated operation which contributes to the loss to the transferor's estate is a relevant operation. Any other operation, although it may be 'associated', is not relevant for the purpose of that provision.
> **Example** *(Angus and Brodie)*
> So if
> [1] A grants a lease to B and
> [2] then later gives him the freehold reversion, after which
> [3] B pays to have an extension built,
> all three operations are associated. They all affect the same property. But the only the first two operations are relevant to the transfer of value under IHTA84/S3(1), since the building of the extension by B does not give rise to any further loss to A's estate.

The rule that a disposition (and so a transfer of value) may be made by associated operations can arise in many contexts, see in particular:

Topic	**See para**
Channelling	74.16.1
Asset splitting	74.16.2
Alteration of share capital	81.7
Joint accounts	94.3.5

74.16.1 *Channelling*

In *Rysaffe*:[49]

> ... a disposition which is effectively by A to C is channelled through B with a view to picking up a saving of inheritance tax in the process. Instead of A transferring the property to C he transfers it to B, and B, pursuant to the scheme, makes an onward transfer to C. One can readily imagine cases where inheritance tax might, the associated operations

[48] See 93.9 (Spouse gift: Associated operations).

[49] *Rysaffe Trustee Co v IRC* [2002] EWHC 1114 (Ch) at [30].

provision apart, be avoided by an exercise of that nature. For example,
[a] an A to B transfer might have benefited from an exemption, such as that for transfers between a husband and wife,
[b] and for some reason[50] there may be a lower liability on a transfer by B to C than there would have been on a direct transfer from A to C.

In practice HMRC do not take that point, at least for straightforward inter-spouse transfers.[51]

In an IT/CGT context, channelling of this kind is addressed by the onward-gift rules.[52]

74.16.2 *Asset splitting*

In *Rysaffe*:[53]

> ... a case where an asset, instead of being transferred to a transferee by a single transfer of the whole asset, is fragmented and transferred in stages, with a view to achieving an overall reduction in the value transferred. For example, X wants to give a valuable freehold to Y, but a simple transfer of the freehold would give rise to a large transfer of value for inheritance tax purposes. Instead
> [1] he first gives a medium length lease of the property to Y, and
> [2] later he gives to Y the freehold reversion.
> If that was a case of two independent dispositions one can readily imagine arguments that the aggregate of their separate values would be considerably lower than the value of a simple one step transfer of the freehold. ... the possibility of manoeuvres like those two examples would have been obvious to the draftsman ... and that the probability is that it was for that purpose ... that 'disposition' was defined to include a disposition by associated operations.

The IHT Manual offers 3 examples of asset splitting. The first is the lease example:

> **IHTM14827 Transfer Of Value Made By Associated Operations** [Aug 2016]
> ... **Example** *(Angus and Brodie)*
> A has a house with vacant possession worth £260,000.

[50] The most common reason is that B has unused nil-rate band and A does not; though there could be other reasons.

[51] See 93.9 (Spouse gift: Associated operations).

[52] See 61.30 (Onward gifts: Introduction).

[53] *Rysaffe Trustee Co v IRC* [2002] EWHC 1114 (Ch) at [30].

> A grants a controlled tenancy of it to B at full rent.

The HMRC analysis of the first operation is as follows:

> At this point the value is reduced to £182,000 but no claim for IHT then arises because of IHTA84/S10. A has incurred a loss to his estate from £260,000 to £182,000, but he has not made a transfer of value because of IHTA84/S10.[54] It is nevertheless a relevant operation.

Then comes the second operation:

> Two years later, the house is worth £300,000 with vacant possession. A gives B the freehold reversion so that B now effectively owns the house with the right to vacant possession.

The HMRC analysis of the second operation is as follows:

> The two operations, the granting of a tenancy and then the gift of the freehold reversion, affect the same property. A has transferred the house with vacant possession, but he has done it by splitting the transfer into two separate operations. Through the associated operations rule these two operations are combined together. Consequently, tax can be charged on the full vacant possession value of £300,000 at the time of the last operation, the gift of the freehold reversion.

Section 268(2) IHTA supports this view by providing a narrow exemption:

> The granting of a lease for full consideration in money or money's worth shall not be taken to be associated with any operation effected more than three years after the grant

The second example is a release of a loan by instalments. The IHT Manual provides:

> **IHTM14834 Sale without immediate payment of the purchase price** [Sep 2018]
> In this situation, property (typically a house) is sold with the purchase price being treated as a loan. Subsequently, the loan is released in stages (normally in order to utilise the annual exemptions). Also see IHTM14152. You need to
> - consider whether the sale price represents the full open market value of the property at the date of the sale,
> - consider whether the purported releases are legally effective (IHTM19100), and

[54] Author's footnote: This is possible but factually implausible.

> - establish by whom and on what basis the property was occupied between the sale and the death (so that the application of the Gift With Reservation (IHTM14301) provisions can be considered). ...

The third example is the transfer of an asset by instalments. The IHT Manual provides:

> **IHTM14835 Transfer In Stages** [June 2016]
> A transfer may be effected in a series of stages. Typically successive portions of a property may be transferred, often annually. The portion may be calculated in a variety of ways: often it is a share equivalent in value to the amount of the annual exemption.[55]

Whether the instalment examples are actually caught by the associated operations rule is doubtful.

74.17 Gift followed by sale: APR/BPR

The topics of APR/BPR are outside the scope of this book, and would need long chapters to themselves. However they do provide another example of the associated operations issue. *Reynaud v IRC* concerned an arrangement with two steps:

(1) A gift of shares qualifying for BPR
(2) A sale of the shares by the donee

The Special Commissioners said:[56]

> 16. There is no doubt that the two operations of the transfer of shares to the discretionary trusts and the purchase of own shares are associated within the meaning of s 268. They affect the same property, the shares. However, the question is not whether they are associated, but whether there is a disposition effected by associated operations. ...
> 17. An associated operation is relevant only if it is part of the scheme contributing to the reduction of the estate...
> Here the value of the estates of the brothers were diminished as a result of the gift into settlement alone. The purchase of own shares contributed nothing to the diminution which had already occurred and was not therefore a relevant associated operation.

[55] The Manual adds: This is sometimes referred to colloquially as 'salami slicing'. But I do not think this expression has become established, even in the specialist dialect of IHT-practitioners.

[56] [1999] STC (SCD) 185, approved in *Rysaffe v IRC* [2002] STC at 872 at [29]. That HC decision was itself approved on appeal.

> 19. Accordingly, we decide that the disposition reducing the value of their estates was achieved solely as a result of the transfer of the shares into the settlement. The purchase of own shares is not an operation which is part of the disposition reducing the value of the estate. It is not therefore a case of a disposition being effected by associated operations, but a single disposition. It follows that the disposition cannot be treated as taking place later than it actually did, with the result that business relief is available.

The IHT Manual provides:

> **IHTM14832 Transfers Involving Relievable Property** [Sep 2018]
> A transfer of property that qualifies for agricultural or business relief may be followed by an event which, if it had occurred before the transfer, would have prevented the relief being available.
> **Examples**
> - Property which is entitled to agricultural relief is transferred and then sold by the transferee.
> - A transfer of unquoted shares/securities which are eligible for business relief is followed by the shares becoming quoted on a recognised stock exchange (IHTM18061).
>
> A point to consider in these situations is whether relief, which is otherwise available, should be challenged by reference to the associated operations provisions. ...

So the Manual has been out of date since 1999.[57] Is this a record?

[57] The law also altered with s.113A IHTA.

CHAPTER SEVENTY FIVE

EXCLUDED PROPERTY: DEFINITION

75.1 Excluded property: Introduction
75.2 Non-settled foreign property
75.3 Non-settled UK funds
75.4 Non-settled FOTRA securities
75.4.1 Interest on FOTRA security
75.4.2 EU state securities
75.5 FOTRA exemption conditions
75.5.1 Deemed domicile disapplied
75.5.2 Abolition of ordinary residence
75.6 Ownership & Registration
75.7 Channel Islands/IoM domicile
75.8 Trusts: Foreign property
75.8.1 Accumulated income
75.8.2 Formerly-dom resident settlor

75.16.2 Interest in possession
75.16.3 Purchased equitable interest
75.16.4 FAs 2010 and 2012

Cross references

The following topics are considered elsewhere:
79.2 (Addition/transfer to trust)
82.1 (IHT residential-property code)

75.1 Excluded property: Introduction

Excluded property is (more or less) outside the scope of inheritance tax. There are 11 classes of excluded property:

(1) Non-settled property:[1]
   (a) Foreign situate property
   (b) UK funds (unit trusts and OEICs)
   (c) FOTRA securities
(2) Settled property:
   (a) Foreign situate property
   (b) UK funds (unit trusts and OEICs)
   (c) FOTRA securities
(3) Qualifying certificates of IoM/Channel Islands doms
(4) Property of visiting forces[2]
(5) Reversionary interests in settled property
(6) Decorations and awards[3]
(7) Property subject to clearance under the 2011 Swiss Tax Agreement[4]

Thus, with an economy of language, exemptions for excluded property serve several purposes:
(1) Territorial exemption
(2) Limiting the scope of IHT:
   (a) To encourage UK investment by foreigners (FOTRA securities, UK funds)
   (b) To fit the scheme of the Act, avoid double taxation (relief for reversionary property)
   (c) Other meritorious cases (visiting forces, etc)

This chapter considers the definition of excluded property. The reliefs for excluded property are considered in the next chapter.

Excluded property and foreign situate property are distinct concepts. Foreign situate property is the most common category of excluded property but:
(1) UK situate property may be excluded property (eg FOTRA securities).
(2) Foreign situate property may be non-excluded property (eg shares in a foreign company holding a UK residence).

[1] A note on terminology. I use the term “non-settled property” to describe property which is not held in a settlement for IHT purposes. The term used in the IHT Manual is “unsettled property”.

[2] See App 11.4.1 (Excluded property).

[3] Section 6(1B) IHTA; this is too specialist a topic to discuss here.

[4] See para 22(1) sch 36 FA 2012. I discuss this in para 97.20 of the 2016/17 edition of this work.

75.2 Non-settled foreign property

Section 6(1) IHTA provides:

> Property situated outside the UK is excluded property if the person beneficially entitled to it is an individual domiciled outside the UK.

Excluded property status depends on the domicile of the individual at the time the disposition is made. Likewise, excluded property status depends on the location of assets at that time only. It is irrelevant that the assets may previously have been situate in the UK.

On the situs of assets, see 102.1 (Concepts of situs).

75.3 Non-settled UK funds

Section 6(1A) IHTA provides:

> [a] A holding in an authorised unit trust[5] and
> [b] a share in an open-ended investment company[6]
> is excluded property if the person beneficially entitled to it is an individual domiciled outside the UK.

AUTs and OEICs will generally be UK situate assets. I refer to them together as "**UK funds**". These are excluded property for all IHT purposes.

The relief only applies to a *holding* in an AUT or a *share* in an OEIC so other interests in AUTs and OEICs (for instance, options) are not excluded property. Perhaps that does not arise in practice.

The definition for UK funds uses the expression "beneficially entitled" and the definition for FOTRA securities uses the expression "beneficial ownership" but it is considered that the meaning is the same.[7]

This exemption is due to tax competition.[8] HMRC explain:

> Overseas investors are in theory liable to inheritance tax on their OEIC and AUT holdings, because they are regarded as being situated in the UK for tax purposes on the investors' death. Competing centres do not charge tax in parallel circumstances. Removing the potential inheritance tax charge will help UK managers compete on an equal footing with

[5] For the definition see 69.4 (Authorised unit trust).
[6] For the definition see 66.1.2 (Open-ended investment co).
[7] See App. 6.2 (English-law beneficial ownership).
[8] See 1.3 (Other tax competition).

overseas fund providers.[9]

75.4 Non-settled FOTRA securities

The next category of excluded property consists of FOTRA securities[10] (certain UK government securities, sometimes called exempt gilts). FOTRA securities are UK situate assets. Section 6(2) IHTA provides:

> Where securities have been issued by the Treasury subject to a condition authorised by section 22 of the F(No.2)A 1931 (or section 47 of the F(No. 2)A 1915) for exemption from taxation so long as the securities are in the beneficial ownership of persons of a description specified in the condition, the securities are excluded property if they are in the beneficial ownership of such a person.

FOTRA securities issued from 1 April 2005 are titled "Treasury Gilts". Earlier securities have one of the following names:

- Treasury Loan/Stock
- Conversion Loan/Stock
- Exchequer Loan/Stock
- Consolidated Loan/Stock
- War Loan

These names have only historical significance.

Products issued by National Savings and Investments are not FOTRA securities.

75.4.1 *Interest on FOTRA security*

The IHT Manual provides:

> **IHTM27260 Exclusion of interest on exempt securities** [Jul 2016]
> The exclusion for exempt securities can also apply to certain payments of interest on the securities. Payments that qualify for the exclusion are:
> [1] warrants or coupons for interest already received but not encashed at

[9] Press Release 16 October 2002 (OEICs and AUTs) para 6 [2002] STI 24 October 2002. The text continued (inaccurately):

> "This very rarely generates any significant yield, because UK assets still have to exceed the inheritance tax threshold ... before any tax is due. But it is a deterrent in marketing terms".

I suspect that the true reason that the former IHT charge on UK funds raised little IHT was different, namely that no-one (if properly advised and wishing to comply with UK tax rules) would invest more than the IHT threshold in AUTs or OEICs. Undetectable non-compliance must also be reckoned with.

[10] "Free of Tax to Residents Abroad".

> the date of the relevant chargeable event
>
> [2] apportionment of interest due up to, but receivable after, the date of the chargeable event
>
> [3] in the case of a trust, any interest payments already encashed but held, at the date of the chargeable event, by the trustees, before distribution in the administration of the trust. These payments will be excluded even if no separate money can be identified as relating directly to interest on exempt securities.
>
> The **exclusion for interest does not apply** to any warrants or coupons already encashed, or payments of interest already received by the beneficiary in their lifetime, in connection with a chargeable event that happened after they were encashed or received. This is the case whether the beneficiary is the absolute owner of the exempt securities or a beneficiary under a trust.

[1] and [2] are correct, but point [3] seems generous.[11]

75.4.2 *EU state securities*

The EC say:

> The underlying [EU law] principles could equally prohibit, inter alia, inheritance tax treatment that ...
>
> (c) is less favourable in the case of public debt securities issued by other Member States than in the case of similar securities issued by the taxing Member State.[12]

[11] For completeness, the Manual continues:

> **"IHTM27261 Exclusion of repayment of IT on exempt securities** [Jul 2016]
>
> A repayment of Income Tax relating to interest on exempt securities is also excluded from the charge to Inheritance Tax on exempt securities:
>
> - if an existing warrant for repayment has not been cashed at the date of the relevant chargeable event
> - if the proceeds of an encashed warrant are held – at the date of the chargeable event – by the trustees pending distribution in the administration of the trust or
> - if the repayment due up to the date of the chargeable event is received after the date.
>
> A repayment that is cashed before a chargeable event, by the person beneficially entitled to the repayment, is not excluded on that event."

Before 1998 interest was generally paid subject to deduction of tax. But now interest is paid without deduction of tax (unless the owner asks for tax to be deducted) so this point will not arise.

[12] Commission Staff Working Paper "Non-discriminatory inheritance tax systems: principles drawn from EU case-law" (December 2011) para 3

The EC took action over similar rules in Spain:

> The European Commission has officially requested Spain to amend the provisions of the Inheritance and Gift Tax legislation of the *Territorios Históricos de Alava y Bizkaia* as these do not respect the free movement of capital.
> Under these tax provisions public debt issued by the local administrations (*la Comunidad Autónoma del País Vasco, the Diputaciones Forales or the Entidades Locales Territoriales de los tres Territorios Históricos*) benefits from a preferential tax treatment. This means that titles of public debt from these administrations are less taxed than other similar titles after inheritance. This tax treatment discriminates against investments in public debt issued by other EU Member States or EEA States.[13]

Spain subsequently amended its law.[14]

The exemption for UK gilts may not have been EU-law compliant, but post-Brexit the point is not likely to arise.

75.5 FOTRA exemption conditions

FOTRA securities were first issued under s.47 F(No 2)A 1915. This was a temporary measure:

> The Treasury may, if they think fit, during the continuance of the present war and a period of twelve months thereafter, issue any securities which they have power to issue for the purpose of raising any money or any loan with a condition that neither the capital nor the interest thereof shall be liable to any taxation, present or future, so long as ... the securities are in the beneficial ownership of persons who are neither domiciled nor ordinarily resident in the UK...

This section was repealed in 1927, but the repeal did not affect tax exemptions for securities previously issued and one such security (War Loan 1952 Or After) is still in existence.

Section 22(1) F(No.2)A 1931 provides:

> Any securities issued by the Treasury under any Act may be issued with the condition that -

https://taxation-customs.ec.europa.eu/system/files/2016-09/working_paper_en.pdf

[13] MEMO/13/122 Event Date: 21/02/2013 *http://europa.eu/rapid/press-release_MEMO-13-122_en.htm*

[14] C-127/12.

> (a) so long as the securities are in the beneficial ownership of persons who are not [ordinarily][15] resident in the UK, the interest thereon shall be exempt from income tax; and
>
> (b) so long as the securities are in the beneficial ownership of persons who are neither domiciled nor [ordinarily] resident in the UK, neither the capital thereof nor the interest thereon shall be liable to any taxation present or future.

Subsequent statutory provisions do not specify the condition for exemption: they give the Treasury a discretion to specify the condition in the terms of the issue. Section 60 FA 1940 provides:

> The power of the Treasury under s.22 F(No.2)A 1931 to issue securities with the condition as to exemption from taxation specified in that section shall extend to the issuing of securities with that condition so modified, whether as to the extent of the exemption or the cases in which the exemption is to operate, as the Treasury may specify in the terms of the issue.

So the details must be found in the prospectus for each gilt concerned.[16] Section 154(1) FA 1996 provides:

> The modifications which, under s.60 of the FA 1940, may be made for the purposes of any issue of securities to the conditions about tax exemption specified in s.22 of the F(No.2)A 1931 shall include a modification by virtue of which the tax exemption contained in any condition of the issue applies, as respects capital, irrespective of where the person with the beneficial ownership of the securities is domiciled.

It is hard to see the need for this, but it does no harm.

Before 6 April 1998 some gilts were issued without FOTRA conditions. These have now been given the benefit of FOTRA conditions by s.161 FA 1998:

> (1) Subject to the following provisions of this section, any gilt-edged security[17] issued before 6 April 1998 without FOTRA conditions shall be treated in relation to times on or after that date as if—
>
> (a) it were a security issued with the post-1996 Act conditions; and
>
> (b) those conditions had been authorised in relation to the issue of that security by virtue of s.22 of the F(No. 2)A 1931...

[15] See 75.5.2 (Abolition of ordinary residence).

[16] Prospectuses can be found on *https://www.dmo.gov.uk/search/?q=prospectuses*

[17] “Gilt-edged securities” has the CGT definition: see s.161(6) FA 1998.

> (4) In this section "FOTRA conditions" means any such conditions about exemption from taxation as are authorised in relation to the issue of a gilt-edged security by virtue of section 22 of the Finance (No 2) Act 1931...
> (5) In this section "the post-1996 Act conditions" means the FOTRA conditions with which 7.25% Treasury Stock 2007 was first issued by virtue of s.22 of the F(No. 2)A 1931.[18]
> (7) This section does not apply to any 3½% War Loan 1952 Or After which was issued with a condition authorised by virtue of s.47 of the F(No. 2)A 1915.

So all UK government securities have FOTRA status, irrespective of the original terms of issue but there are two classes of FOTRA securities with different conditions attached. The IHT Manual provides:

> **IHTM04291 Government securities in foreign ownership: introduction** [Sep 2018]
> ...Before 6 April 1998, FOTRA securities or gilts were issued with the additional requirement that the beneficial owner had to be domiciled (IHTM13000) as well as ordinarily resident outside the UK. The domicile requirement still applies to FOTRA securities that were issued before 29 April 1996.
> Under FA40/S60 (1), the Treasury has powers to modify the terms of issue of a Government security so as to change the scope of the exemption. These powers were exercised so that with effect from 6 April 1998 all gilts were deemed to be FOTRA gilts. So, for deaths and other chargeable events on or after 6 April 1998, all government securities are excluded property (IHTM04251) for Inheritance Tax purposes if the beneficial owner was ordinarily resident outside the UK (or, for securities acquired after 6 April 2013, simply resident outside the UK).
> The only exception is 3½% War Loan, where the additional domicile condition still applies to deaths or other chargeable events on or after 6 April 1998.
> So, in summary,
>
> - FOTRA securities issued before 29 April 1996 will be exempt if the beneficial owner is both domiciled and ordinarily resident outside the UK;
> - 3½% War Loan 1952 or after will be only be exempt if the beneficial

[18] This was one of the first gilts issued in 1996/97. The condition provided: "the Stock will be exempt from all UK taxation, present or future, so long as it is shown that the Stock is in the beneficial ownership of persons who are not [ordinarily] resident in the UK".

owner is both domiciled and ordinarily resident outside the UK, even if the chargeable event is after 6 April 1998;
- all government securities issued without FOTRA conditions before 6 April 1998 will be exempt from that date provided the beneficial owner is ordinarily resident outside the UK. Domicile is relevant only for 3½% War Loan;
- all government securities issued between 29 April 1996 and 5 April 2013 will be exempt provided the beneficial owner is ordinarily resident outside the UK. Domicile is relevant only for 3½% War Loan;
- all government securities acquired on or after 6 April 2013 will be exempt provided the beneficial owner is resident outside the UK. Domicile will be relevant only for any future issue of 3½% War Loan.

> The main factors for determining the exclusion (or otherwise) of Government securities are
> - the type and ownership (IHTM04294) of the security which is deducted as excluded property,
> - the ordinary residence (IHTM04295) of the beneficial owner of the relevant security or, where the security is settled property, that of the beneficiary or beneficiaries concerned, but
> - for deaths and chargeable events prior to 6 April 1998, the domicile (IHTM04296) of the person(s) mentioned above must also be outside the UK.

It would be simpler if all gilts could be governed by the same rules.

75.5.1 *Deemed domicile disapplied*

Section 267(2) IHTA provides:

> Subsection (1) above [deemed domicile for IHT] shall not apply for the purposes of section 6(2) or (3) or 48(4) above ...

Similarly, s.267ZA(5) IHTA provides:

> An election under this section does not affect a person’s domicile for the purposes of section 6(2) or (3) or 48(4).

That is, the IHT deemed domicile rules do not apply for the purposes of the exemptions conferring excluded property status on:
(1) FOTRA securities
(2) Qualifying certificates of IoM/Channel Island doms.[19]

[19] See 75.7 (Channel Islands/IoM domicile).

The reason is historical. The concept of deemed domicile was introduced with CTT in 1974. At that time gilts had been issued with a promise that they would be free from taxation (including estate duty, now IHT) if the owner was not (actually) UK domiciled. The deemed domicile rule could not have been applied to those gilts. All that the drafter needed to do was to disapply the deemed domicile rule to FOTRA securities in issue at the time of the introduction of CTT (now IHT). It was not necessary to disapply the deemed domicile rule to gilts issued later. But that is the rule. Presumably the intention was to avoid having two classes of FOTRA securities governed by different rules; or to encourage foreigners to continue to invest in FOTRA securities issued after 1974.

No doubt the same reasoning applied to Qualifying certificates of IoM/Channel Island domiciliaries.

The practical importance of this rule is diminished by the fact that it is only relevant to those FOTRA securities where IHT FOTRA exemption requires the owner to be domiciled outside the UK; in (I think) almost all cases, except 3½% War Loan 1952 Or After, the exemption only requires the owner to be non resident, and domicile (deemed or actual) is irrelevant.

75.5.2 *Abolition of ordinary residence*

Para 114 sch 46 FA 2013 provides:

> (4) Sub-paragraph (5) applies to a person who becomes the beneficial owner of a pre-commencement security (or an interest in such a security) on or after 6 April 2013.
> (5) If obtaining the relevant exemption is conditional on being not ordinarily resident in the UK, any enactment conferring the exemption is to have effect (in relation to a person to whom this sub-paragraph applies) as if obtaining the exemption were conditional instead on being not resident in the UK.
> (6) In this paragraph—
> "pre-commencement security" means a FOTRA security (as defined in section 713 of ITTOIA 2005) issued before the day on which this Act is passed [17 July 2013];
> "the relevant exemption", in relation to a pre-commencement security, means the exemption for which provision is made in the exemption condition (as defined in that section).

Para 114(1) sch 46 FA 2013 deletes the word "ordinarily" in s.22 F(No.2)A 1931 and para 114(3) provides a similar rule:

> (3) Subject to sub-paragraph (5), the amendment made by sub-paragraph (1) does not affect a pre-commencement security (nor the availability of the relevant exemption).

75.6 Ownership & Registration

The gilts must be in the "beneficial ownership" of the individual. Beneficial ownership has various meanings,[20] but the meaning here is (in my terminology) English-law beneficial ownership, ie the English property law/trust law meaning.

The IHT Manual provides:

> **IHTM04294 type of security and ownership** [Sept 2018]
> If a government security is a FOTRA gilt (IHTM04291) you will have to consider who is beneficially entitled (IHTM04031) to that security to work out whether it is excluded property for IHT purposes.
> If a worthwhile amount of tax is at stake you should investigate the possibility of a last-minute purchase. Except where the available information reasonably rules out that possibility - for instance, if the amount of interest returned suggests long-term ownership - you should seek specific confirmation that the gilts concerned were in fact registered in the transferor's, or the trustee's, name(s) at the date of the relevant transfer.
> Technical can give you advice if you discover a last-minute purchase of gilts.

I do not think that the IHT Manual means to say that relief only applies if the securities are registered in the name of the individual or the trustees. The point is that no relief applies if the securities are purchased but not paid for. The purchaser is not the beneficial owner until payment, or even if they were, securities not paid for have no value because of the vendor's lien. So if the gilts are not registered in the name of the individual, further evidence may be needed to show that the individual actually is the beneficial owner.

In practice, register the gilts in the name of the individual or the trustees to avoid possible dispute. Perhaps the withheld text instructs Inspectors how to identify false claims for relief, or perhaps it identifies what is a "worthwhile amount" to investigate.

[20] See App.6.1 (Beneficial ownership: Meanings).

75.7 Channel Islands/IoM domicile

Section 6(3) IHTA provides:

> Where the person beneficially entitled to the rights conferred by any of the following, namely—
>
> (a) war savings certificates;
> (b) national savings certificates (including Ulster savings certificates);
> (c) premium savings bonds;
> (d) deposits with the National Savings Bank or with a trustee savings bank;
> (e) a certified SAYE savings arrangement within the meaning of section 703(1) ITTOIA;
>
> is domiciled in the Channel Islands or the Isle of Man, the rights are excluded property.

In the following discussion:

(1) "**Qualifying certificates**" are investments within (a) to (e).
(2) "**Islanders**" are persons domiciled in the Channel Islands or the Isle of Man.

The IHT 3-year and 15-year deemed domicile rules do not apply for the purposes of this section: see s.267(2) IHTA.

The IHT Manual para 27270 [July 2016] correctly states:

> Other points to note are:
>
> [1] the exclusion applies not only to securities that are owned absolutely but also to any settled securities in which the owner has a beneficial interest in possession[21]
> [2] the exclusion does not extend to settled securities in which there is no interest in possession, (held on discretionary trusts
> [3] the relevant domicile is that of the transferor (and not the transferee) of the securities, at the time of the transfer
> [4] the deemed domicile provisions of IHTA84/S267 (2) do not apply. So the transferor's domicile has to be determined under general law.

Points [2] to [4] are straightforward, but point [1] is important.

The exemption could be particularly useful for an individual who is:

(1) domiciled in the Channel Islands or the Isle of Man, and
(2) deemed UK domiciled (so in principle within the scope of IHT), and

[21] Author's footnote: From 2006 this will only apply to an estate IIP.

(3) resident in the UK (so the FOTRA securities exemption is not available).

The exemption is also useful for an estate IIP trust with an Islander life tenant.

The exemption dates back to 1931[22] and was presumably an attempt to market the securities to Islanders, who would otherwise not find them an attractive choice. It seems surprising that the exemption is limited to Islanders; perhaps there were exchange control reasons?

75.8 Trusts: Foreign property

This section sets out the position for transfers made on or after 22 July 2020.

Section 48(3) IHTA provides:

> Where property comprised in a settlement is situated outside the UK—
> (a) [i] the property (but not a reversionary interest in the property) is excluded property unless the settlor was domiciled in the UK at the time property became comprised in the settlement
> [ii] (but see also subsection (3F))[23]

This is the main category of settled excluded property, roughly corresponding to the rule that non-settled foreign situate property is excluded property.

A trust made by a foreign domiciled settlor is sometimes referred to as an "**excluded property trust**". This label is not wholly accurate, as property in a (so-called) excluded property trust may or may not be excluded property, depending on its situs and nature; but it is a convenient shorthand.

The residence and domicile of the beneficiaries is irrelevant for this purpose. The residence of the trustees is similarly irrelevant.

Excluded property status depends on the domicile of the settlor at the time the property became comprised in the settlement, which is typically, though not necessarily, the time the settlement was made. Domicile at the time of the chargeable event is generally ignored.[24] Contrast the IT/CGT

[22] Section 41 FA 1931. The exemption for FOTRA securities was revived in the same year.

[23] For s.48(3F), see 75.8.1 (Accumulated income).

[24] There are two exceptions:
(1) If the settlor/spouse has an initial IIP in the settled property: see 75.13 (Initial

position. The identity of the settlor is obviously crucial.[25]

The post-2020 law adopts a date of addition test, as opposed to the old law where the test was the date that the settlement was made.[26] It may therefore be necessary to determine the domicile of the settlor on repeated occasions, and to trace funds added to a trust which may become mixed with funds added previously.

There are times where it is unclear when property is added, such as interest-free loans;[27] or what property is added, eg on payment of trust expenses or liabilities.

The situs of the trust assets matters only at the moment a charge arises; provided the assets are then situated abroad, it is irrelevant that they may previously have been situated in the UK.

HMRC accept this. IHT Manual provides:

> **IHTM04274 Identifying settled property** [July 2020]
> The expression 'property comprised in a settlement' in IHTA84/S48 (3) means the items of property (IHTM04030) held in the settlement (IHTM16042) at the time of the chargeable event you are considering.
> In determining the locality (IHTM27071) of any particular property you should consider the property in its current form and not its previous history.
> *Example* [Stella, Xavier and Yolanda]
> In 2004 S, when domiciled in Germany, transfers a house in Germany and some UK securities into a settlement for X for his life with remainder to Y.
> On X's death - the potentially chargeable event - the settled fund consists of
>
> - Option 1: a villa in Spain.
> - Option 2: land in the UK.
> - Option 3: a house in Spain and some UK securities.
>
> With Option 1 the villa is excluded property even though it partly represents the proceeds of what was previously UK property (the securities).
> The land in Option 2 is not excluded property although it is partly derived from the proceeds of sale of the German house.

interest settlor/spouse).
(2) Formerly domiciled residents

[25] See 99.2.10 (Settlor: IHT definition).

[26] See 75.15 (Adding property).

[27] See 99.26 (Loans).

> In Option 3 the house in Spain is excluded property but the UK securities are not.

75.8.1 *Accumulated income*

As a matter of general law, accumulated income becomes comprised in a settlement at the time that it is accumulated.[28] However s.48(3F) IHTA provides:

> If—
> (a) an amount is payable in respect of property ("the existing property") comprised in a settlement, and
> (b) the amount represents an accumulation of income which (once accumulated) becomes comprised in the settlement,
>
> subsections (3)(a), (3A)(a) and (3E) have effect, in the case of the amount, as if any reference to the time it became comprised in the settlement were to the time the existing property became comprised in the settlement.

This only applies for the provisions mentioned, but the provision is repeated verbatim elsewhere where needed: s.64(1BA) and s.65(8A) IHTA.

75.8.2 *Formerly-dom resident settlor*

Section 48(3E) IHTA overrides the usual rule for a settlor who is a formerly-domiciled resident:[29]

> In a case where the settlor of property comprised in a settlement is not domiciled in the UK at the time the property became comprised in the settlement (but see also subsection (3F)),[30] the property is not excluded property by virtue of subsection (3) or (3A) above at any time in a tax year if the settlor was a formerly domiciled resident for that tax year.

If the formerly-domiciled resident ceases to be resident, or dies, the trust property becomes excluded property again.

The HMRC consultation paper "Reforms to the taxation of non-domiciles" (2015) provides:

> [Formerly domiciled residents] will be treated as having a UK domicile for tax purposes. This means there will be no protection for offshore

[28] See 87.6.1 (Undistributed trust income).

[29] See 5.5 (IHT Formerly-domiciled resident rule.

[30] For subsection (3F), see 75.8.1 (Accumulated income).

> trusts, either in terms of the tax on income/gains in the trusts or for IHT purposes.
>
> The excluded property trust rules for IHT will be changed so that they do not apply in these circumstances. This will be the case even for trusts that are set up offshore while the individual was not domiciled or resident in the UK (and would therefore be excluded property for IHT purposes under the current rules). So if an individual caught by this test acquires an overseas domicile and then sets up an offshore trust while non-UK domiciled, once that individual becomes UK resident the assets in that trust will cease to qualify as excluded property and would be liable to inheritance tax charges. ...
>
> Since the residence criteria will be based on the statutory residence test where individuals are either resident or non-resident for the whole year, it will create situations in which property will switch from being excluded property to being liable to IHT under the "relevant property" regime for periods of one or more tax years. If someone is frequently coming and going from the UK, the property in the trust will be excluded property one year and relevant property in the next year. The government accepts this position as it would allow individuals flexibility to move in and out of the UK as and when necessary.[31] However, trustees will need to consider whether a ten year anniversary charge arises at any point during each period the settlor is UK resident.[32]

The rule operates in an arbitrary way. Eg, if an formerly-domiciled resident who has created a trust comes to the UK for 5 years, a 10 year charge depends on the accident of whether the 10 year anniversary falls within any of those 5 years. Planning is possible:

(1) Winding up the trust before the settlor becomes deemed domiciled for IHT would avoid the trust charges.

(2) Excluding the settlor before the settlor becomes deemed domiciled for IHT would avoid a GWR charge which may otherwise arise on the death of the settlor while UK resident.

The rule is particularly harsh for foreign charitable trusts (not charities for UK tax purposes).[33] It may be possible for such charities to convert into

[31] A restriction on "individuals flexibility to move in and out of the UK" would not be EU-law compliant.

[32] *https://www.gov.uk/government/consultations/reforms-to-the-taxation-of-non-domiciles/reforms-to-the-taxation-of-non-domiciles*

[33] See Kessler, Wong & Shah, *Taxation of Charities and Nonprofit Organisations*, (14th ed., 2024-25), Chapter 3 (Definitions of "Charity"), online version

a form which qualifies as a charity for UK tax. But the issue will rarely arise.

75.9 Income unpaid on life tenant death

Suppose:

(1) A trust for A for life remainder to B.
(2) On the death of A, income has accrued but not yet been paid ("the accrued income").
(3) After the death of A, the trustees receive that income.

75.9.1 *Trust law background*

The default trust law rule is that the trustees apportion the income they receive, and a part equal to the accrued income is paid to the executors of A.[34] I refer to this as the "**apportionment rule**".

For instance, suppose A dies on 30 April 2012. In 2013 the trustees receive interest which accrued in the calendar year 2012:

(1) One-third of the income will be apportioned to the period before A's death (and so paid to A's estate).
(2) The remaining two-thirds is apportioned to the period after A's death and so paid to B.

There are however two exceptions so wide that the apportionment rule does not often apply:

(1) The rule may be reversed by the terms of the trust, and it usually is.[35]
(2) The Trusts (Capital and Income) Act 2013 abolished this rule for trusts created after 1 October 2013, when the Act took effect, including a trust created under a power conferred by an old trust. Any entitlement to income under a new trust is an entitlement to income as it arises.

The amounts involved are usually small, in which case no-one takes any notice of the apportionment rule even if it does apply; but that is not always the case.

75.9.2 *IHT position*

Dymond states:

https://www.taxationofcharities.co.uk

[34] Apportionment Act 1870.

[35] See Kessler et al, *Drafting Trusts & Will Trusts* (15th ed, 2023), para 21.65 (Statutory and equitable apportionment rules).

> [1] When a life-tenant dies, any apportionment of dividends or interest payable to his personal representatives may be excluded from the account of the property passing under the settlement and should be included in the Inland Revenue account of his free estate.
> [2] If any dividend or apportionment does not come within the charge to Inheritance Tax because, for instance, the life-tenant had a foreign domicile and the apportionment is payable by foreign trustees, it seems that in strictness deduction of the dividend could be refused on the ground that the value for tax is the market price of the security at the date of death, but in practice the deduction is permitted.[36]

Point [1] is looking at the position where:

(1) Trust property is held on trust for A for life, remainder to B.
(2) A dies and there is income (dividends or interest) which accrued during the lifetime of A ("the accrued income").
(3) The apportionment rule applies, so the accrued income is payable to the executors of A.

Dymond states that the accrued income is subject to IHT as part of A's free estate. The accrued income is not subject to IHT as part of the trust fund. In such a case, clearly, one would not expect the accrued income to be subject to IHT twice, once as part of A's free estate and also as part of the trust fund. It should be one or the other. Of the two, it can be said to make sense to treat it as part of A's free estate and not as part of the trust fund because that is where it belongs, and then IHT is paid by the executors, and borne by the residuary beneficiaries of A's free estate who receive it; the burden of IHT should not be paid by the trustees of the trust who do not receive it.

Point [2] is looking at the same position but the accrued income is not subject to IHT in A's free estate. The example is where the accrued income is excluded property (on the basis that A is not UK domiciled and the accrued interest is not UK situate property). Dymond says that in practice in such cases the trustees are still not subject to IHT on the accrued income. Here it is suggested that the trustees have a deduction for the accrued income.

The practice is long standing, as the same point is made in Dymond's Death Duties[37] in a passage from which the current text of Dymond is

[36] Dymond's Capital Taxes (looseleaf) para 23.673.
[37] (15th ed., 1973), p.819.

derived.

There are two possible bases for this practice. It might be said that the trust holds two assets, the loan and the accrued income; but that seems difficult to sustain (even more so if the trust asset is shares and the accrued income is an unpaid dividend). The correct basis is that the trustees have a liability in respect of the accrued income, which is deductible in computing the value of the trust fund for IHT purposes, just like any other trustee liability.

Sometimes the practice will favour HMRC. For instance, if A is UK domiciled but the settlor of the trust was not UK domiciled when the trust was made then the trust property (including the accrued income) would be excluded property but the right to the A's free estate is chargeable property.

Does the same practice apply where the apportionment rule is excluded? If the practice is that the liability to pay accrued income is a deductible trustee liability, it should be deductible in this case also. The liability remains; the exclusion of the apportionment rule only alters the person to whom the liability is due.

For the special case of accrued income on FOTRA securities, see 75.4.1 (Interest on FOTRA security).

75.10 Trusts: UK funds

Section 48(3A) IHTA provides:

> Where property comprised in a settlement is a holding in an authorised unit trust or a share in an open-ended investment company—
> (a) [i] the property (but not a reversionary interest in the property) is excluded property unless the settlor was domiciled in the UK at the time the property became comprised in the settlement
> [ii] (but see also subsection (3F)),[38] and
> (b) section 6(1A) above applies to a reversionary interest in the property but does not otherwise apply in relation to the property;[39]
> but this subsection is subject to subsection (3B) below[40] and to Schedule A1.

This is the settled property equivalent of the relief discussed at 75.3 (Non-

[38] For subsection (3F), see 75.8.1 (Accumulated income).

[39] For a discussion of s.48(3A)(b), see 75.12.2 (Foreign prop/UK funds).

[40] For the subsection 3B exception, see 75.16.3 (Purchased equitable interest).

settled UK funds).

The relief does not apply if the settlor is a formerly-domiciled resident: see 75.8.2 (Formerly-dom resident settlor).

75.11 Trusts: FOTRA securities

FOTRA securities held by trustees may be excluded property. Under this exemption the domicile of the settlor is irrelevant; one must look at the residence of the relevant beneficiary or beneficiaries and, if appropriate, their domicile.

For the interaction with s.44(2) IHTA, see 79.5.3 (When fiction applies).

75.11.1 *Estate IIP trust*

Section 48(4) IHTA provides:

> Where securities issued by the Treasury subject to a condition of the kind mentioned in subsection (2) of section 6 above are comprised in a settlement, that subsection shall not apply to them; but the securities are excluded property if—
>
> (a) a person of a description specified in the condition in question is entitled to a qualifying interest in possession[41] in them...

75.11.2 *Other trusts*

Section 48(4) IHTA provides:

> Where securities issued by the Treasury subject to a condition of the kind mentioned in subsection (2) of section 6 above are comprised in a settlement, that subsection shall not apply to them; but the securities are excluded property if ...
>
> (b) no qualifying interest in possession[42] subsists in them but it is shown that all known persons
>
> [i] for whose benefit the settled property or income from it has been or might be applied, or
>
> [ii] who are or might become beneficially entitled to an interest in possession in it,
>
> are persons of a description specified in the condition in question.
>
> This subsection is subject to Schedule A1.

The IHT Manual provides:

[41] See 74.7 (Qualifying interest in possession).

[42] See 74.7 (Qualifying interest in possession).

> **IHTM04298 Relevant Property Trusts & FOTRA Gilts** [Sep 2018]
>
> ... • ‘all known persons’. Accordingly, when considering the question of ordinary residence (and domicile) you should disregard the possibility that some (currently) unknown person, for example, an unborn child or future spouse or civil partner (IHTM11032) of an existing beneficiary might become a beneficiary in the future.

The expression “known persons” is to be contrasted with “any person whether ascertained or not”.[43]

> - ‘the settled property’. So the application of the settled property and its income relate to all the property comprised in the particular settlement and not just to the exempt securities.
> - ‘has been or might be applied’. This means that you will need to consider both past and future or potential application of the property and its income.
>
> However, in the case of *Von Ernst and Cie SA v IRC* [1980] 1 WLR 468 the Court ruled that any payment or potential payment from the settled property to an incorporated UK charity - to be used by the charity for its charitable purposes - would not be an application for the ‘benefit’ of the charity. Accordingly you should not deny the exclusion for exempt securities merely because a qualifying charity (whether incorporated or not) has received or might receive any of the settled property or income from it.

The possibility that non-resident beneficiaries may later come to the UK does not preclude the relief - or else it would never apply.

For relief for the exit charge on acquisition of FOTRA securities, see 76.8 (Exit charge).

75.12 Estate IIP trust

75.12.1 *The question*

As we have seen, there are two sets of definitions of excluded property:

(1) Section 6 IHTA defines categories of excluded property for non-settled property to which a person is beneficially entitled.

(2) Section 48 IHTA defines corresponding categories of excluded property for trust property.

Property is either settled or not, so at first sight the definitions appear to be mutually exclusive. However, a settlement under which a beneficiary has

[43] Section 1(b) VTA 1958.

an estate interest in possession raises a doubt. Property held in a settlement with an estate IIP is certainly settled property (so *prima facie* the s.48 rules apply). However, s.49(1) IHTA provides (for an estate IIP):

> A person beneficially entitled to an interest in possession in settled property shall be treated for the purposes of this Act as beneficially entitled to the property in which the interest subsists.

Since the person is treated as beneficially entitled, should the s.6 IHTA rules apply to settled property?

75.12.2 *Foreign prop/UK funds*

The answer is provided by s.48(3)(b) IHTA:

> Where property comprised in a settlement is situated outside the UK ...
> (b) section 6(1) above applies to a reversionary interest in the property *but does not otherwise apply in relation to the property*;

Thus for settled foreign-situate property the s.48 definition applies and the s.6(1) definition is disapplied. The operation of these rules can be illustrated by two examples:

(1) Suppose a foreign domiciled beneficiary has an estate IIP in a settlement made by a UK domiciled settlor. The trust property is situated outside the UK.

The trust property is not excluded property as it does not meet the requirements of s.45(3)(a). It would meet the requirements of s.6(1) but s.48(3)(b) disapplies s.6(1).

(2) Suppose the reverse situation – a UK domiciled beneficiary has an estate IIP in a settlement created by a foreign domiciled settlor. The trust property is again situated outside the UK.

The tax position is now reversed. The trust property would not qualify as excluded property under s.6(1) but it does qualify under s.48(3)(a). Section 48(3)(b) disapplies s.6(1) but that is irrelevant: the trust property is excluded property.

For UK funds, the same answer is provided by s.48(3A)(b) IHTA:

> Where property comprised in a settlement is a holding in an authorised unit trust or a share in an open-ended investment company ...
> (b) section 6(1A) above applies to a reversionary interest in the property *but does not otherwise apply in relation to the property*;

Thus for settled AUTs and OEICs, the s.48 definition applies and the s.6(3A) definition is disapplied.

75.12.3 *FOTRA securities in trust*

Section 48(4) IHTA provides:

> Where securities issued by the Treasury subject to a condition of the kind mentioned in subsection (2) of section 6 above are comprised in a settlement, that subsection shall not apply to them; ...

Again, the s.48(4) definition of excluded property applies and the s.6(2) definition is disapplied. This is not actually necessary because s.6(2) and s.48(4)(a) lead to the same result, but it does no harm.

75.12.4 *Qualifying certificates in trust*

Qualifying certificates of an individual domiciled in the Channel Islands or the Isle of Man ("**an Islander**") are excluded property.[44] If an Islander is entitled to an estate IIP in qualifying certificates, the certificates are not excluded property under s.48(3) or s.48(4). But it is considered that the property does qualify as excluded property under s.6(3) since the individual is to be treated as if they were beneficially entitled. In this case there is no express provision that s.48 overrides s.6. Section 48 and s.6 do not contradict each other: they offer two alternative routes to attain excluded property status. Such settled property is therefore excluded property. HMRC agree with this view.

75.13 Initial interest settlor/spouse

75.13.1 *Section 80 fictions*

Special rules apply where the settlor or spouse have an estate interest in possession in a trust when it is made ("**an initial IIP**").

The basic rule is set out in s.80(1) IHTA:

> Where a settlor or his spouse or civil partner is beneficially entitled to a qualifying interest in possession[45] in property immediately after it becomes comprised in the settlement,
>
> [a] the property shall for the purposes of this Chapter [Chapter 3 Part 3 IHTA, relevant property] be treated as not having become comprised in the settlement on that occasion;
>
> [b] but when the property or any part of it becomes held on trusts under which neither of those persons is beneficially entitled to a qualifying

[44] See 75.7 (Individual domiciled in Channel Islands or Isle of Man).

[45] See 74.7 (Qualifying interest in possession). I use the term "estate IIP".

interest in possession, the property or part shall for those purposes be treated as
[i] becoming comprised in a separate settlement
[ii] made by that one of them who ceased (or last ceased) to be beneficially entitled to a qualifying interest in possession in it.

Thus where the settlor or spouse has an initial estate IIP, s.80 imposes three fictions the ("**s.80 fictions**"):

(1) Property which is actually held in one settlement (the "**actual settlement**"):
(a) is treated as non-settled property (so long as the settlor/spouse have an estate IIP); and subsequently:
(b) is treated as being held in a separate settlement (the "**s.80 notional settlement**").
(2) The s.80 notional settlement is treated as having the following qualities:
 (a) The person who is treated as the settlor of the s.80 notional settlement may be the spouse, ie different from the real settlor of the actual settlement.
 (b) The time at which trust property is treated as becoming held in the s.80 notional settlement is when the settlor/spouse IIP ceases, which is later than the time that property actually became held in the actual settlement.

For other tax issues, see 78.18.1 (Termination of IIP: Navigation).

75.13.2 *Anniversary date: s.80*

The date of trust 10-year anniversaries matters because:
(1) There is a 10-year charge on the 10 year anniversary
(2) The rate of an exit charge depends on the 10-year anniversary (if any) which preceded it.

The date is normally ascertained in a straightforward manner. Section 61(1) IHTA provides:

> In this Chapter "ten-year anniversary" in relation to a settlement means the tenth anniversary of the date on which the settlement commenced[46] and subsequent anniversaries at ten-yearly intervals, but subject to subsections (2) to (4) below.

[46] See 74.9 (Settlement commencement date).

However, s.61(2) IHTA provides a special rule for the s.80 notional settlement:

> The ten-year anniversaries of a settlement treated as made under section 80 below shall be the dates that are (or would but for that section be) the ten-year anniversaries of the settlement first mentioned in that section.

The section 80 fictions do not apply for the purposes of ascertaining the ten-year anniversary date of the notional trust: that is fixed by reference to the date of the actual settlement. I cannot see the reason for that rule and would be grateful to any reader who could suggest one.

75.13.3 *Trust partly within s.80*

It is possible that one trust may hold property which is within the scope of s.80 and property which is not. This could happen in various ways, but the common example will be a trust conferring an IIP on the settlor where:
(1) Property ("pre-2006 property") was settled before 22 March 2006
(2) Other property ("post-2006 property") was added after 22 March 2006.

In that case:
(1) The pre-2006 property is treated as held in a s.80 notional settlement governed by the s.80 fictions.
(2) The post-2006 property is treated as held in the actual settlement.

The actual commencement date of the actual settlement is the date that property was first comprised in it. However pre-2006 property is "treated as not having become comprised in the settlement" at that date. The first time that property that is held by the actual settlement is when post-2006 property is added. That date is treated as its commencement date, and anniversaries of that date are treated as its 10-year anniversaries.

75.13.4 *IIP spouse: Excluded property*

Suppose:
(1) In Year 1, H creates a trust under which W has an initial IIP.
(2) In Year 2, W dies (so her IIP comes to an end). H does not become entitled to an estate IIP at the time that W dies.

In this example H is the settlor of the actual trust and Year 1 is the date of commencement of the actual trust. However, applying the s.80 fictions, the property is treated as held in a notional trust, which is treated as made in Year 2 and W is treated as the settlor.

If that were all, it would follow that the trust property could be treated as excluded property if W was foreign domiciled at the time of her death in Year 2. The domicile of H would be irrelevant. This could benefit the taxpayer if (for instance) H was UK domiciled and W was not, and could sometimes be used for tax avoidance.

Therefore where s.80 applies, s.81B IHTA imposes a further condition relating to excluded property.[47] This provides:

> (1) This section applies to property to which section 80 (initial interest of settlor etc) applies.
> (2) If the property would apart from this section be excluded property by virtue of section 48(3)(a) or (3A)(a),[48] the property is at any time in a tax year to be regarded as excluded property for the purposes of this Chapter, [Chapter 3 Part 3 IHTA, relevant property] except sections 78 and 79,[49] only if Conditions A and B are met.
> (3) Section 65(8) has effect in relation to the property only if Condition A is met (in addition to any condition mentioned in that provision).
> (4) Condition A is that the actual settlor was not domiciled in the UK at the time of the occasion first referred to in section 80(1).
> (5) Condition B is that the actual settlor is not a formerly domiciled resident for the tax year.
> (6) In this section "the actual settlor" means the person who is the settlor of the property in relation to the settlement first mentioned in section 80(1).

I refer to this rule as "**s.80 retesting**".

In relation to foreign situate trust property, s.81B prevents the s.80 fictions from benefiting the taxpayer. The fictions may however benefit HMRC. Suppose:

(1) H is the settlor.
(2) W has an initial IIP.
(3) Subsequently the settled property is held on trusts where neither H nor W has an interest in possession.[50]

In order to determine whether foreign situate trust property (in the s.80

[47] Similar rules apply on transfers between trusts; see 79.11 (Trust-transfer retesting).

[48] See 75.10 (Trusts: UK funds).

[49] Sections 78, 79 IHTA concern conditional exemption for historic property, which is not discussed here.

[50] Whether an estate IIP or not. This is anomalous, but the drafter of the 2006 rules did not think through the consequences for s.80.

notional settlement) is excluded property it is necessary to look at

(1) the domicile of H at the time when the actual settlement was actually made *and*

(2) the domicile of W at the time her interest in possession came to an end.

H and W must both be domiciled outside the UK (at the right time) in order for foreign situate property to qualify securely for excluded property status.

75.13.5 *IIP settlor: Excluded property*

In practice, in lifetime trusts it is rare for the settlor's spouse to have an initial IIP but it is common for the settlor to have an initial IIP. Suppose first that:

(1) Year 1: H has an initial IIP; and

(2) Year 2: that IIP comes to an end (without W becoming entitled to an estate IIP).

In this example H is the settlor of the actual trust and Year 1 is the date of commencement of the actual trust. However, applying the s.80 fictions, the property is treated as held in a notional trust, which is treated as made in Year 2 though H is still treated as the settlor.

If that were all, it would follow that the trust property could be treated as excluded property if H was foreign domiciled in Year 2. The domicile of H at the time the trust was made would be irrelevant. This could not be used for tax avoidance, but s.81B IHTA nonetheless imposes its further condition relating to excluded property. In order to determine whether foreign situate trust property (in the s.80 notional settlement) is excluded property it is necessary to look at the domicile of H

(1) at the time when the actual settlement was actually made *and*

(2) at the time the interest in possession came to an end.

H must be domiciled outside the UK at both times in order for foreign situate property to qualify securely for excluded property status.

Suppose:

(1) In Year 1, H creates a trust under which H has an estate IIP.

(2) In Year 2, H dies and W becomes entitled to an estate IIP.

(3) In year 3, W's interest comes to an end (H not at that time becoming entitled to an estate IIP).

In this example H is the settlor of the actual trust and Year 1 is the date of commencement of the actual trust. However, applying the s.80 fictions, the property is treated as held in a notional trust, which is treated as made in Year 3 and W is treated as the settlor.

If that were all, it would follow that the trust property could be treated as excluded property if W was foreign domiciled at the time of her death in Year 3. The domicile of H would be irrelevant. Once again, s.81B IHTA imposes a further condition relating to excluded property. In relation to foreign situate trust property, s.81B prevents the s.80 fictions from benefiting the taxpayer. It may however benefit HMRC. In order to determine whether foreign situate trust property (in the s.80 notional settlement) is excluded property it is necessary to look at

(1) the domicile of H at the time when the actual settlement was actually made *and*
(2) the domicile of W at the time her interest in possession came to an end

H and W must both be domiciled outside the UK (at the right time) in order for foreign situate property to qualify for excluded property status.

75.13.6 *Partly excluded property trust*

I use the term **"partly excluded property trust"** to refer to a trust where:

(1) the trust property in the actual settlement is excluded property on ordinary principles; but
(2) it is not excluded property in the s.80 notional settlement under s.80/81B rules.

The s.80/81B rules apply only for the purposes of "this chapter": the relevant property trust regime. They have no wider application. So foreign property of a partly excluded property trust:

(1) is not excluded property for the purposes of the relevant property trust taxation; but
(2) is excluded property for all other IHT purposes (eg GWR and the estate IIP trust regime).

Before 2006, s.80 did not much matter as a partly excluded property trust could remain IIP in form throughout its life. So in practice it qualified as excluded property. Now it cannot do so. So the tax position of these trusts has been seriously affected as an accidental result of the 2006 reforms.

75.13.7 *s.80 retesting: Post-2006 trust*

No difficulty arises for lifetime trusts from 22 March 2006, unless the trust confers a disabled person's interest (which will be rare).

Section 80 still poses a trap for will trusts, where the testator is not UK domiciled and the spouse is (or later becomes) UK domiciled. One needs to avoid an IPDI.

A simple solution is to arrange that the will trust is discretionary at the outset, ie the widow does not have an initial interest in possession. A two-year discretionary period will in principle be needed to avoid s.144 IHTA. This is easy to arrange if the property given to the will trust is not UK situate.

75.13.8 *s.80 retesting: Pre-2006 trust*

In cases where an existing trust conferred an initial IIP on the settlor/spouse, it would be desirable to revoke the IIP before the settlor becomes deemed UK domiciled. It does not matter that the settlor/spouse may have an initial IIP provided that when it comes to an end[51] the life tenant is not UK domiciled or IHT deemed domiciled.

75.13.9 *s.80 retesting: FOTRA/UK funds*

Section 81B(2) provides:

> If the property would apart from this section be excluded property by virtue of section 48(3)(a) or (3A)(a), the property is at any time in a tax year to be regarded as excluded property for the purposes of this Chapter [Chapter 3 Part 3 IHTA, relevant property] .. only if Conditions A and B are met.

So s.80 retesting rule does not apply to FOTRA securities.

Until 2020, the s.80 retesting rule did not apply to UK funds. Now it does, but s.81B(7) IHTA provides a generous transitional relief:

> Where the occasion first referred to in section 80(1) occurred before the day on which the Finance Act 2020 was passed [22 July 2020], this section has effect as if, in subsection (2), "or (3A)(a)" were omitted."

So (in short) in the case of a pre-2020 settlement , the s.80 retesting rule does not apply to UK funds.

75.13.10 *s.80 fictions: Critique*

What is the purpose of the three s.80 fictions? The standard IHT trust regime would not work well where the settlor or their spouse has an initial

[51] Not being followed by another IIP for the settlor/spouse.

estate interest in possession under a settlement commencing after 26 March 1974. Dymond explains:

> In such a case there will be no chargeable transfer when the settlement was made and so no occasion to value the settled property for CTT or IHT at that time. If an exit charge arose nearly 10 years later, it might be difficult to ascertain the value at the commencement of the settlement, as required by s.68(5)(a) IHTA, because important evidence might have been lost or destroyed. It might also not be easy to ascertain the settlor's cumulative total at that time as required by s.68(4)(b) IHTA. The same difficulty with the settlor's cumulative total might occur at the time of the 10 yearly charge, because of s.66(5)(a).[52]

Section 80 solves this administrative problem but the reader may think that even before 2006 the cure was worse than the disease. This does explain why the s.80 fictions only apply for the purposes of the standard IHT trust regime.

Since 2006 the operation of the rules is bizarre, but (as is generally the case with bizarre law) careful planning can mitigate much of the unfairness.

It is suggested that the rules should be repealed.

75.14 s.80 transitional rules

75.14.1 *"Occasion first referred to*"

The transitional rules use the cumbersome expression "The occasion first referred to" in s.80(1). This is the date that the property becomes held in the actual settlement, ie the date that the actual settlement is made.

75.14.2 *Pre-1974 trust*

Section 80(3) IHTA provides:

> This section shall not apply if the occasion first referred to in subsection (1) above occurred before 27 March 1974.

So s.80 does not apply to property settled before 27 March 1974.

75.14.3 *Post-2006 trust*

The position is complicated by botched implementation of the 2006 IHT trust reforms.

[52] *Dymond's Capital Taxes* (looseleaf), para 19.700.

Section 80(4) IHTA provides:

> Where the occasion first referred to in subsection (1) above [date actual settlement made] occurs on or after 22 March 2006, this section applies—
>
> (a) as though for "a qualifying interest in possession" in each place where that appears in subsection (1) above there were substituted "a postponing interest", and
>
> (b) as though, for the purposes of that subsection, each of the following were a "postponing interest"—
>
> (i) an immediate post-death interest;
>
> (ii) a disabled person's interest.

Amended as s.80(4) IHTA directs, s.80(1) provides for settlements made from 22 March 2006:

> Where a settlor or his spouse or civil partner is beneficially entitled to ~~a qualifying interest in possession~~
>
> (i) an immediate post-death interest; [or]
>
> (ii) a disabled person's interest
>
> in property immediately after it becomes comprised in the settlement,
>
> [a] the property shall for the purposes of this Chapter [Chapter 3 Part 3, relevant property] be treated as not having become comprised in the settlement on that occasion;
>
> [b] but when the property or any part of it becomes held on trusts under which neither of those persons is beneficially entitled to ~~a qualifying interest in possession~~
>
> (i) an immediate post-death interest; [or]
>
> (ii) a disabled person's interest
>
> the property or part shall for those purposes be treated as
>
> [i] becoming comprised in a separate settlement
>
> [ii] made by that one of them who ceased (or last ceased) to be beneficially entitled to ~~a qualifying interest in possession~~
>
> (i) an immediate post-death interest; [or]
>
> (ii) a disabled person's interest
>
> in it.

Section 80 can apply to trusts from 22 March 2006 if the trust confers:

(1) an IPDI (which applies to will trusts) or

(2) a disabled person's interest (which will be rare).

Why is a transitional serial interest not included?

75.14.4 *Pre-2006; IIP ceases post-2006*

The word "qualifying" which should have been inserted into s.80 in 2006, was finally added in 2015. Section 13(1) F(no.2)A 2015 provides:

> In section 80 of IHTA 1984 (initial interest of settlor or spouse or civil partner), for "an interest in possession", in each place it appears, substitute "a qualifying interest in possession".[53]
> (2)The amendments made by this section come into force on the day after the day on which this Act is passed[54] subject to the saving provision in subsections (3) to (7).

I refer to this as the 2015 qualifying IP amendment.

What is the position if:

(1) A trust is made before 22 March 2006 and confers an initial IIP on the settlor ("H").
(2) That IIP comes to an end
 [i] during the lifetime of H
 [ii] the 2015 qualifying IP amendment was not in effect.
(3) The spouse ("W") then acquired an IIP which is not a qualifying IIP ("W's non-estate IIP").

In the 2014/15 edition of this work, I said:

> A purposive construction is called for, or the provisions are nonsensical. It is suggested that the reference to an "interest in possession" in s.80 means an interest in possession to which s.49 IHTA applies. The non-estate IIP of W does not count as an interest in possession. So the trust property is treated as becoming comprised in a s.80 notional settlement on the death of H.

It seems that HMRC did not agree with that view and preferred the literal construction. EN F(no.2)B 2015 provides:

> This measure [Clause 13 set out below] fixes an unintended effect of the legislation that allowed a (non-qualifying) interest in possession to escape all IHT charges, because the settled property was neither part of the beneficiary's estate, nor was it comprised in a relevant property trust.

The transitional provisions for the 2015 qualifying IP amendment are therefore important. Section 13 provides:

[53] See 74.7 (Qualifying interest in possession).

[54] The Act was passed on 18 Nov 2015, so the amendment took effect on 19 Nov 2015.

(3) Subsections (4) to (7) apply where—

(a) the occasion first referred to in subsection (1) of section 80 of IHTA 1984 occurred before 22 March 2006,

(b) on that occasion the settlor, or the settlor's spouse or civil partner, became beneficially entitled to an interest in possession in property which, as a result of that subsection, was treated as not becoming comprised in a settlement for the purposes of Chapter 3 of Part 3 of IHTA 1984 on that occasion, and

(c) at all times in the relevant period that property, or some particular part of it, has been property in which the settlor, or the settlor's spouse or civil partner, has been beneficially entitled to an interest in possession,

and in subsections (4) to (7) "the protected property" means that property or, as the case may be, that particular part of it.

(4) The amendments made by subsection (1) do not have effect in relation to any particular part of the protected property for so long as the subsisting interest in possession continues to subsist in that part (but see subsections (5) and (6) for what happens afterwards).

(5) As from immediately before the time when the subsisting interest in possession comes to an end so far as subsisting in any particular part of the protected property (whether or not it also comes to an end at the same time so far as subsisting in some or all of the rest of the protected property), section 80(1) of IHTA 1984 has effect in relation to that part as if the second appearance of "an interest in possession" were "a qualifying interest in possession".

(6) If (ignoring this subsection), subsection (5) would have the consequence that a particular part of the protected property is treated as becoming comprised in a separate settlement at a time earlier than the time at which the subsisting interest in possession comes to an end so far as subsisting in that part, that part is to be treated as becoming comprised in a separate settlement at that later time.

(7) In this section—

(a) "the relevant period" means the period beginning with the occasion first mentioned in section 80(1) of IHTA 1984 and ending with the day on which this Act is passed [18 Nov 2015],

(b) "qualifying interest in possession" has the same meaning as in section 80(1) of IHTA 1984,

(c) "subsisting interest in possession", in relation to a part of the protected property, means the interest in possession which subsisted in that part immediately before the end of the relevant period, and

(d) the reference in subsection (3)(c) to the spouse or civil partner of a settlor includes a reference to the widow or widower or surviving civil partner of the settlor.

75.15 Adding property

Suppose:

(1) A settlor creates a trust when not UK domiciled.
(2) The settlor[55] later adds property to the trust when UK domiciled.

Can the added property be excluded property? The answer for chargeable transfers after the FA 2020 is, no. Before then, there were two views.

(1) "**The addition-date view**": the excluded property status of the added property depends on the domicile of the settlor at the date the property is added to the trust.
(2) "**The settlement-date view**": the status of added property depends on the domicile of the settlor at the date the settlement was made.

HMRC took the addition-date view, but the settlement-date view was the better. I discussed this in earlier editions of this work, but omit the material now as it is of historical interest only.[56]

Budget 2018 provided:

> **2.21. Inheritance tax - trusts settlement definition**
> ... the government will introduce legislation in Finance Bill 2019-20 to reflect HMRC's established legal position in relation to the IHT treatment of additions to existing trusts. The legislation will confirm that additions of assets by UK-domiciled (or deemed domiciled) individuals to trusts made when they were non-domiciled are not excluded property. The legislation will apply to IHT charges arising on or after the date on which Finance Bill 2019-20 receives Royal Assent, whether or not the additions were made prior to this date.

Note the chutzpah of the reference to "HMRC's established legal position" which legislation is to "confirm" or "clarify".[57] But there is a long tradition of misdescribing substantial tax changes as clarification.[58]

Suppose a settlor created a trust when UK domiciled and added property to it when foreign domiciled. The added property is now clearly excluded property, and in this case the taxpayer benefits from the 2020 reform. Of course, a well-advised settlor would not be in this situation, but it does arise from time to time by accident.

[55] This section considers the position where the original settlor adds to a trust. For the position where others add to a trust, see 79.6 (B adds property to A's trust).

[56] See the 2019/20 ed. of this work para 74.15 (Added property: change of domicile).

[57] The word "clarify" is used in EN FB 2020 background note on clause 72.

[58] See App 1.2 (Clarify/modernise/reform).

75.15.1 *Change of domicile: Gift to underlying co*

Suppose:

(1) A settlor creates a trust while domiciled outside the UK;
(2) The settlor becomes UK domiciled; and
(3) The settlor gives property to a company owned by the trust.

The shares in the company (if not UK situate) must be and remain excluded property. But scope for avoidance is limited by the fact that the gift may be a gift with reservation, and a chargeable transfer for IHT, and the GAAR may also need consideration.

75.16 Interest in trust property

An interest in trust property (an equitable interest) is itself an item of property which may be subject to IHT. That would lead to double taxation, eg in a trust for A for life, remainder to B, there might be:

(1) tax on the death of A (if A has an estate IIP) or 10-year charges; and
(2) tax on the death of B (if the reversionary interest is an asset of B's estate).

75.16.1 *Reversionary interest*

Section 48(1) IHTA deals with this problem by providing that a reversionary interest is generally excluded property:

> A reversionary interest is excluded property unless—
> (a) it has at any time been acquired (whether by the person entitled to it or by a person previously entitled to it) for a consideration in money or money's worth, or
> (b) it is one to which either the settlor or his spouse [or civil partner] is or has been beneficially entitled, or
> (c) it is the interest expectant on the determination of a lease treated as a settlement by virtue of section 43(3) above.

What about a reversionary interest within (a) to (c)? Section 48(3) IHTA provides:

> Where property comprised in a settlement is situated outside the UK—
> (a) the property (but not a reversionary interest in the property) is excluded property unless the settlor was domiciled in the UK at the time the settlement was made, and
> (b) section 6(1) above applies to a reversionary interest in the property *but does not otherwise apply in relation to the property*
> ...

The words in italics make it clear that the non-settled property rules apply. An equitable interest which is a reversionary interest may be excluded property if it meets the conditions of s.48(1) or if it is not UK situate and owned by a foreign domiciliary.

75.16.2 *Interest in possession*

An equitable interest which is an estate IIP is excluded properly only if it is owned by a foreign domiciliary and is not UK situate. However, the disposal of the interest is not a transfer of value; s.51 IHTA. Tax is charged under s.52 only if the settled property is not excluded property.

75.16.3 *Purchased equitable interest*

Section 48(3) and (3A) IHTA both provide:

> but this subsection is subject to subsection (3B) below ...

Section 48(3B) IHTA is an anti-avoidance provision which applies to two categories of settled excluded property: foreign situate property and UK funds. It provides:

> Property is not excluded property by virtue of subsection (3) or (3A) above if—
> (a) a person is, or has been, beneficially entitled to an interest in possession in the property at any time,
> (b) the person is, or was, at that time an individual domiciled in the UK, and
> (c) the entitlement arose directly or indirectly as a result of a disposition made on or after 5th December 2005 for a consideration in money or money's worth.

EN FB 2006 explains:

> 8. ... By purchasing interests in existing trusts originally settled by a person domiciled outside the UK, UK-domiciled individuals have increasingly exploited this exemption to convert their wealth into IHT-free form.
> 9. This clause is aimed at blocking such avoidance by providing that property is not excluded property by virtue of section 48(3) or section 48(3A) IHTA if, at any time, a person domiciled in the UK has had an interest in possession in it, and their interest arose from a disposition for a consideration in money or money's worth. This applies whoever paid the money, and if the interest was acquired indirectly (for example, under a will or by intestacy) or has been passed on to someone else.

Section 48(3C) IHTA expands on this:

> For the purposes of subsection (3B) above—
>
> (a) it is immaterial whether the consideration was given by the person or by anyone else, and
>
> (b) the cases in which an entitlement arose indirectly as a result of a disposition include any case where the entitlement arose under a will or the law relating to intestacy.

Section 48(3C)(a) confirms (what would have been clear) that the provision can apply if an interest is purchased by A and then given by A to B. I am unable to see the point of s.48(3C)(b).

75.16.4 *FAs 2010 and 2012*

Consideration is also needed for the anti-avoidance rules introduced in 2010 and 2012: ss.52, 53 F(No.1)A 2010; s.48(3D), s.74A, 74B IHTA. This topic will require many pages to discuss. It is some way from the themes of this book but I hope to address it in a future edition.

CHAPTER SEVENTY SIX

EXCLUDED PROPERTY EXEMPTIONS

76.1 Excluded property exemptions
76.2 Lifetime IHT charge
76.2.1 Methods of exemption
76.3 Lifetime IHT charge: Exemption
76.3.1 Gift to UK bank account
76.4 Death: IHT charge & exemption
76.5 IHT spouse exemption and excluded property
76.5.1 Spouse exemption: Introduction
76.5.2 Spouse exemption/excluded property interaction
76.5.3 Gift of excluded property to spouse
76.5.4 Pecuniary legacy to spouse
76.6 Allocation of exemption
76.6.1 Definitions
76.6.2 Application of allocation rule
76.6.3 Allocation of exemption rule
76.7 10-year charge
76.7.1 Property formerly excluded
76.7.2 Undistributed trust income
76.8 Exit charge
76.8.1 Cease to be relevant property
76.8.2 Depreciatory transaction
76.8.3 10-year/exit charge: Planning
76.9 Exit charge reliefs
76.9.1 Property becomes excluded
76.9.2 Property previously excluded
76.9.3 Income-receipt relief
76.10 Termination of estate IIP
76.10.1 Disposal for consideration
76.10.2 IIP: Depreciatory transaction
76.10.3 Charges only on qualifying IIP
76.10.4 Interests in part
76.11 Termination of IP: Reliefs
76.12 When excluded property matters
76.13 Foreign currency account
76.13.1 Individual account
76.13.2 Trust account
76.13.3 Overdrawn account
76.13.4 Foreign currency: Critique
76.14 Works of art
76.15 Residence nil-rate band
76.16 Overseas pensions
76.17 Excluded property planning
76.17.1 Planning for individual
76.17.2 Anticipation of UK domicile
76.17.3 Planning for non-resident UK dom
76.17.4 Excluded property trust
76.17.5 Companies: Situs planning
76.18 UK dom settlor becomes non-dom
76.19 Planning for non-estate IIP trust
76.20 Planning: Trust with UK dom settlor
76.20.1 Non-resident beneficiaries
76.20.2 Non-dom beneficiary
76.21 UK funds v foreign funds
76.22 FOTRA securities: Planning
76.23 Channel Islands/IoM domicile

76.1 Excluded property exemptions

This chapter considers:

(1) IHT exemptions for excluded property

(2) Reliefs for:

(a) works of art
(b) foreign currency bank accounts
(c) foreign pensions
These are not excluded property, but qualify for similar exemptions.

(3) Related planning issues (except will drafting, which is considered in the next chapter)

In order to understand the IHT exemptions one must consider the relevant charging provisions.

76.2 Lifetime IHT charge

We begin with the main charge to IHT. Section 1 IHTA provides:

> Capital transfer tax shall be charged on the value transferred by a chargeable transfer.

76.2.1 *Methods of exemption*

Statute uses a variety of ways to confer IHT exemption:

(1) Sometimes a disposition is not a transfer of value.
(2) Sometimes a transfer of value is exempt (eg the IHT spouse exemption).
(3) Sometimes property is not in the individual's estate.

The excluded property exemptions work in a variety of ways. Each exemption needs to be seen in the context of the charging provision concerned.

76.3 Lifetime IHT charge: Exemption

The excluded property exemption for the lifetime charge slots into the definition of transfer of value.[1] Section 3(2) IHTA provides:

> For the purposes of subsection (1) above no account shall be taken of the value of excluded property which ceases to form part of a person's estate as a result of a disposition.

"Ceases to form part of a person's estate" is not to be construed too literally. Suppose an individual makes a disposition which reduces the value of excluded property but the property itself is retained. That must come within the exemption in s.3(2).

[1] See 74.3 (Transfer of value/value transferred).

Excluded property status is determined at the time of the disposition. It does not matter if the individual subsequently becomes UK domiciled or deemed domiciled. HMRC agree:

> ... where an individual transfers a property that is situated abroad while they are non-UK domiciled and then dies after having become deemed-UK domiciled, the transfer should be outside the charge to inheritance tax. This is in line with the current treatment of transfers made by non-domiciled individuals who die after having become UK domiciled. The government does not intend to change this treatment.[2]

76.3.1 *Gift to UK bank account*

What is the position if a foreign domiciled donor makes a gift from their foreign bank account (ie, not a UK situate asset) to a *UK situate* bank account of the donee? The gift is not a transfer of value for IHT purposes. When funds are held in the donor's account, the donor has an asset (a debt). When funds are transferred to the donee's account, the donor's asset comes to an end and the donee acquires a new asset (a debt). The donor is at no time entitled to the funds in the UK account.[3]

As a matter of banking law, the donor's cheque or other instruction to the bank to transfer funds from the donor's account to another account is in principle revocable until it is carried out[4] but that does not alter the analysis, because when the donee receives the credit to his account, the instructions have been carried out and the instruction has become irrevocable.

I stress this because the contrary has been suggested, but the position is perfectly clear.

76.4 Death: IHT charge & exemption

The occasion of death would not be a transfer of value as defined in s.3(1) IHTA, as death does not involve a disposition. Section 4(1) IHTA deals with this:

[2] "Reforms to the taxation of non-domiciles: further consultation" (2016) *https://www.gov.uk/government/consultations/reforms-to-the-taxation-of-non-domiciles-further-consultation*

[3] For the banking law background, see 18.14.6 (Gift to non-relevant person).

[4] For completeness: in any particular case it would be relevant to consider the documentation and proper law concerned; but that will not affect the IHT analysis because it makes no difference if the instruction to the bank is revocable or not.

> On the death of any person tax shall be charged as if, immediately before his death, he had made a transfer of value and the value transferred by it had been equal to the value of his estate immediately before his death.

The excluded property exemption for the IHT charge on death slots into the definition of estate.[5]

76.5 IHT spouse exemption and excluded property

76.5.1 *Spouse exemption: Introduction*

I begin with an introduction to the IHT spouse[6] exemption.

Section 18(1) IHTA provides:

> A transfer of value is an exempt transfer to the extent that the value transferred is
> [a] attributable to property which becomes comprised in the estate of the transferor's spouse or civil partner or,
> [b] so far as the value transferred is not so attributable, to the extent that the estate is increased.

I refer to this as the "**IHT spouse exemption**".

The exemption applies to lifetime transfers and on death.

A full discussion of the IHT spouse exemption needs a book to itself. Section 18(3) IHTA and s.56 IHTA contain anti-avoidance provisions which are not discussed because they are too far from the themes of this work, and I have discussed them elsewhere.[7]

A striking feature of the exemption is that it applies even if the spouses are not living together. It is suggested that the exemption would be better targeted if it was restricted in that way, which would also be consistent with the CGT spouse exemption. But separated spouses will not complain.

This section considers the interrelation of the IHT spouse exemption and excluded property rules. I deal with other spouse exemption issues as they arise in the context of other topics:

[5] See 74.2 ("Estate").

[6] References to spouse include a civil partner; see App 3.2 ("Spouse") and App 3.3 ("Civil partner").

[7] There is a full discussion on the (almost) identical charity provisions in Kessler, Wong & Shah, *Taxation of Charities and Nonprofit Organisations*, (14th ed., 2024-25), online version *http://www.taxationofcharities.co.uk*

Topic	**Para**
GWR spouse exemption	78.10
GWR on death: Spouse exemption	78.19
Interaction with spouse exemption	80.29.1
Restricted IHT spouse exemption	93.2
Spouse exemption on death of account holder	94.3.4

76.5.2 *Spouse exemption/excluded property interaction*

The issues arise most often on the death of a spouse. Suppose:

(1) H (not UK domiciled) dies leaving an estate which consists of:
  (a) excluded property and
  (b) chargeable (ie, non-excluded) property
(2) Part of H's estate passes[8] to H's spouse ("W").

This raises the interesting question of the interaction of the excluded property rules and the IHT spouse exemption.

Sections 4 and 5 IHTA provide (so far as relevant):

> **4 Transfers on death**
> (1) On the death of any person tax shall be charged as if, immediately before his death, he had made a transfer of value and the value transferred by it had been equal to the value of his estate immediately before his death. ...
> **5 Meaning of estate**
> (1) For the purposes of this Act a person's estate is the aggregate of all the property to which he is beneficially entitled, except that ...
> (b) the estate of a person immediately before his death does not include excluded property...

The following propositions are clear:

(1) IHT is charged as if H made a transfer of value ("the deemed transfer of value").
(2) The estate of H immediately before H's death does not include H's excluded property.
(3) The value transferred by the deemed transfer of value is equal to the value of H's estate (which is the value of the chargeable property).

76.5.3 *Gift of excluded property to spouse*

Suppose that on the death of H, only H's excluded property passes to W.

[8] By will, by survivorship or by the relevant succession law; this makes no difference.

Does the spouse exemption apply? Section 18(1) IHTA provides:

> A transfer of value is an exempt transfer to the extent that the value transferred is
> [a] attributable to property which becomes comprised in the estate of the transferor's spouse or civil partner or,
> [b] so far as the value transferred is not so attributable, to the extent that the estate is increased.[9]

The deemed transfer of value is not exempt under s.18(1)[a]. There is "property which becomes comprised in the estate of the spouse". However, the value transferred is not attributable to that property.

That leaves the exemption in s.18(1)[b]. A transfer of value is an exempt transfer to the extent that the estate of the spouse is increased. The estate of W is increased on the death of H.[10] It is therefore considered that the spouse exemption does apply, on a plain reading of the words.[11] Is this result so absurd that the courts should not adopt a plain reading? I do not see why it should be regarded as absurd. If W is UK domiciled the application of the spouse exemption on the death of H is reasonable, because W's estate is increased and the property W receives will be subject to tax on the death of W. [12] If the contrary view were adopted, then the practical consequence should not be to raise more funds for HMRC, but only to pose a trap for taxpayers and their advisers.

76.5.4 *Pecuniary legacy to spouse*

Suppose H leaves W a pecuniary legacy. The IHT Manual provides:

[9] In the case considered here the restriction in s.18(2) does not apply since H (the transferor) is not domiciled in the UK.

[10] This is the case even if the property is excluded property in the estate of W (which will be the case if W was not UK domiciled). Excluded property is "property" for IHT and (except immediately before death) a person's estate includes their excluded property.

[11] Exemption is given to the extent of the value of the property given to W.

[12] It might be said to be anomalous because a simple lifetime gift of excluded property by H to H's spouse would not be a transfer of value, so it would not qualify as an exempt transfer under the IHT spouse exemption. But of course in such a case the spouse exemption is not needed.
The end result is consistent with the exemption for funeral expenses, which are set against UK property alone; see 80.45 (Funeral expenses).

> **IHTM11013 Quantifying the exemption** [Jan 2020]
> ... *Example* ...
> Where the will of a person domiciled (IHTM13000) abroad disposes of their UK estate and some or all of their world estate, exemption for pecuniary legacies (IHTM12082) should be given against the UK estate in the proportion it bears to the worldwide estate, and not against the UK estate alone. Any case where you have difficulty obtaining details of the world estate, or where our official practice meets resistance, should be referred to Technical.

This is correct in relation to charities. The IHT charity exemption is more narrowly worded. But for spouses, it is not consistent with the words of s.18(1)[b]. It is suggested that the spouse exemption applies to the full extent of the pecuniary legacy. It makes no difference whether the pecuniary legacy is subsequently paid out of UK or foreign situate property.

76.6 Allocation of exemption

The reader might think that answers may be found in Chapter 3 Part 2 IHTA (Allocation of Exemptions). In order to focus on the main issue, I do not consider the provisions dealing with abatement and the burden of IHT.

76.6.1 *Definitions*

Before turning to the rules, it is helpful to consider the meaning of the term "specific gift". Section 42(1) IHTA first defines "gift":

> In this Chapter [Chapter 3 Part 2 IHTA]—
> "gift", in relation to any transfer of value, means the benefit of any disposition or rule of law by which, on the making of the transfer, any property becomes ... the property of any person or applicable for any purpose;
> "given" shall be construed accordingly;

Section 42(1) IHTA then defines "specific gift":

> "specific gift" means any gift other than a gift of residue or of a share in residue.

76.6.2 *Application of allocation rule*

Section 36 IHTA provides:

> Where
> [i] any one or more of sections 18, 23 to 27 and 30 above apply in relation to a transfer of value but
> [ii] the transfer is not wholly exempt—
> (a) any question as to
> [A] the extent to which it is exempt or,
> [B] where it is exempt up to a limit, how an excess over the limit is to be attributed to the gifts concerned
>
> shall be determined in accordance with sections 37 to 40 below...

We are considering the estate of a testator ("T") who by will makes gifts to a spouse ("S") and a chargeable beneficiary (say, a child) ("X"). The estate is as follows:

> Chargeable assets ("C"), value £C
> Excluded property ("E"), value £E
> Transfer of value on death = value of chargeable assets = £C
> Property given to S has value £S

Condition [i] is satisfied.
Condition [ii] is satisfied if £S < £C. But if £S > £C (the value of what is given to S equals or exceeds the value of the chargeable property) then the estate is wholly exempt, condition [ii] is not satisfied, and the allocation of exemption rules do not apply.

76.6.3 *Allocation of exemption rule*

Section 38(1) IHTA provides (so far as relevant):

> Such part of the value transferred shall be attributable to specific gifts as corresponds to the value of the gifts …

Consider just a few of the possible permutations:

	Specific Gifts			
Case	Gift of C	Gift of E	Pecuniary	Residue
1	S	X	-	-
2	X	S	-	-
3	S	-	-	X
4	X	-	-	S
5	-	S	-	X
6	-	X	-	S

Assume £S (value given to the spouse) is less than £C (the value of the chargeable property) so the transfer is not wholly exempt. It is plain that the allocation of exemption rule has absurd results:

In cases 1 and 2, the transfer of value is attributed to both gifts. Quite apart from the fact that the value of the gifts exceeds the value transferred, it makes no difference whether the gift to S is of excluded or chargeable property. In cases 3 to 6, the transfer of value is attributed to the gift of C.

It is suggested that the allocation of exemption rules are intended to solve problems arising on:

(1) gifts of business property, and
(2) gifts which bear their own tax.

The allocation of exemption rules have no application to allocation of exemptions for estates holding excluded property.

76.7 10-year charge

IHT operates a system of 10-year and exit charges on relevant property trusts. A full discussion needs a book to itself. I focus on the reliefs for excluded property, but as usual, it is necessary to review the charging provisions to see the reliefs in context.

The 10-year charge on trusts is in 64(1) IHTA:

> Where immediately before a ten-year anniversary all or any part of the property comprised in a settlement is relevant property, tax shall be charged
> [a] at the rate applicable under sections 66 and 67 below
> [b] on the value of the property or part at that time.

The excluded property exemption for the 10-year charge comes in the definition of relevant property. If trust property is excluded property on the 10-year anniversary, it is not relevant property so there is no charge.

76.7.1 *Property formerly excluded*

It may happen that:

(1) Relevant (non-excluded) trust property was formerly excluded property; and
(2) The property is not excluded at the time of the 10-year anniversary.

In this case, s.66(2) IHTA provides a time-apportioned relief:

> [a] Where the whole or part of the value mentioned in section 64 above is attributable to property which
> [i] was not relevant property, or
> [ii] was not comprised in the settlement,

> throughout the period of ten years ending immediately before the ten-year anniversary concerned,
>
> [b] the rate at which tax is charged on that value or part shall be reduced by one-fortieth for each of the successive quarters in that period which expired before the property became, or last became, relevant property comprised in the settlement.

This will apply in particular:

(1) If a trust disposes of excluded property and acquires non-excluded property which is held at the time of the 10-year anniversary.

(2) If a trust holds a company which holds a UK residence: the shares ceased to be excluded property in 2017 under the IHT residential-property code.

76.7.2 *Undistributed trust income*

Section 64(1A) IHTA provides:

> For the purposes of subsection (1) above, property held by the trustees of a settlement immediately before a ten-year anniversary is to be regarded as relevant property comprised in the settlement at that time if—
>
> (a) it is income of the settlement,
>
> (b) the income arose before the start of the five years ending immediately before the ten-year anniversary,
>
> (c) the income arose (directly or indirectly) from property comprised in the settlement that, when the income arose, was relevant property, and
>
> (d) when the income arose, no person was beneficially entitled to an interest in possession in the property from which the income arose.

I refer to income within s.64(1A) as **"undistributed trust income"**.

This deals with the problem that undistributed trust income is not settled property for IHT purposes, unless and until it is accumulated (at which point it becomes settled property).[13] It will be very rare that trustees retain trust income unaccumulated and undistributed for more than 5 years; but it could happen if there was a tax incentive to do so.

Five years seems a generous period for this rule, but it does not much matter.

[13] See 87.6.1 (Undistributed trust income).

In these (somewhat unlikely) circumstances, s.64 IHTA goes on to confer relief for the undistributed trust income, in accordance with the rules for excluded property:

> (1B) Where the settlor of property comprised in a settlement was not domiciled in the UK at the time the property became comprised in the settlement (but see also subsection (1BA)) and is not a formerly domiciled resident for the tax year in which the ten-year anniversary falls, income of the settlement is not to be regarded as relevant property comprised in the settlement as a result of subsection (1A) above so far as the income—
>
> (a) is situated outside the UK, or
>
> (b) is represented by a holding in an authorised unit trust or a share in an open-ended investment company.
>
> (1BA) [Section 64(1BA) deals with accumulated income, see 75.8.1 (Accumulated income).]
>
> (1C) Income of the settlement is not to be regarded as relevant property comprised in the settlement as a result of subsection (1A) above so far as the income—
>
> (a) is represented by securities issued by the Treasury subject to a condition of the kind mentioned in subsection (2) of section 6 above, and
>
> (b) it is shown that all known persons for whose benefit the settled property or income from it has been or might be applied, or who are or might become beneficially entitled to an interest in possession in it, are persons of a description specified in the condition in question.

Note that undistributed trust income does not fall within the definition of “excluded property”. So the IHTA residential-property code, in sch A1 IHTA, which de-excludes property which would otherwise be excluded property by virtue of s.6 or s.48 IHTA,[14] does not apply here.

76.8 Exit charge

The on trusts in s.65 IHTA is known as the exit charge. It applies in two circumstances, or sets of circumstances:

Circumstance	**s.65**	**See para**
Ceasing to be excluded property	(1)(a)	76.8.1
Reducing value of trust property	(1)(b)	76.8.2

[14] See 82.2 (De-exclusion of sch A1 property).

Perhaps one should refer to exit charges, in the plural, but it is usual to use the singular.

I do not discuss the computation of the amount of the exit charge, though I hope to cover this in a future edition.

76.8.1 *Cease to be relevant property*

Section 65 IHTA provides:

> (1) There shall be a charge to tax under this section—
>
> (a) where the property comprised in a settlement or any part of that property ceases to be relevant property (whether because it ceases to be comprised in the settlement or otherwise);

This applies in principal where:

(1) Relevant (non-excluded) trust property ceases to be trust property (ie, a beneficiary becomes absolutely entitled); or

(2) Relevant (non-excluded) trust property remains trust property, but ceases to be relevant property, typically because it becomes excluded property. That may happen if:

(a) the situs changes (eg a chattel is moved outside the UK)

(b) non-excluded property is sold and excluded property is acquired[15]

If a beneficiary becomes absolutely entitled to excluded property, there is no exit charge because excluded property is not relevant property, so it does not "cease to be relevant property" when it ceases to be comprised in a settlement.

There is no exit charge if an excluded property trust makes a distribution in the form of a payment from an offshore bank account of the trustees to a UK bank account of a beneficiary, as no property ceases to be relevant (non-excluded) property.[16]

76.8.2 *Depreciatory transaction*

Section 65 IHTA continues:

> (1) There shall be a charge to tax under this section ...
>
> (b) in a case in which paragraph (a) above does not apply, where

[15] Settled property is regarded for IHT as a fund with a continuing identity, not as a set of distinct assets.

[16] Contrast 76.3.1 (Gift to UK bank account).

> the trustees of the settlement make a disposition[17] as a result of which the value of relevant property comprised in the settlement is less than it would be but for the disposition.

The drafting is based on the definition of transfer of value.[18]

The charge might apply even if the result of the disposition is to increase the value of property in other relevant property trusts. But this issue will not often arise.

See too 81.5.2 (IHT close-company code/Non-IIP trust).

76.8.3 *10-year/exit charge: Planning*

IHT DOTAS guidance considers this topic:[19]

> **Example 13:** Immediately before a ten-year anniversary a distribution is made from a relevant property settlement to reduce the charge on the subsequent ten-year anniversary

The guidance considers whether the two IHT DOTAS conditions are met. Condition 1, so far as relevant, is that:

> one of the main purposes of the arrangements is to enable a person to obtain one or more of the following advantages in relation to inheritance tax ...
>
> (b) the avoidance or reduction of a charge to inheritance tax under section 64, 65, 72 or 94 of IHTA 1984;

On the facts as posited ("a distribution ... made... to reduce the 10 year charge) this condition is met.[20]

The important point is HMRC's discussion of DOTAS condition 2. This provides, so far as relevant:

[17] Section 65(9) IHTA extends the meaning of disposition to include an omission:
"For the purposes of this section trustees shall be treated as making a disposition if they omit to exercise a right (unless it is shown that the omission was not deliberate) and the disposition shall be treated as made at the time or latest time when they could have exercised the right."
The drafting is based on s.3(3) IHTA; see 74.5 (Omission: Deemed disposition).

[18] See 74.3 (Transfer of value/value transferred).

[19] HMRC, "Guidance: Disclosure of tax avoidance schemes" (April 2018) *https://www.gov.uk/government/publications/disclosure-of-tax-avoidance-schemes-guidance*

[20] But whether an actual distribution would have that purpose is a question of fact in each case.

> Condition 2 is that the arrangements involve one or more contrived or abnormal steps without which the tax advantage could not be obtained.[21]

HMRC say:

> The inheritance tax legislation applies a tax charge in respect of the distribution and another tax charge at the ten-year anniversary. The choice of making the distribution before the ten-year anniversary may be to achieve a lower overall inheritance tax bill, but the trustees choosing to exercise their powers to make a distribution is, on its own, neither contrived nor abnormal. It would not therefore be reasonable to expect an informed observer to conclude that condition 2 was met.

The author does not explain why the distribution before the ten-year anniversary achieves a lower overall IHT bill, but it often happens that the exit charge (if any) is lower than the 10-year charge. In particular, the exit charge on a distribution within the first 10 years of a trust may be £nil.

An income distribution to a non-resident or remittance basis taxpayer may avoid the exit charge, so that both charges are avoided. But that too is not "contrived or abnormal".

76.9 Exit charge reliefs

In this section I discuss two reliefs, or sets of reliefs, from the exit charge:

(1) excluded property reliefs
(2) income-receipt relief

The residence-property code has two further exemptions to the IHT exit charge.[22]

76.9.1 *Property becomes excluded*

Under s.65(1)(a) IHTA there would be a charge if relevant (non-excluded) trust property becomes excluded property (as it then ceases to be relevant property). There are four exemptions which usually prevent this charge.

Section 65(7) IHTA provides relief if relevant (non-excluded) trust property becomes non-UK situate excluded property:

> Tax shall not be charged under this section by reason only that property comprised in a settlement

[21] Reg 4(3) Inheritance Tax Avoidance Schemes (Prescribed Descriptions of Arrangements) Regulations 2017.

[22] See 82.14 (Residence exit-charge reliefs).

> [a] ceases to be situated in the UK
> [b] and thereby becomes excluded property by virtue of section 48(3)(a) above.[23]

Section 65(7A) IHTA provides relief if relevant (non-excluded) trust property becomes UK-fund excluded property:

> Tax shall not be charged under this section by reason only that property comprised in a settlement becomes excluded property by virtue of section 48(3A)(a) (holding in an authorised unit trust or a share in an open-ended investment company is excluded property unless settlor domiciled in UK when property became comprised in settlement).[24]

Section 65(7B) IHTA provides relief if relevant (non-excluded) trust property becomes excluded property because a formerly-domiciled resident settlor ceases to be UK resident or dies:

> Tax shall not be charged under this section by reason only that property comprised in a settlement becomes excluded property by virtue of section 48(3E) ceasing to apply in relation to it.[25]

Section 65(8) IHTA provides some relief if relevant (non-excluded) trust property becomes FOTRA-security excluded property:

> If the settlor of property comprised in a settlement was not domiciled in the UK when property became comprised in the settlement (but see also subsection (8A)),[26] tax shall not be charged under this section by reason only that
> [a] the property is invested in securities issued by the Treasury subject to a condition of the kind mentioned in section 6(2) above and
> [b] thereby becomes excluded property by virtue of section 48(4)(b) above.

This is not a complete FOTRA exemption: there is still an exit charge if trust property becomes FOTRA-security excluded property under
(1) s.48(4)(a), non-resident entitled to estate IIP; or
(2) s.48(4)(b), if the settlor was UK domiciled.[27]

[23] For s.43(3)(a), see 75.8 (Trusts: Foreign situate property).
[24] For s.43(3A)(a), see 75.10 (Trusts: UK funds).
[25] See 75.8.2 (Formerly-dom resident settlor).
[26] Section 65(8A) deals with accumulated income, see 75.8.1(Accumulated income).
[27] See 75.11 (Trusts: FOTRA securities).

There could be an exit charge if relevant (non excluded) trust property becomes excluded property under other categories of excluded property, see s.58(a) - (eb); but in practice that would be rare.

76.9.2 *Property previously excluded*

There is an exit charge if relevant (non-excluded) trust property ceases to be trust property, ie a beneficiary becomes absolutely entitled.

It may happen that:

(1) Relevant (non-excluded) trust property was formerly excluded property; and
(2) The property ceases to be trust property (eg a beneficiary becomes absolutely entitled).

In this case there is a time-apportioned relief. Section 68(3) IHTA provides the relief before the first 10-year anniversary:

> [A] Where the whole or part of the amount on which tax is charged is attributable to property which
> [i] was not relevant property, or
> [ii] was not comprised in the settlement,
> throughout the period referred to in subsection (2) above,
> [B] then in determining the appropriate fraction in relation to that amount or part—
> (a) no quarter which expired before the day on which the property became, or last became, relevant property comprised in the settlement shall be counted, but
> (b) if that day fell in the same quarter as that in which the period ends, that quarter shall be counted whether complete or not.

This is the exit charge equivalent of s.66(2) IHTA (relief for 10-year charge).[28]

The relief is incorporated by reference for an exit charge after the first 10-year anniversary. Section 69(4) IHTA provides:

> [a] For the purposes of this section the appropriate fraction is so many fortieths as there are complete successive quarters in the period beginning with the most recent ten-year anniversary and ending with the day before the occasion of the charge;
> [b] but subsection (3) of section 68 above shall have effect for the

[28] See 76.7.1 (Property formerly excluded).

> purposes of this subsection as it has effect for the purposes of subsection (2) of that section.

76.9.3 *Income-receipt relief*

Section 65(5) IHTA provides:

> Tax shall not be charged under this section in respect of[29]—
>
> (b) a payment[30] which
>
> [i] is (or will be) income of any person for any of the purposes of income tax or
>
> [ii] would for any of those purposes be income of a person not resident in the UK if he were so resident
>
> or in respect of a liability to make such a payment.[31]

I refer to this as exit-charge **"income-receipt relief"**.

There is a similar relief in the IHT close-company code.[32]

Suppose trustees receive income and distribute it. There is no exit charge, because unaccumulated income is not settled property, and so not relevant property, so s.65(1) does not apply. Income-receipt relief is not needed here. But it can happen that trustees distribute trust capital in a manner which constitutes income of the recipient, and then income-receipt relief will apply.

Suppose a discretionary trust holds a company and procures the company to make a dividend. The value of the settled property (the shares) is reduced, because the income received is not settled property. At first sight there is nevertheless no exit charge, because the trustees have not made a disposition (even by omission). However the IHT close-company code needs consideration.[33]

If a UK resident beneficiary receives a benefit which is taxable in the year of receipt under s.731, it is considered that income-receipt relief applies. The benefit is income of the recipient.

Suppose:

(1) at the time the benefit is received there is no relevant income; but

[29] See App 2.4.1 (In respect of).

[30] Section 63 IHTA provides a wide definition: "In this Chapter [Chapter 3 Part 3], unless the context otherwise requires ... "payment" includes a transfer of assets other than money".

[31] It is difficult to see how an exit charge could arise in relation to a liability to make a payment; but it does not matter.

[32] See 81.4.6 (Income-receipt relief).

[33] See 81.6 (Dividend: Close-co code analysis).

(2) the person abroad receives relevant income later in the same tax year.

It is considered that the relief still applies: the benefit is still taxable. This explains why s.65(5) refers to a payment which is *or will be* income.

Similarly, if a UK resident beneficiary receives a capital payment which is subject to income tax under OIG s.87, the capital payment is subject to income tax, and exit-charge income-receipt relief applies.

This is consistent with the object of the relief, which is to prevent a double charge to IT and IHT.

What if the beneficiary is non-resident? The relief applies because the payment "would for IT purposes be income of a person not resident in the UK if he were so resident".

Suppose a series of payments to a non-resident, thus:

(1) A discretionary trust with a UK domiciled settlor had funds of £2m and relevant income of £1m.
(2) Year 1: the trust made a capital payment to a non-resident of £1m.
(3) Year 2: the trust made another payment to the non-resident of £1m.

There is no exit charge in year 1 as income-receipt relief applies. But there is an exit charge in year 2. The question is whether the payment "would ... be income of a person not resident in the UK if he were so resident." The hypothesis should be that the person is UK resident in year 1 as well as year 2. The payment in year 1 would match the relevant income, and the payment in year 2 would not be subject to IT. The relevant income is not counted twice.

76.10 Termination of estate IIP

Section 52(1) IHTA provides:

> Where at any time during the life of a person beneficially entitled to an interest in possession in settled property his interest comes to an end, tax shall be charged, subject to section 53 below, as if at that time
> [1] he had made a transfer of value and
> [2] the value transferred had been equal to the value of the property in which his interest subsisted.

76.10.1 *Disposal for consideration*

Section 52(2) IHTA provides:

> If
> [a] the interest comes to an end by being disposed of by the person

> beneficially entitled to it and
> [b] the disposal is for a consideration in money or money's worth,
> tax shall be chargeable under this section as if the value of the property in which the interest subsisted were reduced by the amount of the consideration; but in determining that amount the value of a reversionary interest in the property or of any interest in other property comprised in the same settlement shall be left out of account.

76.10.2 *IIP: Depreciatory transaction*

Section 52(3) IHTA provides:

> [A] Where
> [i] a transaction is made between the trustees of the settlement and a person who is, or is connected with,—
> (a) the person beneficially entitled to an interest in the property, or
> (b) a person beneficially entitled to any other interest in that property or to any interest in any other property comprised in the settlement, or
> (c) a person for whose benefit any of the settled property may be applied,
> [ii] and, as a result of the transaction, the value of the first-mentioned property is less than it would be but for the transaction,
> [B] a corresponding part of the interest shall be deemed for the purposes of this section to come to an end,
> [C] unless the transaction is such that, were the trustees beneficially entitled to the settled property, it would not be a transfer of value.

This roughly corresponds to depreciatory transaction exit charge.[34] But the wording is not entirely aligned:

(1) In the IIP case the trustees must make a "transaction". In the exit charge case, the trustees must make a "disposition". Transaction has its ordinary meaning; disposition has a more extended definition, in particular, it may include an omission.[35]

(2) In the IIP case the transaction must meet be between the persons identified at para [i]. In the exit charge case, the parties to the disposition do not matter. But this point may not often arise, as

[34] See 76.8.2 (Depreciatory transaction). See too 81.10 (Alterations: Estate IP trust).

[35] See 74.4 (Disposition).

depreciatory transactions will normally be between those persons.

76.10.3 *Charges only on qualifying IIP*

Section 52(2A)(3A) IHTA are conveniently read side by side:

52(2A) IHTA	**52(3A) IHTA**
Where the interest mentioned in subsection (1) or (2) above is one to which the person became beneficially entitled on or after 22nd March 2006, that subsection applies in relation to the coming to an end of the interest only if the interest is—	Where the interest mentioned in paragraph (a) of subsection (3) above is one to which the person mentioned in that paragraph became beneficially entitled on or after 22nd March 2006, that subsection applies in relation to the transaction only if the interest is—
(a) an immediate post-death interest,	[identical]
(b) a disabled person's interest, or	[identical]
(c) a transitional serial interest	[identical]
or falls within section 5(1B) above.	[identical]

76.10.4 *Interests in part*

Section 52(4) IHTA provides:

> References in this section or section 53 below to any property or to an interest in any property include references to part of any property or interest; and—
>
> (a) the tax chargeable under this section on the coming to an end of part of an interest shall be charged as if the value of the property (or part) in which the interest subsisted were a corresponding part of the whole; and
>
> (b) if the value of the property (or part) to which or to an interest in which a person becomes entitled as mentioned in subsection (2) of section 53 below is less than the value on which tax would be chargeable apart from that subsection, tax shall be chargeable on a value equal to the difference.

76.11 Termination of IP: Reliefs

Section 53 IHTA contains a set of reliefs for the charge under s.52, the first of which is relevant here. Section 53(1) IHTA provides:

> Tax shall not be chargeable under section 52 above if the settled property is excluded property.

76.12 When excluded property matters

RI 166 states:

> ... an "excluded" asset is not always completely irrelevant for the purposes of IHT.

The RI gives two examples. The first concerns marriage value between excluded and non-excluded property:

> an "excluded" asset in a person's estate may still affect the valuation of another asset in the estate, for example, an "excluded" holding of shares in an unquoted company may affect the value of a similar holding in the estate which is not "excluded";

One could just about imagine circumstances where this could happen, but it will so rarely (if ever) happen in practice that it is not worth investigating here.

The second example concerns IHT exit charges on relevant property trusts:

> the value of an "excluded" asset at the time the asset becomes comprised in a settlement may be relevant in determining the rate of any tax charge arising in respect of the settlement under the IHT rules concerning trusts without [estate] interests in possession.[36]

This arises where a trust holds (or has held) excluded and non-excluded (chargeable) property. Before 2017 this was unusual, but it might now happen under the IHT residential-property code.

76.13 Foreign currency account

76.13.1 *Individual account*

Section 157(1)(a) IHTA provides a limited relief for non-residents foreign currency bank accounts:

> In determining for the purposes of this Act the value of the estate

[36] RI 166 refers to:
(1) Exit charges: s.68(5), and 69(3) IHTA;
(2) 10-year charge: s.66(4) IHTA, but following reforms in 2015, this is not now a case where excluded property affects the IHT charge.

> immediately before his death of a person to whom this section applies there shall be left out of account the balance on—
>
> (a) any qualifying foreign currency account of his ...

Section 157(5) IHTA defines "qualifying foreign currency account":

> In this section "qualifying foreign currency account" means a foreign currency account with a bank[37]; and for this purpose—
>
> (a) "foreign currency account" means any account other than one denominated in sterling.

Section 157(2) IHTA explains who qualifies for the relief:

> This section applies to a person who is not domiciled and not resident[38] in the UK immediately before his death.

76.13.2 *Trust account*

Section 157(1)(b) IHTA provides a similar but more restricted relief for a foreign currency trust bank account of an IIP trust:

> (1) In determining for the purposes of this Act the value of the estate immediately before his death of a person to whom this section applies there shall be left out of account the balance on ...
>
> (b) subject to subsection (3) below, any qualifying foreign currency account of the trustees of settled property in which he is beneficially entitled to an interest in possession.
>
> ...
>
> (3) Subsection (1)(b) above does not apply in relation to settled property
>
> [a] if the settlor was domiciled in the UK when the settled property became comprised in the settlement, or
>
> [b] if the trustees are domiciled or resident[39] in the UK immediately before the beneficiary's death.

Domicile presumably depends on the domicile of the trustees in their personal capacity. The rule that trustee's domicile should be relevant is

[37] Section 157(6) IHTA provides: "In this section 'bank' has the meaning given by section 991 of the Income Tax Act 2007."

[38] Section 157(4) IHTA applies the income tax definition of residence:

"For the purposes of this section—

(a) the question whether a person is resident in the UK shall, subject to para (b) below, be determined as for the purposes of income tax".

Para (b) deals with trustee residence, discussed below.

[39] For the definition of trust residence see 7.19 (Trust residence for IHT).

odd, and inconsistent with the general scheme of trust IHT or the taxation of trusts generally.

This relief has not been amended in line with the 2006 changes in inheritance taxation of trusts. There is no relief for discretionary trusts or income accumulated in the account after a change of domicile of the settlor;[40] but the relief does apply to non estate interests in possession.

The relief is not important, so these oddities do not much matter.

76.13.3 *Overdrawn account*

The IHT Manual provides:

> **IHTM04380 foreign currency bank accounts** [Sep 2018]
> ... Where the conditions are met, the balance on the account, whether in credit or in debit should be left out of account. You should refer any case of difficulty, especially if you are seeking to disallow a debit balance, to Technical. ...

The last sentence suggests, perhaps, that HMRC are not entirely confident in this interpretation. It seems literally correct on a first reading, and provides an apparent symmetry of treatment with accounts with a positive balance; on the other hand it is a daft rule, a petty trap easily avoided by the well advised, and inconsistent with the general approach of deduction for debts.[41] I do not think it could have been the intention of parliament.

See too 80.26 (Debt attributable to foreign account).

76.13.4 *Foreign currency: Critique*

This is a limited relief. The bank account is *not* excluded property for IHT purposes. It is only disregarded on the death of the owner or life tenant, so it is taken into account for lifetime gifts of individuals, and 10-year charges on trusts. The conditions for the relief are also stricter than for excluded property. It would in almost all cases be better to use a foreign bank account (which will be excluded property) rather than to rely on this relief.

The purpose of the relief is, I think, to encourage foreign domiciliaries to deposit funds with UK banks. If that is right, these restrictions make no sense. It is suggested that foreign currency accounts (indeed all accounts) ought simply to qualify as excluded property in the same way as non-UK

[40] See 75.8.1 (Accumulated income).

[41] See 80.5 (Allocation of debt).

accounts. That change would:

(1) ensure that the relief serves its purpose
(2) align the deductibility of overdrawn accounts with the usual deductibility rules
(3) simplify the law[42]

Alternatively, the relief is just clutter in the system and if (as I expect) it is not much used it would be better to repeal it.

76.14 Works of art

The IHTA provides a pragmatic relief for works of art. Section 5(1) IHTA provides relief on death:

> For the purposes of this Act a person's estate is the aggregate of all the property to which he is beneficially entitled, except that ...
>
> (b) the estate of a person immediately before his death does not include ... a foreign-owned work of art which is situated in the UK for one or more of the purposes of public display, cleaning and restoration (and for no other purpose).

Section 64(2) IHTA provides relief from 10-year charges:

> For the purposes of subsection (1) above, a foreign-owned work of art which is situated in the UK for one or more of the purposes of public display, cleaning and restoration (and for no other purpose) is not to be regarded as relevant property.

Section 272 IHTA defines these terms:

> "foreign-owned", in relation to property, means property in the case of which the person beneficially entitled to it is domiciled outside the UK or, if the property is comprised in a settlement, in the case of which the settlor was domiciled outside the UK when the property became comprised in the settlement;
>
> "public display" means display to which the public are admitted, on payment or not, but does not include display with a view to sale;

The reason is tax competition. Dawn Primarolo (then Financial Secretary to the Treasury) explained:

[42] The current position further complicates anti-avoidance provision withdrawing relief for excluded property, as they need to refer to both excluded property and to foreign currency bank accounts; eg see 80.26 (Debt attributable to foreign account).

> the public interest would not be served if foreign owners of works of art were unwilling to send them to the UK for [purposes of public display, cleaning or restoration] for fear of a potential inheritance tax charge.[43]

This relief falls short of a complete exemption but in practice it is sufficient, and the gaps are not sufficiently important to discuss further here. See too 19.31 (Public access rule).

76.15 Residence nil-rate band

A discussion of the residence nil-rate band needs a long chapter to itself.[44] This takes us too far from the themes of this book, but the IHT Manual has one comment which is relevant to note here:

> **IHTM46032 Residence outside the UK** [Nov 2018]
> There is no requirement that the residence (dwelling-house) has to be in the UK but it does have to be within the scope of IHT and it has to be included in a person's estate. Whether the residence is within the scope of IHT may depend on the domicile status of the deceased and the location of the property.
> For UK domiciled individuals, who are subject to IHT on their worldwide assets, it does not matter where the residence (dwelling-house) which is left to direct descendants is located. For non-UK domiciled individuals, who are subject to IHT only on their assets in the UK, the residence which is to be left to direct descendants must be situated in the UK in order to be within their estate for IHT purposes and hence to be able to qualify for the RNRB.

76.16 Overseas pensions

A full discussion of the IHT treatment of pensions needs a book to itself. This section focusses on the issues closest to the themes of this book. See too 102.36 (Situs of pension and death benefits).

Section 153 IHTA provides a narrow relief:

> (1) In determining for the purposes of this Act the value of a person's estate immediately before his death there shall be left out of account any pension payable under the regulations or rules relating to
> [a] any fund vested in Commissioners under section 273 of the Government of India Act 1935 or

[43] Ministerial Statement 25 February 2003 [2003] STI 303.

[44] See Kessler & Ashley, "Residence Nil-rate Band".

> [b] to any fund administered under a scheme made under section 2 of the Overseas Pensions Act 1973 which is certified by the Secretary of State for the purpose of this section to correspond to an Order in Council under subsection (1) of the said section 273....
>
> (3) Subsection (1) above shall be construed as if contained in section 273 of the Government of India Act 1935 ...
>
> (4) If, by reason of Her Majesty's Government in the UK having assumed responsibility for a pension, allowance or gratuity within the meaning of section 1 of the Overseas Pensions Act 1973 payments in respect of it are made under that section, this section shall apply in relation to the pension, allowance or gratuity, exclusive of so much (if any) of it as is paid by virtue of the application to it of any provisions of the Pensions (Increase) Act 1971 or any enactment repealed by that Act, as if it continued to be paid by the Government or other body or fund which had responsibility for it before that responsibility was assumed by Her Majesty's Government in the UK.

76.17 Excluded property planning

In the following discussion it is assumed the property concerned is not a UK residence, so it is not necessary to consider the IHT residential-property code.

76.17.1 *Planning for individual*

A foreign domiciliary should arrange, as far as possible, that their assets are situated outside the UK so that they qualify as excluded property and fall outside inheritance tax. The question is: how is the individual's property to be transferred abroad?

The transfer abroad of funds from a UK bank account poses no problem. The transfer of bearer instruments abroad raises no problem. Chattels could be physically moved abroad but that may not be practical.

It is possible to turn UK situate shares and securities into non-UK situate assets for IHT.[45]

Any UK asset could be sold and the proceeds remitted abroad. This is simple and satisfactory for inheritance tax; however, a sale raises CGT and commercial considerations.

If the individual is in good health, there is a lot to be said for doing nothing and ignoring IHT planning. The only inheritance tax risk in this approach is that the individual might die so suddenly that no steps to save

[45] See 102.9 (Bearer and negotiable instruments).

tax can be taken. This risk is reduced (but not eliminated) if the spouse exemption is available. It might be possible to take out insurance.

76.17.2 *Anticipation of UK domicile*

The standard course for the foreign domiciliary is to transfer their assets to a trust. If the settlor has a foreign domicile when at the time the trust is made, settled property can be excluded property and will retain that status indefinitely, even if the settlor later become domiciled here. This has been common practice since at least 1975 and (in the case of deemed domicile) parliament has endorsed it with protected-trust relief.

HMRC accept this. DOTAS guidance provides:

> **13.4 Examples of arrangements which aren't notifiable**
> As set out above, the hallmark does not catch straightforward inheritance tax planning...
> **Example 12:** A non-UK domiciled individual transfers non-UK situs property into a trust just before they become deemed domiciled in the UK. The individual can benefit from the trust
> *Condition 1*: The transfer reduces the value of the person's estate, but this reduction does not give rise to a chargeable transfer or potentially exempt transfer due to section 3(2) IHTA 1984. It is likely that an informed observer would conclude that obtaining the inheritance tax advantage was the main reason, or one of the main reasons for the arrangements, so condition 1(d) is met.
> *Condition 2*:[46] A transfer into a discretionary trust, on its own, is not contrived or abnormal. Although this arrangement is entered into to obtain an inheritance tax advantage, it is making use of the excluded property provisions. The transfer is not within condition 2 and is not a notifiable arrangement under this hallmark.[47]

The opportunity, once missed, cannot be regained so it is desirable to ascertain the exact moment when a UK domicile is acquired. There are three possibilities:

(1) The individual who has decided to make a permanent home in the UK

[46] Reg 4(3) Inheritance Tax Avoidance Schemes (Prescribed Descriptions of Arrangements) Regulations 2017 provides: "Condition 2 is that the arrangements involve one or more contrived or abnormal steps without which the tax advantage could not be obtained."

[47] HMRC, "Guidance: Disclosure of tax avoidance schemes" (April 2018) *https://www.gov.uk/government/publications/disclosure-of-tax-avoidance-schemes-guidance*

will acquire a UK domicile as soon as they arrive here. Such an individual needs to carry out the tax planning before setting foot in this country.

(2) The individual who arrives here to take up residence without such an intention will acquire a UK domicile if and when they later form the intention to live here permanently. They need to carry out the tax planning before their mind is made up, ie while their long-term intentions remain unclear.

(3) The individual who arrives and remains residing in the UK without deciding to live here permanently will acquire a deemed UK domicile after 15 years' UK residence. This is the effective deadline for the IHT planning, although limited planning opportunities remain available for the deemed domiciliary.[48]

A life interest trust will normally be suitable, ie:

(1) income is to be paid to the settlor for life;

(2) subject thereto the trust fund held on discretionary trusts for the benefit of the family of the settlor.

Trust income will belong to the life tenant but (if not UK domiciled) they may mandate the trustees to retain the income and add it to capital. This may be useful to avoid relevant income.[49]

A common form discretionary settlement is a possible alternative.

76.17.3 *Planning for non-resident UK dom*

A non-resident individual who is UK domiciled or deemed domiciled by purchasing FOTRA securities. This may be important for deathbed planning.

In the case of an individual who is deemed domiciled but actually domiciled in the Isle of Man or in the Channel Islands there is similar scope for acquiring excluded property in the form of exempt saving certificates.[50]

Reg 4 Inheritance Tax Avoidance Schemes (Prescribed Descriptions of Arrangements) Regulations 2017 provides:

> (1) Arrangements fall within the description in this regulation if it

[48] See below.

[49] See 50.22 (Income of life tenant: Relevant income).

[50] See 75.7 (Channel Islands/IoM domicile).

> would be reasonable to expect an informed observer (having studied the arrangements and having regard to all relevant circumstances) to conclude that condition 1 and condition 2 are met.
> (2) Condition 1 is that the main purpose, or one of the main purposes, of the arrangements is to enable a person to obtain one or more of the following advantages in relation to inheritance tax (the "tax advantage")
> ...
> (d) a reduction in the value of a person's estate without giving rise to a chargeable transfer or potentially exempt transfer.
> (3) Condition 2 is that the arrangements involve one or more contrived or abnormal steps without which the tax advantage could not be obtained.

HMRC discuss DOTAS:[51]

> **Question:** Suppose a non-resident UK domiciled person is diagnosed with a terminal illness and uses all his cash to buy gilts which he gives away to his children. Is this a disclosable transaction? Does the age or the person's health make any difference?
> **Answer:** Arrangements need to be tested against the hallmark conditions. In this example it seems clear that condition 1(d) would be met as there is a reduction in the transferor's estate without giving rise to a chargeable transfer or PET.

That is right. HMRC continue:

> Whether Condition 2 is met depends on the particular circumstances and whether the arrangements involve one or more contrived or abnormal steps to achieve the tax advantage. It seems likely that, in the circumstances described, Condition 2 would be met.

Is that right? Discuss.

Note that if the individual retains the gilts until his death, rather than giving them away, the condition in para 1(d) is not met.

76.17.4 *Excluded property trust*

This section considers the position of a trust made by a person who is not UK domiciled (or deemed domiciled) when the trust is made.

The trustees should avoid UK situate property, at least at the times when it matters.

Trust property in an excluded property trust can remain effectively free

[51] Letter from HMRC to STEP dated 05/08/2019 .

of IHT so long as the trust continues to exist. The trustees should be reluctant to appoint trust capital to a beneficiary who is or may become UK domiciled; that property may cease to be excluded property. If necessary, steps should be taken to extend its life by exercising powers of appointment or advancement.

If a UK domiciled beneficiary has substantial assets in their own estate then it may be worth adopting a policy of gradually spending their own assets while allowing their trust fund to accumulate or invest for capital growth. It may be attractive for the beneficiary to acquire a purchased life annuity.[52]

76.17.5 *Companies: Situs planning*

If an individual or trustees do not wish UK assets to be sold to a third party, they might sell or give them to a company (typically, non-resident) owned wholly by them. In principle the shares in the company would not be UK situate.[53]

In the case of an individual, the transfer would not be a transfer of value for IHT because the individual's estate would not be reduced in value. It is considered that it is not a disposal by way of gift, as there is no gratuitous intent.

The transfer would be a disposal for CGT purposes and hold-over relief would not normally be available. In some cases BAD or CGT incorporation relief may be available. A gift from an individual to the company by way of *donatio mortis causa* [gift in anticipation of death] may solve the CGT problem.[54]

Property becomes excluded property the moment that it becomes non-UK situate; there is no qualifying period such as is required for agricultural/ business property reliefs. Trustees could transfer the settled property out of the UK the moment before the death of a life tenant, or the occasion of a ten-year charge, and obtain the benefit of excluded property status.

In *Kwok Chi Leung Karl v Commissioner of Estate Duty*[55] the individual transferred his property to a company at 8:45 pm and died on the following day. This last minute planning was successful. The Privy

[52] See 38.17.3 ("Annuity certain").

[53] See 102.5 (Situs of registered shares); 102.9 (Bearer and negotiable instruments).

[54] See 88.7.3 (Gift in anticipation of death).

[55] [1988] STC 728.

Council were not pleased with the outcome of their decision:

> A series of transactions so unusual and so close to the death of the testator almost inevitably suggests that there might have been grounds for attacking the transactions as a sham or as lacking bona fides or as ineffective under the principles enunciated by the House of Lords in *Ramsay...*
>
> As has already been stated, no challenge has been raised to the bona fides of the transaction, so that their Lordships have been compelled ... to treat it in the same way as an arm's length transaction. Lest, however, it should be thought that the door has been opened to making estate duty in Hong Kong a voluntary imposition, their Lordships would add that it would be unwise to assume that the genuineness of similar transactions in the future will necessarily be beyond challenge.

This was a shot from the hip. It is obvious that no serious thought was given to this passage, and it would be a mistake to construe it as if there was; that is not how case law works. So it is not surprising that in *Shiu Wing v Commissioner of Estate Duty*[56] the Hong Kong Court of Final Appeal held that the *Ramsay* principle did not apply to arrangements made by the taxpayer to create property situated abroad (in this case situated outside Hong Kong). The jurisprudence has of course moved on since *Shiu Wing* was decided in 2000. The *Ramsay* principle has "reached a state of well-settled maturity"[57] somewhat different from its 1981 formulation in *Ramsay*. Just how well-settled remains to be seen. However that may be, the outcome should be the same in this context. The IHT residential-property code assumes that (other than for residential property) the planning still works. Still, it would no doubt be wise to avoid the provocative timescale found in *Kwok.*

76.18 UK dom settlor becomes non-dom

What is the best form of tax planning where a settlor has made a settlement while UK domiciled and later acquires a foreign domicile? If nothing is done the trust property cannot be excluded property.

A solution may be to transfer the trust property back to the settlor. That may be impractical. eg if the settlor is not a beneficiary and commercial or foreign tax or UK CGT considerations make this course unattractive.

[56] 2 ITLR 794. See too App.7.12 (Pierce corporate veil/facade).

[57] *Hurstwood Properties v Rossendale BC* [2021] UKSC 16 at [9]; and see the comments on piercing the corporate veil at [63].

In some circumstances, a solution may be:

(1) the settlor creates a new trust; and

(2) the trustees of the old trust transfer the trust property to the new trust.[58]

76.19 Planning for non-estate IIP trust

A discretionary trust (and a non-estate IIP trust) is subject to IHT on its ten- year anniversaries. If the settlor is not UK domiciled when they made the trust, all that matters for IHT is the situs of the trust fund on that date.[59] The trustees may safely invest in the UK for a number of years, provided that, by the deadline, they hold foreign situate assets.

In principle this short-term planning may be extended indefinitely:

(1) As each 10-year anniversary approaches the trustees could sell the UK trust property and invest in excluded property.

(2) Immediately after the anniversary they might sell and revert to UK investments.

In practice such a course might be subject to the GAAR but it depends on how it is done. Ideally the trustees should look for a different approach such as holding UK assets in a foreign registered company.

76.20 Planning: Trust with UK dom settlor

If the settlor is UK domiciled when the settlement was made/funded, trust property is not normally excluded property even if the beneficiary is foreign domiciled.

76.20.1 *Non-resident beneficiaries*

If the life tenant of an estate IIP trust is not resident in the UK, the trustees might invest in FOTRA securities. The trust property would then be excluded property. See 75.11 (Trusts: FOTRA securities).

Likewise if all the known beneficiaries of a discretionary trust are resident abroad. This option is not available if any beneficiaries are domiciled or resident in the UK. A deed of appointment might be needed to satisfy these conditions. This would give rise to an exit charge unless

[58] See 79.9 (Transfer: A's trust to A's trust).

[59] Note also the possible tax charge on the death of the settlor, under the gift with reservation rules, if the property is UK situate: see 78.15 (GWR on death: Settled excluded property) and following.

the settlor is foreign domiciled when the settlement was made/funded. However, the amount of the charge may be moderate or small.

76.20.2 *Non-dom beneficiary*

The best option – if circumstances allow – may be to bring the present settlement to an end by appointment to the foreign domiciled beneficiary absolutely. CGT needs consideration. The beneficiary may after an appropriate period re-settle.[60] This may also be appropriate where the settlor has become foreign domiciled after making/funding the settlement.

An alternative course may be to confer a general testamentary power on the foreign domiciled beneficiary. The beneficiary may on their death create a new trust with excluded property.

76.21 UK funds *v* foreign funds

As far as tax is concerned, which is better for the foreign domiciliary: UK funds or foreign funds?

(1) A remittance basis taxpayer will prefer a foreign fund to a UK one, so that income and gains from the fund will be taxed on the remittance basis.[61] Likewise a settlor-interested trust whose settlor is a remittance basis taxpayer will prefer a foreign fund to a UK one; similarly if the transfer of asset rules may apply, as UK source income from the fund will be taxed on an arising basis and foreign source income will qualify for the remittance basis.

(2) A non-resident non-domiciled individual will not mind (for IHT, CGT or IT) whether they purchase a UK or a foreign fund. However, taxation at fund level is another matter, and the additional burden on UK funds, particularly SDRT, has encouraged fund managers to set up new funds offshore.[62]

Thus the IHT exemption for UK funds represents a pragmatic decision by the Government, but, like so much in the tax system, falls short of

[60] See 99.41 (Planning to create excluded property trust).

[61] If the individual intends to remit income from the fund, it would be better to have a UK fund because higher rates of tax apply to remitted dividends. But that is a special case.

[62] See "Taxation and the Competitiveness of UK Funds" (2006) *https://www.theia.org/sites/default/files/2019-05/20061009-jointkpmgimataxreport.pdf* The report also notes that the uncertainty and instability of the UK tax regime is regarded as making the UK an unsuitable location.

consistency (AKA "joined-up thinking").[63]

76.22 FOTRA securities: Planning

The FOTRA exemption is useful for individuals who are:

(1) UK domiciled or deemed domiciled, (so foreign property is not excluded property) but

(2) not resident in the UK (so they can satisfy the conditions for exemption).

76.23 Channel Islands/IoM domicile

The exemption for Islanders[64] could be useful for an individual who is:

(1) domiciled in the Channel Islands or the Isle of Man

(2) deemed UK domiciled (so in principle within the scope of IHT), and

(3) resident in the UK (so the FOTRA securities exemption is not available)

The exemption is also useful for a trust with such a person as life tenant.

[63] See 1.3 (Other tax competition).

[64] See 75.7 (Channel Islands/IoM domicile).

77.7.5 Forced heirship right: IHT
77.7.6 Forced heirship right: IT
77.8 Family Provision Act claim

77.1 IHT on death: Introduction

The topics of this chapter are:

(1) Will drafting for foreign domiciled testators or beneficiaries
(2) Variation of wills
(3) Forced heirship (légitime, Sharia)

I do not discuss the general or residence nil-rate bands.

There has always been scope for tax saving through an appropriately drafted will.

77.2 UK-dom testator: Non-dom beneficiaries

Here the testator should in principle give their estate to beneficiaries absolutely so that the property may qualify as excluded property in their hands. A short-term discretionary will trust within s.144 IHTA is just as good from a tax viewpoint, and allows additional flexibility.

77.3 Non-dom testator: UK-dom beneficiaries

From an IHT viewpoint, the will should in principle provide that the estate is held on trust for the beneficiaries so that trust property situated outside the UK will remain excluded property.

Do not add property to an existing trust, if the trust may have a pool of trust gains or relevant income.

In addition to creating a trust, the testator should consider making some gifts directly to UK beneficiaries. The advantage is that benefits received by UK beneficiaries from the will trust will come into charge, when matched to trust gains or (subject to the motive defence) relevant income; but direct gifts under a will are tax free. So some absolute gifts may be appropriate, leaving the trust to provide further (though taxable) benefits in the more distant future and accumulate its funds in the meantime.

77.4 Gifts to spouse by will

77.4.1 *Non-dom testator, non-dom spouse*

Suppose:

(1) A foreign domiciled testator has:
  (a) excluded property and
  (b) chargeable (non-excluded) property

(2) The spouse is foreign domiciled so the IHT spouse exemption is fully available.

The safe course will be:

(1) Give the chargeable property to:
  (a) the spouse; or
  (b) a trust where the spouse has an interest in possession (better where the spouse is UK domiciled).

(2) Give excluded property to other persons.

A pecuniary legacy to the spouse should be secured on chargeable property. Watch the drafting.

This course should avoid a dispute with HMRC. However, it is not strictly necessary.[1]

77.4.2 *UK-dom testator, non-dom spouse*

Suppose:

(1) A foreign domiciled testator has
  (a) excluded property and
  (b) chargeable (non-excluded) property

[1] See 76.5.2 (Spouse exemption/excluded property interaction).

(2) The spouse is UK domiciled so the IHT spouse exemption so the full IHT spouse exemption will only apply if the spouse makes the spouse election. That may or may not be desirable, depending on the position of the spouse.[2]

The choice for the will lies between a discretionary will trust or an absolute gift to the foreign domiciled spouse. Which is better? If the property is given to the spouse, it is outside the scope of IHT thereafter, so long as it is excluded property. If the property is given to a will trust, it remains within the scope of IHT, it is not excluded property, as the will trust has a UK domiciled settlor. So at first sight, the absolute gift seems better. Having said that, if property goes into the discretionary will trust and out to the spouse again within two years, the IHT position is (more or less) the same as a direct gift: s.144 IHTA 1984. And it may be desired to pass the property to others, perhaps giving it to the next generation (particularly if not UK domiciled). Also when the testator makes the will, one would not usually know the domicile position at the time of the death. If the spouse lives long enough, she may become deemed UK domiciled for IHT purposes. All things considered, the discretionary will trust seems the more flexible and safer course for the will, in a routine case. In most cases, the will trust is likely to be wound up within two years. But the only cost is the deed of appointment.

77.5 Charitable gift by will

Suppose a foreign domiciled testator has:
(1) excluded property and
(2) chargeable (non-excluded) property

The best course in principle will be:
(1) Give the chargeable property to UK charities or EU charities which qualify for UK tax relief.[3]
(2) Give excluded property to other persons.

A pecuniary legacy to charity should be secured on chargeable property.

77.6 Instrument of variation (IOV)

Books have been written on this topic. I restrict discussion to the statutory

[2] See 5.14 (Spouse-election domicile).

[3] See Kessler, Wong & Shah, *Taxation of Charities and Nonprofit Organisations*, (14th ed., 2024-25), online version *https://www.taxationofcharities.co.uk*

provisions and some non-dom issues.

77.6.1 *IHT/CGT IoV reliefs*

The relief for IoVs is in s.142 IHTA/62 TCGA:

s.142(1) IHTA	**s.62(6) TCGA**
	(6) Subject to subsections (7) and (8) below,
(1) Where within the period of two years after a person's death—	where within the period of 2 years after a person's death
(a) any of the dispositions (whether effected by will, under the law relating to intestacy or otherwise) of the property comprised in his estate immediately before his death are varied, or	any of the dispositions (whether effected by will, under the law relating to intestacy or otherwise) of the property of which he was competent to dispose are varied, or
(b) the benefit conferred by any of those dispositions is disclaimed,	the benefit conferred by any of those dispositions is disclaimed,
by an instrument in writing made by the persons or any of the persons who benefit or would benefit under the dispositions,	by an instrument in writing made by the persons or any of the persons who benefit or would benefit under the dispositions—
	(a) the variation or disclaimer shall not constitute a disposal for the purposes of this Act, and
this Act shall apply as if the variation had been effected by the deceased or, as the case may be, the disclaimed benefit had never been conferred.	(b) this section shall apply as if the variation had been effected by the deceased or, as the case may be, the disclaimed benefit had never been conferred.

77.6.2 *Statements required*

s.142(2) IHTA	**s.62(7) TCGA**
(2) Subsection (1) above shall not apply to a variation unless the instrument contains a statement,	(7) Subsection (6) above does not apply to a variation unless the instrument contains a statement by

made by all the relevant persons,[4] to the effect that they intend the subsection to apply to the variation.	the persons making the instrument to the effect that they intend the subsection to apply to the variation.

77.6.3 *Variation for consideration*

s.142(3) IHTA	**s.62(8) TCGA**
(3) Subsection (1) above shall not apply to a variation or disclaimer made for any consideration in money or money's worth other than consideration consisting of the making, in respect of another of the dispositions, of a variation or disclaimer to which that subsection applies.	(8) Subsection (6) above does not apply to a variation or disclaimer made for any consideration in money or money's worth other than consideration consisting of the making of a variation or disclaimer in respect of another of the dispositions.

77.6.4 *Completion of administration*

s.142(6) IHTA	**s.62(9) TCGA**
(6) Subsection (1) above applies whether or not the administration of the estate is complete or the property concerned has been distributed in accordance with the original dispositions.	(9) Subsection (6) above applies whether or not the administration of the estate is complete or the property has been distributed in accordance with the original dispositions.

77.6.5 *IoV for charity*

For completeness: s.142(3A) IHTA provides:

> Subsection (1) does not apply to a variation by virtue of which any property comprised in the estate immediately before the person's death becomes property in relation to which section 23(1) applies unless it is

[4] Defined in s.142(2A) IHTA: "(2A) For the purposes of subsection (2) above the relevant persons are—
(a) the person or persons making the instrument, and
(b) where the variation results in additional tax being payable, the personal representatives.
Personal representatives may decline to make a statement under subsection (2) above only if no, or no sufficient, assets are held by them in that capacity for discharging the additional tax."

shown that the appropriate person[5] has been notified of the existence of the instrument of variation.

77.6.6 *IHT 2 year interest rule*

Section 142(4) IHTA provides:

> Where a variation to which subsection (1) above applies results in property being held in trust[6] for a person for a period which ends not more than two years after the death, this Act shall apply as if the disposition of the property that takes effect at the end of the period had had effect from the beginning of the period; but this subsection shall not affect the application of this Act in relation to any distribution or application of property occurring before that disposition takes effect.

77.6.7 *IoV and excluded property*

Section 142(5) IHTA provides:

> For the purposes of subsection (1) above the property comprised in a person's estate includes any excluded property but not any property to which he is treated as entitled by virtue of section 49(1) above or section 102 of the Finance Act 1986.

The IHT Manual provides:

> **IHTM35094 Redirection of excluded property** [Sep 2018]
> Another scheme (see also IHTM35093) where the taxpayers seek to take advantage of the provisions of IHTA84/S142 without there being a bona fide variation is where the estate contains excluded property (IHTM04251) such as government securities.
> The deceased, domiciled (IHTM13000) outside the UK, may leave property in this country to chargeable beneficiaries and excluded property to the spouse or civil partner (IHTM11032). An instrument of variation may then be used for the spouse's or civil partner's entitlement to be switched from excluded property to the ordinary UK estate without any change in the amount the spouse or civil partner receives.

[5] Section 142(3B) IHTA provides:
"For the purposes of subsection (3A) "the appropriate person" is—
(a) the charity or registered club to which the property is given, or
(b) if the property is to be held on trust for charitable purposes or for the purposes of registered clubs, the trustees in question."

[6] Section 142(7) IHTA provides:
"In the application of subsection (4) above to Scotland, property which is subject to a proper liferent shall be deemed to be held in trust for the liferenter."

> You should refer cases of this type immediately above to Technical without making any preliminary enquiries provided the basic facts are clear.

I do not understand in what sense it could be said that this is not a "bona fide variation".[7] Section 142(5) IHTA expressly envisages an IOV relating to excluded property.

A variation of this kind cannot sensibly be challenged if properly carried out. If the author's view of the spouse exemption is right, however, an IOV would not be necessary.[8] It may nevertheless be desirable as a useful precaution where a will has not been drafted in the manner recommended above.

77.7 Forced heirship/légitime/Sharia

77.7.1 *Heirship law background*

This section considers forced heirship. That includes:

(1) *Légitime* in civil law jurisdictions (in Scotland, *legitim*) (children's inheritance rights)
(2) Spouses' inheritance rights (in Scotland the technical term "legal rights" is used to refer to spouse rights and legitim[9])
(3) Sharia law inheritance rights

The holder of forced heirship rights is here called "the beneficiary".

The beneficiary may be entitled after the death of the testator:

(1) to override[10] dispositions in the will of the testator

[7] It would be different if there was an arrangement under which the spouse later swapped the UK property for the excluded property.

[8] See 76.5.2 (Spouse exemption/excluded property interaction).

[9] Section 36 Succession (Scotland) Act 1964 ("legal rights" means jus relicti, jus relictae, and legitim).

[10] The position could be different depending on the applicable law
(1) The effect of a forced heirship right may allow the beneficiary to set aside a provision in a will
(2) The effect of a forced heirship right may be that the beneficiary acquires the asset (ie the will is void ab initio).

But English law concepts such as void/voidable (which are themselves far from precise) would not easily be translatable into foreign legal systems. Forced heirship rules vary greatly between different jurisdictions, but in most if not all cases the beneficiary has to take some action to vindicate the right, so a provision in the will in breach of forced heirship rights is not void in the sense of being wholly ineffective. Certainly that was thought to be the case in *AG v Jewish Colonization Association*, discussed below, though that case concerned a lifetime gift, not a will.

(2) to set aside gifts made by the testator during his life

77.7.2 *Position in testator's lifetime*

It is well established that under English law,[11] a beneficiary under the will of a living person has no interest in the property of the testator. The interest of the beneficiary is described as a "mere expectancy". An assignment or disclaimer of a mere expectancy is not valid in English law.[12]

It follows that during the lifetime of the testator the beneficiary's expectancy is not an asset capable of giving rise to a gain for CGT, and is not property for the purpose of IHT.

A contract or undertaking to assign or disclaim during the lifetime of the testator may be valid, but the drafting would require some thought.

77.7.3 *Légitime and trust proper law*

AG v Jewish Colonization Association briefly discussed the proper law of a lifetime trust made by a settlor domiciled in a forced heirship jurisdiction. The settlor, Baron de Hirsch, domiciled in Austria, created a trust for himself for life, with remainder to charity. The issue was whether the trust property was subject to succession duty[13] on the settlor's death. The tax applied if the trust was governed by English law, which was held to be the case.[14] In this context:

> [Counsel for the taxpayer] argued that, if there had been children of the Baron's, inasmuch as by Austrian law an Austrian father cannot divest himself of property so as to impair the rights of his children to "legitim," and any alienation at any time having that effect may on the death of the father be set aside, to the extent to which it has that effect, Austrian and not English law governed the case.

The argument was that a trust made by an Austrian domiciliary must be governed by Austrian law, because of the impact, or theoretical impact,[15]

[11] Although a question of foreign law, the same must apply to a beneficiary who expects to acquire forced heirship rights on the death of a testator.

[12] *Smith v Smith* [2001] 1WLR 1937. Although strictly a question of foreign law, the same would apply *a fortiori* in the forced heirship jurisdiction.

[13] This interesting tax was repealed in 1949.

[14] The moral is that tax advice should have been taken before the trust was made.

[15] It would have been interesting if expert evidence had been provided as to the application of Austrian law in the case of a settlor who was domiciled in Austria but (though not stated in the decision) a German national. But it would have made no

of a légitime claim. That seems hopeless now (perhaps it was less clear in 1901):

> I do not agree. The trust and the administration of the trust can only be enforced or the trust got rid of by having resort to English law - i.e., to an English Court of justice. Till that has been done the English company [trustee] is entitled to hold the £7,000,000, subject, of course, to the [charitable trusts]. In any proceedings to set aside the trust evidence of what is the Austrian law as regards the father's rights might, I think, be given to shew that the trust was non-effective; but this question would have to be decided by an English Court before the company [the trustee] could be deprived of its money.[16]

I mention this for completeness, as it is the only tax case I know involving forced heirship; but proper law rarely matters for tax, now, except for the four surviving estate duty/IHT DTAs.[17] I do not think the case has much wider application.

77.7.4 *Forced heirship right: CGT*

After the death of the testator, a forced heirship right may be an asset for CGT purposes. So disclaimer or other disposal of the right may give rise to a chargeable gain. A remittance basis taxpayer may not be concerned as the asset, if it is one, is not (or at least is not likely to be) UK situate. If a gain is deemed to accrue on a disclaimer of the forced heirship right, the gain cannot be remitted to the UK.

Otherwise, a safe course (if practical) may be that the beneficiary disclaims the forced heirship right or enters into an instrument of variation, in writing, within two years of the death. The forced heirship right will then be ignored for CGT.[18] But the better view that the right is not an asset for CGT. This is part of the wider conundrum of the CGT analysis of beneficiary's rights in a deceased's estate. A beneficiary who exercises forced heirship rights acquires as legatee.

77.7.5 *Forced heirship right: IHT*

There are express IHT provisions, not discussed here, for legitim in

difference to the outcome.

[16] [1901] 1 QB 123 at p.133 approved in *Akers v Samba Financial Group* [2017] UKSC 6 at [23].

[17] See 115.6 (Proper-Law Rule).

[18] See 77.6.1 (IHT/CGT IoV reliefs).

Scotland.[19] This does not in terms apply to foreign forced heirship. The discrimination might not have been EU-law compliant, but post-Brexit the point may not arise.

If forced heirship relates to settled property (eg the property is settled by the will) the right may be a settlement power, ignored for IHT.[20]

Where a will makes a outright (non-settled) gift, subject to forced heirship rights, the beneficiary's forced heirship right (after the death of the testator) might be property for IHT purposes. A foreign domiciled beneficiary may not be concerned as the asset is not (or at least, is not likely to be) UK situate. Otherwise, a safe course (if possible) may be that the beneficiary disclaims the forced heirship right or enters into an instrument of variation, in writing, within two years of the death. The right will then be ignored for IHT.[21] But the better view is that a disclaimer is not a transfer of value,[22] and, perhaps, that the right is not property for IHT.

77.7.6 *Forced heirship right: IT*

HMRC appear to accept that disclaimer or non-exercise of the right does not make the beneficiary a settlor.[23] It does not constitute a transfer of assets for ToA purposes. It may be an associated operation, but the significance of that would need further consideration.

77.8 Family Provision Act claim

This section considers claims under family provision legislation, such as the Inheritance (Provision for Family and Dependents) Act 1975 and its foreign equivalents.

There are express provisions, not discussed here, for UK family provision legislation.[24] This does not in terms apply to foreign family provision legislation, though the discrimination might not be EU-law compliant.

Since the power of the Court under family provision legislation is

[19] Section 147 IHTA, supplemented by s.17(d) IHTA. See Kessler & Grant, *Drafting Trusts and Will Trusts in Scotland* (2nd ed., 2017), para 17.9 ("Legal rights" and NRBs).

[20] See 74.10 (Settlement powers).

[21] See 77.6.1 (IHT/CGT IoV reliefs).

[22] See 99.18.4 (Disclaimer: Tax consequences).

[23] See 99.18.5 (Person disclaiming: a settlor?).

[24] Section 146 IHTA.

discretionary, it is considered that the beneficiary’s right under the legislation is not an asset for CGT or property for IHT. The IT position is the same as for forced heirship, see above.

78.1 GWR: Introduction

Here is a rendezvous of questions and question marks! A full discussion needs a book to itself. I focus on matters closest to the themes of this book, but it is necessary to consider the provisions generally in order to see the issues in their context.

I do not consider the special rules for:

Topic	**Reference**
Land	s.102A-102C FA 1986
Insurance policies	Para 7 sch 20 FA 1986
Agricultural/business property relief	Para 8 sch 20 FA 1986
Double charges	IHT (Double Charges Relief) Regs 1987

The IHT Manual contains much fascinating material which cannot be set out here.

78.2 Purpose of GWR

In *Ingram v IRC*:[1]

> I should say something about the more general considerations involved in the application of s.102. Its policy has puzzled people for a long time. For one thing, it is in one sense a penal section. Not only may you not have your cake and eat it, but if you eat more than a few de minimis crumbs of what was given, you are deemed for tax purposes to have eaten the lot. Secondly, a superficial reading of phrases like 'beneficial enjoyment of the property' and enjoyment of property 'to the entire exclusion . . . of the donor' has led to numerous occasions in the past century in which the Revenue has put forward the proposition that, as a matter of practical common sense, it simply must be contrary to the policy of the statute for a donor to be able to give away property such as a house and go on enjoying the benefit of the property by continuing to live there. This is the premise upon which the Revenue claim the high ground of substance and reality. [Counsel for the Revenue] said that for Lady Ingram to have made a PET and retained the right to stay in the house was simply too good to be true ... But this approach ignores the fact that 'property' in s.102 is not something which has physical existence like a house but a specific interest in that property, a legal construct, which can co-exist with other interests in the same physical object. Section 102 does not therefore prevent people from deriving benefit from the object in which they have given away an interest. It

[1] *Ingram v IRC* [1999] STC 37 at p.41; for other aspects of this case see 83.2.2 (*Ingram* schemes). On identifying statutory purpose, see App 9.1 (Purpose of a statute).

> applies only when they derive the benefit from that interest.
>
> If Lady Ingram had been dealing with a fund of investments instead of a house, she would have had no difficulty in achieving the same result, in economic terms, as the transaction in this case. She could have used part of the fund to purchase an annuity which would have guaranteed her exactly the same income as she had been receiving from the fund and given away the rest. Unless she needed to resort to capital, her outward circumstances would have continued unchanged. Why should it make a difference that her asset happened to consist of land? ...
>
> What, then, is the policy of s.102? It requires people to define precisely the interests which they are giving away and the interests, if any, which they are retaining. Once they have given away an interest they may not receive back any benefits from that interest. In *Lang v Webb*[2] Isaacs J suggested that the policy was to avoid the 'delay, expense and uncertainty' of requiring the Revenue to investigate whether a gift was genuine or pretended. It laid down a rule that if the donor continued to derive any benefit from the property in which an interest had been given, it would be treated as a pretended gift unless the benefit could be shown to be referable to a specific proprietary interest which he had retained. This is probably the most plausible explanation ...

78.2.1 *GWR and the GAAR*

HMRC draft GAAR guidance provided:[3]

> ***4.1.2 The scheme***
>
> *J grants a long lease over his home to S for no consideration, to take effect in 20 years time. ... J is able to continue to occupy the property for the next 20 years as he continues to own the freehold.*
>
> *The result of the scheme is that J has divided his home into two different interests: the lease and the freehold.*
>
> *J has gifted the lease of his home to S. J has also retained the freehold, which diminishes in value over the following 20 years.*

This is a slight variant of the *Ingram* arrangement[4] but the conveyancing details do not matter here.

> ***4.1.4 The taxpayer's tax analysis***
>
> *The interest given away (the lease to take effect in 20 years time) is a potentially exempt transfer under section 3A, IHTA 1984 and will be exempt from IHT provided J survives*

[2] (1912) 13 CLR 503.

[3] HMRC, "GAAR Guidance- Consultation Draft Part B Examples of How the GAAR Applies to Tax Arrangements" (December 2012).

[4] See 83.2.2 (*Ingram* schemes).

for 7 years after the gift.

The interest retained (the freehold subject to the lease) is reducing in value as the time for the lease to take effect approaches, so reducing the value of J's estate that will be subject to IHT on death.

As the time for the lease to take effect approaches, the value of the asset transferred to S increases, but without giving rise to a charge to IHT.

4.1.5 What is the GAAR analysis under clause 2(2)?

4.1.5.1 Are the substantive results of the arrangements consistent with any principles on which the relevant tax provisions are based and the policy objectives of those provisions?

In 1975 Capital Transfer Tax ("CTT") replaced Estate Duty with the aim of reducing avoidance[5] *through giving property away before death. Under CTT, all disposals of property, whether to individuals or into trust were immediately subject to tax. By 1986, CTT was seen as an inhibitor to the transfer of wealth, so transfers between individuals and to certain favoured*[6] *trusts were exempted from charge (provided the donor survived 7 years). Provisions were introduced to prevent the avoidance of the charge on death by gifts where the donor continues to benefit from the gift. And the tax was renamed. The purpose of these provisions was published in the Budget Press Release in March 1986. The scheme allows the taxpayer to 'have their cake and eat it' since an interest in J's home is given away and will be free from IHT provided J survives 7 years; yet J is still able to live in and enjoy his home; the value of which is reducing as the commencement of the lease draws ever closer. This is not consistent with the principles or policy objectives of the reservation of benefit provisions.*

4.1.5.2 Does the means of achieving the substantive tax results involve one or more contrived or abnormal steps?

Absent the arrangements, had J given his home to S and continued to live there rent-free, there would have been a clear reservation of benefit in the property. The property would have formed part of J's estate on death and the full value of the property at that time would have been subject to IHT. Simply making a gift of his home to S whilst continuing to live there might be considered a 'normal' step for J to take, as opposed to the "abnormal steps" which J did take.

The intermediate step taken by J in granting a long lease for no consideration, the commencement of which is deferred for a period of time, is contrived and is inserted purely to gain a tax advantage.

4.1.5.3 Are the arrangements intended to exploit any shortcomings in the relevant tax provisions?

The gifts with reservation rules in section 102, FA 1986 cover a situation where an individual disposes of property by way of gift, but does not fully give away the ability to enjoy that property. The rules do not cover a situation where an individual creates two different interests in that property, and gives one interest away and retains the other.

In both situations the non-tax result for the individual may be the same. However, in the first situation the reservation with benefit rules apply. In the second situation, the rules

[5] This is tendentious: see 3.22 (Intention: parliament\government).

[6] This adjective is tendentious; but that does not affect the policy issues discussed here, and any one-paragraph summary of CTT must oversimplify.

do not apply.
The failure of the rules to cover a situation where an individual creates two different interests in a property is a shortcoming that the scheme is intended to exploit.
4.1.5.4 Do the tax arrangements accord with established practice and has HMRC indicated its acceptance of that practice?
HMRC has not indicated that these arrangements give rise to the claimed tax result.[7]
4.1.6 Conclusion
On the facts given, the arrangements are abusive arrangements to which HMRC would seek to apply the GAAR.

In an early test of the GAAR advisory panel, this passage was deleted from the GAAR guidance. The guidance now provides:

> D27.5.1 ... In [*Ingram*], the House of Lords held that the policy of the legislation was to identify precisely what property had been given away by the donor and what (if anything) was retained. They noted that there is nothing in principle behind the 'gifts with reservation' provisions that stops the donor carefully dividing up his cake, giving away a slice and retaining the remaining cake. Continued enjoyment of the latter does not amount to a reservation in the former. Arrangements of the type adopted are known as 'shearing' operations.
> Ss102A–102C FA 1986 were introduced to stop 'shearing' arrangements in relation to certain 'carve out' schemes over land. Therefore the policy on such arrangements has clearly been altered by legislation and the effect of the GAAR in relation to such tax schemes must be considered in this light. However, this does not mean that all 'carve out' arrangements have been stopped. The House of Lords has indicated that such arrangements are not necessarily[8] against the principles behind the legislation and no legislative action has been taken in relation to other types of assets to stop such arrangements. The discounted gift scheme can be seen as a classic shearing operation on property other than land.[9]

78.3 Basic GWR conditions

Section 102(1) FA 1986 provides:

[7] I wonder about that. *Ingram* arrangements (*avant la lettre*) were used in the 1960's and never challenged. But that does not affect the policy issue discussed here.

[8] This is a somewhat tendentious summary of the view expressed in *Ingram*; but perhaps it does not matter.

[9] HMRC, "GAAR Guidance" Part D (2017)
https://www.gov.uk/government/publications/tax-avoidance-general-anti-abuse-rules

> Subject to subsections (5) and (6) below,[10] this section applies where, on or after 18 March 1986, an individual disposes of any property by way of gift and either—
>
> (a) possession and enjoyment of the property is not bona fide assumed by the donee at or before the beginning of the relevant period;[11] or
>
> (b) at any time in the relevant period the property is not enjoyed to the entire exclusion, or virtually to the entire exclusion, of the donor and of any benefit to him by contract or otherwise ...

There are two sets of conditions:

(1) An individual (in this chapter the "**donor**") makes a disposal of property by way of gift. There are three separate elements here: a *disposal*, of *property*, which must be *by way of gift.*

(2) Condition (a) or (b) above must be satisfied (a reservation of benefit).

78.4 GWR terminology

Section 102(2) FA 1986 defines "**property subject to a reservation**":

> If and so long as—
>
> (a) possession and enjoyment of any property is not bona fide assumed as mentioned in subsection (1)(a) above, or
>
> (b) any property is not enjoyed as mentioned in subsection (1)(b) above,
>
> the property is referred to (in relation to the gift and the donor) as property subject to a reservation.

I coin the following terminology:

My term	Meaning
GWR property	Property subject to a reservation
Settled GWR property	GWR property (gift to a trust)
Non-settled GWR property	GWR property (gift not to a trust)

[10] These exemptions are as follows:

Section	Topic	See
s.102(5)(a)	GWR spouse exemption	78.10
s.102(5)(b)ff	Misc minor reliefs	78.11
s.102(6)	Pre-1986 insurance policy	78.23.1

[11] Section 102(1) provides:

> ... "in this section 'the relevant period' means a period ending on the date of the donor's death and beginning seven years before that date or, if it is later, on the date of the gift."

GWR death charge	Charge imposed by s.102(3) FA 1986
GWR PET charge	Charge imposed by s.102(4) FA 1986

78.5 Disposal by way of gift

There is no definition of "disposal by way of gift".

The surrender of a lease or life interest is arguably not a disposal.

It is considered that giving consent to an exercise of a power of advancement or appointment is not a disposal.

It is considered that a transfer to a settlement in which the settlor has an estate interest in possession is a disposal by way of gift, but from 2006 this issue will not usually arise.

GWR only applies if an *individual* makes a disposal by way of gift. If a company makes a gift, the shareholder or shareholders do not make a disposal by way of gift.[12]

A sale at market value, where the purchase price is left outstanding as an interest-free loan, repayable on demand, is not a disposal by way of gift. A sale at an undervalue may not be a disposal "by way of gift".[13]

An interest-free loan is not a disposal by way of gift.[14]

78.6 Reservation of benefit

When (re)introduced in 1986, the wording of s.102(1)(a)(b) was regarded as exceptionally, even scandalously, vague. But it does not seem exceptional by the standards of contemporary anti-avoidance legislation.

While in most cases the matter will be clear enough there are significant areas of uncertainty. HMRC guidance helps in some cases.

78.6.1 *Gift to settlor-interested trust*

IHT Manual provides:

> **IHTM14393 Settlement on discretionary trusts** [Aug 2016]
> If a donor makes a settlement and is one of the members of the discretionary class of beneficiaries, this is a GWR.

[12] This seems clear from first principles but for completeness, this view is supported by the fact that the shareholders are not transferors for the purposes of s.720; see 49.6 (Shareholders not transferors).

[13] This view is supported by the drafting of para 2(4) sch 20 FA 1986: see 78.21.1 (Gift by donee). See too *AG v Rosenlund* [2016] JRC 062 at [38]-[39].

[14] This view is supported by the drafting of para 5(4) sch 20 FA 1986: see 78.22.3 (Loan to trust).

- The donor's position as a member of the discretionary class of beneficiaries is not an equitable interest retained by them (and so not included in the gift) and
- as the donor is a member of the class, they have not been excluded (IHTM14333), or virtually excluded, from enjoyment. The fact that they do not receive any tangible benefit during the relevant period is immaterial.

This is correct.[15]

It is considered that the same in principle applies where an individual makes a gift to a discretionary trust under which:

(1) the settlor is not included in the class of beneficiaries; but
(2) the trustees have an unrestricted power to add the settlor to the class of beneficiaries.

After some vacillation, HMRC agree.[16] The IHT Manual continues:

> **Discretionary class**
> If a donor settles property on discretionary trusts and is one of the discretionary class of beneficiaries, the gift is a GWR. However, a donor who is not named as a member of the discretionary class may
> - become one if the trustees have power to extend the class of beneficiaries, or
> - benefit if their spouse or civil partner is a beneficiary.
>
> **Example 1** (Anthony)
> A transfers assets into a discretionary settlement under which he is not included in the class of beneficiaries. There is however power to the trustees to add beneficiaries including A to the class at some future date. That A can be considered as a potential beneficiary is sufficient to say that the trust fund is not enjoyed to the entire or virtually to the entire exclusion of benefit to him under the settlement and the gift will be a GWR (*IRC v Eversden* [2003] STC 822). Only if the trust irrevocably excludes A from being a beneficiary under the trust will a GWR not arise.

The position however depends on the proper law and the terms of the trust. For instance, s.9(9) [Malta] Trusts and Trustees Act 1989 provides:

> A person who may be added as a beneficiary in terms of a power

[15] *IRC v Eversden (Greenstock's Executors)* [2002] EWHC 1360 (Ch) at [17]; on the appeal, CoA did not consider this point. *Lyon v HMRC* [2007] UKSPC SPC616.

[16] The text of the Manual changed materially in 2014.

> granted to the trustee
> [a] shall not enjoy any rights in relation to the trust property or against the trustee and
> [b] shall not be considered a beneficiary in any manner until appointed as a beneficiary by the trustee.

It is arguable there is no gift with reservation of benefit in a case where:

(1) the trustees have power to add beneficiaries but
(2) the donor does not "enjoy any rights in relation to the trust property or against the trustee" (whether as a result of the proper law or the drafting of the specific trust).[17]

But it would be better not to plan on that basis.

78.6.2 *Benefit to spouse*

A benefit to a spouse does not count. The Manual passage continues:

> **Example 2** (Anthony)
> A makes a discretionary settlement. The class of beneficiaries includes A's wife, but not himself.
> This does not constitute a reservation but if A shares any benefit (IHTM14339) taken by A's wife, this can be a GWR. You should consider whether a GWR claim is appropriate.

78.6.3 *A gives to B + B gives to trust*

The position is different where:

(1) A makes a gift to B.
(2) Later, by an independent transaction, B creates a discretionary trust under which A is a beneficiary (or where A can be added as a beneficiary).

In these circumstances A is *not* the settlor. It is considered that there is no reservation merely because A is a discretionary beneficiary. There will be a gift with reservation if A actually receives a benefit.

78.6.4 *"Virtually" excluded*

This concept matters for several purposes:

(1) GWR
(2) Remittance conditions C and D[18]

[17] It is assumed that the donor does not enjoy any other benefits from the trust.
[18] See 18.29.4 (Enjoyment disregards).

(3) With an economy of concepts, HMRC apply their guidance to the conceptually distinct issue of whether a person "occupies" land, ie a person "virtually" excluded from land is not an occupier[19]

So the topic often arises.

RI 55 provides:

> The word "virtually" in the de minimis rule in FA 1986 s 102(1)(b) is not defined and the statute does not give any express guidance about its meaning. However, the shorter Oxford English Dictionary defines it as, amongst other things, "to all intents" and "as good as". Our interpretation of "virtually to the entire exclusion" is that it covers cases in which the benefit to the donor is insignificant in relation to the gifted property.
>
> It is not possible to reduce this test to a single crisp proposition. Each case turns on its own unique circumstances and the questions are likely to be ones of fact and degree. We do not operate s 102(1)(b) in such a way that donors are unreasonably prevented from having limited access to property they have given away and a measure of flexibility is adopted in applying the test.

These generalities do not take us far. RI 55 goes on to give more concrete examples:

> Some examples of situations in which we consider that FA 1986 s 102(1)(b) permits limited benefit to the donor without bringing the GWR provisions into play are given below to illustrate how we apply the de minimis test—
>
> [1] a house which becomes the donee's residence but where the donor subsequently—
>
> – stays, in the absence of the donee, for not more than two weeks each year, or
> – stays with the donee for less than one month each year;
>
> [2] social visits, excluding overnight stays made by a donor as a guest of the donee, to a house which he had given away. The extent of the social visits should be no greater than the visits which the donor might be expected to make to the donee's house in the absence of any gift by the donor;
>
> [3] a temporary stay for some short term purpose in a house the donor had previously given away, for example—

[19] "Occupy" is a concept which matters for many tax purposes; see 83.3.1 ("Occupation").

> – while the donor convalesces after medical treatment;
> – while the donor looks after a donee convalescing after medical treatment;
> – while the donor's own home is being redecorated;
> – visits to a house for domestic reasons, for example baby-sitting by the donor for the donee's children;
>
> [4] a house together with a library of books which the donor visits less than five times in any year to consult or borrow a book;
> [5] a motor car which the donee uses to give occasional (ie less than three times a month) lifts to the donor;
> [6] land which the donor uses to walk his dogs or for horse riding provided this does not restrict the donee's use of the land.

There follow some examples of where there is a benefit:

> It follows, of course, that if the benefit to the donor is, or becomes, more significant, the GWR provisions are likely to apply. Examples of this include gifts of—
> [1] a house in which the donor then stays most weekends, or for a month or more each year;
> [2] a second home or holiday home which the donor and the donee both then use on an occasional basis;
> [3] a house with a library in which the donor continues to keep his own books, or which the donor uses on a regular basis, for example because it is necessary for his work;
> [4] a motor car which the donee uses every day to take the donor to work.[20]

The RDR Manual gives an example of a car, in the context of remittance condition C:[21]

> **RDRM33270 Condition C -enjoyment by a relevant person ignored**
> [Jan 2019]
> *[James ("B") and Julia ("S")]*
> B, a remittance basis user, gives his sister S £10,000 of his foreign income. This money is qualifying property of a gift recipient. The following year S brings the money to the UK to purchase a car for £10,000.
> B visits S two or three times a year and while there he occasionally uses

[20] The same passage is found in IHTM14333 (modernised in 2010 to gender inclusive language).

[21] See 18.29.4 (Enjoyment disregards).

her car to run errands. Otherwise the car is used only by S. Although there is enjoyment by a relevant person (B) of qualifying property (the car acquired with the foreign income), the enjoyment is marginal and may be disregarded.

Although the car is registered in S's name, S gives B the car to use every weekend and also for a long-distance journey every second month. B's enjoyment of the car is not 'marginal'.

78.6.5 *Exclusion from part*

Suppose S makes a gift to a settlor-interested trust, and later a separate subfund ("the excluded fund") is created and S is wholly excluded from that fund. Does the excluded fund cease to be property subject to a reservation? Is the position better if the excluded fund (or the non-excluded fund) is transferred to a separate settlement? Discuss.

78.6.6 *Benefit: associated operations*

Para 6(1)(c) sch 20 FA 1986 provides:

> a benefit which the donor obtained by virtue of any associated operations (as defined in section 268 of the 1984 Act) of which the disposal by way of gift is one shall be treated as a benefit to him by contract or otherwise.

See 74.11 (Associated operation). I am not sure this makes much difference in practice, but it shows that the concept of "benefit by contract or otherwise" is to be widely understood.

78.7 Full consideration exemption

Para 6(1) sch 20 FA 1986 provides:

> In determining whether any property which is disposed of by way of gift is enjoyed to the entire exclusion, or virtually to the entire exclusion, of the donor and of any benefit to him by contract or otherwise—
>
> (a) in the case of property which is an interest in land or a chattel, retention or assumption by the donor of actual occupation of the land or actual enjoyment of an incorporeal right over the land, or actual possession of the chattel shall be disregarded if it is for full consideration in money or money's worth;

RI 55 provides:

> ... we take the view that full consideration [for the GWR rule] is required throughout the relevant period—and therefore consider that

the rent paid should be reviewed at appropriate intervals to reflect market changes.

See App 4.9 (Market value/full consideration).

78.8 IHT on disposal by way of gift

A gift which is a chargeable transfer will give rise to a charge to IHT (assuming it exceeds the nil rate threshold) whether or not it is a gift with reservation.[22] The reservation of benefit does not affect the lifetime charge; it just imposes a further charge on the death of the donor. The Inheritance Tax (Double Charges Relief) Regulations 1987 mitigate a double charge. This chapter does not consider the IHT which might arise on a disposal by way of gift; it considers only the GWR aspects.

78.9 Gift of excluded property

GWR applies when an individual disposes of property by way of gift. A foreign domiciliary is "an individual". A gift of UK situate property by a foreign domiciliary is clearly within the GWR rule.

What is the position where a foreign domiciliary disposes of excluded property by way of gift? That is not a transfer of value.[23] The question is

[22] The IHT Manual seems to make this somewhat elementary error:

"**IHTM14316 Sales for less than full consideration** [Sep 2018]

Example 1 (Robert and James)

In 2011 R sold a house, then worth £100,000, to his son, J, for £25,000. This is a disposition partly by way of sale and partly by way of gift. R dies in 2013.

If R has been excluded from enjoyment of the property throughout the period, the gift is a PET chargeable on his death. The loss to his estate is the value of the entirety of the property less the consideration received (£100,000 less £25,000 = £75,000).

[The correct view is that the sale is a PET whether or not the donor is excluded]

If R was not excluded from enjoyment of the property, for instance because he resided at the property following the disposition, the disposal by way of gift is a GWR. The value of the property disposed of by way of gift is 75% of the value of the whole property. Thus, if the property is still subject to a reservation immediately before R's death, 75% of its death value is treated as property to which R was beneficially entitled."

[This is very doubtful; no property is disposed of by way of gift]

[23] Section 3 IHTA provides:

(1) ... a transfer of value is a disposition made by a person (the transferor) as a result of which the value of his estate immediately after the disposition is less than it would be but for the disposition...

(2) For the purposes of subsection (1) above no account shall be taken of the value

whether disposal "by way of gift" here means: by way of a disposition which is a transfer of value.

I mention some preliminary points to clear them out of the way:

(1) Section 3(2) IHTA does not in its terms support the view that a gift of excluded property is not a gift for the purposes of GWR. The subsection is expressed to apply "for the purposes of s.3(1)." It is not expressed to apply for other purposes. We are looking for a purposive (non-literal) construction.

(2) The operation of ten year/exit charges and gift with reservation on death of the settlor is harsh. But the effect of the GWR rule is always to double the potential IHT charges, as property subject to a reservation is taxed in the estate of the donee and the donor. Moreover the severity is in part attributable to the 10 year/exit charge regime, which in general taxes settled property more severely than non-settled property.

It is possible for the Courts to imply a territorial limitation beyond that set out in the statute, but it needs a strong case to do that.[24] Is that case made out here? If GWR applies on a gift of excluded property, there would be a charge to IHT in circumstances where:

(1) a foreign domiciliary with no UK connection makes a gift of excluded (foreign) property to another person with no UK connection, and enjoys some benefit; and

(2) the donor dies many years later at a time when the gifted property, or property representing it, is not excluded property (eg situate in the UK or within IHTA sch A1).

It is not easy for the foreign domiciled donor or their executors to comply with an obligation to pay IHT in such circumstances. But if GWR does not apply in these circumstances, there is some scope for what may be regarded as avoidance. There is at least some UK connection in the IHT charge, in that the property must be UK situate or non-excluded property at the time the charge arises.

Suppose a foreign domiciled individual makes a gift of excluded property to their spouse. On the literal construction, the gift will fall within GWR. A gift of excluded property is not a transfer of value, so not

of excluded property which ceases to form part of a person's estate as a result of a disposition.

[24] See 16.11 (General territorial principle).

an exempt transfer, so it is outside the scope of the GWR spouse exemption. [25] That is anomalous. This consideration does support the argument that gifts of excluded property are not "by way of gift" (and the same argument might apply to any gifts which are not transfers of value, though we need not go that far). But:

(1) Taxpayer arguments based on anomalies are not the most powerful of arguments.
(2) Assuming, by a purposive (non-literal) construction, inter-spouse gifts of excluded property must be taken to fall within the relief in s.102(5), a Court may say that it does not follow that all gifts of excluded property are outside the GWR rule.

In s.3A IHTA gift is defined to mean "transfer of value". Section 3A was introduced by s.101 FA 1986. It might be argued that it would be strange for gift to have a different meaning in the next section, s.102. I do not find this a strong argument, as the wording is different and because inferences from inconsistency in drafting are based on the doubtful assumption that tax legislation is always drafted with consistent wording.

The use of the label "excluded property" suggests the property is regarded as excluded from IHT. But labels used in definitions are only brief descriptions, so the argument is not very strong. In addition, exempt transfers under s.19 IHTA are clearly within GWR (they are omitted from the list of reliefs in s.102(5) FA 1986) even though described as "exempt".

Earlier editions of this work took a more optimistic view. But reviewing the arguments above, it is considered that the better view is that a gift of excluded property is within GWR. HMRC take that view.

This view will sometimes favour the taxpayer, as it means that the POA GWR exemption would be available.[26] But it is not necessary to pursue that here.

78.10 GWR spouse exemption

This section considers the GWR position on inter-spouse gifts.

Section 102(5) FA 1986 provides a set of 10 reliefs. The first is:

> This section does not apply if or, as the case may be, to the extent that the disposal of property by way of gift is an exempt transfer by virtue of any of the following provisions of Part II of the [IHTA],–

[25] See 78.10.1 (H gives excluded property to W).

[26] See 83.19 (GWR exemptions).

> (a) section 18 (transfers between spouses or civil partners);

In the following discussion:
"General IHT spouse exemption" is the IHT exemption on inter-spouse transfers in s.18 IHTA.[27]
"**GWR spouse exemption**" is the GWR exemption in s.102(5)(a).

In short, the GWR rules do not apply on gifts between spouses if the general IHT spouse exemption applies.

Where a UK domiciled individual makes a gift to a foreign domiciled spouse, the IHT spouse exemption is restricted[28] and a gift over the limit will be within the scope of GWR, unless some other exemption[29] is in point. One solution to this problem is to sell assets at market value, so there is no disposal by way of gift. Watch the SDRT/SDLT implications.

One common situation is where one spouse gives an interest in the family home to the other spouse, but as long as the property is jointly occupied, there is in principle no GWR: see s.102B FA 1986.

78.10.1 *H gives excluded property to W*

What is the position when a foreign domiciled individual makes a gift of excluded property to their spouse? On a literal construction, the gift will fall within the GWR rules. A gift of excluded property is not a transfer of value, so not an exempt transfer, so it is outside the scope of the GWR spouse exemption! But that is absurd and cannot be the correct construction, even if words must be strained to reach this result. [30]

78.10.2 *Spouse exemption restricted*

Section 102 FA 1986 provides:

> (5A) Subsection (5)(a) above does not prevent this section from applying if or, as the case may be, to the extent that—

[27] For the IHT spouse exemption generally see 76.5.1 (Spouse exemption: Introduction); see too 78.19 (GWR on death: Spouse exemption).

[28] See 93.2 (Restriction on IHT spouse exemption for foreign domiciled spouse).

[29] Such as the family maintenance exemption: see 93.4 (Disposition for maintenance of spouse and other exemptions).

[30] If this view were wrong the further anomaly would arise that gifts of qualifying investments to charity would fall within the scope of GWR because such gifts fall within s.12 IHTA and not s.102(5)(d) FA 1986; but it is not necessary to pursue that here.

> (a) the property becomes settled property by virtue of the gift,
> (b) by reason of the donor's spouse or civil partner ("the relevant beneficiary") becoming beneficially entitled to an interest in possession in the settled property, the disposal is or, as the case may be, is to any extent an exempt transfer by virtue of section 18 of the 1984 Act in consequence of the operation of section 49 of that Act (treatment of interests in possession),
> (c) at some time after the disposal, but before the death of the donor, the relevant beneficiary's interest in possession comes to an end, and
> (d) on the occasion on which that interest comes to an end, the relevant beneficiary does not become beneficially entitled to the settled property or to another interest in possession in the settled property.
>
> (5B) If or, as the case may be, to the extent that this section applies by virtue of subsection (5A) above, it has effect as if the disposal by way of gift had been made immediately after the relevant beneficiary's interest in possession came to an end.
>
> (5C) For the purposes of subsections (5A) and (5B) above—
> (a) section 51(1)(b) of the 1984 Act (disposal of interest in possession treated as coming to end of interest) applies as it applies for the purposes of Chapter 2 of Part 3 of that Act; and
> (b) references to any property or to an interest in any property include references to part of any property or interest.

This stopped *Eversden* schemes;[31] it is now unnecessary, because of s.102ZA, the POA rules, and the 2006 IHT trust tax reforms; it should be repealed.

78.11 GWR exempt transfer reliefs

In addition to the GWR spouse exemption, s.102(5) FA 1986 provides 9 further minor reliefs, numbered semi-alphabetically:

> This section does not apply if or, as the case may be, to the extent that the disposal of property by way of gift is an exempt transfer by virtue of any of the following provisions of Part II of the 1984 Act- [32]

Para	IHTA	Topic
(a)	s.18	transfers between spouses
(b)	s.20	small gifts

[31] See 83.2.1 (Eversden schemes).

[32] For clarity I have set this out in tabular form rather than the layout of the statute.

(c)	s.22	gifts in consideration of marriage or civil partnership
(d)	s.23	gifts to charities
(e)	s.24	gifts to political parties
(ee)	s.24A	gifts to housing associations
(f)[33]	s.25	gifts for national purposes, etc
(h)	s.27	maintenance funds for historic buildings
(i)	s.28	employee trusts and
(j)	s.28A	employee-ownership trusts

Thus most types of exempt transfer are outside GWR, though the annual exemption (s.19 IHTA) is omitted from this list, no doubt deliberately.

78.12 GWR death charge

Section 102(3) FA 1986 provides:

> If, immediately before the death of the donor, there is any property which, in relation to him, is property subject to a reservation then ... that property shall be treated for the purposes of the [IHTA] as property to which he was beneficially entitled immediately before his death.

I refer to this as the "**GWR death charge**".

CGT rebasing on death does not apply.[34] That might be an accident, an absence of joined-up thinking, or it might be a deliberate decision to penalise or discourage reservations of benefit.

Section 102(3) is a deeming provision; the donor is not in fact beneficially entitled to the property subject to the reservation but the property is treated as if they were so entitled. To understand the significance of this, it is necessary to set out the short series of sections that impose an inheritance tax charge on property to which a person is beneficially entitled at death.

Section 4(1) IHTA imposes the IHT charge on death:

> On the death of any person tax shall be charged as if, immediately before his death, he had made a transfer of value and the value transferred by it had been equal to the value of his estate immediately before his death.

The key word here is "estate". Section 5(1) IHTA defines estate by

[33] There is no para (g).

[34] See 88.5.1 (Rebasing on death).

reference to beneficial entitlement:

> .... a person's estate is the aggregate of all the property to which he is beneficially entitled, except that ...
>
> (b) the estate of a person immediately before his death does not include excluded property ...

So if there is a GWR until death and the property is *not* excluded property:
(1) the property is treated as property to which the donor was beneficially entitled (in all cases);
(2) the property is part of their estate.

If there is a GWR until death and the property *is* excluded property:
(1) the property is treated as property to which the donor was beneficially entitled (in all cases);
(2) the property is not part of their estate.

78.13 GWR over debt owed by deceased

Suppose:
(1) S creates a discretionary settlement under which S is a beneficiary.
(2) The trustees lend to S.
(3) S dies.
The debt ("the GWR debt") is treated as being in the estate of S. However a person cannot owe a debt to himself or herself. If the GWR debt is treated as property beneficially owned by the debtor, it must be treated as if it ceased to exist. For this reason there is no IHT charge on the debt under the GWR rules, on the death of S, even if the GWR debt is UK situate.[35]

78.14 Death: Non-settled excluded prop

Suppose:
(1) A gives property to B, an individual, outright.
(2) There is a reservation of benefit: A enjoys benefits at the time of A's death.
(3) The property is not UK situate at the time of A's death.

A is treated as if A were beneficially entitled to the property at the time of

[35] If the debt is non-UK situate it may also be outside the scope of IHT because of the excluded property rules. On the question of a deduction for the GWR debt, see 80.13.3 (Settlor debt to settlor-interested discretionary trust).

A's death. It forms part of their estate unless it is excluded property at that time. How do the excluded property rules work in these circumstances?

Here we are concerned with non-settled property. The relevant rule is that:

> Property situated outside the UK is excluded property if the person beneficially entitled to it is an individual domiciled outside the UK.[36]

In the example above, B is *in fact* beneficially entitled to the property. A is *treated* as beneficially entitled. Who is "beneficially entitled" for the purpose of applying the excluded property rule; is it A or is it B? This does not matter if A and B are both foreign domiciled, but it does if one is and the other is not. One common case is in a gift from a UK domiciled donor to their foreign domiciled spouse.[37] The answer is to be found by applying the general rule of construction which applies to deeming provisions.[38] Applying this principle it follows that the domicile of the donor A is what matters for excluded property status. Thus if A has a foreign domicile, the property (if not UK situated) is excluded property. The domicile of the donee B is irrelevant. This conclusion is confirmed by the context. It would be absurd if the taxation of A depended on the domicile of B. The taxation of A should depend on A's own domicile position.

For the purposes of the excluded property rule, therefore:

(1) The domicile of the donor at the time of gift is irrelevant (contrast the position where the gift is made in trust).[39]

(2) The situs of the property at the time of the gift is irrelevant to the operation of the excluded property rules on the death of the donor.

HMRC agree. The IHT Manual provides:

> **IHTM14318 The gift: exempt transfers which cannot be GWRs** [Aug 2016]
>
> ...
>
> *Excluded property*
>
> Under the charging provisions (IHTM04072), excluded property (IHTM04251) cannot be the subject of a GWR...

[36] Section 6(1) IHTA.

[37] See 78.10 (GWR spouse exemption).

[38] See App 8.2 (Deeming provisions: Construction).

[39] See 78.15 (GWR death charge: excluded property rules for settled property) below.

> *Example*[40]
> Example 3 (George)
> G is originally domiciled in the UK, but moves to New Zealand and acquires a domicile of choice there. He gives some New Zealand shares to his son, R, but continues to enjoy the dividends until his death ten years later. He dies domiciled in New Zealand.
> The property is subject to a reservation and is therefore deemed to be part of G's estate on death. However, the property is situated outside the UK and the donor, who is treated as beneficially entitled to it, was domiciled outside the UK at his death. The property is therefore excluded property within IHTA84/S6 (1) and escapes the GWR charge.

This is correct; but the fact that G had a domicile of origin in the UK, and was not UK domiciled at the time of the gift, is not relevant: All that matters is domicile at the time of death.

The Manual continues with a variant of these facts:

> However, if G had returned to the UK and his domicile of origin had revived, there will be a GWR claim on his death, or if the reservation had ceased in his lifetime and within 7 years of his death, the ending of the reservation will be treated as a deemed PET. This is because at the time the GWR charge arises, G is domiciled in the UK so IHTA84/S6(1) does not apply...

While it is correct that s.6(1) does not apply on the facts of this version of the example, it is arguable that there is no GWR for other reasons.[41]

The same applies to gifts to companies, including companies held by trusts.

78.15 Death: Settled excluded property

Suppose:

(1) S (not UK domiciled) gives property to a settlement.
(2) There is a reservation of benefit, eg S is a beneficiary.
(3) The property is not UK situate[42] at the time of the death of S.

S is treated as if S were beneficially entitled to the property at the time of S's death. It forms part of S's estate unless it is excluded property at that time. How do the excluded property rules work in these circumstances?

[40] This example was reworded and improved in 2010, probably in response to criticisms of the former wording in the 2010/11 edition of this book.

[41] See 78.9 (Gift of excluded property).

[42] The position is the same if the property consists of UK AUTs or OEICs, but for convenience I refer to non-UK situate property only.

78.15.1 *Rival solutions*

There are two sets of excluded property rules, relating to settled and non-settled property. Which does one apply?

The Settled Property Solution The property subject to a reservation is in fact settled property, so on this view one applies the settled property rules set out in s.48(3) IHTA:

> Where property comprised in a settlement is situated outside the UK–
> (a) The property ... is excluded property unless the settlor was domiciled in the UK at the time the property became comprised in the settlement. ...

So on this view, where an individual makes a gift to a settlement with reservation of benefit, and dies, the property is excluded property for the GWR rules if:

(1) the donor is domiciled outside the UK at the time the property was transferred to the trust. (The domicile of the donor at the time of death is irrelevant); and
(2) the property is not situated in the UK at the time of death.

I call this the "**Settled Property Solution**".

The Non-settled Property Solution The settled property GWR is to be treated as property to which the donor is "beneficially entitled". On this view one applies the deeming provision to its logical conclusion: if a person is beneficially entitled to property, it is not settled property. So on this view, where an individual makes a gift to a settlement with reservation of benefit, and dies, the property is excluded property for the GWR rules if:

(1) the donor was domiciled outside the UK at the time of their death. (The domicile of the donor at the time the property was transferred to the trust is irrelevant for GWR, though it is relevant for other purposes); and
(2) the property is not situated in the UK at the time of death.

I call this the "**Non-settled Property Solution**".

78.15.2 *Correct solution*

The Non-settled Property Solution has had supporters.[43] Nevertheless it

[43] Venables, "Excluded Property Trusts and GROBs" [2003] OITR Vol 11 p.75 *http://www.khpplc.co.uk/reviews* Akin, *GITC Review*, Vol 1 Issue 2, p.1 (no longer

is generally regarded as wrong. What about the deeming provision that the property is to be treated as if the donor were beneficially entitled to it? The answer is that the property must still be regarded as "settled property" for the application of the excluded property rules. One does not carry the implications of the deeming provisions as far as the Non-settled Property Solution suggests. One way to reach this conclusion is to note that the deeming provision does not deem the donor to be beneficially and *absolutely* entitled to the settled property. One can be beneficially entitled to property which is settled property. (Bear in mind that "settlement" has a wide definition for IHT. It includes property held subject to a contingency, property charged with the payment of an annuity, and a lease for life. A person entitled to such property may nevertheless be said to be "beneficially" entitled.)

This view is supported by s.49(1) IHTA which provides:

> A person beneficially entitled to an interest in possession in settled property shall be treated for the purposes of this Act as *beneficially entitled* to the property in which the interest subsists.
> [Emphasis added]

No-one suggests that property to which s.49(1) applies is to be treated as non-settled property for the purposes of the GWR rules. The wording of the deeming provision in s.102(3) is materially the same.

Under the Non-settled Property Solution, the property is simultaneously excluded property (for general IHT purposes) and non-excluded property (for GWR purposes). While that is not impossible, it would be remarkable, even in as convoluted an area as this, and for this reason too the Settled Property Solution is to be preferred.

It has been said that a purposive construction favours the Non-settled Property Solution: the purpose of the GWR rules is to put the donor in the same position as if they had not made the gift. This is the general purpose in the case of gifts by UK domiciliaries. However, arguments on purposive construction only run when one knows the general purpose and is confident that the general purpose applies in the particular circumstances of the case. This argument *assumes* that that purpose necessarily extends to the foreign domiciliary – which begs the question. Perhaps parliament intended there to be a difference between the two cases. One cannot apply a purposive construction unless the purpose is

online).

clear.[44]

Even adopting the Settled Property Solution, there will arguably[45] be a charge to IHT on the death of a settlor who enjoys a benefit over trust property if at the time of their death the trust property is UK situated (and not UK AUTs or OEICs). Though I doubt if much notice is taken of that in practice.

In short, if the settlor is a beneficiary it is safer not to invest directly in UK situate property during their life.

Note that the Non-settled Property Solution favours the taxpayer if a UK domiciliary makes a GWR settlement, and becomes non-UK domiciled before their death. However that won't often happen.

78.15.3 *HMRC view*

After a decade of dithering[46] HMRC agreed with the Settled Property Solution. The IHT Manual provides:[47]

> **IHTM14396 Settled property: Settlement created when the settlor is domiciled outside the UK** [Sep 2018]
> Where the settlor was domiciled outside the UK at the time a settlement was made, any foreign property in the settlement is excluded property and is not brought into charge for IHT purposes (IHTM27220). This rule applies where property is subject to a reservation of benefit even though the settlor may have acquired a domicile of choice in the UK, or be deemed to be domiciled in the UK, at the time the GWR charge arises (IHTM04071).
> *Reservation ceasing on death*
> At the material date FA86/S102(3) deems the donor to be beneficially

[44] In the battle of the anomalies HMRC might instance the case where a foreign domiciliary made a settlement shortly before becoming UK domiciled, and say that it is absurd that a settlement made in such circumstances should avoid IHT on the death of the settlor. But (1) this is certainly the case where the foreign domiciliary enjoys no benefit from the settlement; and (2) this was the case under estate duty; and (3) this was the case under HMRC practice in the first 15 years or so of IHT; in the circumstances it is wrong (if not absurd) to describe that result as absurd.

[45] See 78.9 (Gift of excluded property).

[46] See the 2010/11 edition of this work para 51.12.3.

[47] The point is also made in HMRC "Technical note: Changes to the taxation of non-UK domiciled individuals";

> "Excluded property will not be brought into charge on the settlor's death even if the settlor retains a benefit in the trust assets."

See A1.7.3 (Pre-2025 settlements).

> entitled to property that is, at that time, settled property. As the property in which the reservation subsisted is ‘property comprised in a settlement’, it is the provisions of IHTA84/S48(3) that are in point. It is the domicile of the settlor at the time the settlement was made that is relevant in deciding whether foreign property in which the reservation subsisted is excluded property.
>
> *Example* (Henry)
>
> H, who is domiciled in New Zealand, puts foreign property into a discretionary trust under which he is a potential beneficiary (IHTM14393). He dies five years later having acquired a domicile of choice in the UK and without having released the reservation. The property is subject to a reservation on death but it remains excluded property and is outside the IHT charge.

The Manual continues by noting three exceptions:

> *Exceptions to the rule*
>
> There are, however, circumstances where this rule does not apply:
>
> [1] If the trustees had sold the foreign assets so that at the date of death the settled property was invested in UK assets, the exclusion would not apply as the property comprised in the settlement was not situated outside the UK, so IHTA84/S48(3) cannot apply.
>
> [2] If
>
> [a] the donor has acquired a domicile of choice (or is deemed domiciled) in the UK and
>
> [b] adds other property to the settlement (irrespective of the situs (IHTM27071) of the property),
>
> we regard the donor as creating a separate settlement (IHTM04272). All the trust assets will be property subject to a reservation, but the foreign assets settled when the donor was domiciled outside the UK will be excluded property, whereas the assets settled when the donor was domiciled in the UK will be subject to IHT
>
> [3] And in the reverse situation, if a donor who is domiciled (or deemed domiciled) in the UK creates a settlement with foreign assets and the settled property remains subject to a reservation at death, the trust assets will be subject to IHT under FA86/S102(3) even if the settlor dies domiciled outside the UK as IHTA84/S48(3) does not apply - as well as being subject to relevant property trust charges (IHTM42000).

Point [1] is correct that s.48(3) does not apply but it is arguable that there is no GWR for other reasons.[48] As to point [2], see 75.15 (Adding

[48] See 78.9 (Gift of excluded property).

property). Point [3] is correct, assuming the settled property solution is correct. The unfairness of the double charge (which does not seem to trouble HMRC) may be avoidable by winding up the trust.

78.16 Gift to non-dom who creates trust

Suppose:

(1) A gives property outright to B.
(2) B gives that property to a settlement.
(3) A is a beneficiary of that settlement and enjoys benefits so that there is a reservation of a benefit in relation to A's gift.
(4) B (and not A) is the settlor of the settlement.[49]

Now which set of excluded property rules is applied? It is suggested that one must apply the rules applicable to settled property for the reasons given in 78.15 (Death: Settled excluded property). FA 1986 sch. 20 para 5 needs to be considered but, properly understood, nothing there deems A to be the settlor of the settlement. If that is right, there is no reservation of benefit problem if:

(a) B (the settlor) was not domiciled in the UK when the settlement was made/funded; and
(b) the property is not situated in the UK at the time of the death of A.

Conversely, on this view, there is a GWR problem if B (the settlor) is UK domiciled (regardless of the domicile of A).

78.17 GWR lifetime charge

So far we have considered the position where the benefit continues until the death of the donor. In the absence of any provision, the cessation of a reservation of benefit during the individual's lifetime would not be a transfer of value. Section 102(4) FA 1986 deals with this:

> If, at a time before the end of the relevant period, any property ceases to be property subject to a reservation, the donor shall be treated for the purposes of the 1984 Act as having at that time made a disposition of the property by a disposition which is a potentially exempt transfer.

I refer to this as the "**GWR lifetime charge**".

Section 102(4) is a deeming provision; it is a different deeming from

[49] See 99.7 (A gives to B, B gives to trust).

s.102(3), the GWR death charge. In s.102(3) the donor is deemed to be beneficially entitled. Here, the donor is deemed to have made a PET. To understand the significance of this, it is necessary to set out the definition of a PET. A PET is a particular kind of transfer of value (s.3A IHTA) and s.3 IHTA provides:

> (1) [a] ... a transfer of value is a disposition made by a person (the transferor) as a result of which the value of his estate immediately after the disposition is less than it would be but for the disposition;
> [b] and the amount by which it is less is the value transferred by the transfer.
> (2) For the purposes of subsection (1) above no account shall be taken of the value of excluded property which ceases to form part of a person's estate as a result of a disposition.

Note that s.3(1) contains two definitions: s.3(1)[a] defines "transfer of value" and s.3(1)[b] defines "value transferred". For both purposes s.3(2) states that excluded property is (in short) disregarded.

78.17.1 *Non-settled GWR PET charge*

Suppose:
(1) a non-UK domiciliary makes a non-settled GWR of non-UK situate property; and
(2) the property ceases to be subject to a reservation (while the donor is still non-UK domiciled).

No-one could sensibly suggest that there is a possible IHT charge. The reason is in s.3(2): the donor is deemed to have made a disposition of excluded property. While one can (just) call that a PET, the value transferred is ignored and no charge to IHT can arise. Nothing in the deeming provision requires one to ignore the application of s.3(2) to s.3(1)[b]. What matters is the domicile of the donor (and the situs of the GWR property) at the time the reservation ceases. There would be a deemed PET if:
(1) F (a foreign domiciliary) makes a GWR.
(2) F becomes UK domiciled.
(3) The GWR is released.[50]

[50] There is a hint of this in IHTM 14318, but the point is not addressed clearly.

78.17.2 *Settled GWR PET charge*

Suppose settled property ceases to be subject to a reservation; eg a settlor/donor ceases to be a beneficiary of a trust they have created, and becomes excluded from benefit. The issues are similar to the case of the GWR death charge: how far do you carry the implications of the deemed PET? Do you deem the GWR property which is actually settled property to be non-settled property? Although the deeming is marginally different, the context is the same as for GWR on death.

The answer must be decided consistently with the answer to the related issue for GWR on death. If (as concluded above) the Settled Property Solution is correct on death then there is also no charge on a lifetime cessation of GWR. HMRC agree, and (having eventually come down in favour of the Settled Property Solution) accept the view that there is no charge. The IHT Manual provides:

> **IHTM14396 - Settled property: Settlement created when the settlor is domiciled outside the UK** [Sep 2018]
> ... *Reservation ceasing during lifetime*
> Where the reservation is released during the donor's lifetime, FA86/S102(4) treats the donor as making a disposition of the property by a disposition which is a potentially exempt transfer (PET) (IHTM04072). This is different to the basis of the charge arising on death, but as property in which the reservation ceases is 'property comprised in a settlement' the provisions of IHTA84/S48(3) are again in point to decide whether any foreign property is excluded property.
> As FA86/S102(4) treats the donor as making a disposition, it is the treatment of excluded property when a disposition is made that is relevant. IHTA84/S3(2) states that no account shall be taken of the value of excluded property which ceases to form part of a person's estate as a result of a disposition.
> So as the donor is treated as making a disposition, property is treated as ceasing to form part of their estate. Provided that property is excluded property, IHTA84/S3(2) applies to exclude the assets in which the reservation ceased from charge.

This vindicates the view taken in the pre-2011 editions of this work.[51]

The Manual continues with three exceptions:

[51] "The taxpayer should conduct their affairs on the basis of the Settled Property Solution. .. One should not be deterred by the ghost of an argument rattling its chains in the IHT Manual."

The same exceptions to the above will apply as regards

[1] foreign property which is replaced by UK situs property (IHTM27071),

[2] property added to the settlement when the donor is domiciled in the UK, and

[3] in the reverse situation outlined above, a charge will arise under FA86/S102(4) if the reservation ceases before the donor's death.

Refer any case where you consider that there is such a charge, or any enquiries about the possibilities of a charge, to Technical.

For these exceptions, see 78.15.3 (HMRC view).

78.18 Termination of estate IIP

78.18.1 *Termination of IIP: Navigation*

Termination of an estate IIP raises a variety of tax issues:

Topic	See para
Termination in lifetime of life tenant	
IHT charge	76.10 (s.52 IHTA)
GWR	*Considered here*
Termination on death of life tenant	
IHT charge	76.4 (s.4 IHTA)
CGT rebasing	88.6
Termination at any time	
Settlor/spouse initial IIP	75.13

78.18.2 *Termination of IIP: GWR*

Before 2006, GWR did not normally apply on the termination of an interest in possession, because the termination did not normally involve a disposal by way of gift. Section 102ZA FA 1986 now provides:

> (1) Subsection (2) below applies where—
>
> (a) an individual is beneficially entitled to an interest in possession in settled property,
>
> (b) either—
>
> (i) the individual became beneficially entitled to the interest in possession before 22nd March 2006, or
>
> (ii) [A] the individual became beneficially entitled to the interest in possession on or after 22nd March 2006 and
>
> [B] the interest is an immediate post-death interest, a disabled person's interest or a transitional serial

> interest, or falls within section 5(1B) of the 1984 Act
>
> and
>
> (c) the interest in possession comes to an end during the individual's life.
>
> (2) For the purposes of—
>
> (a) section 102 above, and
>
> (b) Schedule 20 to this Act,
>
> the individual shall be taken (if, or so far as, he would not otherwise be) to dispose, on the coming to an end of the interest in possession, of the no-longer-possessed property[52] by way of gift.

On the termination of an interest in possession, the (former) life tenant is in the same position as the settlor. See 78.15 (Death: Settled excluded property).

If the life tenant does not enjoy a benefit, no problem arises.

If the former life tenant does enjoy a benefit the position is as follows:

(1) The GWR rules do not apply if the GWR property is excluded property.

(2) The GWR property is excluded property if (in short):

  (a) the settlor was not UK domiciled when the settlement was made/funded; and

  (b) the trust property is not UK situate (or is UK funds excluded property) at the time of the GWR charge (the death of the former life tenant or the time of cessation of benefit).

The domicile of the life tenant at the time that the interest came to an end is not relevant (except where the settlor/spouse has an initial estate interest in possession).

78.19 GWR on death: Spouse exemption

This section considers whether the IHT spouse exemption can apply on the death of the donor so as to override the GWR death charge.[53]

[52] "The no-longer-possessed property" is defined in s.102ZA(3) IHTA:

> "In subsection (2) above 'the no-longer-possessed property' means the property in which the interest in possession subsisted immediately before it came to an end, other than any of it to which the individual becomes absolutely and beneficially entitled in possession on the coming to an end of the interest in possession."

I refer to this as **"GWR property"**.

[53] For the IHT spouse exemption generally see 76.5.1 (Spouse exemption: Introduction); see too 78.10 (GWR spouse exemption).

Suppose:

(1) H makes a gift to S which is a GWR so the gifted property is GWR property.
(2) H dies and leaves H's entire estate to his spouse W (and the IHT spouse exemption applies to H's estate).

On the death of H the position for the GWR property is governed by s.102(3) FA 1986:

> ...that property shall be treated for the purposes of the [IHTA] as property to which [H] was beneficially entitled immediately before his death.

The GWR property is not excluded property (even if S is foreign domiciled).[54] So H will in principle be subject to inheritance tax on the GWR property on H's death.

The spouse exemption is not available on the death of H to avoid this GWR charge. The IHT spouse exemption provides that the transfer of value deemed to be made on the death of H:

> ... is an exempt transfer to the extent that the value transferred is
> [a] attributable to property which becomes comprised in the estate of the transferor's spouse or civil partner or,
> [b] so far as the value transferred is not so attributable, to the extent that the estate is increased.

This exemption does not apply to the GWR property since it does not become comprised in the estate of W.

Suppose:

(1) H (UK domiciled) makes a gift to W (foreign domiciled at the time of the gift).[55]
(2) The gift does not qualify for the IHT spouse (or any other) exemption and H continues to enjoy benefits from the property until H's death so the gifted property is GWR property.
(3) W still owns the GWR property at the time of the death of H.
(4) W has become UK domiciled (or IHT deemed domiciled) at the time of the death of H.

At first glance it might seem that the IHT spouse exemption does not

[54] See 78.14 (Death: Non-settled excluded prop).

[55] The gift is a PET (but assume H survives seven years so no tax charge arises on the PET).

apply. On the facts of this example the conditions of the relief are not in reality satisfied. The GWR property does not "become" comprised in the estate of the spouse; and on the occasion of the death of H, the estate of the spouse has not "increased". However, one must remember that s.102(3) FA 1986 is a deeming provision. It is the old question of how far one carries the deeming.[56] If one deems, as s.102(3) requires, the GWR property to be property to which H was beneficially entitled, it would follow that one must deem the estate of W to be increased by reason of the death of H. The conclusion is supported by considering the object of the GWR rules. The object is to put the donor in the same position as if they had not made the gift. If H had not made H's gift then (on the facts of the above example) H would qualify for the spouse exemption.

The IHT spouse exemption would also apply to defeat a GWR death charge if H made a gift to a trust under which H's spouse acquired an estate interest in possession on H's death.

The same would apply if A made a GWR gift to B and A was not married to B at the time of the gift but was married at the time of A's death.

After some vacillation, HMRC now agree. The IHT Manual provides:

> **IHTM14303 devolution of GWR property** [Mar 2021]
> The gift with reservation provisions provide that the gifted property is deemed to be treated as part of the donor's estate immediately before death.
> Although the property does not pass on death under the will or intestacy, exemptions that are available on death such as spouse exemption (IHTM11031) and charity exemption (IHTM11101) may be applicable to the transfer deemed to be made on death if, on death, the property passes to an exempt beneficiary. However, if the reservation ceases during the lifetime of the donor, since the donor is deemed to have made a disposition which is a potentially exempt transfer (IHTM04064), no exemptions can apply.
> Annual exemptions (IHTM14141) will not apply to the transfer deemed to be made on death or deemed to be made when the reservation ceases.[57]

[56] See App 8.2 (Deeming provisions: Construction).

[57] This change was anticipated in a STEP Briefing Note "IHT- Gift with reservation and spouse exemption" (Feb 2021.

78.19.1 *Remedial planning after GWR*

Where H has made a gift, and a reservation of benefit problem arises, the following solutions may be considered:

(1) H ceases to enjoy any benefit.
(2) The donee gives the property back to H.
(3) Arrange that the IHT spouse exemption applies on the death of H.
(4) The donee settles the property: see 93.10.2 (Gift to spouse + gift to trust).

78.20 Tracing gifted property

The identity of the property disposed of by way of gift matters for several reasons:

(1) To determine whether the donor has reserved a benefit over it
(2) To apply the excluded property rules
(3) To identify the property subject to the GWR charge

Sch 20 FA 1986 contains three sets of tracing rules:

Tracing rules for	**Sch 20 para**
Non-settled property	2 - 4
Termination of estate IIP	4A
Settled property	5

The drafter in 1986 took the wording from the old estate duty provision in FA 1957. The legislation could have simply used the concepts of "derived from" or "representing", and the whole of paras 2-5 would not have been necessary. But there it is.

78.20.1 *"The material date"*

All three codes use the term "material date" which is (in short) the date when the GWR charge arises. Para 1 sch 20 FA 1986 provides:

> "the material date", in relation to any property means,
> [a] in the case of property falling within [s.102(3)], the date of the donor's death and,
> [b] in the case of property falling within [s.102(4)], the date on which the property ceases to be property subject to a reservation;

https://www.step.org/system/files/media/files/2021-02/step-iht-gift-with-reservation-and-spouse-exemption-briefing-note_0.pdf

78.21 Tracing non-settled property

Para 2(1) sch 20 FA 1986 provides the general rule:

> Where
> [a] there is a disposal by way of gift and,
> [b] at any time before the material date, the donee ceases to have the possession and enjoyment of any of the property comprised in the gift,
>
> then on and after that time the principal section [s.102] and the following provisions of this Schedule shall apply as if the property, if any, received by the donee in substitution for that property had been comprised in the gift instead of that property (but in addition to any other property comprised in the gift).

Para 2(3) sch 20 FA 1986 provides a commonsense definition of "in substitution":

> In sub-paragraph (1) above the reference to property received by the donee in substitution for property comprised in the gift includes in particular—
> (a) in relation to property sold, exchanged or otherwise disposed of by the donee, any benefit received by him by way of consideration for the sale, exchange or other disposition; and
> (b) in relation to a debt or security, any benefit received by the donee in or towards the satisfaction or redemption thereof; and
> (c) in relation to any right to acquire property, any property acquired in pursuance of that right.

This is a straightforward tracing or derivation rule. Para 2(2) sch 20 FA 1986 provides two exceptions. The first relates to settled property, which has a separate code.[58] The second is a surprise:

> This paragraph does not apply if the property disposed of by the gift ...
> (b) is a sum of money in sterling or any other currency.

Suppose:

(1) A gives money to B.
(2) B uses the money to buy an asset.
(3) A enjoys a benefit over the asset.

There is no GWR over the money: which no longer exists, or else belongs

[58] See 78.22 (Tracing settled property).

to the vendor of the asset. Does it follow that there is no GWR at all? Taken at face value, this suggests that if there is a non-settled gift of money which is then invested, GWR ceases to apply. Could that really be correct? HMRC say that it is.[59]

78.21.1 *Gift by donee*

Para 2(4) sch 20 FA 1986 provides:

> Where, at a time before the material date, the donee
> [a] makes a gift of property comprised in the gift to him,
> [b] or otherwise voluntarily divests himself of any such property otherwise than for a consideration in money or money's worth not less than the value of the property at that time,[60]
>
> then, unless he does so in favour of the donor, he shall be treated for the purposes of the principal section [s.102] and sub-paragraph (1) above as continuing to have the possession and enjoyment of that property.

Para 2(5) sch 20 FA 1986 defines "voluntarily":

> For the purposes of sub-paragraph (4) above—
> (a) a disposition made by the donee by agreement shall not be deemed to be made voluntarily if it is made to any authority who, when the agreement is made, is authorised by, or is or can be authorised under, any enactment to acquire the property and
> (b) a donee shall be treated as divesting himself, voluntarily and without consideration, of any interest in property which merges or is extinguished in another interest held or acquired by him in the same property.

78.21.2 *Tracing shares*

Para 2(6) sch 20 FA 1986 provides:

> Where
> [a] any shares in or debentures of a body corporate are comprised in a gift and
> [b] the donee is, as the holder of those shares or debentures, issued with shares in or debentures of the same or any other body corporate, or granted any right to acquire any such shares or debentures,
>
> then, unless the issue or grant is made by way of exchange for the

[59] See 83.19.3 (Tracing rules).

[60] The words at [b] are needed as a sale at an undervalue is not a disposal by way of gift.

> first-mentioned shares or debentures, the shares or debentures so issued, or the right granted, shall be treated for the purposes of the principal section [s.102] and this Schedule as having been comprised in the gift in addition to any other property so comprised.
> (7) In sub-paragraph (6) above the reference to an issue being made or right being granted to the donee as the holder of shares or debentures shall be taken to include any case in which an issue or grant is made to him as having been the holder of those shares or debentures, or is made to him in pursuance of an offer or invitation made to him as being or having been the holder of those shares or debentures, or of an offer or invitation in connection with which any preference is given to him as being or having been the holder thereof.

This is needed because a bonus issue is not "in substitution" and so not within para 2(1).

78.21.3 *New consideration: Deduction*

Para 3 sch 20 FA 1986 provides:

> (1) Where either sub-paragraph (3)(c) or sub-paragraph (6) of paragraph 2 above applies to determine, for the purposes of the principal section [s.102], the property comprised in a gift made by a donor—
> (a) the value of any consideration in money or money's worth given by the donee for the acquisition in pursuance of the right referred to in the said sub-paragraph (3)(c) or for the issue or grant referred to in and said sub-paragraph (6), as the case may be, shall be allowed as a deduction in valuing the property comprised in the gift at any time after the consideration is given, but
> (b) if any part (not being a sum of money) of that consideration consists of property comprised in the same or another gift from the donor and treated for the purposes of the 1984 Act as forming part of the donor's estate immediately before his death or as being attributable to the value transferred by a potentially exempt transfer made by him, no deduction shall be made in respect of it under this sub-paragraph.
>
> (2) For the purposes of sub-paragraph (1) above, there shall be left out of account so much (if any) of the consideration for any shares in or debentures of a body corporate, or for the grant of any right to be issued with any such shares or debentures, as consists in the capitalisation of reserves of that body corporate, or in the retention by that body corporate, by way of set-off or otherwise, of any property distributable by it, or is otherwise provided directly or indirectly out of the assets or

> at the expense of that or any associated body corporate.
> (3) For the purposes of sub-paragraph (2) above, two bodies corporate shall be deemed to be associated if one has control of the other or if another person has control of both

78.21.4 *Donee dies before material date*

Para 4 sch 20 FA 1986 provides:

> Where there is a disposal by way of gift and the donee dies before the date which is the material date in relation to any property comprised in the gift, paragraphs 2 and 3 above shall apply as if—
> (a) he had not died and the acts of his personal representatives were his acts; and
> (b) property taken by any person under his testamentary dispositions or his intestacy (or partial intestacy) were taken under a gift made by him at the time of his death.

78.22 Tracing settled property

Para 5 sch 20 FA 1986 contains the tracing rules for a gift to a trust, and para 4A contains the rules on the termination of an estate IIP. It is convenient to consider these together, as para 4A adopts the para 5 rules, with a nod to plain English drafting (describing the donor as "D").

Para 5(1) sch 20 FA 1986 ***After gift to trust***	**Para 4A(1)(2) sch 20 FA 1986** ***After termination of estate IIP***
Where there is a disposal by way of gift and the property comprised in the gift becomes settled property by virtue of the gift,	(1) This paragraph applies where— (a) under section 102ZA of this Act, an individual ("D") is taken to dispose of property by way of gift, and (b) the property continues to be settled property immediately after the disposal.
[a] paragraphs 2 to 4 above shall not apply[61]	(2)[a] Identical

[61] In addition, para 2(2) sch 20 FA 1986 provides: "This paragraph does not apply if the property disposed of by the gift ... (a) becomes settled property by virtue of the gift". But that is otiose as para 5(1)[a] has the same effect.

[b] but, subject to the following provisions of this paragraph, the principal section [s.102] and the following provisions of this Schedule shall apply as if the property comprised in the gift consisted of the property comprised in the settlement on the material date,	Identical
[c] except in so far as that property neither is, nor represents,[62] nor is derived from, property originally comprised in the gift.	Identical

This is the same in effect as the tracing rule for non-settled property, except that it also applies to money.

Para 5 does not apply to a gift to a company held by a trust.

78.22.1 *Trust comes to end*

Para 5(2) sch 20 FA 1986 ***After gift to trust***	**Para 4A(4) sch 20 FA 1986** ***After termination of estate IIP***
If the settlement comes to an end at some time before the material date as respects all or any of the property which, if the donor had died immediately before that time would be treated as comprised in the gift,—	If the settlement comes to an end at some time before the material date as respects all or any of the property which, if D had died immediately before that time, would be treated as comprised in the gift,—
(a) the property in question, other than property to which the donor then becomes absolutely and beneficially entitled in possession, and	(a) the property in question, other than property to which D then becomes absolutely and beneficially entitled in possession, and
(b) any consideration (not consisting of rights under the settlement) given by the donor for	(b) any consideration (not consisting of rights under the settlement) given by D for any of

[62] See App 2.9 ('Representing' assets).

any of the property to which he so becomes entitled,	the property to which D so becomes entitled,
shall be treated as comprised in the gift (in addition to any other property so comprised).	Identical

This would also apply on a transfer between trusts.

78.22.2 *Donee creates trust*

Para 5(3) sch 20 FA 1986 provides:

> Where
> [a] property comprised in a gift does not become settled property by virtue of the gift,
> [b] but is before the material date settled by the donee,
> sub-paragraphs (1) and (2) above shall apply in relation to property comprised in the settlement as if the settlement had been made by the gift; and for this purpose property which becomes settled property under any testamentary disposition of the donee or on his intestacy (or partial intestacy) shall be treated as settled by him.

78.22.3 *Loan to trust*

Para 5(4) sch 20 FA 1986	**Para 4A(3) sch 20 FA 1986**
Where property comprised in a gift becomes settled property either by virtue of the gift or as mentioned in sub-paragraph (3) above, any property which—	Any property which—
(a) on the material date is comprised in the settlement, and	[identical]
(b) is derived, directly or indirectly, from a loan made by the donor to the trustees of the settlement,	(b) is derived, directly or indirectly, from a loan made by D to the trustees of the settlement,
shall be treated for the purposes of sub-paragraph (1) above as derived from property originally comprised in the gift.	shall be treated for the purposes of sub-paragraph (2) above as derived from property originally comprised in the gift.

The drafter presumably considered that a loan is not a disposal by way of gift.

78.22.4 *Accumulated trust income*

Para 5(5) sch 20 FA 1986	**Para 4A(5) sch 20 FA 1986**
Where, under any trust or power relating to settled property, income arising from that property after the material date is accumulated, the accumulations shall not be treated for the purposes of sub-paragraph (1) above as derived from that property.	Where, under any trust or power relating to settled property, income arising from that property after the material date is accumulated, the accumulations shall not be treated for the purposes of sub-paragraph (2) above as derived from that property.

This seems generous, but there it is.

78.23 1986 transitional relief

The GWR rules only apply to disposals on or after 18 March 1986. The IHT Manual states correctly:

> **IHTM14311 GWRs: the gift: initial requirements** [Sep 2018]
> ... Gifts made before 18 March 1986 cannot be the subject of a GWR claim.
> *Settled property*
> A pre-18 March 1986 settlement which would have been caught by the GWR provisions had it been made after 17 March 1986 will therefore escape the GWR charge unless further gifts into settlement are made after that date. The GWR provisions will apply to the property settled by those further gifts....

The Manual gives a straightforward example:

> *Example* (Frederick)
> On 1 January 1985 F settled £100,000 on discretionary trusts under which he was a potential beneficiary. On 1 January 1989 he added a further £50,000 to the settlement. Frederick died on 1 April 1992, having remained a potential beneficiary throughout.
> The GWR provisions apply to the 1989 addition but not to the property originally settled. The GWR claim extends to the assets in the settled fund at 1 April 1992 representing that £50,000. The Double Charges Regulations (IHTM14711) will be in point.

GWR does apply to pre-1986 settlements on a post-1986 termination of an estate IIP.[63]

78.23.1 *Pre-1986 insurance policy*

For completeness: s.102(6)(7) FA 1986 provide a transitional relief for pre-1986 policies of insurance:

> (6) This section does not apply if the disposal of property by way of gift is made under the terms of a policy issued in respect of an insurance made before 18th March 1986 unless the policy is varied on or after that date so as to increase the benefits secured or to extend the term of the insurance; and, for this purpose, any change in the terms of the policy which is made in pursuance of an option or other power conferred by the policy shall be deemed to be a variation of the policy.
> (7) If a policy issued as mentioned in subsection (6) above confers an option or other power under which benefits and premiums may be increased to take account of increases in the retail prices index (as defined in section 8(3) of the 1984 Act) or any similar index specified in the policy, then, to the extent that the right to exercise that option or power would have been lost if it had not been exercised on or before 1st August 1986, the exercise of that option or power before that date shall be disregarded for the purposes of subsection (6) above.

A gift might be made under the terms of a policy if a person covenanted to pay the premiums of a policy held by another. That would not have been usual and I doubt if the issue ever arises now.

[63] See 78.18.1 (Termination of IIP: GWR)

CHAPTER SEVENTY NINE

INTER-TRUST TRANSFERS: IHT

This chapter discusses IHT issues on transfers between trusts. Transfers between trusts raise many other tax issues:

Topic	**See para**
Trust law background	99.10
IHT Transfer of value	*Not discussed; see s.52 IHTA*
IHT loss of estate IIP status	*Not discussed*
Gift with reservation of benefit	78.2.1
CGT disposal by transferor	56.21.5
s.731	50.13.2
ToA motive defence	52.24

s.87 trust gains transferred	61.39
2008 rebasing	61.47.3; 61.52
sch 4B (Flip-flop schemes)	62.2
Tainting protected trusts	92.4
Addition to pre-2006 settlor IIP trust	75.13.3
Who is settlor	99.11 - 99.14; 100.1
CRS	130.25

I also discuss the IHT consequences of individuals adding property to trusts.

79.2 Addition/transfer to trust

There are four tiers of rules:

(1) General rules of trust law

(2) General rules of IHT law:

   (a) The IHT definition of settlement: this applies for all IHT purposes

   (b) An IHT provision for trusts with two settlors: this applies for (more or less) all IHT purposes[1]

   I refer to this as "**general IHT law**"

(3) IHT provisions for transfers between trusts: these apply only for the taxation of relevant property[2] which I call "**relevant property taxation**"

(4) Further rules apply to the specialist (but important) topics of employee trusts[3] and pension trusts[4]

The main significance of these rules relates to excluded property status, where there has been a change of domicile of the settlor. The rules can affect other matters, such as date and computation of a 10-year charge.

79.3 One IHT-settlement or more

In order to decide whether there has been a transfer between trusts (or settlements, I use the terms synonymously) it is first necessary to identify what is (or are) the settlement(s) for IHT purposes. A transfer can only take place if there are two (or more) distinct settlements.

[1] See 79.5 (Separate-settlement fiction).

[2] For this important but opaque term, see 74.8 ("Relevant property").

[3] See s.86(4)(5) IHTA (not discussed here).

[4] See 84.14 (Transfer between schemes).

There are trust law rules which determine for trust law purposes whether one trust exists, or whether two (or more) distinct or separate trusts exist.[5] Subject to context, and specific tax rules, these rules apply for tax purposes. That is, in the absence of specific context or rules, the word trust has its normal trust law meaning. So the question is: when do these trust law rules apply, and when do specific IHT rules override them.

Section 43 IHTA provides:

> (1) The following provisions of this section apply for determining
> [a] what is to be taken for the purposes of this Act to be a settlement, and
> [b] what property is, accordingly, referred to as property comprised in a settlement or as settled property.
> (2) "Settlement" means any disposition or dispositions of property, whether effected by instrument, by parol [ie, orally] or by operation of law, or partly in one way and partly in another, whereby[6] the property is for the time being held in trust...[7]

There are two distinct concepts here:

(1) The entity, created by a disposition (or dispositions), which has an ongoing existence. I refer to this entity, if within the IHT definition, as an **"IHT-settlement"**.

(2) The disposition (or dispositions) which create an IHT-settlement, which take place at a particular moment (or moments).

The following points seem clear:

(1) 2 (or more) dispositions may create 2 (or more) separate IHT-settlements.

(2) On the other hand:
    (a) 2 (or more) dispositions may create one IHT-settlement.
    (b) 2 (or more) associated operations may create one IHT-settlement (as 1 disposition can be made by 2 (or more) operations).[8]

I refer to a case within (2) as a **"compound IHT-settlement"**.

[5] See 99.10 (Inter-trust transfer: Trust law background).

[6] "Whereby" means "by virtue of which". That is self-evident, but if authority is needed, see *Rysaffe v IRC* [2002] STC 872 at [34].

[7] For the text which follows these words, see 87.6.3 (Definition of "IHT-settlement").

[8] See 74.15 (Disposition by associated ops).

The IHT definition derives from s.1 SLA 1925,[9] which also has a concept of compound settlements.[10]

When do dispositions or operations create only one (compound) IHT-settlement and when do they create more than one? There are two cases where this question has been discussed.

79.3.1 *Hatton*

In *Hatton v IRC*[11] there was an arrangement under which:

(1) A made a settlement ("the first disposition") conferring a valuable equitable interest on B.

(2) B transferred her interest to a new settlement ("the second disposition").

The Judge said:

> the first settlement was made with a view to enabling or facilitating the making of the second settlement. Accordingly, the two settlements are associated operations

That is straightforward. What follows? The 2 dispositions (operations) created one IHT-settlement (in my terminology, a compound IHT-settlement):

> they are, therefore, to be regarded as effecting together a single disposition for the purposes of [IHT]. On that basis, the two settlements together constitute a single disposition of property, namely the property assigned ... to the trustees of the first settlement... That single disposition is a "settlement" within the [IHT] definition.[12]

79.3.2 *Rysaffe*

In *Rysaffe v IRC* the settlor transferred 5 parcels of shares to five settlements. As a matter of trust law, there were 5 separate settlements.

[9] The SLA reference to "any… instrument, or any number of instruments" has become "any disposition or dispositions" in s.43 IHTA (in order to include settlements made orally).

[10] A note on terminology: the SLA 1925 was the first statute to use the term compound settlement, but the terminology was in use before 1925: see *Re Coull* [1905] 1 Ch 712.

[11] 67 TC 759 at p.788.

[12] That was one IHT-settlement with two settlors. For the consequences, see 79.7 (Direct and indirect settlors).
For another aspect of *Hatton,* see 99.33 (Purpose: Adviser/agent of settlor).

HMRC argued that there was only one IHT-settlement. HMRC's first argument relied on the words "disposition or dispositions" in the definition of IHT-settlement. Thus it was argued that 5 dispositions[13] created one IHT-settlement.

This was rejected:

> [20] [s.43(1) IHTA] begins by saying that the provisions of the section 'apply for determining what is to be taken for the purposes of this Act to be a settlement'. Notwithstanding those words of the statute, my opinion is that s 43 gives little or no guidance to answering the question of whether ... there is one settlement or more than one. In my judgment the draftsman has for the most part left those questions to be answered in accordance with general [trust law] principles...

The judge then explains why:

> [21] ...the use of the plural ['dispositions'] is merely a recognition that in a case where there is a settlement (ie only one settlement) it is possible for there to have been more dispositions to the trustees than one. A typical case is where a settlor creates his settlement with one disposition, and later adds more property to it by one or more other dispositions. ... One of the hypothetical examples which I gave earlier was of a case where a wife made an addition to the trust fund of an existing settlement previously made by her husband. I do not accept that the use of the plural means any more than that it is possible to have more than one disposition to the trustees of a single settlement. In particular, the use of the plural is not a positive enactment that, where there are two or more dispositions to different settlements, they are to constitute one settlement for inheritance tax purposes even if they would constitute two or more settlements under the general law.[14]

This proposition was justified by considering the easy case of two unconnected persons creating separate settlements:

> [22] Indeed, if it was all a matter of the wording of s 43, it would be impossible to discriminate between cases of two dispositions to different settlements which count as one settlement for inheritance tax, and cases of two dispositions to different settlements which do not count as one settlement for inheritance tax.

[13] In fact there were 10 dispositions, as the settlor first transferred £10 to each settlement, but nothing turned on that.

[14] *Rysaffe v IRC* [2002] STC 872, approved in *Barclays Wealth v HMRC* [2017] EWCA Civ 1512 at [52]. Also see 75.15 (Added property: Change of domicile).

> Assume that settlor A has made a disposition of property to trustee X whereby some property is currently held on a discretionary trust, and that settlor B has made a disposition of other property to trustee Y whereby the other property is also currently held on a discretionary trust. Assume also that there is no connection between A and B or between X and Y: they have never even heard of one another. Assume yet further that there is no connection or overlap between the two discretionary classes. The only things which the two settlements have in common is that they are both discretionary and that they are both structures under which some property is 'for the time being' held in trust. Could it be argued that the two settlements rank as one settlement for inheritance tax purposes because of the definition in s 43(2)? Of course not. The argument would be ridiculous. But if one looks only at the words of the statute there have been 'dispositions of property … whereby the property is for the time being … held by trustees' on discretionary trusts. The obvious proposition that each is a separate settlement for inheritance tax purposes as well as for other purposes cannot, in my opinion, be found spelt out in the small print of s 43. The proposition follows because it is the position in the general law, and s 43 assumes that that position will apply for inheritance tax as for other purposes of the law—unless, as sometimes is so but not in this case, there is a detailed provision requiring a departure from the position in the general law.

HMRC's second argument was based on associated operations. The 5 dispositions to the trusts were operations. These operations were in fact not associated,[15] but the judge considered the position if they had been (that does make the discussion somewhat unrealistic). HMRC relied on the rule that a disposition includes a disposition effected by associated operations; they argued that the 5 associated operations constituted a single disposition effected by associated operations. Hence there was one IHT-settlement. This was also rejected:

> The starting point should have been to consider whether the property which the case was about was 'property comprised in a settlement' within the meaning of s 64 [IHTA] (the charging section) read with s 43 [IHTA] (the section which explains the concepts of settlement and of property being comprised in a settlement). If it was property comprised in a settlement anyway without the need to rely on the extension of 'disposition' to cover also a disposition by associated operations, the associated operations provision was not relevant. Sections 43 [definition

[15] See 74.11 ("Associated operation").

> of IHT-settlement] and 64 [10-year charge] applied, and there was no need to invoke the definition of associated operations in order to make them apply. Nor was there any need to consider whether, if the definition had been potentially relevant, the facts of this case would have come within it...
>
> [34] Let me begin with the parcel of shares held by [the] first settlement (settlement no 1) ... I find it clearest to begin in para (b) of sub-s (2). Were the shares 'held by trustees on trust' as described in the paragraph? To paraphrase, were they held by trustees on discretionary trusts? The answer is: yes. ... [s.43(2)] requires me to ask whether the shares were held by trustees on discretionary trusts by virtue of 'a disposition or dispositions of property'. My answer is: yes. They were held by the trustee on discretionary trusts by virtue of the transfer of them which [the settlor] made to the trustee ... That transfer was a disposition of property. Having given that obvious answer I go on to say that it is the answer on the ordinary meaning of 'disposition', without recourse to the extended definition under which the term includes a disposition by associated operations. It is wrong to say that the parcel of 6,900 shares held by the trustee of settlement no 1 on discretionary trusts was so held by the trustee by virtue of a disposition effected by associated operations. The parcel of shares was held by the trustee on the discretionary trusts by virtue of a disposition of it effected by a single operation, not by virtue of a disposition of it effected by multiple operations. It is neither necessary nor appropriate to invoke or to apply the extended statutory definition in order to conclude that the parcel of shares was property comprised in a settlement at the time when the ten-yearly charge fell to be applied.

The comments in *Rysaffe* should be seen in the context of the issue in the case, which was whether simple and discrete dispositions to separate trusts could be combined to create one compound IHT-settlement. It is now settled that the answer is, no.[16]

Rysaffe is not authority for the proposition that one can *never* combine dispositions (or associated operations) so as to constitute one compound IHT-settlement. That is not consistent with *Hatton* (which was not cited in *Rysaffe,* but should not be regarded as overruled).

[16] The reader may wonder whether the same answer would have been reached today, when a different attitude to avoidance prevails; but the issue does not arise: the doctrine of precedent (more or less) prevents the issue from being re-litigated, and the legislation has also now changed.

79.3.3 *GAAR guidance: Pilot trusts*

GAAR guidance discusses the issue. It is not relevant to the current law, and the more focussed reader should skip to the next section, but I digress to set it out here, as it illustrates the weakness of the GAAR guidance, which is a point of general importance:

> **D26 Pilot trusts**
> This example shows a long-established practice approved by the Courts in an area where the law provides deliberately precise boundaries.
> The Inheritance Tax legislation described below has been amended since the original publication of this guidance: this example is included to demonstrate the underlying principles.[17]
> **D26.1 Background**
> D26.1.1 [The guidance summarises the relevant property regime and notes:] In determining the rate at which tax is charged on settled property, the value of all the property in settlements established by the same settlor on the same day – 'related settlements' – is taken into account.
> **D26.2 The arrangements**
> D26.2.1 C wishes to leave his estate in trust for his 7 grandchildren. He wants to ensure that these settlements are not subject to Inheritance Tax after his death.
> C establishes one settlement per day over a period of 7 days, settling £100 on each.[18] He revises his Will so that he leaves a specific legacy of £250,000 free of tax to each settlement.
> Following his death, his executors pay the legacies to each of the trustees...

I refer to this as a **"pilot trust scheme"**.

> **D26.4 The taxpayer's tax analysis**
> D26.4.1 On C's death, his estate will be subject to Inheritance Tax and

[17] Author's footnote: See s.62B IHTA, enacted in 2015. Perhaps it was thought too much trouble to find an example to make the point which operated under the current law. It is not easy to find examples of contrived and artificial transactions which are not caught by the GAAR.

[18] Author's footnote: The position should be the same if the sum have been £10, which was the sum used in *Rysaffe*. Perhaps HMRC wanted to be free to argue that £10 (worth less now than it was worth at the time of *Rysaffe*) could be ignored as *de minimis*? But if so what happened to the "deliberately precise boundaries"? Probably that is reading the text with more care than was intended.

> the tax will be borne by the residuary estate. But going forward, each settlement will benefit from its own nil-rate band and the funds added to each of the other settlements will not be taken into account in arriving at the rate of tax as the settlements are not related settlements. Provided that the value of the settled property remains below the Inheritance Tax nil-rate band, the trusts will not pay any [Inheritance] tax.
>
> **D26.5 What is the GAAR analysis under s207(2) of FA 2013**
>
> D26.5.1 *Are the substantive results of the arrangements consistent with any principles on which the relevant tax provisions are based (whether express or implied) and the policy objectives of those provisions?*
>
> ...Settlements that are established on the same day are related settlements and the value of property, immediately after they commenced, in related settlements is taken into account in determining the rate of tax that is charged on each settlement. Because the settlements were created on consecutive days, they are not related settlements and so the rate of tax is calculated without reference to the other settlements, even though the substantial addition of funds came about as a result of a single event - C's death.

This does not answer the question set out at D26.5.1. But it suggests that the answer is yes, the pilot trust scheme is consistent with tax principles, on the grounds that " the law provides deliberately precise boundaries".

> D26.5.2 *Do the means of achieving the substantive tax results involve one or more contrived or abnormal steps?*
>
> Had C's Will established a single settlement for the benefit of all of his grandchildren that trust would have been subject to Inheritance Tax. And if seven separate settlements had been established by his Will, they would have been related settlements so each would have been taken into account with the other to establish the rate of tax. Establishing the 'pilot' trusts on separate days before death had no purpose other than to put the trusts in a tax-advantaged position.

This does not answer the question set out at D26.5.2, but it suggests that the answer is yes: the pilot trust scheme is contrived and abnormal; which seems fairly clear.

This seems to be a rare example of a scheme which is contrived and abnormal but consistent with tax principles.

> **D26.5.3 Do the tax arrangements accord with established practice and has HMRC indicated its acceptance of that practice?**
>
> The practice was litigated in the case of *Rysaffe Trustee v IRC* [2003]

> STC 536.[19] HMRC lost the case and having chosen not to change the legislation [from 2003 to 2015] must be taken to have accepted the practice.

There was no HMRC statement to that effect. The inference is from silence. Pilot trust schemes were rarely used in practice, as far as I am aware.[20] If that is right, the inference from silence is a weak one.

The reader may also wonder *when* HMRC should be taken to have accepted the efficacy of pilot trust schemes. Presumably HMRC's acceptance took effect after they had a reasonable opportunity to change the law, perhaps a year or two after the *Rysaffe* decision was final. If the GAAR had been in effect in 2003, it would have applied. What if the law changed in 2004, or a few years later? Discuss.

> **D26.6 Conclusion**
> D26.6.1 The arrangements accord with established practice accepted by HMRC and are accordingly not regarded as abusive.

HMRC's customers may regard this guidance as somewhat unimpressive. But there it is.

79.4 Inter-trust transfer: IHT effect

After that digression, and with the definition of IHT-settlement and its case law in mind, I return to ask: What is the position where there is an appointment between trusts, that is:

(1) S creates a trust ("trust 1")
(2) The trustees exercise a trustee power to transfer the trust property to what is (for trust law purposes) a separate and distinct trust ("trust 2").

I refer to that as an **"inter-trust transfer"**.

The two steps constitute 2 dispositions (and also 2 associated operations).

Before 2018, there was a good argument that:

(1) The 2 dispositions (or operations) should be regarded as a constituting a single compound IHT-settlement.
(2) That trust is the same as trust 1. That is, for IHT purposes the

[19] Author's footnote: The facts of *Rysaffe* were different and did not involve a gift by will to long-dormant pilot trusts. But it seems HMRC did not consider the differences were significant.

[20] Particularly since even if pilot trusts were made, the arrangement only took effect on the death of the testator.

property is regarded as remaining in trust 1.

In short, the inter-trust transfer has no effect for IHT purposes. The exercise of the power has the same effect as if the trustee of trust 1 appointed the trust fund to be held upon trusts identical with the trusts of trust 2 but set out in full in the appointment, without reference to trust 2. This avoids the problems and anomalies which arise if an inter-trust transfer is regarded as a transfer to a separate IHT-settlement. I refer to that as the **"no-transfer approach"**.

The no-transfer approach is not now open. It is inconsistent with *Barclays Wealth v HMRC*.[21] In this case, trustees held property in an excluded property trust. They transferred the trust fund to another trust. The settlor was (deemed) UK domiciled when the second trust was made. The CoA said:

> There can be no doubt that, when the [trust's] shares were appointed by the Trustee ... from the 2001 Settlement to the DBJT, they ceased to be comprised in the former settlement and became comprised in the latter. ... Accordingly, section 81(1) applied with the consequence that, for the purposes of Chapter III, the shares had to be treated as remaining comprised in the 2001 Settlement for so long as they (or, after the sale, their proceeds) were in fact comprised in the DBJT...
>
> It is also clear that, while the shares and their proceeds remained in the DBJT, they were not excluded property. ... the settlor ... was UK-domiciled when the DBJT was made, so the [retesting] condition in section 82(3) could not be satisfied.[22]

In *Barclays Wealth* this was in fact common ground. The no-transfer approach was not put to the court. Strictly speaking, a case is not binding authority for a proposition which was not argued. But where the CoA have expressed themselves in such strong terms, and the parties were represented by leading counsel, there is little prospect that a Court below the Supreme Court would refuse to follow the CoA lead on this point. In short, for practical purposes, the law on this point is now settled at all levels below the Supreme Court.

An inter-trust transfer should not be within the scope of s.81 retesting. That would avoid many anomalies and issues discussed below. As the Supreme Court are not likely to have an opportunity to put this right,

[21] [2017] EWCA Civ 1512.

[22] para [41], [44].

statutory law reform is needed to provide that a transfer between trusts is ignored for all IHT purposes.[23]

79.5 Separate-settlement fiction

Section 44(2) IHTA provides:

> Where more than one person is a settlor in relation to a settlement and the circumstances so require, this Part of this Act (except s.48(4) to (6)) shall have effect in relation to it as if the settled property were comprised in separate settlements.

I refer to this as the "**separate-settlement fiction**".

79.5.1 *Analysis of fiction*

When the separate-settlement fiction applies, the settled property is treated as being in separate settlements (which I call "**notional trusts**").

Each notional trust must (for IHT purposes) be regarded as possessing three features: (1) notional trust property (2) a notional settlor and (3) a notional date on which it was made. These features are as notional (or fictional) as the notional trust itself. The statute does not expressly tell us what they are: context and common sense must fill that gap.

One might say that the notional trusts do not exist, in the sense that the trust with several settlors exists, and one might describe the latter as "the real trust". But more analytically, the trust with several settlors exists for the purposes of trust law (and other purposes which adopt trust law principles) and the notional trusts exist for IHT purposes.[24]

As to tracing when some of the trust fund is taken from a settlement with two settlors, see App.2.10 (Withdrawal from mixed fund).

79.5.2 *Purpose of fiction*

The separate-settlement fiction is needed because inheritance taxation of trusts depends on:

(1) the domicile of the settlor

(2) the transfers made by the settlor in the 7 years before commencement of the trust (which affect the trust's nil-rate band for trust taxation).

The rules are drafted on the basis that every trust has one settlor and only

[23] There is a loose precedent in the IT/CGT appointment rules; see 99.11 (Inter-trust transfer: appointment).

[24] See App 7.1 (What do we mean by real).

properly work on that basis; instead of making provision for a trust with multiple settlors, the scheme is to regard such trusts as multiple trusts.

IHT Manual provides:

> **IHTM42253. More than one settlor** [Jun 2016]
> ... This separation has 3 main effects
> [1] Where more than one trust exists each will have its own nil-rate band for rate purposes.
> [2] The value of property may be affected. For example, holdings of unquoted shares in a single trust might amount to a control holding whereas the same parcels of shares would be minority holdings if taken separately.
> [3] The separate trust made by the second person will have its own starting date. (IHTM42221)

This is correct as far as it goes, but it ignores the settlor domicile aspect of the rule, which is in practice the most important.

79.5.3 *When fiction applies*

The separate-settlement fiction is expressed to apply for the purposes of Part 3 IHTA (not generally), but all the important provisions which govern trust IHT are in Part 3 (which is headed: Settled Property).[25]

There are two cases where the separate-settlement fiction does not apply.

Firstly, the fiction does not apply unless "the circumstances so require". Normally the circumstances do so require. Most likely the drafter could not identify any cases where the fiction should not be applied but thought there might be some such cases; another possibility is that the drafter identified some cases but thought they were too difficult or insufficiently important to set out in the statute. So that has been left to the courts to sort out.

Secondly, the separate-settlement fiction does not apply for the purposes of s.48(4) to (6), ie for the FOTRA securities exemption. The reason was that FOTRA exemption does not depend on the identity of the settlor, it depends on the identity of the beneficiaries.[26] It was therefore unnecessary to apply the separate-settlement fiction. As far as I can see the fiction would not have done any harm, but it would not have had any effect:

[25] The separate-settlement fiction has to be repeated in s.201(4) IHTA in order to apply it to s.201 (because that is not in Part 3).

[26] See 75.11 (Trusts: FOTRA securities).

presumably the drafter thought it safer or simpler not to have to bother with the separate-settlement fiction.

79.6 B adds property to A's trust

Suppose:
(1) an individual ("A") creates a trust ("the real trust"), and
(2) another[27] individual ("B") adds property to it.[28]

The real trust has two settlors, A and B. The separate-settlement fiction applies, and one must imagine that the trust fund of the real trust is comprised in two notional trusts, "notional trust A" and "notional trust B". Common sense suggests:
(1) Notional trust A is regarded as if:
    (a) It holds the property given by A.
    (b) A is its sole settlor.
    (c) It was made at the time A made the real trust.
(2) Notional trust B is regarded as if:
    (a) It holds the property given by B.
    (b) B is its sole settlor.
    (c) It was made at the time B added property to the real trust.

This seems clear, but if authority is needed, see *Hatton v IRC*:

> Circumstances in which [the separate-settlement fiction] is commonly found to apply include those in which two or more persons have separately provided funds from their own independent resources to be held upon the trust of the same settlement. In such a case the effect of [the separate-settlement fiction] is, I suspect, generally thought to be that the settled property is treated as if a proportionate or identifiable part were held in other, separate settlements; each notionally separate settlement having its own single settlor.[29]

79.6.1 *More than 1 addition to trust*

Suppose:
(1) An individual ("A") creates a trust ("the real trust").

[27] For the position where the settlor adds to their *own* trust, see 75.15 (Added property: Change of domicile).

[28] The same analysis applies if A and B together transfer funds to a new jointly made trust.

[29] 67 TC 759 at p.789.

(2) Another individual ("B") adds property to it ("the first addition").
(3) B later adds more property to the trust ("the second addition").

It is considered that there are still two notional trusts. Notional Trust A is as before. Notional trust B is regarded as if:

(a) It holds the property given by B.
(b) B is its sole settlor.
(c) It was made at the time of the first addition
(d) B added property to the notional trust at the time of the second addition.

It follows that trust property added by the second addition may be excluded property if B was not UK domiciled at the time of the first addition.[30]

79.6.2 *Adding value indirectly*

It is suggested that the same applies if B adds value indirectly to the real trust (eg by a gift to a company held by the real trust). The real trust has two settlors, A and B.[31] The circumstances require the real trust to be regarded as two separate notional trusts. A division of the trust property of the real trust into two parts representing the value given by A and the value given by B is still possible. It may not be easy but it is no harder than many apportionments required for tax.[32]

79.7 Direct and indirect settlors

Suppose there is an arrangement under which:

(1) A gives property to B, and
(2) B gives the property to a trust ("the real trust").

It appears at first sight that there are then two settlors: an indirect settlor (A) and a direct settlor (B).[33] Both have provided the *same* property. A similar issue may arise if A owns a company and procures the company to make a settlement. The company is a direct settlor and A is an indirect settlor.

[30] But see 75.15 (Added property: Change of domicile).

[31] See 99.24 (Providing property to co in a trust).

[32] For instance, apportionment of gains of non-resident companies to participators.

[33] See 99.7 (A gives to B, B gives to trust). This issue may arise in the context of failed tax planning of the kind discussed at 99.41 (Planning to create excluded property trust).

What is the IHT analysis? On one view the separate-settlement fiction applies so that the settled property in the real trust is treated as being comprised in separate trusts (which I call "notional trust A" and "notional trust B"). On this view the consequence is said to be that:

(1) Notional trust A:
   (a) holds *all* the trust property of the real trust;
   (b) A is its sole settlor;
   (c) I do not know when proponents of this view would say that notional trust A was made. It would either be at the time A gave the property to B or the time that B settled it, and this poses perhaps another difficulty with this view.

(2) Notional trust B:
   (a) also holds *all* the trust property of the real trust;
   (b) B is its sole settlor;
   (c) was made at the time B created the real trust.

The difficulty with this view is that it leads to double taxation[34] and the separate-settlement fiction which only applies "if the circumstances so require" should not be used to give that result. So the better view is that the circumstances do not "so require" and the separate-settlement fiction does not apply.

We have therefore one real settlement with two settlors. What is the position for excluded property if A is foreign domiciled and B is not? It will be recalled that settled property is (in short) excluded property "unless *the settlor* was domiciled in the UK at the time the settlement was made". There are two possible solutions:

(1) One cannot say that "the settlor" was domiciled in the UK unless both settlors were domiciled here. In that case the trust property may be excluded property if either A or B are foreign domiciled.
(2) To read the word "the settlor" in this context as meaning "the settlor or one of the settlors".[35] In that case the trust property is only excluded property if A and B are both foreign domiciled.

[34] This view is supported by comments in *Hatton v IRC* 67 TC 759 at pp.789–790. But (1) the comments were not a necessary part of the decision, and so are not binding (2) the judge did not have the benefit of counsel's arguments on the issue (3) the judge did not appreciate the double taxation difficulties which arise on his view; in the circumstances it is considered that these comments do not represent the law.

[35] Applying (perhaps extending) the rule of construction that the singular includes the plural.

Both solutions have anomalous results, though in one case the anomaly favours the taxpayer and in the other it favours HMRC.

The best solution to this conundrum is that one should identify A as the "real" settlor and infer that B should not be regarded as a settlor.[36] Then the anomalies do not arise.

79.7.1 *HMRC view*

RI 166 provides:

> **Several persons contribute to a single settlement** [February 1997]
> ...
> [Section 44(2)] is similar in terms[37] to FA 1975 Sch 5 para 1(8), which was considered by Chadwick J in *Hatton v IRC* [1992] STC 140. In the light of the decision in that case [HMRC] take the view
> [1] that the determination of the extent to which overseas assets in a settlement are excluded property by reason of the settlor's domicile is a relevant "required circumstance"; and that
> [2] where a clear, or reasonably sensible, attribution of settled property between the contributions made by several settlors is possible, there will be a separate settlement, with its own attributed assets, for each contributor for IHT purposes;
> [3] if such an attribution is not feasible, each separate settlement will comprise all the assets of the single, actual settlement.[38]
>
> **Trust records**
>
> It follows from the comments above that the trustees of a settlement should keep adequate records to enable any necessary attribution of the settled property to be made if ... two or more persons have contributed funds for the purposes of the settlement.

[36] See 99.7.2 (Is B also a settlor?).

[37] Author's footnote: Although the RI uses the word "similar", there are in fact no material differences.

[38] In similar vein, IHT Manual provides:

> "**IHTM42253. More than one settlor** [Jun 2016]
> ... In practice, you can take the phrase 'and the circumstances so require' to mean, 'in a simple and straightforward case'.
> [1] You can accept the separateness of direct additions made by the settlor's favourite aunt,
> [2] but if for instance the added property is situate in Liechtenstein and transferred by a nominee in Liberia to a trust company in Jersey you would need to satisfy yourself as to what the circumstances were and whether they require treatment as separate trusts."

Para [2] unhelpfully ducks the issue.

Points [1] and [2] are correct.

A discussion of point [3] first requires consideration of when attribution is "feasible", I suggest it should always be feasible where two or more persons have contributed distinct funds, even if the funds are later merged.[39] I understand point [3] to refer to the *Hatton* situation, gift from A to B and gift from B to a trust, in which case the HMRC view is subject to the objections considered above.[40]

In practice it is perhaps better to avoid joint settlors (or for one person to add property to a settlement made by another). This avoids the complication of the separate-settlement fiction. But in a straightforward case there should not be any difficulty as long as:

(1) all settlors are foreign domiciled or all are UK domiciled; or
(2) the settlors include both UK and foreign domiciliaries, but trust record keeping is adequate. (Ordinary trust accounts should suffice.)

It is likewise best to avoid indirect additions to a trust fund (eg a beneficiary using their own funds to improve trust property), where the original settlor is foreign domiciled and another person adding property is UK domiciled.[41]

79.8 Transfer: A's trust to B's trust

Suppose:

(1) A gives property ("A's fund") to trust A ("real trust A")
(2) B gives property ("B's fund") to trust B ("real trust B")
(3) The trustees of real trust A transfer A's fund to real trust B[42] ("the inter-trust transfer")

In this paragraph I consider the general IHT position, ie the position on the assumption that s.81 does not apply (or at least before the application of s.81). That is the case if we are concerned with the taxation of estate IIP trusts (though this will be rare).

Real trust B has two settlors, A and B. The separate-settlement fiction applies and one imagines that the settled property is comprised in two

[39] This is assumed in s.471 ITA; see 99.11.3 (IT/CGT appointment rule).

[40] See 79.7 (Direct and indirect settlors).

[41] If the settlor adds property to a trust of which they are the settlor, see 75.15 (Added property: Change of domicile).

[42] The same analysis applies if the trustees of real trusts A and B each transfer their trust funds to a third real trust C.

notional trusts ("notional trust A" and "notional trust B").

Notional trust A is regarded as if:

(1) it holds the property provided by A; and
(2) A is its sole settlor.

The important question is: at what time is notional trust A regarded as being made? The choice is:

(a) at the time that real trust A was made;
(b) at the time of the transfer to real trust B.

The latter view cannot be right, for various anomalies would then arise.

(1) Suppose A died before the transfer to real trust B. One cannot then apply the rule that the excluded property status of the trust depends on the domicile of the settlor "at the time the settlement was made".[43]
(2) Suppose a transfer from trust A to trust B and A changes domicile after the date of trust A but before the transfer:
    (a) If A is UK domiciled when A made real trust A and foreign domiciled at the time of the transfer to real trust B, A's fund would become excluded property after the transfer. One would not expect HMRC to agree with that.
    (b) Conversely, if A is foreign domiciled when A made real trust A and UK domiciled at the time of the transfer to real trust B, the trust fund would cease to be excluded property.

    These are not equivalent or self cancelling anomalies, for in case (a) no transfers would usually take place, whereas in case (b) transfers would take place every time.

[43] It has been argued that if A is UK domiciled when A made real trust A and dead at the time of the transfer to real trust B, A's fund can be excluded property after the transfer. The argument is:
(1) Notional trust A is regarded as made at the time of the transfer to real trust B.
(2) A is regarded as not "domiciled in the UK" at that time (because a dead person has no domicile).
The view that notional trust A is regarded as made at the time real trust A was made avoids obvious anomalies and is to be preferred.
If (contrary to my view) notional trust A is regarded as made at the time of the transfer to real trust B, after the death of A, one might regard A as having at that time the domicile A had:
(1) at the time of A's death; or
(2) at the time A made real trust A.
Another view is that s.44(2) only applies if the circumstances so require, and they do not so require. However adopting my approach, s.44(2) gives a sensible result.

Under this analysis, there is (subject to s.81, if applicable) no IHT advantage or disadvantage from a transfer to another trust, regardless of changes in the settlor's domicile, or the settlor's death, which is logical and sensible. I see no difficulty in a rule that the notional trust is regarded as made before the transfer, for once one accepts that the notional trust is fictional, it can logically be regarded as being made on any date.[44]

79.9 Transfer: A's trust to A's trust

Suppose:

(1) A creates two separate trusts, trust A1 and A2.

(2) The trustees of trust A1 transfer property ("the transferred property") to trust A2.

In this paragraph I consider the general IHT position, ie the position on the assumption that s.81 does not apply (or at least before the application of s.81). That is the case if are concerned with two estate IIP trusts (though this will be rare).

Trust A2 has only one settlor, A, and the separate-settlement fiction does not apply to it.

The possibilities are as follows:

A is UK domiciled when A made trust A1; but not when A made trust A2. It is suggested that the transferred property in trust A2 may in principle qualify as excluded property. Trust A2 *does* satisfy the condition that the settlor was foreign domiciled at the time that *this* settlement was made.

A is foreign domiciled when A made trust A1; and UK domiciled when A made trust A2. The result is reversed. The transferred property in trust A2 is not excluded property. Trust A2 does not satisfy the condition that the settlor was foreign domiciled when this settlement was made.

Thus there is a distinction between:

(1) transfer from trust made by A to a trust made by B (change of A's domicile irrelevant); and

(2) transfer from trust made by A to another trust made by A (change of A's domicile significant).

This is anomalous but the anomaly naturally follows from the fact that the separate-settlement fiction applies in case (1) and not in case (2).

[44] See 87.5.7 (Trust appointment: Filling blanks).

79.9.1 *Transfer to new trust*

It is tentatively suggested that the same applies where trustees of trust A1 transfer the trust fund to new trustees who hold on the terms of a new declaration of trust which is an "empty trust", there being no trust property before the transfer ("trust A2"). In this case too the separate-settlement fiction does not apply.

The view that trust A2 is regarded as made at the time trust A1 was made, the principle that a trust appointment merely fills in blanks left by the settlor,[45] gives a sensible result but is hard to reconcile with s.48A IHTA which provides:

> In this Act any reference to the commencement of a settlement is to the time when property first becomes comprised in it.[46]

It is considered that the transferred property may in principle be excluded property if A is living and foreign domiciled at the time of the transfer, even though A was UK domiciled when A made trust A1.

What if A is dead at the time of the transfer? On a literal reading, one might argue that (regardless of the domicile of A during A's life) the settlor, A, was not UK domiciled when trust A2 was made, since a deceased person has no domicile. The scope for tax avoidance would make that result unacceptable to a court in a case where A was UK domiciled at the time A made trust A1 and at the time of A's death. A court is likely to regard A as retaining after A's death the domicile A had during A's life. This is not as much of a stretch as first appears. If a company can be regarded as having a domicile (by analogy to the domicile rules of a living individual) why not a deceased person? However, it is suggested that the trust property in trust A2 may be excluded property if A was not UK domiciled at the time of A death.

79.10 Same-settlement fiction: s.81

Section 81(1) IHTA provides:

> [1] Where property which ceases to be comprised in one settlement becomes comprised in another
> [2] then, unless in the meantime any person becomes beneficially

[45] See 87.5.7 (Trust appointment: Filling blanks).

[46] See 74.9 (Settlement commencement date).

entitled to the property (and not merely to an interest in possession in the property),

[3] it shall for the purposes of this Chapter [Chapter 3 Part 3 IHTA, relevant property] be treated as remaining comprised in the first settlement.

I call this the "**same-settlement fiction**".

79.10.1 *Purpose of fiction*

As with any deeming provision, in order to understand the same-settlement fiction one must understand its purpose.[47]

It must be intended to counter avoidance of the IHT 10-year charge, based on moving property between settlements. Suppose a trust ("the old trust") is approaching its 10-year anniversary (on which a 10-year charge would arise). In the absence of s.81, the trustees might perhaps avoid the charge by the following:

(1) The trustees transfer trust property to another trust whose 10-year anniversary is some way off.

Or

(2) (a) The trustees appoint a reversionary interest to a beneficiary.
(b) The beneficiary transfers that interest to a new trust.
(c) The new trust becomes entitled to the trust property before the ten year anniversary of the old trust.[48]

Section 81 effectively counteracts these schemes by deeming the trust property to remain in the old trust. This explains why the same-settlement fiction applies only for the purpose of relevant property taxation.

79.10.2 *Application of fiction*

IHT regards trust property as a continuing fund,[49] so s.81 does not apply

[47] See App 8.2 (Deeming provisions: Construction).

[48] Under the scheme (2), the beneficiary would be the settlor of the new trust, which might also be advantageous. For completeness: this scheme might also be advantageous if the settlor had made chargeable transfers in the 7 years before the creation of the old trust, as the second trust might have a better nil-rate band in the computation of its ten-year charges.

[49] Contrast SP E9: "Property is regarded ... as becoming comprised in a settlement when it, *or other property which it represents,* is introduced by the settlor." See Dymond's Death Duties (15th ed, 1973) p.75 ("the term "property" in the Finance Acts embraces, not merely the specific investments at a particular, time, but the corpus which is the subject-matter of the disposition..."). See App. 2.9 ('Representing' assets).

on a sale between trusts at full value, for no property moves between settlements.

Section 81 does not apply to a loan from trust 1 to trust 2 on commercial terms. It does not apply to an interest free loan repayable on demand, because the promise to repay is full consideration.

Section 81 only applies on a transfer of trust capital: if trustees distribute trust income to another trust, s.81 does not apply, because the income is not "settled property" within the IHT definition.[50]

What if property is transferred from trust A to trust B and the terms of the trusts are different? Although the property transferred is deemed to be held in trust A, it is not deemed to be held on the terms of trust A: it is regarded as held on the terms of trust B as if they had been incorporated in trust A. For instance, on a transfer from an estate IIP trust to a discretionary trust:

(1) the property is deemed to remain held in the first trust but
(2) it is regarded as held on the terms of the second trust.

So the interest in possession in the property transferred comes to an end, giving rise to an IHT charge: the deeming does not affect that.

What about a transfer to an insolvent trust? Suppose:

(1) Trust B is insolvent: its assets are worth 100 and it has debts of 200.
(2) Trust A transfers an asset worth 100 to trust B.

The asset is deemed to be in trust A. But if the debt is deductible against the asset there is an exit charge on the basis that trust property has reduced in value. If the debt is not deductible against the asset, there is an exit charge when the debt is satisfied.

79.11 Trust-transfer retesting

Where s.81 applies, s.82/82A IHTA impose additional requirements for trust property to qualify as excluded property.[51] I coin the following terminology:

Term	**Meaning**
Trust-transfer retesting	s.82/82A rules together
Pre-2020 trust-transfer retesting	s.82 rule
Post-2020 trust-transfer retesting	s.82A rule

[50] See 87.6 (Definition of "IHT-settlement").

[51] Similar rules apply where the settlor/spouse have an initial IIP: see 75.13 (Initial interest settlor/spouse).

Section 82 IHTA provides:

> (1) [a] In a case where, apart from this section, property to which section 81 applies would be excluded property by virtue of section 48(3)(a) above,
>
> [b] that property shall not be taken to be excluded property at any time ("the relevant time") for the purposes of this Chapter [Chapter 3 Part 3 IHTA, relevant property] (except sections 78 and 79)[52] unless Conditions A and B are satisfied.
>
> (2) [This is a transitional rule: see 79.13 (s.81 transitional rules)].

It is convenient to read conditions A and B side by side:

Condition A: s.82(3)	**Condition B: s.82(4)**
Condition A referred to in subsections (1) and (2) above is	Condition B referred to in subsection (1) above is
(b)[53] in the case of property to which subsection (1) or (2) of section 81 above applies,	(b) in the case of property to which subsection (1) or (2) of section 81 above applies,
that the person who is the settlor in relation to the second of the settlements mentioned in the subsection concerned,	that the person who is the settlor in relation to the first or second of the settlements mentioned in that subsection,
was not domiciled in the UK when that settlement was made.	was not a formerly domiciled resident[54] for the tax year in which the relevant time falls.

Section 82(5) IHTA provides:

> This section does not apply in relation to a case to which section 82A applies.

The following discussion focusses on condition A, as condition B (formerly-domiciled resident) will be uncommon.

Pre-2020 retesting only applies for determining whether property is excluded property "by virtue of s.48(3)(a)", ie for determining whether

[52] Sections 78, 79 IHTA concern conditional exemption for historic property, which is not discussed here.

[53] Para (a) has been deleted in s.82(3) and (4).

[54] This has its normal IHT meaning: see 5.5 (IHT Formerly-domiciled resident rule).

foreign situate property is excluded property. So it does not apply for AUTs and OEICs.[55]

Retesting only applies for the purposes of relevant property taxation, so one must distinguish:

(1) excluded property for the purposes of relevant property taxation ("**RP excluded property**"); and
(2) excluded property for other IHT purposes (but the scope of this has been greatly reduced since the trust IHT reforms introduced in 2006)

The consequences of retesting depend on the circumstances of the inter-trust transfer.

79.11.1 *A's trust to A's other trust*

Suppose:

(1) A creates two separate trusts, trust A1 and trust A2.
(2) The trustees of trust A1 transfer property ("the transferred property") to trust A2.

The possibilities are as follows:

A is not UK domiciled when A made trust A1 but UK domiciled when A made trust A2. The transferred property in trust A2 is not excluded property under general IHT principles.[56]

A is UK domiciled when A made trust A1 but not UK domiciled when A made trust A2. The transferred property may be excluded property under general IHT principles. However, s.82 retesting prevents transferred property in trust A2 from qualifying as RP excluded property. (This is probably an accidental consequence of the wording, because if the drafter had had this point in mind they would have made s.82 IHTA apply for all IHT purposes and not only for the purposes of relevant property taxation.)

In short, for foreign situate transferred property to qualify as RP excluded property, A must be domiciled outside the UK at the time A made trust A1 and trust A2.

79.11.2 *Transfer to 3rd or to 1st trust*

Suppose:

(1) A creates three separate trusts, A1, A2 and A3.

[55] See 75.10 (Trusts: UK funds).

[56] See 79.11.4 (Transfer of equitable interest).

(2) The trustees of trust A1 transfer property ("the transferred property") to trust A2.
(3) The trustees of trust A2 transfer the transferred property to trust A3.

The transferred property is treated as remaining in trust A1. It is only excluded property if A was not UK domiciled when A made "the second of the settlements mentioned" in s.81(1), but that refers (it is considered) to trust 3. The domicile of A at the time A made trust A2 is not relevant.

Thus if trustees of an excluded property trust transfer property to a non-excluded property trust made by the same settlor, they have fallen into a trap: foreign situate transferred property ceases to be excluded property. They can extricate themselves from the trap if the trustees of trust A2 transfer the property back to trust A1: *Barclays Wealth v HMRC*.[57] But there will be an exit charge if the property ceases to be excluded property on the transfer. That is anomalous, because if the trust property was UK situate at the time of the transfer there would be no exit charge, even it it later became foreign situate. But this is an area full of anomalies, and only law reform, or the Supreme Court, can put that right.

79.11.3 *From A's trust to B's trust*

Suppose:
(1) A gives property ("A's fund") to a settlement ("real trust A").
(2) B gives property ("B's fund") to a separate settlement ("trust B").
(3) The trustees of real trust A transfer A's fund to trust B.

For general IHT purposes, A's fund is regarded as in a notional trust and may be excluded property if A was not UK domiciled when real trust A was made.

At first sight the position for the purposes of RP trust tax seems to be different:
(1) A's fund is treated as remaining comprised in real trust A (applying the same-settlement fiction); and
(2) foreign situate property in A's fund can only be excluded property if:
  (a) A is foreign domiciled at the time real trust A was made; and
  (b) B is foreign domiciled at the time trust B was made
(applying trust-transfer retesting).

There is a better view. On these facts the separate-settlement fiction of

[57] See 75.15 (Added property: Change of domicile).

s.44(2) applies. A's fund is treated for IHT as if it were transferred to a separate notional trust. The same-settlement fiction applies as if there is a transfer from real trust A to the separate notional trust deemed to be made by A at the time (I think) of real trust A. So, for RP trust tax purposes, A's fund may be excluded property if A is not UK domiciled at the time A made trust A. That is, trust-transfer retesting does not add anything to the general excluded property rule. The domicile of B is irrelevant. That gives a fair result and is consistent with what I take to be the purpose of s.82; see below.

A similar result applies if the trustees of trust A transfer A's fund to a company held by trust B.

79.11.4 *Transfer of equitable interest*

The position is different if:

(1) A gives property ("A's fund") to a settlement ("trust A").
(2) B has an equitable interest under trust A (perhaps a reversionary or contingent right to trust capital).
(3) B assigns B's equitable interest to a separate settlement ("trust B").
(4) Trust B becomes entitled to A's fund (perhaps because the reversionary interest falls into possession or the contingency is satisfied).

B is in principle the settlor of trust B for general tax purposes. The position for the purposes of RP trust taxation is that:

(1) A's fund is treated as remaining in trust A (applying the same-settlement fiction); and
(2) A's fund can only be RP excluded property if:
    (a) A is foreign domiciled at the time that trust A was made, and
    (b) B is foreign domiciled at the time trust B was made
    (applying trust-transfer retesting).

It would be possible to avoid these consequences if the trustees of trust B sell the equitable interest before it falls into possession, or if they transfer it to a company.

79.11.5 *Pre-2020 test: FOTRA security*

Section 82(2) IHTA provides:

> Section 65(8) above shall not have effect in relation to property to which section 80 or 81 above applies unless Condition A is satisfied (in addition to the condition in section 65(8) that the settlor was not

domiciled in the UK when the settlement was made).

This relates to the specialist topic of IHT exemption for FOTRA securities.[58] IHT Manual provides:

> **IHTM27251 exempt securities: anti-avoidance rules** [Sep 2018]
> ... The rules are designed to deter people from avoiding tax by transferring property from one settlement where the beneficiaries are resident or domiciled in the UK, into a sub-settlement where the beneficiaries are all abroad. ...

79.11.6 *Trust-transfer retesting: Purpose*

What is the purpose of trust-transfer retesting? It often happens that an artificial deeming rule which closes one avoidance scheme can be exploited for another. The same-settlement fiction is an example. Suppose:

(1) A, who is domiciled outside the UK, settles foreign property on discretionary trusts for a short period with remainder to A absolutely.
(2) B, who is UK domiciled, buys A's reversion and settles it on discretionary trusts.[59]

Under general IHT law, B would in principle be the settlor of trust B, which would be within the scope of IHT in the ususal way. However applying the same-settlement fiction, in the absence of retesting, A would be the settlor and (because of A's domicile) B's trust would be an excluded property trust!

Section 82 counteracts this scheme. If my analysis is right,[60] then s.82 works, though it does not produce the fair result in every case. Suppose the facts were reversed:

(1) A, who is domiciled in the UK, settles foreign property on discretionary trusts for a short period with remainder to A absolutely.
(2) B, who is foreign domiciled, buys A's reversion and settles it on discretionary trusts.

There is no obvious fairness here in the rule that B's trust should be within the scope of IHT. But the example is somewhat contrived and perhaps it does not much matter.

[58] See 76.9.1 (Property becomes excluded).
[59] These are the facts considered in 79.11.4 (Transfer of equitable interest).
[60] See 79.11.3 (Transfer: A's trust to B's trust).

An incidental result is to restrict or prevent tax advantages on a transfer from trust A1 to A2, where A was UK domiciled when A made trust A1 but foreign domiciled at the time A made trust A2.[61]

79.12 Post-2020 transfer retesting

79.12.1 *Application conditions*

Section 82A(1) IHTA provides:

> This section—
> (a) applies where, at any time on or after the day on which the Finance Act 2020 is passed [22 July 2020],
> [i] property ceases to be comprised in a settlement ("the first settlement") but
> [ii] is treated as a result of section 81 as remaining comprised in that settlement for the purposes of this Chapter [Chapter 3 Part 3 IHTA, relevant property], and
> (b) applies whether or not at any subsequent time the property is comprised in the first settlement without regard to that section.

79.12.2 *Retesting rule*

Section 82A(2) IHTA provides:

> If the property would apart from this section be excluded property by virtue of section 48(3)(a) or (3A)(a), the property is to be regarded as excluded property for the purposes of this Chapter [Chapter 3 Part 3 IHTA, relevant property], except sections 78 and 79, at any time only if the non-domicile condition is met in relation to each qualifying transfer occurring on or before that time.

79.12.3 *Qualifying transfer*

This term matters as each qualifying transfer must satisfy the "non-domicile condition".

Section 82A IHTA provides:

> (4) For the purposes of this section each of the following is a "qualifying transfer"—
> (a) the occasion on which section 81 applies to the property; and
> (b) any subsequent occasion on which the property would, if the effect of section 81 were ignored, become comprised in a

[61] See 79.11.1 (Transfer: A's trust to A's trust).

> settlement to which this Chapter applies (including the first settlement).
>
> (5) But a qualifying transfer does not occur as a result of—
>
> (a) an assignment[62] by a beneficiary of an interest in a settlement, or
>
> (b) an exercise of a general power of appointment,[63]
>
> unless the time of the assignment or exercise of the power falls on or after the day on which the Finance Act 2020 is passed [22nd July 2020].

79.12.4 *Non-domicile condition*

Section 82A(6) IHTA provides:

> For the purposes of this section "the non-domicile condition" is—
>
> (a) in a case where a qualifying transfer occurs as a result of[64] an assignment by a beneficiary of an interest in a settlement or an exercise of a general power of appointment,[65] that the beneficiary or the person exercising the power—
>
> (i) was not domiciled in the United Kingdom at the time of the assignment or exercise of the power, and
>
> (ii) is not a formerly domiciled resident for the tax year in which the time mentioned in subsection (2) falls;
>
> (b) in a case in which section 81 applies which is not within paragraph (a), that the person who was the settlor of the property in relation to the first settlement was not domiciled in the UK immediately before the time when the property ceased to be comprised in the first settlement;
>
> (c) in any other case, that the person who was the settlor of the property in relation to the first settlement was not domiciled in the UK immediately before the time of the subsequent occasion.

79.12.5 *Transfer after death of settlor*

Section 82A(7) IHTA provides:

[62] Section 82A(9) acknowledges Scots law terminology: "In this section any reference to an assignment includes an assignation."

[63] See 87.10.1 (General power: Terminology).

[64] Section 82A(8) provides: "In this section any reference to a qualifying transfer occurring as a result of—
(a) an assignment by a beneficiary of an interest in a settlement, or
(b) an exercise of a general power of appointment,
includes the transfer occurring partly as a result of the assignment or exercise of the power."

[65] See 87.10.1 (General power: Terminology).

> If—
>
> (a) the settlor mentioned in subsection (6)(b) or (c) has died before the time mentioned there, and
>
> (b) the death does not give rise to a qualifying transfer,
>
> the non-domicile condition is treated as met.

79.12.6 *Post 2020-retest: FOTRA security*

Section 82A(3) IHTA provides:

> Section 65(8) has effect in relation to the property at any time only if (in addition to the condition mentioned there) the non-domicile condition is met in relation to each qualifying transfer occurring on or before that time; but, for the purposes of this subsection, the non-domicile condition has effect with the omission of subsection (6)(a)(ii).

79.12.7 *2020 retesting: Critique*

In the 2019/20 edition of this work I said:

> What is needed is a review and rethinking the rules as a whole, not tinkering; but there is not much chance of that.

HMRC say:

> HMRC met with stakeholders [in 2020] to discuss questions and requests for clarification around the recent legislative changes concerning trust settlements definition and application of excluded property tests. HMRC agreed that more could be done to provide certainty and clarity to affected customers, and to work collaboratively with stakeholders to improve customer understanding of how HMRC interprets legislation in what are often complex individual scenarios. To that end it was agreed to take forward work across three areas;
>
> - HMRC to clarify in guidance, working with stakeholders, their interpretation of how the legislation applies in certain more straightforward scenarios. Clarifying any misunderstandings on how they interpret the legislation operating.
> - HMRC and stakeholders to work together to update the available customer guidance on the treatment of loans in regards to settlements, and consequential application of the tax code. It was acknowledged there are some longstanding areas of uncertainty for customers in this area, which predate the recent changes. This is especially true given the range of complex scenarios which may arise.
> - HMRC and stakeholders to continue discussions to best understand if and how improvements could be made to ensure the interaction of

> settlements[66] between trusts and the gifts with reservation of benefits rules are operating as intended.[67]

The reader may think that the time for these discussions was before the provisions were enacted - not after. But the philosophy of "ready, fire, aim" prevails.[68] The hope that the problems of ill thought out provisions (such as 2020 retesting) will be solved by guidance appears to be ineradicable - despite all experience and case law to the contrary.

79.13 s.81 transitional rules

The current provisions have evolved over time.

From 1975 to 1981, the position was governed by para 11(4) sch 5 FA 1975:

> *Where, by the same disposition, property ceases to be comprised in one settlement and becomes comprised in another settlement, the property shall be treated as remaining comprised in the first settlement.*

This was narrower than the current s.81 rule, which applies to an inter-trust transfer "unless in the meantime any person becomes beneficially entitled to the property" rather than one made "by the same disposition".

In particular, the 1975 rule would not apply where an individual was entitled to a reversionary interest, and transferred that interest to a settlement, and subsequently the interest fell into possession.

FA 1982 introduced the current rule but preserved the former rule for earlier transfers. Section 81(2) IHTA preserves that status quo:

> (2) [a] Subsection (1) above shall not apply where the property ceased to be comprised in the first settlement before 10 December 1981;
>
> [b] but where property ceased to be comprised in one settlement before 10 December 1981 and after 26 March 1974 and, by the same disposition, became comprised in another settlement, it shall for the purposes of this Chapter [Chapter 3 Part 3 IHTA, relevant property] be treated as remaining comprised in the first settlement.

There was an afterthought in 1984, now in s.81(3) IHTA which provides:

[66] Presumably the meaning is, transfers between trusts.

[67] Informally circulated email, Sep 2020.

[68] See 1.12 (State of UK tax reform).

> Subsection (1) above shall not apply where a reversionary interest in the property expectant on the termination of a qualifying interest in possession subsisting under the first settlement was settled on the trusts of the other settlement before 10 December 1981.

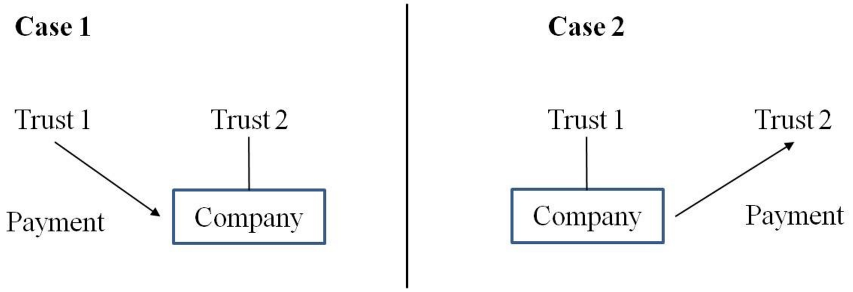
That would apply in a case where the reversionary interest fell into possession (ie where the inter-trust transfer took effect) even after the date of change of 10 December 1981.

A reversionary interest settled before 1981 is likely to have fallen into possession, but the point is still relevant as settlements affected by the transitional rules may still be in existence.

By today's standards, s.81(3) seems a generous transitional provision: the principle that amendments should not have retrospective effect was more strictly observed a generation ago than it is today.

79.14 Transfers to/from underlying co

Section 81 only applies on a transfer from one trust to another trust. It does not apply on a transfer from a company held by a trust, or on a transfer to a company held by a trust.



In case 1, there is a transfer from trust 1 to the company held by trust 2. In case 2, there is a transfer from the company held by trust 1 to trust 2. Section 81 does not apply in either case.

Section 81 is not needed, because a variety of other IHT provisions fill the gap. A full analysis would be a lengthy exercise, as there are a number of permutations, depending on whether we are considering case 1 or 2, and whether the payment is income or capital. But in outline:

(1) In case 2, there is in principle a charge under the IHT close-company code.

(2) (a) If trust 1 is a discretionary trust, there will in principle be an exit charge:

(i) in case 1, as property ceases to be relevant property
(ii) in case 2, on the diminution of the value of trust property[69]

(b) If trust 1 is an estate IIP trust, there may be a chargeable transfer:
(i) in case 1, as an interest in possession comes to an end
(ii) in case 2, perhaps, on diminution of value of trust property[70]

(3) If the payment is income, then s.731 and other income tax anti-avoidance provisions need consideration.

79.14.1 *Transfers across trust/co structures: Navigation*

82.9 IHT residential-property code: Deductibility of relevant loan

Debts raise many other tax issues: see 62.1.1 (Loan tax issues: Navigation).

80.1 IHT deduction for debts: Introduction

This chapter is concerned with IHT deductions for debts or liabilities.[1] I go beyond the themes of this book and address the topic as a whole.

I also consider the IHT position of the creditor, and IHT deductions on death for funeral expenses and costs of estate administration.

This chapter needs to be reviewed in the light of the recent cases on home loan schemes;[2] but that must wait until the cases are final.

80.2 Position of creditor

A creditor owns an asset (the benefit of the debt) which is part of their estate.

80.2.1 *Value of debt-asset for IHT*

Section 166 IHTA provides:

> [1] In determining the value of a right to receive a sum due under any

[1] A note on terminology: "Debt" and "liability" are used (more or less) synonymously. There is a distinction in that:
(1) "Liability" is only apt to describe the burden of the debt.
(2) "Debt" may be used to describe (a) the burden of the debt (the obligation of the debtor) *or* (b) the benefit of the debt (the asset of the creditor). The context should make it clear which meaning of "debt" is intended. For instance, in s.251 TCGA, the word is first used with one meaning and then with the other; see 56.22.1 (CGT debt exemption). It might sometimes assist clarity to refer to the benefit/burden of the debt, or to refer to a debt-asset/debt-liability; or to use the word "liability" for the burden of the debt and "receivable" for the benefit of the debt.

In this chapter the word debt is generally used, perhaps loosely, as equivalent to liability. I prefer *debt* as the shorter word. See too 56.22.2 (Meaning of "debt").

[2] *Pride v HMRC* [2023] UKFTT 316 (TC); *Elborne (Executors of) v HMRC* [2023] UKFTT 626 (TC) (14 July 2023).

obligation it shall be assumed that the obligation will be duly discharged,

[2] except if or to the extent that recovery of the sum

[a] is impossible or not reasonably practicable and

[b] has not become so by any act or omission of the person to whom the sum is due.

I refer to this as the "s.166 statutory valuation rule".

It is necessary to distinguish:

(1) Market value of a debt-asset

(2) Statutory IHT value: value for IHT purposes under s.166

(3) Face value: the amount due under the terms of the debt

In the following discussion:

(1) An **"impaired debt"** is one which will not (or may not) be repaid in full, because the debtor has insufficient assets

(2) A debt is **"deliberately"** impaired if it has become so by an act or omission of the creditor

(3) A **"time-barred debt"** is one which cannot be enforced under the English law Limitation Act 1980 or similar legislation[3]

80.2.2 *Impaired debt*

The market value of an impaired debt is less than face value. But if a creditor ("C") deliberately allows a debt to become impaired, by omitting to take some step, such as calling in the debt, the value of the debt for IHT purposes in C's estate is (for IHT purposes) regarded as if the obligation will be fully discharged. The statutory IHT value is higher than the market value.

Suppose the relationship between creditor and debtor is arm's length. It could still happen that:

(1) C has an opportunity to call in the debt but for commercial reasons does not do so.

(2) The debt later becomes impaired or worthless.

No-one would suggest that the s.166 statutory valuation rule applies. One might say that context shows that the act or omission must be one where C intends to confer a gratuitous benefit on the debtor. Or one might rely on a causation argument and say that in this commercial case, the reason

[3] Different considerations apply in Scotland; see 80.8.3 (Limitation in Scots law).

that the debt becomes impaired is not the omission to call it in, it is the failure of the creditor. Causation is a context-dependent concept. These are two routes to the same destination.

The s.166 statutory valuation rule may favour HMRC because the value of C's estate is higher, which may increase IHT due on the death of C; or if C is a trust, the value of the trust property is higher, which may increase trust IHT charges. But the rule may favour C, because C does not make a transfer of value by allowing a debt to become impaired, even if the omission is deliberate; ie if C could have called for payment, but gratuitously and deliberately left it outstanding to become impaired in order to benefit the debtor.

This makes sense, because the market value of an impaired debt fluctuates over time. There is no specific occasion or point of time when an IHT charge could arise.

80.2.3 *Time-barred debt*

Similar points arise for a time-barred debt. The market value of a time-barred debt is nil. But if a creditor ("C") allows a debt to become time-barred, the value of the debt in C's estate is (for IHT purposes) regarded as if the obligation will be fully discharged. So C does not make a transfer of value by allowing a debt to become time-barred: the value of C's estate is not reduced. Likewise there is no IHT exit charge if trustees allow a debt to become time-barred. This applies even if the omission is deliberate, ie the creditor could have called for payment but deliberately left it outstanding to become time-barred.

This makes sense, if it is seen in the context of HMRC practice that a time-barred debt is deductible in the estate of the debtor.[4]

80.2.4 *Gift/waiver/disposal of debt*

If C gives a deliberately impaired, or time-barred, debt to a 3rd party, C makes a transfer of value equal to the statutory IHT value.

The value of the debt for IHT purposes in the hands of the assignee is its market value. The s.166 valuation rule does not then apply as the condition in s.166[2][b] is not met.

If C waives the debt, the same point arises.

If C calls in the debt in part, the value of the outstanding debt remains

[4] See 80.2.1 (Value of debt-asset for IHT).

its face value, if the impairment is due to C.

If C releases a deliberately impaired debt for consideration less than its IHT value, there is a reduction in C's estate of the difference.

If the debtor becomes bankrupt, the debt may cease to exist, but C does not make a disposition or transaction, so there is no occasion of charge to IHT.

80.3 Basis of deduction for debts

The IHTA distinguishes between:

(1) A debt which is an incumbrance[5] on an asset. I refer to this as an "**incumbrance-debt**" and I refer to the asset as the "**incumbered property**".

(2) Other debts ("**unsecured debts**").

80.3.1 *Incumbrance-debt*

IHT is charged by reference to the market value of assets. In the case of incumbrance-debts, there are in principle two possible ways to approach the deduction for debts:

(1) *A net-value approach*: One might identify the asset as the asset subject to the incumbrance; the market value of the asset is the value taking the incumbrance into account.

(2) *A deduction approach*: One might identify the asset as the asset free of the incumbrance; the market value is the value of the asset ignoring the debt and then a deduction is made as a separate step.

The two approaches generally reach the same result. However occasionally the paths diverge. The question arose in a procedural context in *Alexander v IRC*, because a question about the value of land is (in some cases) referred to the Lands Tribunal but other questions are not.[6] In *Alexander* the asset was a lease acquired at a discount under "right to buy" legislation. Under the lease the tenant covenanted to repay the discount if he sold the property within five years. The CoA adopted the net-value approach:

> The liability to repay the discount, being charged on the leasehold premises, was in my judgment, an incumbrance on the property and

[5] A note on spelling: the IHTA refers to *incumbrance*. Outside UK statutory drafting, the word is generally spelt *encumbrance* but I adopt the IHTA spelling here.

[6] Section 222(4A) IHTA.

> should be taken into account in ascertaining the value of that property. I therefore agree that ... the question as to the value of the flat, taking into account the liability to repay discount, was a question as to the value of land for the Lands Tribunal ... . the issue as to the value of the property of the deceased in the flat was not correctly described by the Lands Tribunal, as a question of 'deciding liabilities between the vendor and a third party'. It was, in my judgment, a question of the value of the property in the hands of the deceased.[7]

80.3.2 *Unsecured debt*

In the case of unsecured debts, the net-value approach is not possible, and the only approach is the deduction approach: one must value the assets of the estate, and make a deduction as a separate step. In this case s.5(3) IHTA authorises, or at least confirms,[8] the deduction for the debt:

> In determining the value of a person's estate at any time his liabilities at that time shall be taken into account, except as otherwise provided by this Act.

80.4 Amount of deduction for debt

Section 162(2) IHTA provides:

[7] [1991] STC 112 at p.122. If further authority is needed, see *Henty v The Queen* [1896] AC 567 at p.573: "In any question as to probate duty, [an incumbrance-debt] is a burden which adheres to and tends to diminish, or it may be to extinguish, the value of the asset upon which it is charged."

[8] *Green v IRC* [2005] EWHC 14 (Ch) at [12] regarded s.5(3) IHTA as merely confirming a deduction, not authorising it:

> "... the property of the deceased ... is his personal estate net of his liabilities. In other words, it is at that stage that the liabilities are dealt with. It is not necessary for section 5(3) to provide for a second time that the debts are to be deducted in arriving at the value of the deceased's property (or estate) and in my view it is not really doing that. It is in part confirmatory, but in the main it is intended to provide a qualification or qualifications to the principle that debts are deductible– the meat of the subsection is in the closing words 'except as otherwise provided by this Act'. One finds provisions in the Act which qualify that right in sections 5(4), 5(5) and 162. Its confirmatory nature is supported by the use of the phrase 'taken into account', which is more general than 'shall be deducted'. I accept that the nature of section 5(3) would be clearer without the comma, but nevertheless it seems to me to be clear enough."

In relation to incumbrance-debts, that is right; in relation to unsecured debts, it seems an odd construction of the words; but it does not matter.

> Subject to subsection (3) below,[9] where a liability falls to be discharged after the time at which it is to be taken into account it shall be valued as at the time at which it is to be taken into account.

This only states what one would have expected. Suppose, say, T dies in year 1, owing a debt for 100 payable in year 2, interest free. The valuation of the debt is less than 100, as there is a discount for the delayed payment. But the point may not often arise.

80.5 Allocation of debt

80.5.1 *Why allocation matters*

Suppose an individual dies and is liable to certain debts immediately before death. The debt is deducted in computing the value of the estate. If on the death all the estate is subject to IHT at the same rate, it does not matter for IHT whether the debt is regarded as a deduction from any particular item of property. However it often happens that an estate includes chargeable and exempt property. In particular:

(1) An individual may own excluded property and non-excluded (chargeable) property
(2) An individual may own property which qualifies for an IHT relief, eg:
  (a) APR or BPR
  (b) DT relief
  (c) Instalment relief
(3) Property may be given to a spouse or charity and so qualify for the IHT spouse or charity exemption

In these cases one must ask whether the debt is deducted from the value of the chargeable or the exempt property.

80.5.2 *Incumbrance-debt*

Section 162(4) IHTA provides:

> A liability which is an incumbrance on any property shall,
> [a] so far as possible and
> [b] to the extent that it is not taken to reduce value in accordance with section 162B [debt attributable to agricultural/business property],
> be taken to reduce the value of that property.

[9] The exception (not discussed here) relates to a liability to pay IHT; this is taken into account without making an allowance for the fact that payment of the tax is not due immediately.

That adopts or confirms what I call the net-value approach.[10] The term sometimes used is "economic alliance" principle.

It is considered that "incumbrance" here means a security interest, ie a mortgage, charge, lien or pledge.[11]

If the amount of the debt exceeds the value of the property, the value of the property is taken as nil and the excess is deductible from the estate like an unsecured debt.

If a debt is an incumbrance on several assets there must be an apportionment. HMRC agree. The IHT Manual provides:

> **IHTM28210 Investigating liabilities: mortgages** [Sep 2018]
> ... when a debt is charged on several properties it should be apportioned between them.

If the incumbrance on some asset has priority, then the deduction should be against that asset first.

If it is desired to secure a debt on non-UK property (but to keep the IHT deduction against UK property), a back-to-back guarantee may be a solution. That is:

(1) T borrows from a third party ("the primary debt").
(2) T's primary debt is guaranteed by a bank.
(3) Under the terms of the guarantee, T is required to reimburse the bank if the guarantee is called upon ("the second debt"). This second debt is secured on foreign assets.

Section 162(4) will not apply to the primary debt, which can in principle be deducted from UK property. But the GAAR may need consideration.

Conversely, if on those facts the second debt is secured on UK property, but the primary debt is not secured on that property and the deduction is not set against that property.

Note the need to comply with the Bills of Sale Acts if securing loans on chattels.

80.5.3 *Unsecured debt*

Section 162(5) IHTA provides:

> Where a liability taken into account is a liability to a person resident outside the UK which neither—

[10] See 80.3 (Basis of deduction for debts).

[11] See 82.10.1 (Security/collateral).

> (a) falls to be discharged in the UK, nor
> (b) is an incumbrance on property in the UK,
>
> it shall,
>
> [i] so far as possible and
> [ii] to the extent that it is not taken to reduce value in accordance with section 162B [debt attributable to agricultural/business property],
>
> be taken to reduce the value of property outside the UK.

This identifies three connecting factors. Where a debt is not an incumbrance on any property, there are two connecting factors and four permutations:

Case No.	**1**	**2**	**3**	**4**
Debt to UK resident	No	No	Yes	Yes
Discharge in the UK	No	Yes	No	Yes

Section 162(5) tells us the answer to Case 1: the debt is set against non-UK property. Which non-UK property, if there is more than one item of property? IHT Manual provides:

> **IHTM28394 deducting foreign debts** [Sep 2018]
>
> [1] Debts that are owed to a person resident outside the UK and:
>
> - not charged on UK property, or
> - not contracted to be paid in the UK
>
> should be deducted primarily against foreign property, IHTA84/S162 (5).
>
> [2] If there are debts in more than one country the debts in any one country should be set against the assets in that country, and any excess set proportionately against the assets in other foreign countries.
>
> [3] This instruction does not apply to funeral expenses (IHTM10371).

I do not see any good reason for point [2]: an unsecured debt should be set against foreign property pro rata; but it will not often matter.

Suppose an individual holds shares in a foreign company which holds a UK residence. The shares are non-excluded property, but they remain foreign situate property, so that an unsecured debt may be set against the shares under s.162(5).

There is nothing about Cases 2 to 4. However, the implication is that in Cases 2 to 4 the debt reduces the value of the property in the UK.

What is the priority between s.162(4) and (5)? It is considered that (4) is applied first. An incumbrance-debt is taken so far as possible to reduce the value of the property. Only if the debt is not an incumbrance on any property, or if the amount of the debt exceeds the value of the property, does one apply the rules in s.162(5). HMRC agree. The IHT Manual provides:

> **IHTM28395 Deducting liabilities where there is excluded property** [Sep 2018]
> You will see cases where there is excluded property in the estate and deductions may be properly payable out of both excluded and other property. In this situation, provided the debts are to UK creditors, you may allow a deduction in full against the non-excluded property.
> But, in view of IHTA84/S162 (4) this does not apply to debts that are charged on excluded property.
>
> **IHTM28396 Deducting UK debts when there is both UK and foreign property in the estate** [Sep 2018]
> If the deceased's estate includes both UK and foreign assets you should first deduct any UK debts against the UK assets and set the deficit, if any, against the foreign assets. Debts are UK debts if one of the following applies:
> - they are owed to creditors who are resident solely in the UK
> - they are charged on property in the UK, or
> - they are contracted to be paid in the UK.
>
> This practice should be applied, despite the decision in *Re Kloebe*, *Kannreuther v Geiselbrecht* [1884] 28 Ch D 175. This was that in the administration of the English estate of a deceased person domiciled abroad, foreign creditors are entitled to be paid, along with those who are resident in the UK, in shares proportionate to their respective claims.
> If our official practice is challenged you should refer the case to Technical.

The practice seems right; though I do not see why the probate case cited should have any relevance to IHT.

80.5.4 *Where debt falls to be discharged*

In outline, the place where a debt falls to be discharged is that specified in the contract, or (if not specified) the residence of the creditor.[12] HMRC broadly agree. The IHT Manual provides:

[12] See *Chitty on Contracts* (34th ed., 2021), para 24-053 (Place of payment). Further consideration is needed for a contract not governed by English law.

> **IHTM28396 Deducting UK debts when there is both UK and foreign property in the estate** [Sep 2018]
> If the deceased's estate includes both UK and foreign assets you should first deduct any UK debts against the UK assets and set the deficit, if any, against the foreign assets. Debts are UK debts if one of the following applies
> - *they are owed to creditors who are resident solely in the UK*
> - they are charged on property in the UK, or
> - *they are contracted to be paid in the UK. ...*
>
> (Emphasis added)

A debt which is set against UK property (but which is not charged on specific property) will be set against UK property rateably. Some of the deduction will be wasted if the individual owns UK property outside the scope of IHT, in particular:

(1) Property qualifying for APR or BPR
(2) For a foreign domiciliary: UK AUTs or OEICs
(3) For a non-resident: FOTRA securities

80.6 GWR property subject to debt

A debt secured on an asset is in principle deductible in computing a GWR charge on the asset.[13]

If the GROB property is held in trust, trust debts are similarly deductible. HMRC agree. IHT Manual provides:

> **IHTM14401. The property comprised in the gift** [Sep 2018]
> ... *Example* (Vineet)
> In 2000 V settles £1 on discretionary trusts of which he is, and remains until his death in 2005, an object. Shortly after the creation of the settlement he advances £50,000 to the trustees by way of loan, interest free and repayable on demand.
> At the time of V's death, the settled property comprises £1 cash (representing the original £1 gift into settlement) and the proceeds of an insurance policy (purchased with the borrowed monies) on V's life amounting to £250,000.
> The loan of £50,000 has been repaid at the rate of £2,500 per annum by the trustees and £25,000 is outstanding at the date of death.

The HMRC analysis is as follows:

[13] See 80.3.1 (Incumbrance-debt).

> The proceeds of £250,000, *less the loan of £25,000*, are derived from the original loan, and you can treat them as part of the death estate. (The balance outstanding under the loan less £25,000 forms part of the free estate).

80.7 Invalid claim

In principle a deduction is only allowed for a valid and enforceable debt. In general an invalid or unenforceable claim (such as a debt of honour) is not a debt at all, in the true sense:[14] it is not classified as a debt which is disallowed for IHT. But it comes to the same thing.

The IHT Manual provides:

> **IHTM28383 Debts must be legally enforceable** [Sep 2018]
> The general position is that no deductions can be allowed for debts that are not legally enforceable or capable of being legally enforced...
> Debts that may be disallowed because they are not legally enforceable include
> - debts paid under a moral obligation (these are likely to be debts that have either been incurred for no consideration or for past consideration)
> - liabilities that are unenforceable because there is no written evidence (for example, oral agreements for the sale of an interest in land)

80.8 Time-barred debt

80.8.1 *Limitation law background*

In outline: s.5 Limitation Act 1980 provides:

> An action founded on simple contract shall not be brought after the expiration of six years from the date on which the cause of action accrued.[15]

A debt which under the LA 1980 cannot be enforced is called "time-barred" (or "statute-barred", but "time-barred" is the better term).

There was formerly held to be a moral obligation to pay a time-barred debt. In *Re Rownson*:

[14] It would not matter if an unforceable claim were said to be a "debt", as its value would be nil; see 80.4 (Amount of deduction for debt).

[15] In the case of a specialty (deed) the period is 12 years: s.8 Limitation Act 1980. The same applies in Northern Ireland law: Art 4 Limitation (Northern Ireland) Order 1989

> We know that there are some people, both Judges and other persons, who think that to plead the Statute of Limitations is unconscionable.[16]

Norton v Frecker (not a tax case) shows how strong the moral obligation was perceived to be in the 18th century:[17]

> no executor was compellable, either in law or equity, to take advantage of the statute of limitations against a demand otherwise well formed.

I think attitudes to this moral issue have changed.[18] But it depends on the circumstances. A time-barred debt to a friend in need is one thing, and refusal to pay may still be regarded as unconscionable. A debt to a trust of which the debtor is settlor, or principal beneficiary, may be quite different.

Time-barred debts - unenforceable but retaining a spectral existence - occupy a strange space between validity and invalidity.

80.8.2 *Time-barred debt: Deduction*

The IHT Manual provides:

> **IHTM28384 Statute-barred debts** [Dec 2021]
> [The Manual summarises the rules in the Limitation Act (wrongly called the Limitations Act) and continues:]
> Even though the lender may be barred from pursuing recovery, a debtor may decide to pay the debt after the expiry of the time limits. Because of this you should allow a debt which is otherwise statute-barred if the personal representatives pay the debt and you receive evidence that the payment has been made.

This practice is at first sight surprising, though taxpayers who qualify for an IHT deduction will not complain. But on reflection it makes sense. It would not be right that a debt, incurred for full consideration, and paid under an accepted moral obligation, should be disallowed for IHT; and the practice established under estate duty, or earlier, has continued unaltered for IHT.

It logically follows that HMRC should in practice accept that a debor

[16] (1885) 29 Ch D 358 at p.362. Kocourek, "A Comment on Moral Consideration and the Statute of Limitations" (1923) 18 Ill LR 538.

[17] (1737) 1 Atk. 524. It seems to me that in an appropriate case this antique comment should be reconsidered. But the question will not often arise.

[18] See 121.13.2 (Time limits: Policy).

who pays a time-barred debt is not a transfer of value; though that is not said expressly in the Manual.

If contemporary morality has changed, the practice has lost its original *raison d'être*; but sometimes a moral obligation still obtains; see above.

80.8.3 *Limitation in Scots law*

A different rule applies to a debt governed by Scots law. The IHT Manual provides:

> **IHTM28384 Statute-barred debts** [Sep 2018]
> ... These instructions do not apply to debts in Scotland. Under Scottish law, if a lender allows time to pass without receiving any payment an action for recovery may become barred under the Prescription and Limitation (Scotland) Act 1973 (For details of this Act see Gloag and Henderson's *The Law of Scotland* 12th edition[19] at Chapter 4.) These debts are completely extinguished and cannot be enforced. Once the prescriptive period expires the debt cannot be allowed as a deduction.

For a debt governed by a foreign law one would have to consider whether the limitation law followed the English or the Scots model.

80.8.4 *Time-barred debts: Critique*

If recovery of a valuable debt is made impossible due to the creditor consciously allowing the debt to become time-barred, the omission should logically be a transfer of value. One should not treat an unenforceable debt as if it were enforceable. (The position is different for an impaired debt).

By the same logic, the rule (or practice) that a time–barred debt should be deductible for IHT should be abolished.

In short, normal IHT principles should apply in this area. This would bring the law into line with reality. It would align the law in England/Northern Ireland with Scotland. It would seem to be a simplification.[20] But the issue arises so rarely that the change seems more trouble than it is worth.

[19] Author's footnote: Now 14th ed., 2017.

[20] We would need transitional rules for debts which are time-barred at the time of the law reform, so there would be different rules for new and for old time-barred debts, until all the old time-barred debts ceased to exist, which would take a generation. So the reform is more like a complication than a simplification.

80.9 Disallowed debts: Introduction

There are 12 cases[21] where IHT deduction for a debt is disallowed:

Circumstance	**See para**
Right to reimbursement	80.10
Debt incurred for less than full consideration	80.11
Section 103 FA 1986	80.12
Estate IIP: Life tenant's personal debt not set against trust fund	80.15.2
Debt owed to trust in which the debtor has an estate IIP	80.16
Non-residents overdrawn foreign currency bank account	76.13.3
Debt attributable to:	
(a) excluded property (excluded property disallowance)	80.18
(b) business/agricultural/woodland property	80.29
(c) non-residents foreign currency bank account	80.26
Debt unpaid after death	80.36
Debt which the debtor is treated as entitled to under GWR rules	80.44.5
Debt in connection with a life policy[22]	*not discussed*

The drafting technique of most of the disallowance provisions is to state that the debt is not "taken into account". The s.103 disallowance provides that the debt is "subject to abatement", but that means the same.

80.9.1 *Position of creditor*

The disallowances could lead to insolvency, as debts disallowed for IHT purposes nevertheless remain payable. Unsecured creditors may need to ask for security in order to have priority over HMRC IHT claims.

80.9.2 *Debt of company*

The debt disallowance rules set out above are aimed at disallowing debts of individuals and trustees, who are liable for IHT. Companies are not subject to IHT. In valuing shares for IHT purposes, it is considered that company debts, like assets, should be taken into account in all circumstances.

In most cases the wording of the disallowances makes this clear (though if it did not, that might easily be inferred). The rules clearly do not apply to companies so far as they are expressed to apply:

[21] The GAAR is another exception; but the GAAR is an exception to every rule of tax law.

[22] See s.103(7) FA 1986.

- to a liability "incurred by a transferor" (the company is not the transferor)
- "in determining the value of a person's estate immediately before his death"

A company is not (usually) a transferor, so the disallowance cannot apply. The excluded property disallowance does not apply because company property is not excluded property.

80.10 Right to reimbursement

Section 162(1) IHTA provides:

> A liability in respect of which there is a right to reimbursement shall be taken into account only to the extent (if any) that reimbursement cannot reasonably be expected to be obtained.

Although this rule is expressed as a disallowance, it does not usually make much difference, as the right to reimbursement would either reduce the value of the debt or constitute an asset of the estate. (There could be a difference if the right to reimbusement was excluded property.)

The IHT Manual provides:

> **IHTM28354: reimbursement of guarantee debt** [Sep 2018]
> If you have accepted that there was consideration you need to consider the possibility of the deceased being reimbursed. This is because IHTA84/S162 (1) provides that the liability is to be restricted to the extent that reimbursement cannot reasonably be expected.
> If the tax at stake is worthwhile, you should look at the borrower's financial position at the date of death. This may involve valuing the deceased's assets such as unlisted shares or land. If the borrower was an unlisted company you should ask for advice from Shares and Assets Valuation (SAV).
> If the deceased was not the only person to guarantee the debt you will need to take into account the combined resources of the debtor and other creditor to calculate the deceased's liability on death. To do this you will need to consider the financial position of the other guarantor at the time of the deceased's death, as well as that of the borrower. The deceased's liability will be restricted to that part of the debt that cannot be met by the combined resources of the borrower and the other guarantor.
> When the financial position of the other liable people is known you can calculate the allowable deduction (IHTM28355) in the deceased's estate.

> **IHTM28355: calculating the allowable deduction for a guarantee debt** [Sep 2018]
>
> As long as the debt was for consideration (IHTM28353) you should allow a deduction in the deceased's estate for the part of the outstanding loan that cannot be met by the borrower. The basic scenarios are as follows
>
> **Borrower has no resources**
>
> If the borrower has no financial resources the whole of the outstanding liability will be deductible but the guarantee may be a lifetime transfer (IHTM28356).
>
> **Borrower has resources**
>
> If the borrower has enough financial resources to repay the loan in full the debt is not allowable. There is no lifetime transfer.
>
> **Borrower can repay part of the outstanding loan**
>
> If the borrower can only repay part of the loan the deduction is limited to that part of the loan that cannot be met by the borrower and which will have to be met by the deceased. You will need to negotiate the size of the deduction with the taxpayers. The guarantee may be a lifetime transfer (IHTM28356).
>
> The deduction allowed will not necessarily be the same as the amount, if any, ultimately paid out of the estate. This is because the liability is considered as at the date of death for Inheritance Tax purposes.

80.11 Debt not for full consideration

Section 5(5) IHTA provides:

> Except in the case of a liability imposed by law, a liability incurred by a transferor shall be taken into account only to the extent that it was incurred for a consideration in money or money's worth.

80.11.1 *Consideration*

This disallowance does not often apply, because debts are normally incurred for full consideration.[23] In particular, if an individual borrows money, the liability to repay the lender is in principle outside the scope of s.5(5), because the debt is incurred for full consideration.

What about interest accruing on a disallowed debt? Strictly, interest is incurred for full consideration, namely, not repaying the principal sum due, but it may be said that one should look back to the original

[23] For the meaning of "consideration" see App 4.2 (Consideration).

consideration (or lack of it) for the debt of the principal; and it would be safer to adopt the more cautious view.

The IHT Manual provides:

> **IHTM28353 Consideration For A Guarantee Debt** [Sep 2018]
> Before you can allow a deduction you must be sure that consideration was given in money or money's worth, IHTA84/S5 (5).
> This will usually be the case. For example, in the normal commercial situation where a bank will not extend credit to A without a guarantee from B the 'consideration' for the debt will be the granting of credit on the strength of the guarantee. In cases where a company's overdraft is guaranteed by one of the principal shareholders, you should assume that the requirements of IHTA84/S5 (5) are satisfied.
> An example of the sort of situation where there may be no consideration is where a parent agrees to guarantee a child's bank borrowings without the bank itself having given any undertaking in connection with the debt. The fact that the bank has made no undertaking means there has been no consideration. In this case the main purpose of the guarantee is to benefit the child, perhaps simply as an assurance that the parent will meet any debts incurred by the child from the bank. If a guarantee was given without any consideration you should not allow a deduction and you should also consider the possibility that lifetime transfers (IHTM28356) were made.

80.11.2 *Payment of disallowed debt*

If an individual gratuitously covenants to pay money to a person, the liability to pay under that covenant is disallowed. It follows that

(1) There is no transfer of value when the covenant is made.

(2) There is a transfer of value when a payment is made under the covenant.[24]

The payment of a disallowed debt may be a PET. The IHT Manual provides:

> **IHTM28356: lifetime transfers on guarantee debt** [Sep 2018]
> If no consideration was given in exchange for the guarantee (IHTM28353) any payments made by the deceased before the death should be treated as lifetime transfers to the borrower.
> In other cases, where you have allowed a deduction for the deceased's

[24] In this case, s.10 IHTA will not provide relief.

> liability you will need to consider whether the giving of the guarantee was a lifetime transfer. For example, if at the time the deceased gave the guarantee there was little prospect that the borrower would be able to pay the debts then there may be a lifetime transfer approximately equal to the full amount of the liability. If it was likely that at least some of the debt would be repaid then there may still be a transfer of value equivalent to the value of the guarantee less what the borrower could have been expected to repay. In both these cases any lifetime payments by the guarantor are not treated as lifetime transfers.
>
> When considering lifetime transfers you will need to look closely at the circumstances when the agreement was entered into. This usually means that you will need to see details of the borrower's financial position at that time.
>
> You should refer any case involving guarantee debts where you think that a lifetime transfer might be involved to Technical.
>
> **IHTM28357 lifetime transfers on guarantee debts called in and fully paid before death** [June 2016]
>
> Lifetime transfers might have arisen if the deceased entered into an agreement to guarantee a debt within the 7 years before they died and payments under the guarantee were required and made before death.
>
> You should consider the borrower's financial position at the date that the guarantee was given in the same way as on the previous page (IHTM28356) even though there is no outstanding liability at the date of death.
>
> This information will not be shown on form IHT419. In strictness any lifetime transfer should be shown on form IHT403. But in many cases this will only come to light in the course of other enquiries or if other information is received. Although you should be alert to possible omissions, particularly in where unlisted companies are involved, you should not raise any enquiries unless you have evidence to suggest that a lifetime transfer has not been returned.

There is no guidance on the consequences of part payment of a debt which is partly disallowed by s.5(5). We only have the words "to the extent that". I expect that the issue does not often arise. It is considered that the position should be as follows:

(1) In the absence of contrary intent, a part repayment of a partly disallowed debt should be regarded as
    (a) in part in consideration of allowable debt, and so not a transfer of value
    (b) in part in consideration of disallowable debt, and so a transfer of value

in the same proportions as the original principal of the debt.

(2) It should be possible for a debtor to specify whether part repayment should be regarded as relating to allowable or disallowable parts of the debt. This is consistent with the well-established principle that a debtor can in principle specify whether a part repayment of a debt is attributed to outstanding interest or to principal.[25]

80.11.3 *Debt imposed by law*

A debt imposed by law is allowable, even though not incurred for consideration. IHTM28381 [May 2020] gives examples: taxes, fines and penalties.

80.12 Section 103 FA 1986

80.12.1 *Section 103: Introduction*

A debt is in principle deductible even if it is owed to a connected person. But in this case s.103 FA 1986 needs consideration. This applies (in short) where an individual owes a debt to a person to whom they have previously made a gift.

The section was described in *McDougal v IRC* 31 ATC 153 as "intricate and involved in expression". The reader who studies this section will agree! But if one works patiently through it a few times the meaning becomes clearer; contrast the less convoluted but hopelessly vague wording of s.102 (GWR). Thus there has been little litigation on s.103, and a vast amount on s.102.

GAAR guidance describes s.103 as concerned with "self-generated liabilities" but that label is not very apt, and is best avoided as it may cause confusion.

80.12.2 *Section 103 disallowance*

Section 103(1) must be split up into separate parts in order to distil the sense:

> Subject to subsection (2) below, if, in determining the value of a person's estate immediately before his death, account would be taken, apart from this subsection, of a liability consisting of
>
> [i] a debt incurred by him or
>
> [ii] an incumbrance created by a disposition made by him,

[25] See 26.7 (Part payment: interest or principal).

> that liability shall be subject to abatement to an extent ...

Thus, subject to certain defences, s.103(1) disallows the deduction for the debt to a certain extent. The section then goes on to specify the extent of the disallowance:

> ... to an extent proportionate to the value of any of the consideration given for the debt or incumbrance which consisted of—
> (a) property derived from the deceased; or
> (b) consideration (not being property derived from the deceased) given by any person
> [A] who was at any time entitled to, or
> [B] amongst whose resources there was at any time included,
> any property derived from the deceased.

Thus s.103(1) works like this:

(1) One needs to identify the consideration given for the debt.
(2) One asks to what extent the consideration consists of the type of consideration described in s.103(1)(a) and (b).
(3) To that extent, the debt is in principle disallowed. (There are defences; I come to those later.)

80.12.3 *Property derived from deceased*

This expression "property derived from the deceased" is defined in s.103(3):

> In subsections (1) and (2) above "property derived from the deceased" means, subject to subsection (4) below, any property
> [a] which was the subject matter of a disposition made by the deceased,
> [i] either by himself alone
> [ii] or in concert or by arrangement with any other person
> or
> [b] which represented any of the subject matter of such a disposition, whether directly or indirectly, and whether by virtue of one or more intermediate dispositions.

What if an individual owns a company and procures it to make a disposition? There is no disposition made by the deceased, and s.103 does not apply.

The words at s.103(3)[a][ii] cover reciprocal arrangements.

The IHT Manual comments on "property derived from the deceased":

> **IHTM28367 Definition of 'property derived from the deceased' for s.103 FA 1986 purposes** [Sep 2018]
> ... In practice, income from property given absolutely by the deceased is treated as falling outside this definition. But where the deceased settled the property, the definition includes income payable under the disposition.
> You should treat money raised by the sale or mortgage of property derived from the deceased as though it was property derived from the deceased.

As to mortgages, see App.2.9.5 (Borrowing charged on asset).

80.12.4 *s.103(1)(a) disallowance*

One needs first of all to ascertain whether the consideration for the debt was "property derived from the deceased". If so, the debt is disallowed under s.103(1)(a). The debt is wholly disallowed if all the consideration is "property derived from the deceased" or partly disallowed if the consideration is partly "property derived from the deceased".

The IHT Manual gives this simple example:

> **IHTM28365 How s.103 FA 1986 applies when the consideration is 'property derived from the deceased'?** [Aug 2016]
> *Example*
> On 19 March 1987 A gives his brother B £25,000.
> On 25 April 1987 A borrows back £25,000 from B.[26]
> On 7 April 1994 A dies.
> Without the legislation A's estate includes the original £25,000. But if the money was still owed when A died the debt might [?] be claimed as a deduction against his estate. And the PET in 1987 is exempt as more than 7 years have elapsed.
> The legislation disallows the deduction for IHT purposes ...

80.12.5 *s.103(1)(b) disallowance*

Assuming one passes unscathed past the s.103(1)(a) disallowance, the journey takes us to s.103(1)(b). One must identify the person who gave the consideration for the debt. One then asks whether this is a person:

> who was at any time entitled to, or amongst whose resources there was at any time included, any property derived from the deceased.

[26] Author's footnote: It is assumed that this £25,000 is, or represents, the £25,000 given to B.

If so, the debt is disallowed under s.103(1)(b). In principle the debt is wholly disallowed.[27] The IHT Manual gives this simple example:

> **IHTM28366 How s.103 FA 1986 applies when there is 'consideration given by any person whose resources at any time included property derived from the deceased'?** [Sep 2018]
> ... *Example*
> On 19 March 1987 A gives his brother B a parcel of land worth £25,000.
> On 27 April 1987 A borrows £25,000 from B.
> On 7 April 1994 A dies, at which time B retains the land which is non-income producing.[28]

The HMRC analysis is as follows:

> The PET was made more than seven years before the death so that no claim arises on the death.
> As the consideration for the debt is not derived from the deceased s.103(1)(a) FA 1986 would not apply.[29]
> But this arrangement is caught by s.103(1)(b) FA 1986 and the liability is not an allowable deduction for Inheritance Tax purposes.

80.12.6 *s.103(2) exceptions to s.103(1)(b)*

Section 103(2) provides exceptions to the s.103(1)(b) disallowance.[30] This provides:

> If, in a case where the whole or a part of the consideration given for a debt or incumbrance consisted of such consideration as is mentioned in subsection (1)(b) above, it is shown that
> [a] the value of the consideration given, or of that part thereof, as the case may be, exceeded
> [b] that which could have been rendered available by application of all the property derived from the deceased,
> [c] other than such (if any) of that property—
> (a) as is included in the consideration given, or

[27] Unless the consideration for the debt is given by more than one person (very unusual); but see below on defences to the s.103(1)(b) disallowance.

[28] But whether the land is income producing is not directly relevant.

[29] Author's footnote: It is assumed that the £25,000 which B lends to A does not represent the land.

[30] Section 103(2) does not override the s.103(1)(a) disallowance.

> (b) as to which it is shown that the disposition of which it, or the property which it represented, was the subject matter was not made with reference to, or with a view to enabling or facilitating, the giving of the consideration or the recoupment in any manner of the cost thereof,
>
> no abatement shall be made under subsection (1) above in respect of the excess.

It is helpful to consider this as three distinct exceptions.

80.12.7 *s.103(2)[b] exception*

The "s.103(2)[b] exception" is my term for the exception given by the words of s.103(2) down to the end of s.103(2)[b], ie ignoring s.103(2)[c]. The IHT Manual gives a simple example:

> **IHTM28369 Allowing part of a debt under s.103(2) FA 1986** [Aug 2016]
> Even if an arrangement (IHTM28366) is caught by FA86/S103 (1) (b), a deduction may still be allowed for part of the debt. If the value of the consideration given by the [lender][31] exceeded the amount that would have been available if the lender had applied all the property derived from the deceased, then the debt is reduced only to the extent of that lower amount.
> *Example*
> A gives his son B shares worth £20,000.
> B lends A £25,000, out of his separate resources, at a time when the shares were worth £17,000.
> A dies and a deduction of £25,000 is claimed.
> The amount of the deduction is the realisable value at the time the debt was created. So the liability is reduced by £17,000 - leaving £8,000 as a valid deduction.

The s.103(2)[b] exception allows a deduction (overriding the s.103(1)(b) disallowance) to the extent that the debt exceeds the value of the property derived from the deceased. That is obviously fair.

80.12.8 *s.103(2)[c](a) exception*

The next exception is the extension of s.103(2)[b] by s.103(2)[c](a). This prevents double counting with the s.103(1)(a) disallowance. The IHT Manual gives an example:

[31] The IHT Manual erroneously reads: "deceased".

> **IHTM28369 Allowing part of a debt under s.103(2) FA 1986** [Aug 2016]
> ... *Example*
> A gives shares worth £15,000 to B
> 18 months later B sells half the shares back to A for £7,500 – which is not paid but left as a debt repayable on demand.
> B lends A £12,000 entirely from his own resources.
> A dies owing B £19,500 [ie both debts remain outstanding].

The £7,500 debt is disallowed under s.103(1)(a). The reason is that the consideration for the £7,500 debt (the shares) is property derived from the deceased. The Manual correctly makes this point:

> The debt of £7,500 is clearly derived from the earlier gift of shares – and falls within s.103(1)(a) FA 1986. This liability is not deductible.

The Manual then turns to the £12,000 debt:

> If it was not for the provisions of FA86/S103 (2)(a) it would be possible to take that £7,500 into account in considering the debt of £12,000. The result would be that the entire debt of £12,000 would be non-deductible, so the whole of the claimed £19,500 would be disallowed. But because under FA86/S103 (1)(b) half the value of the shares is included in the consideration given for the debt there remains an excess of £4,500. This figure of £4,500 for the allowable debt is arrived at by calculating the resources available to B against the second loan of £12,000 as £7,500, being the original gift of shares less the £7,500 disallowed. So the balance of £4,500 is deductible without restriction because under IHTA84/S103 (2)(a) this amount is the excess consideration.

80.12.9 *s.103(2)[c](b) exception*

The next exception is the extension of s.103(2)[b] by sub-para [c](b). The Manual does not give an example of a case within s.103(2)[c](b); though this is perhaps the most important of the three. The result in the s.103(1)(b) examples in the IHT Manual would be different if the gift from A to B was not made (in short) with a view to enabling B to lend to A.

80.12.10 *s.103(4) exception*

Section 103(4) provides an important exception to the s.103(1)(a) and (b) disallowances:

> If
> [a] the disposition first-mentioned in subsection (3) above[32] was not a transfer of value and
> [b] it is shown that the disposition was not part of associated operations which included—
> (a) a disposition
> [i] by the deceased, either alone or in concert or by arrangement with any other person,
> [ii] otherwise than for full consideration in money or money's worth paid to the deceased for his own use or benefit; or
> (b) a disposition by any other person operating to reduce the value of the property of the deceased,
>
> that first-mentioned disposition shall be left out of account for the purposes of subsections (1) to (3) above.

Associated operation has its IHT meaning[33] as s.103 is to be construed as one with the IHTA.

Suppose:

(1) S (not UK domiciled) transfers excluded property (ie non-UK situate property) to a trust.
(2) S borrows from the trustees and invests or spends the sum borrowed.

At first sight, the debt is disallowed as the consideration is property derived from the deceased, S. However, the s.103(4) exception applies. The disposition to the trust is disregarded, because it is the disposition first-mentioned in s.103(3)[a] and:

[a] the disposition is not a transfer of value;
[b] the disposition is a simple gift. It is not part of associated operations within s.103(4)[b](a) or (b).

Using the sum borrowed is an associated operation and it may be said that the disposition to the trust is "part of associated operations". But the requirement of s.103(3)[b] is still met:

> [b] ... the disposition was not part of associated operations which included—
> (a) *a disposition*
> [i] by the deceased, either alone or in concert or by

[32] That is, the disposition made by the deceased. See 80.12.4 (s.103(1)(a) disallowance).

[33] See 74.11 ("Associated operation").

> arrangement with any other person,
> [ii] otherwise than for full consideration in money or money's worth paid to the deceased for his own use or benefit; or
> (b) a disposition by any other person operating to reduce the value of the property of the deceased,

The trust disposition is not for full consideration. But the disposition mentioned in the third line must be a *different* disposition from the trust disposition.

Thus a debt to an excluded property trust is not in principle disallowed under s.103. It may be said that the intention of section 103 FA 1986 is to prevent self-generated debts from being deductible for inheritance tax purposes, so a purposive construction should be applied. But s.103(4) can be explained as a rational policy-based exemption for foreign domiciliaries, so it should be given its natural meaning.

The same applies if the gift is to a trust where the settlor has a estate IIP (eg a gift to a pre-2006 IIP trust) because such a gift is not a transfer of value.

Suppose an arrangement under which:

(1) Trustees lend to the settlor, S.
(2) S gives the borrowed money to another person.

The debt is disallowed. The s.103(4) exception does not apply. Condition [a] is satisfied but condition [b] is not, because the gift at stage (2) is an associated operation otherwise than for full consideration.

80.12.11 *Payment of debt: deemed PET*

In the absence of any provision, repayment of a disallowed debt would not be a transfer of value.[34] Section 103(5) FA 1986 deals with this:

> If, before a person's death but on or after 18 March 1986, money or money's worth, is paid or applied by him—
> (a) in or towards the satisfaction or discharge of a debt or incumbrance in the case of which subsection (1) above would have effect on his death if the debt or incumbrance had not been satisfied or discharged, or
> (b) in reduction of a debt or incumbrance in the case of which that subsection has effect on his death,

[34] Because s.103 only disallows the debt on death; s.10 IHTA may also provide relief, but it is not necessary to rely on that.

> the [IHTA] shall have effect as if, at the time of the payment or application, the person concerned had made a transfer of value equal to the money or money's worth and that transfer were a potentially exempt transfer.

I refer to this as a "**s.103(5) deemed PET**".

There is no express provision for a foreign domiciliary. Taken literally, there would be a deemed PET where, say, an individual domiciled in Australia:

(1) made a gift to a child
(2) later borrowed from the child
(3) later repaid the debt

The debt could fall within s.103(5) as the debt is one "in the case of which s.103(1) would have effect on his death if the debt had not been satisfied."[35]

However, the principle of territorial limitation requires that some exemption is implied. The best solution is that the deemed PET should be regarded as not only "equal to the money or money's worth" but made out of the money or money's worth. Thus no tax charge arises if:

(1) The individual is not UK domiciled at the time they discharge the debt, and
(2) The debt is discharged out of excluded property.

This would be broadly consistent with the comparable GWR provision.[36]

80.12.12 *Assignment of debt*

Suppose:

(1) A borrows from a bank ("A's debt").
(2) B purchases the benefit of the debt from the bank for its market value.

It is suggested that the purchase price paid by B to the bank is "consideration given for the debt". So A's debt is disallowed if the purchase price which B pays to the bank is property derived from A. Otherwise the section is easy to avoid.

[35] From 2013, the debt might be disallowed under the excluded property disallowance, in which case there would be no s.103(5) deemed PET; but that is not necessarily the case.

[36] See 78.17 (GWR lifetime charge).

Conversely if A's debt is disallowed because it is made in consideration of property derived from A, it continues to be disallowed even if the debt is sold to a third party. In other words, "consideration for the debt" means the consideration for the creation of the debt but also includes consideration for the assignment of the debt.

80.12.13 *1986 transitional rules*

For completeness: s.103(6) FA 1986 provides:

> Any reference in this section to a debt incurred is a reference to a debt incurred on or after 18 March 1986 and any reference to an incumbrance created by a disposition is a reference to an incumbrance created by a disposition made on or after that date …

This will rarely if ever now apply. But it illustrates how attitudes to retrospective effect in commencement provisions have changed since 1986.[37]

80.13 Debt owed by individual to trust

80.13.1 *Non-settlor life tenant debt to estate IIP trust*

Suppose the life tenant (not the settlor) owes a debt to trustees of an estate IIP trust (as happens when a pre-2006 IIP trust lends money to the life tenant). At first sight, the position seems to be:

(1) The life tenant has a deduction for the burden of the debt on their death.

(2) The benefit of the debt is an asset of the trust fund, and therefore part of the estate of the life tenant.

These two factors, the deduction and the asset, normally cancel each other out and the position ends up at neutral.

There is however one exceptional case. If the benefit of the debt is excluded property (in short, foreign domiciled settlor and debt not UK situate) then at first sight the result is a mismatch which benefits the taxpayer:

(1) a deduction for the burden of the debt in the estate of the life tenant; and

(2) no IHT on the benefit of the debt, being excluded property.

[37] See 2.9 (Retrospective tax legislation).

Robert Venables KC takes the view that there is no deduction for the debt. He cites Lord Asquith's well-known comment on deeming provisions[38] and continues:

> If one applies Lord Asquith's dictum, what is deemed to happen when the settlor[39] in fact borrows money from the trustees? As he is deemed to own the money before it is borrowed [s.49 IHTA], he cannot borrow it from himself. The transfer of the money to himself is a non-event for inheritance tax purposes. His estate is subject to no debt, as a man cannot owe a debt to himself. The question of any such debt being treated as non-deductible in computing the value of his estate for inheritance tax purposes therefore does not arise. Conversely, however, the settled property does not include the right to sue the settlor for the money borrowed, as a man cannot have a right against himself.[40]

I agree. The effect of s.49(1) IHTA is therefore to disallow the deduction for the debt.

A practical solution may be to arrange that the debt is not due to the trustees, but to a company owned by the trustees. Alternatively, perhaps, arrange that the debtor beneficiary ceases to be life tenant.

80.13.2 *Settlor life tenant debt to estate IIP trust*

Suppose a settlor life tenant owes a debt to trustees of an estate IIP trust (as happens when a pre-2006 IIP trust lends money to the settlor life tenant). At first sight, the general position seems to be:

(1) The settlor can claim a deduction for the burden of the debt on their death.

(2) The benefit of the debt is an asset of the trust fund, and therefore part of the estate of the life tenant.

These two factors, the deduction and the asset, normally cancel each other out and the position ends up at neutral. There are however two special cases.

If the benefit of the debt is excluded property, at first glance the result is a mismatch which favours the settlor (deduction for the burden of the debt,

[38] See App 8.2 (Deeming provisions: Construction).

[39] Venables is considering the position of a settlor life tenant, but the same applies to a non-settlor life tenant.

[40] Venables, "An IHT Trap for Settlors of Non-UK Resident Trusts", OTPR, vol 4, issue 3, p.165 *http://www.khpplc.co.uk/reviews*

no charge on the benefit of the debt).[41]

If the deduction for the debt is disallowed (eg under s.103[42]) the result is a mismatch which favours HMRC (no deduction for the burden of the debt, but a charge on the benefit of the debt, unless it is excluded property).

However on the view set out in para 80.13.1 (Debt owed by non-settlor life tenant to trust), the burden of the debt and the asset of the trust cancel each other out and both are ignored for IHT purposes. This is a sensible result, which fits the purpose of the legislation. In practice HMRC appear to accept this.

80.13.3 *Settlor debt to settlor-interested discretionary trust*

Suppose:

(1) The settlor ("S") owes a debt to trustees of a discretionary trust (as happens when a discretionary trust lends money to the settlor).

(2) The trust is within the scope of the GWR rules.

At first sight, the position seems to be:

(1) The settlor can claim a deduction for the burden of the debt on their death.

(2) The benefit of the debt is an asset of the trust fund, and therefore part of the estate of the settlor under the GWR rules.

These two factors, the deduction and the asset, normally cancel each other out and the position ends up at neutral.

There is however one exceptional case. Where the benefit of the debt is excluded property (in short, foreign domiciled settlor and debt not UK situate) then at first sight the result is a mismatch which benefits the taxpayer:

(1) a deduction for the burden of the debt in the estate of the settlor;[43] and

(2) no IHT on the benefit of the debt, being excluded property.

It is considered that the debt is disallowed under s.102(3) FA 1986. Under this section the benefit of the debt is treated as property to which the settlor was beneficially entitled on their death. The analysis is therefore

[41] This might happen if the settlor was not UK domiciled, but needed the deduction for the debt as their property was UK situate.

[42] But this would not often apply to excluded property trusts or to trusts where the settlor has an initial estate IIP: see 80.12.10 (Section 103(4) exception).

[43] Since s.103 does not usually apply: see 80.12.10 (Section 103(4) exception).

the same as where the settlor is a life tenant, see above. This is so whether the GWR debt is UK situate or foreign situate.[44]

80.14 Debts to and from trusts

Do not confuse two situations:

(1) Where an individual owes money to trustees (eg the trustees have lent money to the individual). Here:
   (a) The individual may be entitled to an IHT deduction for the burden of the debt in their estate.
   (b) The trustees have an asset, the benefit of the debt (which may or may not be excluded property).

(2) The reverse, where trustees owe money to another person (eg an individual has lent to the trustees). Here:
   (a) The individual owns an asset in their estate, the benefit of the debt (which may or may not be excluded property).
   (b) The trustees or life tenant may be entitled to an IHT deduction for the burden of the debt on the trust property.

The issue of deduction for debts of trustees raises entirely different questions to which we now turn.

80.15 Deduction for trust debt

The position for a trust debt[45] which is an incumbrance on a specific trust asset is straightforward: under the net-value approach, the asset is valued for IHT purposes at the net value (less the incumbrance)[46]; that rule applies for the Inheritance Taxation of trusts as for individuals.

It is clear that unsecured trust debts are also in principle deductible for IHT purposes, although there is no provision which states this expressly.[47] This apparent gap has caused some confusion.

Let us consider first the position where the trustees have borrowed funds and an estate interest in possession terminates during the lifetime of the life tenant. There is a transfer of value and the value transferred is:

[44] As to whether the GWR debt is subject to IHT under the GWR rules, see 78.13 (GWR over debt owed by the deceased).

[45] Strictly one should refer to a trustee debt rather than a trust debt, but in practice the two terms may be used synonymously.

[46] See 80.3.1 (Incumbrance-debt).

[47] In particular, s.5(3) IHTA does not apply here as trustees do not have an estate. See 80.3.2 (Unsecured debt).

> equal to the value of the property *in which his interest subsisted*.[48]

What is "the property in which the interest subsists"? In my view it is not the settled property; it is the property subject to the trustee lien.[49] For the trustee lien takes priority over the interest of the life tenant. The trustee lien is a lien over both income and capital of the trust fund. The value of property is its market value. Market value of property subject to a lien will be the net value, the value after deducting the value of the lien. In this valuation exercise we are not strictly claiming a "deduction" for the lien. We are simply ascertaining what property will fetch in the open market.

For the same reason, trust debts are deductible when an estate IIP terminates on the death of the life tenant and in computing 10-year and exit charges.[50]

This is the correct reason why unsecured trust debts are deductible.[51]

Some provisions which disallow debts of individuals do not apply to trust debts. Section 103(1) FA 1986 provides:

> ... if, in determining the value of a person's estate immediately before his death, account would be taken, apart from this subsection, of a liability consisting of a debt *incurred by him* or an incumbrance created by a disposition *made by him*, that liability shall be subject to abatement.

This does not apply to debts of trustees as we are not concerned with a debt or disposition made by the individual.

Section 5(5) IHTA provides:

[48] Section 52(1) IHTA, emphasis added. See 76.10 (Termination of estate IIP).

[49] Where a trustee has incurred a liability as trustee, they may in principle reimburse themselves out of the trust fund. For this purpose the trustee has a lien over the trust fund. One exception is where the trustee has committed a breach of trust. In the discussion here, it is assumed that is not the case.

[50] Section 65(5) IHTA assumes debts are deductible for the IHT exit charge, though it is not necessary to rely on this.

[51] In *Green v IRC* [2005] EWHC 14 (Ch) at [12] the judge took a short cut to reach the same destination:

> "... s.49 IHTA [deems] the deceased to be beneficially entitled to 'the property' in which his life interest subsists. It does not say 'net property' (i.e. the value of the property net of trust liabilities) but that is what it must mean, and the parties to this appeal both agree that in practice that is the effect the Revenue gives to the section."

The point is discussed in detail in the 3rd ed of this book para 27.9, but it is not necessary to set this out now that *Green* has confirmed the principle that trust debts are deductible for IHT.

On HMRC practice see for instance IHT Manual 10541 [Jun 2014] (deductions).

> Except in the case of a liability imposed by law, a liability incurred by a transferor shall be taken into account only to the extent that it was incurred for a consideration in money or money's worth.

This does not apply to trustees because they are not the transferor.

However the disallowance in s.162A IHTA (liability attributable to financing excluded property) can apply to trustees.

80.15.1 *Debt set against what property*

It matters in various cases whether a deduction for a trust debt is set against one item of trust property or another.[52] In particular, it matters where a trust with a foreign domiciled settlor has UK and excluded property.

The principles are as follows:

(1) If the debt is an incumbrance on specific trust property, the deduction is set against that property. This follows from the net-value approach and is confirmed by s.162(4) IHTA.[53]

(2) If the debt is not an incumbrance on specific trust property, it is under general trust law principles an incumbrance on the trust fund as a whole and deducted from the trust assets *pro rata*. The place of payment and residence of creditor are not relevant, and s.162(5) IHTA does not apply.

80.15.2 *Debt of life tenant not set against trust fund*

The IHT Manual provides:

> **IHTM28397 Liabilities: dealing with deficits** [June 2016]
> We take the view that a liability at any title may only be deducted against the assets at that title. This means that if there is an overall deficit on the free estate you cannot set this against the value of settled property. This is derived from the judgements of Lawrence J and the Court of Appeal in *Re Barnes (deceased)* [1938] 2 KB 684 in the first instance and [1939] 1 KB 316 CA. It is considered that these decisions, based on the relevant estate duty provisions in the 1894 Finance Act apply equally to the corresponding provisions in the Inheritance Tax legislation. But a contrary view is possible in view of IHTA84/S5(1) and IHTA84/S49(1). If the official view is contested and the tax

[52] See 80.5.1 (Why allocation matters).

[53] If under the terms of the trust a debt is payable out of certain property it is for this purpose a incumbrance on that property.

> involved is substantial you should refer the matter to Technical. **(This content has been withheld because of exemptions in the Freedom of Information Act 2000)**[54]

It is in fact clear that a personal debt of the life tenant cannot be set against property in which the life tenant has an estate interest in possession.[55]

80.16 Estate IIP trust debt to life tenant

Suppose trustees of an estate IIP trust owe a debt to the life tenant (as happens when a life tenant lends to a pre-2006 IIP trust). At first sight, the position seems to be:

(1) The trust can claim a deduction for the burden of the debt on the death.
(2) The benefit of the debt is part of the estate of the life tenant.

These two factors, the deduction and the asset, normally cancel each other out and the position ends up at neutral.

There is however one exceptional case. Where the benefit of the debt is excluded property (ie foreign domiciled life tenant and the debt not UK situate) then at first sight the result is a mismatch which benefits the taxpayer:

(1) a deduction for the burden of the debt in the trust;[56] and
(2) no IHT on the benefit of the debt, being excluded property.

[54] For completeness: The Manual continues:

> You should treat a deficit on joint survivorship property in a similar way. The deficit cannot be set against the assets at another title. But a deficit on joint property that passes under the Will can be set against free estate assets.
>
> You may generally allow a deficit in the deceased's estate that does not qualify for the instalment option to be set against the property that qualifies for the instalment option. If the value of the instalment option assets is insufficient to cover the liabilities, then the balance can be carried forward and set against any foreign property that the deceased owns. You may also allow any excess liabilities on the instalment option property against the non-instalment option property with any balance being carried forward against any foreign property, if any.

I am unable what point is being made here. Possibly the text would make sense if read together with the preceding passage which was omitted because of supposed exemptions in the FOIA 2000 (it is also difficult to understand what the FOA point may be, but there it is).

[55] *Green v IRC* [2005] EWHC 14 (Ch).

[56] Of course in most cases the trust property is excluded property so there is no need for the deduction, but that is not necessarily the case: the trust may hold UK property.

It is considered that s.49 IHTA does not disallow the debt.

80.17 Deduction for foreign taxes

80.17.1 *IHT on death*

Foreign inheritance taxes and similar taxes may be available as a credit to set against IHT: see 120.1 (Credit for Foreign IHT). Such taxes are not deductible for IHT purposes on general principles as they arise on the death and IHT is charged immediately before the death.

80.17.2 *Lifetime taxes*

Unpaid foreign taxes, and penalties, which accrue during a person's lifetime are in principle deductible. They are liabilities imposed by law. The IHT Manual provides:

> **IHTM28100 Overseas taxes** [Sep 2018]
> Special rules (IHTM27181) apply to overseas taxes that are similar in nature to Inheritance Tax (IHT). These may in some cases be set against the IHT liability.
> For other types of overseas taxes the general rule is that they can normally only be deducted from the value of property in the country that imposes the tax. This is because the taxes are unenforceable in other countries, *Government of India v Taylor* [1955] AC 491.
> There are three exceptions to this rule:
> - tax debts in the Republic of Ireland (IHTM28101)
> - Canadian income tax on a deemed disposal on death (IHTM28102)
> - foreign tax on shares situated in the UK (IHTM27201).

The proposition that foreign taxes are unenforceable in other countries now needs to be qualified. Enforceability of foreign taxes is a large topic, and may need investigation in the circumstances of the case; but under international treaties, foreign taxes are generally enforceable in other countries, and there may be other methods of enforcement (eg arrest of the executors if they enter the jurisdiction concerned.)

So far as foreign taxes are unenforceable and unpaid it seems right in principle that there should be no deduction and a court would be expected to reach that conclusion even in the absence of express provision to that effect.[57]

It is difficult to see why the deduction should be against property in the

[57] See too 80.36 (Debt unpaid after death).

country concerned: it should be against non UK property generally, under s.162(5) IHTA, unless the foreign tax legislation imposes an incumbrance (which does not seem likely).

80.17.3 *Irish tax*

The IHT Manual provides:

> **IHTM28101 Deduction for tax debts in the Republic of Ireland** [Sep 2018]
> If the deceased died owing tax in the Republic of Ireland, you should allow a deduction against the free estate for any tax that has actually been paid to the Irish authorities provided the deceased
> - was domiciled in the United Kingdom, and
> - had no assets in the Republic of Ireland.
>
> Where, in these circumstances, the deceased also has assets in a third country, you should apportion the tax debts.
> If a deduction is claimed for any 'Probate Tax' paid in the Republic of Ireland, you must refer the matter to Technical for advice. This tax, which is paid by the executors or administrators of an estate, is not covered by our Double Taxation Convention with the Republic of Ireland.

80.17.4 *Canadian income tax*

The IHT Manual explains the Canadian tax background:

> **IHTM28102. Canadian income tax** [Jul 2016]
> Under Canadian law, the estate of an individual is deemed to have been disposed of immediately before their death. Income tax is charged on any resulting gains. If, under the (Income Tax) Double Taxation Agreement the deceased was resident in Canada, the charge applies to all property wherever it is situated. But if the deceased was resident in the UK the charge applies only to immovable property in Canadia and to certain business property.

There was a similar charge to CGT in the UK between 1965 and 1971. The UK abolished the CGT charge on death; Canada abolished its estate duty instead, a wiser decision.[58] The Manual continues:

> In a press release dated 1 August 1978, the Board announced that, by concession
> - IHTA84/S5 (3) will be treated as applying to income tax in Canada

[58] See 88.5.6 (Rebasing on death: Critique).

> imposed on a deemed disposal immediately before death even though the liability may not in strictness have arisen until the person had died
>
> - where Inheritance Tax (IHT) is chargeable on a person's world-wide estate, and income tax in Canada is charged on deemed gains which are attributable to property forming part of that estate, the Canadian tax will be allowed as a deduction in arriving at the value of the estate for IHT purposes, and
> - Canadian tax will normally be treated as reducing the value of property situated outside the UK whether that property is liable to IHT or not. But if the Canadian tax is more than the value of that property the excess will be set off against the value of the UK property.
>
> Any case in which IHT is not chargeable on the deceased's world-wide estate (for example, because the deceased was not domiciled in the UK) but a deduction is claimed for Canadian income tax on a deemed disposal immediately before death should be referred to Technical.

The matter was formerly covered by ESC F18, but HMRC withdrew that as they decided that the practice was correct as a matter of law, not concession.[59]

80.17.5 *Foreign tax on UK shares*

The IHT Manual provides:

> **IHTM27201. Procedure for relief by concession on shares** [Jul 2016]
> Occasionally shares in a company situated in some part of the UK by UK law, are also treated as liable to tax in a foreign country on the grounds, for example, that the company carries on business there. In this circumstance, by concession, the amount of foreign tax is allowed as a deduction against the value of the shares. This concession operates whether the company is incorporated in the UK or elsewhere.
>
> The concession applies in the same way where the obligation to pay foreign tax on death falls upon the company and the company has the right to be reimbursed by the personal representatives of the deceased shareholder before it registers a transfer of the shares.
>
> The concession does not apply to cases covered by the statutory reliefs provided for by s.158 IHTA 1984 and s.159 IHTA 1984. Nor does it apply to shares that become liable to the foreign tax by reason of the

[59] HMRC, "Withdrawal of extra statutory concessions: Technical note and call for evidence" (January 2014).

> operation of a double taxation convention to which the UK is not a party.

I would have thought in this situation s.158 or 159 relief would normally apply, and in other cases relief would be available by law and not by concession. I would be interested if any reader can identify the foreign taxes to which this paragraph is applicable.

80.18 Excluded property disallowance

Section 162A(1) IHTA provides:

> To the extent that a liability is attributable to financing (directly or indirectly)—
> (a) the acquisition of any excluded property, or
> (b) the maintenance, or an enhancement, of the value of any such property,
> it may only be taken into account so far as permitted by subsections (2) to (4).

I refer to this as the "**excluded property disallowance**".

The disallowance applies to individuals and trustees, on death and on other occasions of charge.

80.18.1 *Commencement: Pre-2013 debt*

Para 5(1) sch 36 FA 2013 provides:

> Subject to sub-paragraph (2),[60] the amendments made by this Schedule have effect in relation to transfers of value made, or treated as made, on or after the day on which this Act is passed [17th July 2013].

So the excluded property disallowance applies to pre-2013 debts, if the transfer of value is after enactment. This was an unfair commencement rule as in many cases, including those without tax avoidance, existing liabilities will have been incurred in reliance of the pre-2013 rules. The norm requiring commencement rules to avoid retrospective effect has weakened.[61] But there it is.

80.19 "Financing" an acquisition

What is meant by the expression "financing" an acquisition of excluded

[60] This relates to the business/agricultural property disallowance: see 80.30.2 (BPR/APR disallowance: Commencement).

[61] Contrast 80.12.13; and see 2.8.2 (Retrospective legislation: Extent).

property? It is considered that it should be widely construed.

Suppose T enters into a contract to purchase excluded property and the purchase price remains outstanding on completion. The debt is attributable to financing the acquisition of the excluded property.

What about borrowing to pay incidental costs of acquiring excluded property, such as foreign stamp duty or agents commission? It is suggested that this is not disallowed.

If a person borrows to pay for services, the debt is not disallowed (unless the services relate to maintenance/improvement of excluded property).

Suppose:

(1) T borrows to acquire excluded property ("debt 1").
(2) T borrows to pay interest on debt 1 ("debt 2").

It is considered that debt 2 is not incurred in financing the acquisition, and so is not disallowed.

More commonly, the interest will be added to the acquisition debt, ie there will be one single debt; it is arguable that the debt is disallowed to the extent it reflects the acquisition cost, but not to the extent it reflects interest. However the drafter seems to have assumed that an increase in the debt due to interest is in principle caught.[62]

80.20 Maintenance/enhancement of value

The IHT Manual provides:

> **IHTM28012 meaning of 'maintain' and 'enhance'** [Sep 2018]
> The words 'maintain' and 'enhance' extend the scope of the provisions beyond simply buying either excluded property (IHTM28014) or assets that qualify for relief (IHTM28019).
> Both words have their normal meaning. 'Maintain' means to keep in good or proper order, and 'enhance' means to improve or augment. These words are most likely to apply in connection with borrowing money to maintain or enhance buildings.
> Where a person borrows money instead of using their own money to acquire assets, it could be said that they have 'maintained' the value of their other assets. So if they were not domiciled in the UK and held most of their assets abroad, borrowing against UK assets could be said to be 'maintaining' the value of excluded property. Individuals are free to choose how to use and invest their assets and whether to borrow

[62] See 80.25.5 (Disallowable reason 2: increase in liability).

> money. So you should not normally disallow the deduction of a liability in these circumstances.
>
> But, any case where the borrowing against UK assets appears to be part of arrangements that are primarily designed to avoid these provisions and obtain a tax advantage should be referred to Technical.

80.21 "Indirectly" financing

The IHT Manual provides:

> **IHTM28013 meaning of "indirectly"** [Dec 2021]
>
> The word 'indirectly' at s.162A(1) IHTA84, s.162B(1)(b), (3)(b) & (5)(c) IHTA84 significantly broadens the scope of the provisions. It reduces the possibility of avoiding the restrictions by inserting a step or steps in the process of acquiring excluded or relievable property with the borrowed funds.
>
> As with the pre-owned assets charge (IHTM44005),[63] it is not necessary to show any intention that the funds should eventually be converted into excluded or relievable property when a loan was taken out. Inserting steps in an attempt to disguise the true nature of a transaction will be a strong indicator of indirect financing. And the acquisition of assets of any nature as part of a sequence of transactions that ends with the acquisition of excluded or relievable property will not necessarily be sufficient to prevent the deduction being disallowed.

"Not necessarily" is not exactly guidance. HMRC go on to cite a case:

> In *IRC v Stype Investments (Jersey) Ltd*[64] Vinelott J observed that the word 'indirectly' was used to make it clear that the (Inland Revenue) charge extended not only to the proceeds of sale of property subject to the charge and to property purchased with those proceeds (which may be said to represent that property 'directly') but also to any property into which the property subject to the charge or the proceeds of sale can be traced. Whilst this view may (?) have been expressed in connection with

[63] This relates to different wording: "the chargeable person has directly or indirectly provided ... any of the consideration given by another person for the acquisition of ... an interest in the relevant land"; see 83.6 ("Provide"). That does not shed much light on the issue discussed here.

[64] For the *Stype* case, see App 2.9.6 (Do co shares represent co assets). But I do not think that a comment on the meaning of "directly or indirectly representing" in the context of the Inland Revenue charge sheds much light on the meaning of "indirectly financing" in the present context; "directly or indirectly" is a phrase which is very context dependent.

> an administrative process, it shows the potentially broad scope of the word. There is no number of steps or a timescale beyond which borrowing money can be regarded as safe from being attributed to the acquisition of excluded or relievable property. And there is no statutory let-out where the taxpayer can show that at the time the loan was taken out; there was no intention to convert the borrowed funds into excluded or relievable property. But although the word 'indirectly' has a broad meaning, in the context of this provision, it must be possible to reasonably attribute the acquisition of the excluded or relievable property to the borrowed funds before the deduction of the loan is disallowed. Each case will turn on its own facts. You can find some examples of situations where property is acquired indirectly at IHTM28025.

This is an important question. Suppose:

(1) T borrows to acquire an asset ("asset 1").

(2) T sells asset 1 and uses the proceeds to acquire another asset ("asset 2").

Is it the case that the debt is "attributable to financing indirectly the acquisition of asset 2? That is the case if the steps formed part of an arrangement, but perhaps not otherwise.[65]

80.21.1 *Borrowed money in mixed account*

HMRC's first set of examples concern borrowed money mixed in an account with other money:

> **IHTM28025 examples where money has been borrowed to 'indirectly' acquire excluded or relievable property** [Sep 2018]
> *Example 1* (Marianne)
> M, who is domiciled outside the UK, owns a property in the UK.
> She borrows some money which she charges against her property and puts the money in her UK bank account.
> Some time later, she use some of the money in the account to buy some UK listed shares and some foreign shares.
> On her death, the liability is still charged against her property. The extent to which the liability may be disallowed will depend on the facts.

This particular scenario seems far-fetched, as one normally draws down a loan facility when the funds are needed, not before. But mixed fund

[65] In the IHT residential-property code, there is a provision to deal with this case: see 82.8.6 (Finance indirectly).

issues will arise in various circumstances.

HMRC consider three permutations of facts.

> [*Example 1(a)*]
> If
> [1] M had borrowed £100,000 and added that to her UK account which already contained £50,000 (that had not been borrowed) and
> [2] had then used that money to buy £75,000 worth of UK shares and £75,000 worth of foreign shares,
> it might be reasonable to say that one half of the liability was attributable to acquiring excluded property and disallow £50,000.

The author of the passage seems unsure. "It might be reasonable" is not guidance.

In my view one should apply the rule in *Clayton's case*: M has power to chose, and in the absence of an express choice, first in first out.[66] If the UK shares were purchased first, then (1) the UK shares were purchased with the UK money and £25k borrowed money; (2) the foreign shares were purchased with £75k borrowed money and £75k borrowing is disallowed. If the foreign shares were purchased first, then vice versa, and £25k is disallowed. If the shares were purchased at the same time, then as HMRC suggest, half the liability is disallowed.

The moral is that M should not mix borrowed money and other money. She should:

(1) use her existing £50k to purchase foreign shares, and
(2) borrowed £100k to purchase £75k UK shares and £25k foreign shares.

Then only £25k would be disallowed. But of course before 2013, M could not have known that.

In the next example the bank account holds (more or less) only the borrowed money:

> [*Example 1(b)*]
> Had the account contained very little other money and £100,000 of foreign shares had been acquired, the whole liability should be disallowed.

That seems straightforward.

The next example is similar to example 1a, but the HMRC analysis is unknown:

[66] See App. 2.10 (Withdrawal from mixed fund).

> [*Example 1(c)*]
> On the other hand, had the account contained, say, £400,000 and £100,000 of foreign shares had been acquired the position will depend on circumstances. You should obtain details of the amount in the account before the borrowed funds were added and details of how the funds in the account were used afterwards.
> Where the funds were borrowed specifically to acquire the excluded property, then they should be treated as being used wholly for that purpose and the liability disallowed. But if the facts indicate that the funds in the account were mixed, it might be more appropriate to apportion the amounts used to purchase the excluded property. If the position is unclear, or if the taxpayer or agent disagrees with your apportionment of the liability, refer the case to Technical.

This is not exactly "guidance".

80.21.2 *Tracing borrowed money through purchases and sales*

It is convenient to coin some terminology. In the following discussion:
"**A debt-financed asset**" is one purchased out of borrowed funds.
"**A partly debt-financed asset**" is one purchased partly out of borrowed funds and partly out of other funds.
"**Chargeable property**" is property which is not excluded property within the IHT definition.

The IHT Manual provides:

> **IHTM28025 examples where money has been borrowed to 'indirectly' acquire excluded or relievable property** [Sep 2018]
> ... *Example 3*
> The trustees[67] of an excluded property trust borrow £1m which is charged against existing UK property worth £1.5m (property 1).
> They use the borrowed funds to purchase a second UK property for £1m (property 2).
> At this point, if the liability were to be taken into account in arriving at the value subject to tax, the £1m liability would be allowed as a deduction because the money has been used to acquire UK property. IHTA84/S162A does not apply, so the chargeable value would be £1.5m (£2.5m chargeable UK assets less £1m allowable liability).

[67] This set of examples concern trustees whereas the first set concerned an individual. Do HMRC intend to suggest that there is a difference between trustees and individuals? Trustees are more likely to keep good accounts and a trust has more of a unity of purpose.

> Property 2 is later sold for £1m and all the proceeds are transferred offshore to become excluded property.

This is therefore a case where:
(1) A debt-financed asset is chargeable property.
(2) The chargeable property is sold.
(3) Excluded property is purchased with the proceeds.

The HMRC analysis is as follows:

> The liability would now be disallowed by IHTA84/S162A. This is because the liability has been incurred to indirectly acquire excluded property - the funds now held offshore. The chargeable value is still £1.5m (£1.5m of UK assets and no deduction for the liability).

In the next example:
(1) A debt-financed asset is chargeable property.
(2) The chargeable property is sold.
(3) Excluded property is purchased with part of the proceeds.

> *Example 4*
> The trustees of an excluded property trust borrow £1m which is charged against existing UK property worth £1.5m (property 1).
> They use the borrowed funds to purchase a second UK property for £1m (property 2).
> Property 2 is later sold for £1m,

So far the facts are the same as example 3, but the proceeds of sale are used in a different manner.

> £400,000 of which is used to acquire UK listed shares and the £600,000 to acquire foreign shares.

The HMRC analysis is as follows:

> £600,000 of the liability is disallowed by IHTA84/S162A(1) having been used to acquire indirectly the foreign shares which are excluded property, with the result that only £400,000 of the liability is allowed as a deduction.
> The value of the UK assets is £1.9m (£1.5m, plus the additional £400,000 in shares) from which can be deducted the allowable part of the liability of £400,000, leaving £1.5m chargeable.

In the next example:
(1) A *partly* debt-financed asset is chargeable property.
(2) The chargeable property is sold

(3) All the proceeds are used to purchase excluded property.

> *Example 5*
> The trustees of an excluded property trust own £1.5m of UK listed shares.
> They borrow £1m and use a further £600,000 from sale of some of the shares to purchase a UK property for £1.6m.
> The property is subsequently sold for £2.5m and all the sale proceeds are invested in foreign shares.
> The whole of the £1m liability has been used indirectly to acquire excluded property, so it is disallowed by IHTA84/S162A(1).
> The chargeable value is £900,000 (the original £1.5m less the £600,000 worth of the shares used to purchase the property).

In the next example:

(1) A partly debt-financed asset is chargeable property.
(2) The chargeable property is sold.
(3) Part of the proceeds are used to purchase excluded property.

> *Example 6*
> The trustees of an excluded property trust own £1.5m of UK quoted shares.
> They borrow £1m and use a further £600,000 from sale of some of the shares to purchase a UK property for £1.6m.
> The property is subsequently sold for £2.5m.

So far the facts are as in example 5.

> This time £750,000 of the sale proceeds are used to reinvest in UK quoted shares and £1.75m is used to acquire foreign shares.
> IHTA84/S162A(1) disallows the liability to the extent that it has been used indirectly to acquire excluded property.
> Part of the £1.75m of excluded property has been acquired indirectly from the £1m borrowed at the outset; this part is established as follows.
> The £1m borrowed made up 62.5% of the purchase price of the £1.6m UK property purchased by the trustees.
> When this property was sold, 70% of the sale proceeds (£1.75m out of £2.5m) were used to acquire the foreign shares. Of the original £1m borrowed therefore, £437,500 (£1m × 70% × 62.5%) is attributable indirectly to financing the acquisition of excluded property.
> Only the remaining £562,500 of the liability can be taken into account.
> The value of the UK assets is £1.65m (the original £1.5m less £600,000 used to buy the property plus the additional £750,000 reinvested in UK shares) from which can be deducted the allowable part of the liability of

£562,500, leaving £1,087,500 chargeable.

80.21.3 *Borrowing to repay debt*

Suppose:
(1) T borrows to purchase excluded property ("debt 1").
(2) T borrows to repay debt 1 ("debt 2").

Is debt 2 indirectly attributable to financing the acquisition of excluded property? What if T borrows to purchase non-excluded property but later sells that property and uses the proceeds to repay debt 1? It is suggested that debt 2 is attributable to financing excluded property if the steps form part of an arrangement, but not otherwise.

80.21.4 *Acquisition by third party*

The position becomes more complex if a second person is involved. Suppose:
(1) A (an individual) borrows.
(2) A gives the borrowed funds to B.

If A borrows and acquires *excluded* property, and gives it to B the debt is forever disallowed.

A may borrow and acquire *chargeable* property and give it to B; in the hands of B the property may (a) be excluded or (b) later become excluded. A's gift may be a PET or qualify for the IHT spouse exemption or it may be a chargeable transfer.

In the expression "attributable to financing (directly or indirectly) the acquisition of any excluded property" does "acquisition" mean acquisition by the person who has the liability? or does it mean acquisition by anyone? It is tentatively suggested that A's debt is attributable to financing the acquisition by B, if the steps form part of an arrangement, but not if they are independent.

Similar issues arise if trustees borrow and appoint the borrowed funds to B.

80.22 Excluded property disallowance reliefs

Statute provides the following reliefs (exceptions to excluded property disallowance):
(1) Disposal of debt-financed excluded property (disposal relief)
(2) Debt-financed asset ceases to be excluded property
(3) Debt exceeds debt-financed asset

80.23 Disposal of debt-financed asset

Section 162A(2) IHTA provides:

> [1] Where the property mentioned in subsection (1) has been disposed of, in whole or in part, for full consideration in money or money's worth, the liability may be taken into account
> [2] up to an amount equal to so much of that consideration as—
> (a) is not excluded property, and
> (b) has not been used—
> (i) to finance (directly or indirectly) the acquisition of excluded property or the maintenance, or an enhancement, of the value of such property, or
> (ii) to discharge (directly or indirectly) any other liability that, by virtue of this section, would not be taken into account.

I refer to this as "**disposal relief**".

"Dispose" is not defined so will bear its normal meaning, not the extended CGT meaning.

The liquidation of a company does not give rise to a disposal for consideration, in the strict sense;[68] but it appears that HMRC do not take this point. The IHT Manual provides:

> **IHTM28015 disposal of acquired assets where money has been borrowed to acquire excluded property** [Sep 2018]
> ... Example 2 (Axel)
> A, who is not domiciled in the UK, owns shares in an overseas company, which owns a UK property.
> A acquired the company by borrowing £1m.
> The company is liquidated and the UK property is transferred to A.
> IHTA84/S162A(2) refers to the disposal of excluded property for consideration in money or money's worth. You may accept that liquidating the company and transferring the property to A meets that requirement so the liability may[69] be allowed as a deduction against the UK property, although the allowable liability cannot exceed the value of the UK property that was transferred to the A.

[68] See App 4.5 (Transfer on liquidation).

[69] The example states *may* rather than *will* to allow for the possibility of other disallowable deduction rules, and that the deduction (if allowable) is not set specifically against the UK property (unless it is charged on the property, which the author of the example has perhaps assumed to be the case).

Suppose:
(1) T borrows to acquire excluded property ("asset 1").
(2) Asset 1 is sold and other excluded property is purchased ("asset 2").
(3) Asset 2 is sold and chargeable property is purchased.

Disposal relief can apply, as the debt is attributable to financing the acquisition of asset 2. HMRC agree. The IHT Manual provides:

> **IHTM28015 disposal of acquired assets where money has been borrowed to acquire excluded property** [Sep 2018]
> Example 3 (Basha)
> B, who is not domiciled in the UK, borrows £1m which she uses to invest in an overseas company (Company A).
> Company A in turn owns another overseas company (Company B) which owns a UK property.
> Company A is liquidated so B receives the shares in Company B. Company B is then liquidated and B becomes the owner of the UK property.
> Here the liability is attributable to indirectly financing the acquisition of the shares in Company B that owned the UK property. So excluded property was disposed of for full consideration in money's worth and as the consideration (the UK property) is not excluded, the liability may be allowed as a deduction against it.

80.24 Debt-financed asset becomes non-excluded property

An item of property may be excluded property at one time and subsequently become chargeable property, for instance, because:
(1) The owner of property may become UK domiciled.
(2) Foreign situate property (such as a chattel) may be brought to the UK.
(3) The law may change (as with the introduction of the 2017 IHT residence-property rules).

Section 162A(3) IHTA provides:

> The liability may be taken into account up to an amount equal to the value of such of the property mentioned in subsection (1) as—
> (a) has not been disposed of, and
> (b) is no longer excluded property.

If T borrows to acquire excluded property but the property becomes chargeable, the debt becomes allowable under 162A(3) up to the value of the property.

The IHT Manual gives this example:

> **IHTM28016 property is no longer excluded where money has been borrowed to acquire excluded property** [Aug 2016]
> ... Example (Chandra)
> C, who is not domiciled in the UK borrows £750,000 and buys a property abroad for £1m.
> The interest due on the loan is allowed to accumulate instead of being repaid.
> C subsequently becomes deemed domiciled in the UK (IHTM13024) so the property is now subject to tax.

More analytically, it is no longer excluded property.

> On C's death, the property is worth £1.2m and the sum owed under the liability is £1.3m.
> As the property is now subject to tax, the liability may be allowed; but only up to the value of £1.2m. The remaining £100,000 may not be deducted.

Had C bought property in the UK, the remaining £100k would be allowable. This seems a clear restriction on free movement of capital; so as long as EU law continues to apply, the law is not EU-law compliant.

It is open to question whether the interest part of the debt is disallowed.

80.25 Debt exceeds excluded property

80.25.1 *"Remaining liability"*

Statute uses the term "remaining liability" which is defined in s.162A(8) IHTA:

> "remaining liability" means the liability mentioned in subsection (1) so far as subsections (2) and (3) do not permit it to be taken into account;

The label is not entirely apt: "disallowed liability" might have been clearer.

80.25.2 *Debt exceeds original excluded property*

Section 162A(4) IHTA provides:

> To the extent that any remaining liability is greater than the value of such of the property mentioned in subsection (1) as—
> (a) has not been disposed of, and
> (b) is still excluded property,

> it may be taken into account, but only so far as the remaining liability is not greater than that value for any of the reasons mentioned in subsection (7).

The IHT Manual gives a straightforward example:

> **IHTM28017 Excess liability over value of excluded property where money has been borrowed to acquire excluded property** [Sep 2018]
> **Example 1** (Dominique)
> D, who is not domiciled in the UK, borrows £800,000 which is charged on UK assets worth £1.5m.
> She uses the £800,000 to acquire a villa in Spain, which is excluded property.
> The open market value of the Spanish villa falls to £500,000 by the date of her death.
> The £800,000 liability has been incurred to directly acquire excluded property, so would normally be disallowed by IHTA84/S162A(1). However, the reason for the liability being greater than the value of the excluded asset is not due to:
>
> - it being part of an arrangement to secure a tax advantage, or
> - an increase in the value of the liability, or
> - a disposal of the whole or part of the excluded asset.
>
> So £300,000 of the liability (£800,000 liability less the £500,000 value of the excluded asset) is allowed and reduces the chargeable value of the UK assets to £1.2m.
> **Example 2**
> If, in the example above:
>
> - the money had been borrowed from abroad,
> - it had not been charged on UK property, and
> - the deceased had also owned assets in France,
>
> the £300,000 should first be set against the French assets[70] before any balance is then set against UK assets.

80.25.3 *Debt exceeds property which becomes excluded*

Section 162A IHTA provides:

> (5) Subsection (6) applies where—
> (a) a liability or any part of a liability is attributable to financing (directly or indirectly)—
> (i) the acquisition of property that was not excluded property,

[70] More accurately, the deduction is against D's *foreign* assets; but the author has perhaps assumed that D's French assets are her only foreign assets.

> or
>
> (ii) the maintenance, or an enhancement, of the value of such property, and
>
> (b) the property or part of the property—
>
> (i) has not been disposed of, and
>
> (ii) has become excluded property.
>
> (6) The liability or (as the case may be) the part may only be taken into account to the extent that it exceeds the value of the property, or the part of the property, that has become excluded property, but only so far as it does not exceed that value for any of the reasons mentioned in subsection (7).

The IHT Manual provides a straightforward example:

> **IHTM28018 excess liability over property that has become excluded where money has been borrowed to acquire excluded property** [Sep 2018]
>
> ... Example (Roberto)
>
> R who is not domiciled in the UK borrows £500,000 which he uses to buy two paintings which he keeps in his London house.
>
> He subsequently takes one of the paintings, worth £300,000, to keep in his house in Florida. This painting is now excluded property.

The HMRC analysis is as follows:

> The £300,000 painting has not been disposed of but has become excluded property. The liability of £500,000 is therefore allowed to the extent that it exceeds the value of that painting. In other words, £200,000 of the liability is an allowable deduction (£500,000 less £300,000).

It was not necessary to have a separate relief for this case. Relief should have been available under s.162A(4).[71] But it does no harm.

80.25.4 *Disallowable reason: Avoidance*

Section 162A(7) IHTA sets out three disallowable reasons. They override the reliefs in:

Section	**Topic**	**See para**
s.162A(4)	Liability exceeds value of original excluded property	80.25.2
s.162A(5)(6)	Liability exceeds value of property which becomes excluded	80.25.3

[71] See 80.25.2 (Liability exceeds value of original excluded property).

The first disallowable reason is set out in s.162A(7)(a) IHTA:

> The reasons are—
>
> (a) arrangements[72] the main purpose, or one of the main purposes, of which is to secure a tax advantage ...

Section 162A(8) provides the standard IHT definition of "tax advantage".[73] "Tax" is not defined here, so it means IHT: see s.272 IHTA.

80.25.5 *Disallowable reason 2: Increase in debt*

The second disallowable reason is set out in s.162A(7)(b):

> The reasons are...
>
> (b) an increase in the amount of the liability (whether due to the accrual of interest or otherwise)...

An increase in the debt due to interest or index-linking is disallowed. So inflation will whittle away the value of the allowable debt over time.

The IHT Manual provides a straightforward example:

> **IHTM28018 meaning of 'indirectly' where money has been borrowed to acquire excluded property** [Sep 2018]
>
> ...
>
> *Example 2* (Emilio)
>
> E, who is domiciled outside the UK, borrows £800,000 and invests it in diamonds, which he keeps in the UK.
>
> He moves the diamonds abroad just before he dies.
>
> On his death, the diamonds are still worth the same amount but interest has accumulated on the loan so that Emilio now owes £850,000.

The HMRC analysis is as follows:

> As the assets acquired with the loan have not been disposed of but have become excluded property, only the excess value of the loan over the asset can be allowed as a deduction against any chargeable estate. However, as the liability has increased due to accrued interest, none of the liability may be allowed as a deduction.

Clearly E should have been advised to keep the diamonds in the UK. What if he took them outside and returned them before his death?

[72] Section 162A(8) IHTA Section 404A(8) ITTOIA provides the standard (unnecessary) IHT definition : see App 2.2.3 (Definitions of "arrangement").

[73] See 3.19.1 (Tax advantage: Definitions).

In the case of a foreign currency debt the debt is valued at the time it is taken out and an increase in the value of the debt due to currency fluctuation is disallowed.

80.25.6 *Disallowable reason 3: Disposal*

The third disallowable reason is set out in s.162A(7)(c):

> The reasons are...
>
> (c) a disposal, in whole or in part, of the property.

I do not understand the purpose of (c): how can a liability be attributable to a disposal? Is this a reference to disallow borrowing to cover the incidental costs of disposal?

80.26 Debt attributable to foreign account

A foreign currency bank account of a foreign domiciled non-resident qualifies for IHT relief, but it is not classified as excluded property.[74] It follows that a debt attributable to such an account is not disallowed under the excluded property disallowance. This was overlooked in 2013, but a provision was introduced to deal with the matter in 2014. Section 162AA IHTA provides a set of rules based on the excluded property disallowance:

> (1) This section applies if—
>
> (a) in determining the value of a person's estate immediately before death, a balance on any qualifying foreign currency account ("the relevant balance") is to be left out of account under section 157 (non-residents' bank accounts), and
>
> (b) the person has a liability which is attributable, in whole or in part, to financing (directly or indirectly) the relevant balance.
>
> (2) To the extent that the liability is attributable as mentioned in subsection (1)(b), it may only be taken into account in determining the value of the person's estate immediately before death so far as permitted by subsection (3).
>
> (3) If the amount of the liability that is attributable as mentioned in subsection (1)(b) exceeds the value of the relevant balance, the excess may be taken into account, but only so far as the excess does not arise for either of the reasons mentioned in subsection (4).
>
> (4) The reasons are—

[74] See 76.13 (Foreign currency account).

(a) arrangements[75] the main purpose, or one of the main purposes, of which is to secure a tax advantage,[76] or
(b) an increase in the amount of the liability (whether due to the accrual of interest or otherwise).

The better course would have been to classify foreign currency bank accounts as excluded property; or else to repeal FCBA relief altogether.[77] Does it matter? It is just one more page of legislation, one more straw on the camel's back.

80.27 Excluded property disallowance: planning

Planning is needed at the time of the acquisition of UK property. Suppose T owns £1m foreign property and wishes to purchase a UK home worth £1m:
(1) If T borrows to purchase the UK home, the debt is deductible.
(2) If T sells the foreign property to purchase the home, and subsequently borrows £1m to purchase foreign property, T is (more or less) in the same economic position. But in this case the debt is disallowed.

80.28 Business/agricultural property debt

Section 162B IHTA effectively disallows three classes of debt, attributable to:
(1) business property
(2) agricultural property
(3) woodland

I do not consider the provisions relating to woodland. The IHT Manual uses the terms "relievable property" or "relievable assets"; but I think it is clearer to refer to business /agricultural property. This takes us some way from the themes of this book, but s.162A-s.162C form part of a single code, and HMRC guidance on s.162B is relevant to 162A.

80.29 Business property debt

Section 162B(1) IHTA provides:

[75] Subsection (5) provides the standard (unnecessary) IHT definition: see App 2.2.3 (Definitions of "arrangement").
[76] Subsection (5) provides the standard IHT definition of "tax advantage"; see App 3.19.1 (IHT definition of "tax advantage").
[77] See 76.13.4 (Foreign account: Critique).

> (1) Subsection (2) applies if—
>
> (a) the whole or part of any value transferred by a transfer of value[78] is to be treated as reduced, under section 104, by virtue of it being attributable to the value of relevant business property, and
>
> (b) the transferor has a liability which is attributable, in whole or in part, to financing (directly or indirectly)—
>
> (i) the acquisition of that property, or
>
> (ii) the maintenance, or an enhancement, of its value.

The words in (b) are the same as the excluded property disallowance.[79]

Section 162B(2) IHTA provides:

> [a] The liability is, so far as possible, to be taken to reduce the value attributable to the value of the relevant business property, before it is treated as reduced under section 104 [BPR],
>
> [b] but only to the extent that the liability—
>
> (a) is attributable as mentioned in subsection (1)(b), and
>
> (b) does not reduce the value of the relevant business property by virtue of section 110(b).

This is not strictly a disallowance of the debt; but in the (usual) case of property qualifying for 100% relief, it comes to the same thing. I refer to this as "**the BPR disallowance**". The wording is different from the excluded property disallowance as business property may not qualify for 100% relief.

The disallowance can apply to individuals and to trustees, on death and on other occasions of charge.

The IHT Manual gives a straightforward examples of a debt used to purchase shares qualifying for BPR:

> **IHTM28020 borrowed money used to acquire assets that qualify for business relief** [Feb 2020]
>
> ...
>
> *Example 2* (Habibah)
>
> H borrows £450,000, which is charged on her house, and uses the funds to acquire AIM shares. At the date of H's death the AIM shares are worth £575,000 and qualify for business relief. The rest of her estate is

[78] Section 162B(9) IHTA provides a standard definition of "transfer of value" (repeating s.103(1) IHTA).

[79] See 80.19 ("Financing" an acquisition).

> worth £1.5m.
> At the date of death the liability is taken to reduce the value of the AIM shares that can qualify for business relief under IHTA84/S162B(2) from £575,000 to £125,000. Business relief applies to that value.
> The total estate, including the AIM shares is £2,075,000 (£1.5m plus £575,000).
> This is reduced by business relief of £125,000 and, subject to it meeting the provisions of IHTA84/S175A, the liability of £450,000.
> The value of the chargeable estate is £1.5m.
> As the liability has been taken into account to reduce the value of the AIM shares under IHTA84/S162B, the liability cannot be deducted against the value of the house under IHTA84/S162(4).

80.29.1 *Spouse exemption: Interaction*

The Manual then considers a more complex case:

> *Example 3* (Ian)
> I borrows £600,000, which is charged on his house and uses the money to buy shares in his son's company.
> At I's date of death,
> - the shares are worth £800,000,
> - the house £1m and
> - his personal estate is worth £500,000.
>
> Under his Will, I leaves his house to his spouse with the residue to his son.
> Assuming the liability meets the conditions of IHTA84/S175A, it is taken to reduce the value of the company shares before business relief is applied. As the liability has been taken into account under IHTA84/S162B, it cannot be taken against the value of the house under IHTA84/S162(4).
> The value of shares is reduced to nil through a combination of deducting the liability (£600,000) and business relief (£200,000).
> The liability has been taken into account against the shares, so the house passes to the spouse, free of the liability and qualifies for spouse or civil partner exemption.
> This leaves a chargeable estate of £500,000 that passes to the son.

The house does *not* pass to the spouse free of the debt as a matter of succession law.[80] The author means that the spouse exemption applies as if the house were free of the debt. The value transferred on the death for

[80] Unless I's will so provides; see s.35 AEA 1925.

IHT purposes is £1.5m, of which £1m is exempt under the IHT spouse exemption.

The IHT Manual does not address the more interesting question of whether the debt is disallowed on the death of I's spouse.

80.30 Agricultural property debt

Section 162B IHTA provides:

> (3) Subsection (4) applies if—
> (a) the whole or part of any value transferred by a transfer of value is to be treated as reduced, under section 116, by virtue of it being attributable to the agricultural value of agricultural property, and
> (b) the transferor has a liability which is attributable, in whole or in part, to financing (directly or indirectly)—
> (i) the acquisition of that property, or
> (ii) the maintenance, or an enhancement, of its agricultural value.
>
> (4) To the extent that the liability is attributable as mentioned in subsection (3)(b), it is, so far as possible, to be taken to reduce the value attributable to the agricultural value of the agricultural property, before it is treated as reduced under section 116.

I refer to this as the "**APR disallowance**". The wording echoes the BPR disallowance.

The IHT Manual gives some examples. The first example is a straightforward loan to improve agricultural property:

> **IHTM28021 borrowed money used to acquire assets that qualify for agricultural relief** [Sep 2018]
> ... *Example 1* (Ken)
> K borrows £200,000 which he uses to repair buildings on his farm which qualify for agricultural relief. The value of K's estate on death is £2m, of which £1,200,000 is agricultural property qualifying for relief at the date of death.
> The £200,000 liability reduces the agricultural value of the agricultural property to £1,000,000 under IHTA84/S162B(4).
> This £1,000,000 of agricultural value qualifies for agricultural relief.
> The value of the estate is reduced by agricultural relief of £1,000,000 and, subject to it meeting the provisions of IHTA84/S175A, the liability of £200,000, leaving a chargeable estate on death of £800,000.

80.30.1 *Debt partly attributable to agricultural property*

The next example involves a loan to acquire agricultural and non-agricultural property. It is also relevant to a loan to acquire excluded and non-excluded property:

> **IHTM28021 borrowed money used to acquire assets that qualify for agricultural relief** [Sep 2018]
> *Example 2* (Jan)
> J borrows £1m and invests it in a house and some adjoining farmland.[81] The house is worth £700,000 and the land £300,000.
> The farmland is let out to a neighbouring farmer.[82]
> At J's date of death, the value of the combined property has increased in value to £2m of which £1.2m is attributable to the house and £800,000 to the land.

In tabular form:

	House	**Land**	**Total**
Purchase date	£700k (70%)	£300k (30%)	£1m (100%)
Death date	£1.2m (60%)	£800k (40%)	£2m (100%)

The HMRC analysis is as follows:

> The liability is to be taken against the agricultural property to the extent to which it can be attributed to paying for that property, IHTA84/S162B(4).
> When J acquired the property, £300,000 was attributable to the farmland and this is the amount of the liability to be taken against the agricultural value on death.
> So, subject to the liability meeting the provisions of IHTA84/S175A, the chargeable value of the house will be £500,000 (£1.2m less the £700,000 portion of the liability used to buy the house). The value of the land (£800,000) will be reduced to nil by a combination of the liability (£300,000) and agricultural relief (£500,000). ...

Apportionment is by reference to values at the date of acquisition. The text goes on to consider the alternative of apportionment by reference to values at the date of death:

> An alternative approach would be to apportion the liability by reference to the values at the date of death. The effect, in this example, would be that only £600,000 of the liability would have been attributable to the house (£1,200,000 ÷ £2,000,000 × £1,000,000) giving a chargeable value for the house of £600,000 and increasing the liability to tax.
> If the combined value had been split differently between the house and the farmland, or if their values had increased in different proportions, apportioning

[81] It is assumed (1) the house does not qualify for APR and (2) the land qualifies for 100% APR.

[82] The point of stating this is that the land qualifies for APR but not BPR.

> the liability by reference to, say, date of death values may give a different result. But a consistent approach is necessary, and the liability should be apportioned using the values at the date of acquisition, even if an alternative approach would give rise to more tax.
>
> As well as being consistent, using the values at the date of acquisition avoids difficulties that might arise if either
>
> [1] part of the property is sold but the liability retained (how should the remaining liability then be apportioned?), or
>
> [2] if there were a sale and part of the liability was repaid, which would trigger the provisions of IHTA84/S162C, (IHTM28026).[83]
>
> Fixing the liability attributable to the different parts of the assets at the time they were acquired provides a certain basis going forward.

It would be better to take out two separate loans, one for the agricultural property and one for other property.

80.30.2 *BPR/APR disallowance: Commencement*

Para 5 sch 36 FA 2013 provides:

> (2) Section 162B of IHTA 1984 (inserted by paragraph 3) only has effect in relation to liabilities incurred on or after 6 April 2013.
>
> (3) For the purposes of sub-paragraph (2), where a liability is incurred under an agreement–
>
> (a) if the agreement was varied so that the liability could be incurred under it, the liability is to be treated as having been incurred on the date of the variation, and
>
> (b) in any other case, the liability is to be treated as having been incurred on the date the agreement was made.

This is different from the commencement of the other 2013 debt disallowances.

Care must be taken over refinancing pre-2013 loans relating to agricultural/business property, as that will have the effect of disallowing the debt.

Suppose:

(1) A pre-2013 debt is attributable to the acquisition of BPR/APR property which is not UK situate.

(2) The property is excluded property as it is owned by a foreign domiciliary or an excluded property trust.

The debt is not disallowed under the BPR/APR disallowance. However

[83] See 80.34 (Part payment of mixed debt).

it is disallowed under the excluded property disallowance!

One solution if possible is to make the property UK situate.

This seems a clear restriction on free movement of capital, so as long as EU law continues to apply, the disallowance is not EU law compliant.

80.30.3 *Effect on wills*

The rules may have an effect on pre-2013 wills using formulae relating to valuation, or relating to agricultural or business property relief.

80.31 Debt of unincorporated business

Section 110 IHTA provides:

> For the purposes of this Chapter—
> (a) the value of a business or of an interest in a business shall be taken to be its net value;
> (b) the net value of a business is the value of the assets used in the business (including goodwill) reduced by the aggregate amount of any liabilities incurred for the purposes of the business;
> (c) in ascertaining the net value of an interest in a business, no regard shall be had to assets or liabilities other than those by reference to which the net value of the entire business would fall to be ascertained.

In the following discussion, "**business debt**" means a debt incurred for the purposes of an unincorporated business.

The IHT Manual gives an example involving an unsecured business debt:

> **IHTM28020 borrowed money used to acquire assets that qualify for business relief** [Feb 2020]
> ...
> *Example 1* (Gareth)
> G, who runs his own sole trader business, borrows £250,000 to buy property that is to be used in his business. The loan is unsecured and is shown in the accounts as a liability of the business. IHTA84/S162B(1)(b) applies as the liability has been incurred to acquire relevant business assets. Under IHTA84/S162B(2) the liability should be taken to reduce the value of the relevant business assets before that value is reduced by business relief. However in this case the liability has already been reflected in the net value of the business under IHTA84/S110(b), so IHTA84/S162B(2)(b) prevents the liability being deducted twice.

Charging a business debt on non-business assets did not reduce the IHT liability even before 2013. Now the position is reinforced by s.162B. The IHT Manual provides:

> **IHTM25250 Partnership interests** [Feb 2017]
> ... One example of the operation of [s.110(c)] concerns a partner's Income Tax liability on their share of the partnership profits. As the partner's tax is not a liability incurred for the purposes of the business, it should not be taken into account in determining the net value of the partnership for the purposes of business relief.

80.32 Property qualifying for BPR/APR

The IHT Manual provides:

> **IHTM28022 borrowed money used to acquire assets that qualify for both agricultural and business relief** [Sep 2018]
> Where an asset qualifies for both agricultural and business relief, IHTA84/S114 (IHTM24151) directs that agricultural relief applies to the agricultural value first, with business relief applying to any excess value over the agricultural value of the asset. So, where the liability exceeds the agricultural value of the asset, there will be no agricultural relief to be deducted against the estate. The balance of the liability should then be set against the non-agricultural value of the asset to arrive at the value of the asset which may qualify for business relief.
> If the liability is more than the open market value of the asset, any excess can be set against any other chargeable assets. If the other chargeable assets qualify for business relief, the balance of the liability must be set against those assets that qualify for business relief before being set against any other assets that are chargeable to tax, subject to the liability meeting the provisions of IHTA84/S175A (IHTM28027).
> *Example* (Leon)
> L borrows £800,000 which he uses to buy a farm which he then farms himself. On L's death the estate is worth £2m, of which the farm is worth £1m with an agricultural value of £750,000.
> The liability of £800,000 was incurred to finance the acquisition of assets that are both relevant business assets and agricultural assets. IHTA84/S114 provides that where both agricultural relief and business relief can apply to the same asset agricultural relief is given in priority to business relief.
> Under IHTA84/S162B(4) the agricultural value of the agricultural property is reduced from £750,000 to nil, leaving no value qualifying for agricultural relief.
> The remaining £50,000 liability is deducted from the £250,000 value of the relevant business property, leaving £200,000 which can qualify for

> business relief.
> So the value of the estate of £2m is reduced by business relief of £200,000 and, subject to it meeting the provisions of IHTA84/S175A, the liability of £800,000, leaving a chargeable value on death of £1m.

Why does it matter which relief applies?

80.33 Gift of debt-financed business/agricultural property

The IHT Manual provides:

> **IHTM28024 transfer of relievable assets where borrowed money is used to acquire assets that qualify for relief** [Sep 2018]
> Where assets that qualify for relief have been acquired using borrowed funds and the liability has been secured against other chargeable assets, it would still be possible to obtain full relief and the deduction of the liability by:
> - giving away the relievable assets before death, but
> - retaining the liability within the estate.
>
> IHTA84/S162B requires that the liability is set against the transfer of relievable assets at the time of the lifetime transfer, and any excess value over the value of the liability would qualify for relief. But at death, the estate would no longer include any relievable assets, so the provisions of IHTA84/S162B would not apply and the liability could still be deducted against estate on death under IHTA84/S162(4).

Section 162B(7) IHTA deals with this problem:

> Subject to subsection (8), to the extent that a liability is, in accordance with this section, taken to reduce value in determining the value transferred by a chargeable transfer, that liability is not then to be taken into account in determining the value transferred by any subsequent transfer of value by the same transferor.

The IHT Manual provides:

> To prevent this, IHTA/S162B(7) stipulates that where a liability has already been taken into account to reduce the value transferred by a chargeable transfer, the liability cannot then be taken into account to reduce a subsequent transfer of value made by the same transferor.
> The wording used is important. The liability must reduce the value transferred by a chargeable transfer (a transfer that is immediately chargeable or a failed PET). If the lifetime transfer was a PET and the transferor survives 7 years, the transfer is an exempt transfer; so the liability may still be deducted from the estate on death as it will not have

> taken into account by an earlier chargeable transfer.
> ...
> *Example* (John)
> J, who has an estate of £3m, borrows £1m and uses this to purchase farmland which he then farms for 3 years.
> He then gives the farmland, now worth £1.2m to his daughter who farms the land herself, but he retains the liability.
> The individual has made a transfer of value when he gives the farmland to his daughter. The value transferred is the loss to J's estate of £1.2m. IHTA84/S162B(4) has the effect of reducing the £1.2m agricultural value by the amount of the liability to £200,000. This £200,000 value then qualifies for agricultural relief, reducing the value transferred to nil.
> When J dies 2 years later, the £1m liability cannot be taken into account again due to IHTA84/S162B(7). Instead of the chargeable transfer on death being £2m (£3m less the £1m liability), it is £3m with no deduction for the liability.

Care is needed if a parent wishes to give different property to different children.

80.33.1 *Relevant property trusts*

Section 162B(8) IHTA deals with this problem:

> Subsection (7) does not prevent a liability from being taken into account by reason only that the liability has previously been taken into account in determining the amount on which tax is chargeable under section 64.

The IHT Manual provides:

> **IHTM28024 transfer of relievable assets where borrowed money is used to acquire assets that qualify for relief** [Sep 2018]
> ...
> But this limitation does not apply to ten-year charges in view of IHTA84/S162B(8). So, whilst the assets acquired with the liability remain in the trust, the liability can be taken into account at each ten year charge. But once the assets cease to be relevant property, so that the liability is taken in account at the time of the exit charge, then if the liability remains in the trust, IHTA84/S162B(7) will prevent it from being taken into account against any further charges.

80.34 Part payment of mixed debt

A single debt may be used to finance the acquisition of:
(1) excluded property

(2) UK business/agricultural property
(3) chargeable property

I refer to this as a "**mixed debt**".

What if the debt is repaid in part? Is the part repaid:
(1) the allowable part (attributable to the chargeable property) or
(2) the disallowable part (attributable to APR/BPR/excluded property)?

Section 162C IHTA provides the answer in the manner most favourable to HMRC:

> (1) This section applies for the purposes of determining the extent to which a liability is attributable as mentioned in
> [a] section 162A(1) or (5) [excluded property disallowance]
> [b] 162AA(1) [foreign currency bank account disallowance] or
> [c] 162B(1)(b), (3)(b) or (5)(c) [BPR/APR disallowances]
>
> (1A) In a case in which the value of a person's estate immediately before death is to be determined, where a liability was discharged in part before that time—
> (a) any part of the liability that, at the time of discharge, was not attributable as mentioned in subsection (1) is, so far as possible, to be taken to have been discharged first,
> (b) any part of the liability that, at the time of discharge, was attributable as mentioned in section 162B(1)(b), (3)(b) or (5)(c) is, so far as possible, only to be taken to have been discharged after any part of the liability within paragraph (a) was discharged,
> (c) any part of the liability that, at the time of discharge, was attributable as mentioned in section 162AA(1) is, so far as possible, only to be taken to have been discharged after any parts of the liability within paragraph (a) or (b) were discharged, and
> (d) any part of the liability that, at the time of discharge, was attributable as mentioned in section 162A(1) or (5) is, so far as possible, only to be taken to have been discharged after any parts of the liability within paragraphs (a) to (c) were discharged.
>
> (2) In any other case, where a liability was discharged in part before the time in relation to which the question as to whether or how to take it into account arises—
> (a) any part of the liability that, at the time of discharge, was not attributable as mentioned in section 162A(1) or (5) or 162B(1)(b), (3)(b) or (5)(c) is, so far as possible, to be taken to

have been discharged first,

(b) any part of the liability that, at the time of discharge, was attributable as mentioned in section 162B(1)(b), (3)(b) or (6)(c) is, so far as possible, only to be taken to have been discharged after any part of the liability within paragraph (a) was discharged, and

(c) any part of the liability that, at the time of discharge, was attributable as mentioned in section 162A(1) or (5) is, so far as possible, only to be taken to have been discharged after any parts of the liability within paragraph (a) or (b) were discharged.[84]

The IHT Manual provides:

> **IHTM28026 partial repayment of loan before tax charge arises** [Sep 2018]
> Where borrowed money has been used to acquire:
> - excluded property (IHTM28014), or
> - finance the balance of a qualifying foreign currency bank account (IHTM28033), or
> - assets that have become excluded property (IHTM28018) or
> - relievable assets (IHTM28019)
>
> and the loan has been partially repaid before a charge to tax arises only the balance of the loan will be affected by the provisions of IHTA84/S162A, S162AA or S162B, subject to the liability meeting the conditions of IHTA84/S175A (IHTM28027).
> Where borrowed money has been used to acquire a mixture of:
> - excluded property (IHTM28014), or
> - assets that have become excluded property (IHTM28018) and
> - finance the balance of a qualifying foreign currency bank account (IHTM28033),
> - relievable assets (IHTM28019)
>
> and the liability has been partially repaid before a charge to tax arises, IHTA84/S162C contains rules that set out the order in which the liability is treated as having been discharged. The provisions cover the situation where a single loan has been used to acquire other assets that would be subject to tax as well.
> IHTA84/S162C(1A) only applies when considering the estate on death and only applies where the death is on or after 17 July 2014.
> Any part of the liability that is attributable to assets that are neither

[84] I set out the section as amended by the FA 2014 with effect from royal assent.

excluded nor relievable, nor used to finance a foreign currency bank account is treated as having been repaid first, IHTA84/S162C(1A)(a). If the partial repayment was greater than that part of the liability, the part of the liability that is attributable to relievable assets is treated as having been repaid next, IHTA84/S162C(1A)(b).

If the partial repayment was greater than the part of the liability attributable to both of those two categories of asset, the part of the liability that is attributable to financing the foreign currency account is treated as having been repaid next, IHTA84/S162C(1A)(c).

And, if the partial repayment was greater than the part of the liability attributable to all of the above categories, the remainder of the liability must be attributable to excluded property, or assets that have become excluded property, and is treated as being repaid last, IHTA84/S162C(1A)(d). So if the balance of the liability outstanding on death can only be attributable to excluded property then, subject to the provisions of IHTA84/S162A (IHTM28014), any deduction for the balance of the loan is disallowed.

IHTA84/S162C(2) applies in all other cases (and for events on or after 17 July 2013) in the same order as above, but ignoring the references to foreign currency bank accounts.

Example 1

The trustees of an excluded property trust which contains a UK house worth £2m borrow £1.5m which is charged against the property.

£800,000 is used to acquire unlisted UK shares which qualify for business relief and

£700,000 is used to acquire excluded property.

£300,000 of the liability is repaid before the ten year anniversary leaving a liability of £1.2m. At that time the unlisted UK shares are valued at £900,000 and the excluded property is valued at £1m.

Under IHTA84/S162C(2) the liability is treated as having been repaid first on the part of the liability incurred to acquire the unlisted UK shares. As £800,000 of the loan was used for this purpose, the £300,000 that was repaid is treated as having partially discharged this part of the liability - leaving £500,000 as a loan used to acquire the UK shares.

Under IHTA84/S162B(2) the value of the unlisted UK shares that can qualify for business relief is reduced by £500,000 from £900,000 to £400,000. The remaining £700,000 liability that was used to acquire excluded property is disallowed by IHTA84/S162A.

So the value of the UK assets in the trust of £2.9m (the UK house and the unlisted UK shares) is reduced by the part of the debt that was used to acquire the UK shares, £500,000, and business relief of £400,000 to £2m – or the same as the value of the UK assets before any transactions took place. Business relief is allowed against the increase in the value of the UK unlisted shares.

Example 2

The trustees of an excluded property trust which contains a UK house worth £2m borrow £1.5m which is charged against the property. This time the trustees use the £1.5m to acquire

- £900,000 of excluded property,
- £350,000 of assets qualifying for agricultural relief and
- £250,000 of UK listed shares.

£700,000 of the liability is repaid before the ten year anniversary leaving a liability of £800,000. At that time the excluded property is worth £1m, the agricultural assets are worth £400,000 and the UK shares, £300,000.

In tabular form:

	Excluded Prop	**Ag. Land**	**Shares**	**Total**
Purchase date	£900k (60%)	£350k (23%)	£250k (17%)	£1.5m (100%)
TYA date	£1m (59%)	£400k (24%)	£300k (18%)	£1.7m (100%)

The HMRC analysis is as follows:

Under IHTA84/S162C(2) the liability is treated as having been repaid first on the part used to acquire the UK shares. As £250,000 of the liability was used for this purpose, the first £250,000 of the amount discharged reduces the liability which can be deducted from the UK shares to nil.

Of the remaining £450,000 that was repaid, £350,000 was used to acquire agricultural assets which are worth £400,000 at the date of the ten year anniversary. So, the next £350,000 of the amount repaid reduces the liability which can be taken against the agricultural assets under IHTA84/S162C(2)(b) to nil. As none of the remaining liability can be attributed to acquiring the agricultural assets, the full value of the agricultural assets may qualify for agricultural relief with no restriction under IHTA84/S162B.

The last £100,000 of the liability which has been discharged (£700,000 - (£250,000 + £350,000) = £100,000) is treated as reducing the liability incurred to acquire the excluded property under IHTA84/S162C(2)(c). This reduces that part of liability from £900,000 to £800,000. So the balance of the liability that was not repaid, £800,000 is attributed to the acquisition of excluded property and is disallowed by virtue of IHTA84/S162A.

The value of the UK assets in trust of £2.7m (the UK house, agricultural assets and quoted shares) is reduced by the agricultural relief to £2.3m and none of the liability is allowable.

> In effect, the original £2m in the trust, plus the UK shares are now liable to tax. Although this may seem a harsh result given that the shares were acquired through borrowing, without a priority rule, it would be possible to manipulate assets and values to obtain an advantage.

80.35 Payment of disallowed debt

The payment of a disallowed debt is in principle a transfer of value, because it reduces the value of the estate. However, relief will in principle be available under s.10 IHTA (Dispositions not intended to confer gratuitous benefit). There is no equivalent of a s.103(5) deemed PET.[85] A simple course if possible is to repay the borrowing at any time before the death. Repayment reduces the value of the estate, but will in principle for relief under s.10. So "deathbed" planning may be possible.

If s.10 does not apply, however, repayment would be a chargeable transfer. It would not fall within the definition of a PET.

80.36 Debt unpaid after death

Section 175A IHTA provides:

> (1) In determining the value of a person's estate immediately before death, a liability may be taken into account to the extent that—
> (a) it is discharged on or after death,
> [i] out of the estate or from excluded property owned by the person immediately before death,
> [ii] in money or money's worth, and
> (b) it is not otherwise prevented, under any provision of this Act, from being taken into account.
>
> (2) Where the whole or any part of a liability is not discharged in accordance with paragraph (a) of subsection (1), the liability or (as the case may be) the part may only be taken into account for the purpose mentioned in that subsection to the extent that [the commercial reason defence applies].

Subsection (1) is worded as an *allowance* for debts which are paid: in order to identify the disallowance of undischarged debts, one needs to read subsections (1) and (2) together. The wording is convoluted, but it works.

I refer to this rule as the **"s.175A disallowance"**. That is not a transparent label, but I cannot think of a better one.

This disallowance only applies on death. It does not apply to lifetime

[85] See 80.12.11 (Payment of debt: deemed PET).

transfers (failed PETs or chargeable transfers) or to 10 year and exit charges on trusts.

A deduction is not allowed if the creditor waives (releases) the debt as that is not a discharge out of the estate. But a deduction is allowed if:
(1) The debt is paid, and
(2) The creditor makes a gift back to the debtor.

This is commercially equivalent to a waiver by the creditor. That arrangement is not avoidance: it makes the practical difference that interest accruing on the debt becomes taxable.

80.36.1 *To extent discharged*

If a debt for (say) 100 is discharged as to 50%, by a payment of 50, then 50% of the debt is allowable.

If the debt is wholly discharged by the transfer of money's worth valued 50, then it would be sensible if only 50% of the debt is allowable; though it requires a purposive reading to reach that result.

80.36.2 *s.175A disallowance: Commencement*

Para 5 sch 36 FA 2013 provides:

> (1) Subject to sub-paragraph (2),[86] the amendments made by this Schedule have effect in relation to transfers of value made, or treated as made, on or after the day on which this Act is passed.

So the s.175A disallowance applies to pre-2013 debts, if the transfer of value (ie the death) is after 17 July 2013. This is an unfair commencement rule as in many cases, including those without any element of tax avoidance, existing debts will have been incurred in reliance of the pre-2013 rules.[87] But there it is.

80.37 Discharge "out of the estate"

80.37.1 *Payment from "estate"*

Section 175A(1) IHTA provides:

> In determining the value of a person's estate immediately before death,

[86] This relates to the business/agricultural property disallowance: see 80.30.2 (BPR/APR disallowance: Commencement).

[87] Note the change in attitude to commencement provisions with retrospective effect, see 80.18.1 (Commencement: Pre-2013 debt).

> a liability may be taken into account to the extent that—
> (a) it is discharged on or after death,[88]
> [i] out of the estate or
> [ii] from excluded property owned by the person immediately before death ...

"The estate" in (1)(a)[i] refers back to the "person's estate immediately before death" in the opening words in (1): the deceased's estate.

A debt is paid out of the estate if it is paid out of:

(1) property which was in the estate immediately before death, or
(2) property representing that property: IHT adopts the concept of a continuing fund.

"Estate" has its usual IHT meaning.[89] It includes in particular:

(1) Settled property in which the deceased had an estate interest in possession
(2) GWR property

Such property is treated as part of the deceased's estate immediately before death, and following the individual's death the property is no longer be treated as part of his or her estate. It is considered that does not matter: following the death the deceased has no estate at all. So the discharge of a debt on GWR property out of that property (or property representing such property) will satisfy the requirement.

80.37.2 *Payment from excluded property*

Section 175A(1)(a) needs to refer to excluded property, because that is not part of the estate immediately before death.[90]

The IHT Manual provides:

> **IHTM28028 meaning of 'out of estate'** [Aug 2016]
> In determining whether the loan has been discharged out of the estate, the word 'estate' has its normal meaning for Inheritance Tax (IHTM28027); but IHTA84/S175A(1)(a), extends this meaning for the purpose of this provision only to include any excluded property owned by the deceased.[91] It is important here that the excluded property was

[88] The words "on or after the death" are otiose.

[89] See 74.2 ("Estate").

[90] See 74.2 ("Estate").

[91] This is not strictly correct. Section 175A does not extend the meaning of "estate": it provides that debts may be allowed if paid out of the estate or out of excluded

> 'owned' by the deceased, taking the natural meaning of the word 'owned'. Excluded property that is also settled property in which the deceased had an interest is not property 'owned' by the deceased.
>
> Although the meaning of estate is extended in this way, the normal rule that a liability can only be deducted against assets at the same title applies (IHTM28397). Other than in exceptional circumstances, in reality, assets in the Free Estate are not available to trustees to settle trusts debts.

What if there is a GWR of settled property which is excluded property? The deceased is treated as beneficially entitled to such property, and so should be treated as owning it for s.175A purposes.

80.37.3 *Payment out of loan to PRs*

Suppose:
(1) An estate has a debt ("the pre-death debt").
(2) The PRs borrow, so the estate has a second debt ("the post-death debt").
(3) The PRs use the borrowed funds to pay the pre-death debt.

This is a matter of refinancing. The deduction is allowed even if the post-death debt is not discharged, or is discharged, but not out of the estate. That arrangement is not avoidance: it makes the practical difference that interest accruing on the pre-death debt becomes taxable.

This is important where:
(1) The estate had a pre-death debt.
(2) The deceased took out a life policy to fund repayment, and settled the policy.

If the trustees of the policy repay the pre-death debt (as would have been envisaged when the trust was made) the pre-death debt is not deductible. The solution is that:
(1) The trustees lend to the PRs.
(2) The PRs repay the debt out of the estate.
(3) The trustees may then waive the post-death debt.

HMRC agree. The IHT Manual provides:

property. But it comes to the same thing.

> **IHTM28028 meaning of 'out of estate'** [Aug 2016]
>
> ...
>
> There may be circumstances where the estate has very little in the way of liquid assets from which to repay a liability so the personal representatives may need to borrow money to actually repay the debts. Where this happens, with the result that the estate is charged with repaying that new debt, you can accept that the liability owed by the deceased has been repaid 'out of' the estate.
>
> *Example* (Kevin)
>
> K's estate is valued at £750,000, £700,000 of which is attributable to his home.
>
> A mortgage of £100,000 is secured against the house.
>
> The executors borrow £100,000 to repay the mortgage and secure the new loan on the house, so that the beneficiary receives the property charged with the new debt.

The HMRC analysis is as follows:

> You may accept that the liability has been discharged out of the estate. There is no need to raise any enquiries into the source of funds lent to the executors, including whether or not the beneficiary is the creditor for the new loan. Provided the mortgage has actually been repaid from funds charged against the estate, the deduction may be allowed as this has the same effect as the liability being discharged out of the estate had there been sufficient liquid assets.
>
> It is possible that the beneficiary[92] may be able to make a loan to the estate from the proceeds of an insurance policy held in trust outside the estate for the purposes of repaying the mortgage. Again, the source of the funds does not matter.

Although this passage refers to an illiquid estate, where the trustees "need" to borrow, the same would apply to a liquid estate (if it mattered).

80.38 Commercial reason defence

Section 175A(2) IHTA provides a TAAR, in slightly non-standard form:

> Where the whole or any part of a liability is not discharged in accordance with paragraph (a) of subsection (1), [ie the liability is not paid out of the estate] the liability or (as the case may be) the part may only be taken into account for the purpose mentioned in that subsection to the extent that—

[92] "The beneficiary" is presumably a slip for the trustees of the insurance policy trust.

> (a) there is a real commercial reason for the liability or the part not being discharged,
> (b) securing a tax advantage is not the main purpose, or one of the main purposes, of leaving the liability or part undischarged, and
> (c) the liability or the part is not otherwise prevented, under any provision of this Act, from being taken into account.

Paras (a)-(c) contain an exception to the s.175A disallowance. I refer to this as the "**commercial reason defence**". The label is not entirely apt to cover all the requirements of (a) - (c) but no short label could do that.

There is no relief if the debt is discharged, but not out of the estate (even if that is done for commercial reasons).

80.38.1 *Commercial reason*

Section 175A(3) IHTA provides:

> For the purposes of subsection (2)(a) there is a real commercial reason for a liability, or part of a liability, not being discharged where it is shown that—
> (a) the liability is to a person dealing at arm's length, or
> (b) if the liability were to a person dealing at arm's length, that person would not require the liability to be discharged.

I abbreviate "real commercial reason" to "commercial reason" because "real" does not add anything to the meaning.[93] I refer to the requirements in (a) and (b) as "**commercial reason requirements (a) and (b)**".

Section 175A(3) is not expressed to be a comprehensive definition of commercial reason. It is suggested that there could be a commercial reason even if commercial reason requirements (a) and (b) are not met; but that would be rare, as those conditions more or less encapsulate the meaning of "commercial" in this context.[94]

At what time does one ask whether commercial requirement (a) is met? A person may be dealing at arm's length at one time and not at another time. At what time does one ask whether commercial requirement (b) is met? It may be that a person (hypothetically) dealing at arm's length would require the debt to be discharged at one time but not at another time.

Clearly, one cannot look at the position at the date of the death. It is

[93] See 3.21.3 ("Genuine").

[94] See App.5.2 (Commercial).

suggested that one looks at the position at the time that the IHT is due and payable. The due date is normally when probate is applied for. If the commercial reason defence applies at that time, the debt is deductible. Since there is no provision for the possibility that IHT may subsequently fall due, it is suggested that it does not matter what happens later. This view increases the scope of the commercial reason requirements (a) and (b) but that does not matter as the commercial reason defence is still effectively policed by the tax motive rule.

HMRC say:

> 8.8 The 'commercial reason' test will apply at the time the decision is made not to repay the loan.[95]

However it may not be possible to identify that time.

80.38.2 *Tax motive rule*

The second requirement of the commercial reason defence is that:

> (b) securing a tax advantage is not the main purpose, or one of the main purposes, of leaving the liability or part undischarged ...

I refer to this as the **"tax motive rule"**.

Section 175A(5) IHTA provides the standard definition of "tax advantage"[96] rather than the usual IHT definition (as in the excluded property disallowance).[97] That makes sense because of the wider definition of "tax" applies here. Section 175A IHTA(6) provides:

> In subsection (5) "tax" includes income tax and capital gains tax.

What matters is the purpose for leaving the debt undischarged, not the purpose for creating it. Leaving a debt undischarged is not usually going to avoid IHT. It could avoid IT or CGT.

Again, the legislation is silent as to the time when the main purpose(s) are ascertained. Purpose may vary over time. It is suggested that one looks at the time the IHT is due. But since avoidance need only be one of the purposes, this problem may not often arise.

If one meets all the requirements of the commercial reason defence, then

[95] HMRC, "Treatment of liabilities for inheritance tax: HMRC response to comments on schedule 36 FA 2013" (September 2013).

[96] See App 3.19.1 (Tax advantage: Definitions).

[97] See 80.25.4 (Disallowable reason 1: Avoidance).

it does not matter if the debt is later waived.

The IHT Manual provides 3 examples.

80.38.3 *HMRC eg 1: NRB debt scheme*

Example 1 is a (more or less) standard nil-rate band debt scheme.[98]

> **IHTM28029 non-repayment of liabilities deducted against the estate on death** [Sep 2018]
>
> ...
>
> *Example 1* (Harvey and Wendy)
>
> H dies leaving a nil-rate band (NRB) discretionary trust under his Will with the residue of the estate passing to his wife, W.
>
> The trustees of the NRB trust exercise their powers and pass the whole of the H's estate to W in return for her agreeing to repay an amount equal to the NRB (£325,000). Interest is charged on the debt at 3% per annum, compounded annually.[99]
>
> On W's death four years later, interest has increased the liability from £325,000 to £365,790. The liability is not disallowed by any other part of the IHTA, so it can be taken into account to the extent that it is actually repaid out of the estate in money or money's worth under IHTA84/S175A(1)(a).

The HMRC analysis is as follows:

> Provided the whole £365,790 is repaid out of W's estate, the full sum can be deducted from her estate. The interest received by the NRB trustees will be income of the trust and should be declared for Income Tax purposes.
>
> If, instead, only £325,000 is discharged from W's estate, that sum can still be deducted from her estate under IHTA84/S175A(1)(a). But there is unlikely to be any commercial purpose to the interest not being repaid as, had the creditor been at arm's length, they would have wanted the interest repaid as well. As a result, the £40,790 of the liability that is not repaid from the estate is not allowed as a deduction against the estate – but equally, the trustees will have no Income Tax liability.

HMRC argue that the commercial reason defence does not apply. They

[98] On these schemes, see Kessler et al, *Drafting Trusts & Will Trusts* (15th ed, 2023), para 18.3 (Residence NRB).

[99] Under the NRB schemes in practice, the debt is usually index-linked, and index-linking is not interest: see Kessler et al, *Drafting Trusts & Will Trusts* (15th ed, 2023), para Appendix 4 (NRB Interest).

accept if is possible (if unlikely) that commercial requirements (a) or (b) may be met, if that is the case, the tax motive rule disallows the relief:

> Even if it could be shown that the liability incurred by the wife to the NRB trustees was incurred in an arm's length transaction, the provisions of IHTA84/S175A(2)(b) must be considered.

Does the author mean to suggest that the time to assess commercial reason requirement (a) is when the debt is incurred?

> The part of the liability not discharged may not be taken into account if the main purpose, or one of the main purposes, for not repaying the liability was to secure a tax advantage. If the trustees have waived the interest, it would result in the trust receiving less income than it otherwise would. This in turn would lead to a reduced Income Tax liability. A reduction of a charge to Income Tax falls within the definition of a tax advantage in IHTA84/S175A(45), so £40,790 of the liability that is not repaid from the estate is not allowed as a deduction against the estate.

I wonder about that. For basic rate taxpayer beneficiaries, the maximum tax advantage may be saving IT on the interest at 20% or less (allowing for the repayment of the trustees tax credit on a distribution to beneficiaries): is the saving of £8k likely to be a main purpose? Not if the estate is illiquid. The purpose of waiving the loan is to avoid the cost of borrowing.

80.38.4 *HMRC eg 2: Family trust lends*

The next example concerns a loan from a family trust. The IHT Manual provides:

> **IHTM28029** [Sep 2018]
> *Example 2* (David)
> D's estate includes a house valued at £800,000. There is a commercial mortgage of £200,000 from a family trust charged against the property. D leaves his house to his son, Roger. The trustees[100] are content that the house can be transferred to Roger provided that Roger takes over the mortgage and continues to make the repayments.
> Although the liability has not been repaid, the arrangements are commercial and there is no tax advantage arising from Roger taking over the mortgage, so the liability may be allowed as a deduction against the

[100] More accurately, PRs or executors; but nothing turns on the terminology.

> estate.

How does D "take over" the mortgage? The passage is not drafted by a lawyer. The usual way would be a tripartide agreement between (1) the PRs, (2) the lender, (3) D, under which:

(1) The lender discharges/releases the debt due from the PRs in consideration for which
(2) D promises to pay a like sum to the lender.

That would not strictly qualify for the commercial reason defence as that only applies if the debt is not discharged. HMRC may not take the point. The safe way to deal with the matter is for D to borrow, lend to the PRs who then repay the lender.

80.38.5 *HMRC eg 3: Family loan repayable on 2^nd^ death*

The IHT Manual provides:

> **IHTM28029** [Sep 2018]
> *Example 3* (Adrian)
> A makes of loan of £25,000 to his father to help with living expenses, which is secured on his parent's house.
> A normal rate of interest is charged, but they agree to allow the interest to be added to capital sum owing.
> The liability is not to be repaid until after the death of both parents, so when A's father dies, two years later the loan is not repaid.

Of course s.103 FA 1986 may disallow the debt on the death of the father, but we must assume it does not.

The HMRC analysis is as follows:

> Since the loan was not due to be repaid until the death of the survivor, an arm's length creditor would not have any cause to seek repayment, so the liability may be allowed as a deduction against the estate.

More analytically, the commercial reason defence applies.

> On the mother's subsequent death, the liability must be repaid from the estate before it can be allowed as a deduction against the estate. If the accrued interest was not repaid, no deduction should be allowed for that sum.

It may be different if there is a break clause in the agreement.

> The position may be different if the loan agreement contains a 'break' clause that allows for early repayment. If a favourable rate of interest, or

> no interest, was charged and the repayment could be demanded after the first death, an arm's length creditor might reasonably be expected to call in the loan to gain a better return from the money. In these circumstances, if the loan is not repaid on the first death, the terms of IHTA84/S175A(2)(a) are unlikely to be met and the liability should be disallowed unless it is repaid, although this may be of limited impact if most of the estate passes to the surviving spouse.

The disallowance for debts not paid after death is irrelevant if the spouse exemption applies. The example may be more important for cohabitees.

80.39 Part payment of mixed debt after death

A single debt may be used to finance the acquisition of:
(1) excluded property
(2) business/agricultural property
(3) chargeable property

If the debt is not repaid after death, it will be wholly disallowed. If the debt is wholly repaid after death, it will be (effectively) disallowed to the extent was used to finance excluded or business/agricultural property and allowable to the balance. What if the debt is repaid in part after death? Is the part repaid the allowable or the disallowable part? Section 175A(7) IHTA provides the answer in the way most favourable to HMRC:

> Where the liability is discharged as mentioned in subsection (1)(a) only in part—
> (a) any part of the liability that is attributable as mentioned in section 162A(1) or (5) is, so far possible, taken to be discharged first,
> (aa) any part of the liability that is attributable as mentioned in section 162AA(1) is, so far as possible, taken to be discharged only after any part of the liability within paragraph (a) is discharged,
> (b) any part of the liability that is attributable as mentioned in section 162B(1)(b), (3)(b) or (5)(c) is, so far as possible, taken to be discharged only after any parts of the liability within paragraph (a) or (aa) are is discharged, and
> (c) the liability so far as it is not attributable as mentioned in paragraph any of paragraphs (a) to (b) is, so far as possible, taken to be discharged only after any parts of the liability within any of those paragraphs are discharged.

This follows the pattern of the rules for excluded property/APR/BPR.[101] The IHT Manual provides:

> **IHTM28032 partial repayment of liabilities after death** [Nov 2016]
> Where a liability is partially repaid after death only the part of the loan that has been repaid will be allowed as a deduction, unless the balance that has not been repaid meets the conditions of IHTA84/S175A(2), (IHTM28029).
> Where borrowed money has been used to acquire a mixture of excluded property (IHTM28014), finance a foreign currency bank account (IHTM28033) and/or relievable assets (IHTM28019) and the loan has been partially repaid, IHTA84/S175A(7) sets out the priority in which the partial repayment should be allocated against the assets of the estate. The provisions cover the situation where the single loan has been used to acquire other chargeable assets as well...
> Any part of the liability that is attributable to excluded property is treated as being repaid first, IHTA84/S175A(7)(a), with the result that although this part of the liability has been repaid, the deduction is still disallowed under IHTA84/S162A (IHTM28014), unless one of the exceptions is satisfied. If the partial repayment was greater than that part of the liability, the part of the liability that is attributable to a foreign currency bank account is treated as being repaid next, IHTA84/S175A(7)(aa), so the deduction is still disallowed under IHTA84/S162AA (IHTM28033). If the partial repayment was greater than that part of the liability, the part of the liability that is attributable to relievable property is treated as being repaid next IHTA84/S175C(7)(b), so that this part of the loan is a valid deduction against the estate, but it will reduce the value of the property that can qualify for relief; ultimately reducing the relief to nil.
> And if the partial repayment was greater than the part of the liability attributable to all the above categories of asset, the remainder of the liability can then be allowed as a deduction against the chargeable estate, IHTA84/S175A(7)(c).

The HMRC example has 3 parts:[102]

> *Example* [1] (Neville)
> N, who is non-UK domiciled, borrows £1.5m from an excluded property trust. He charges the liability against his existing UK chargeable property worth £2m.

[101] See 80.34 (Part payment of mixed debt).

[102] I have slightly altered the layout for enhanced clarity.

He uses the £1.5m to acquire:

excluded property	£600,000
property qualifying for agricultural relief	£500,000
chargeable UK property	£400,000
	£1,500,000

When he dies the whole £1.5m remains outstanding.
The values of the assets have not changed; none of the exceptions to the general rules apply.

The Manual first considers the position if the debt is wholly repaid after death:

Under IHTA84/S162A the £600,000 used to acquire excluded property is disallowed. Under IHTA84/S162B the agricultural value of the agricultural property which can qualify for relief is reduced from £500,000 to nil.
If the liability is discharged in full from the estate after the date of death, the UK assets of £2.9m (UK property, agricultural land and other chargeable property) is reduced by

- the £500,000 liability set against the agricultural property and
- the £400,000 liability used to acquire chargeable UK assets,

leaving £2m in charge.

Example [2]: partial repayment after death

Assume however, that only £750,000 of the liability is discharged from the estate after death.
Under IHTA84/S175A(7)(a) the first £600,000 discharged is taken to have discharged the liability incurred to acquire excluded property. This part of the liability remains disallowed by IHTA84/S162A(1)(a).
Under IHTA84/S175A(7)(b) the next £150,000 is taken to have discharged part of the £500,000 liability incurred to acquire agricultural property. As only £150,000 of this liability is treated as having been discharged, only £150,000 is an allowed as a deduction from the value of the estate on death. This reduces the value of the property that can qualify for agricultural relief to £350,000, and assuming that relief is available, the chargeable value of the property is reduced to nil.
Under IHTA84/S175A, the agricultural property that makes up part of the UK assets of £2.9m is reduced to nil by a mixture of the liability (£150,000) and agricultural relief (£350,000) leaving a chargeable estate of £2.4m

Example [3]: partial repayment after death

Assume now that £1.3m of the liability is discharged from the estate after death.
Under IHTA84/S175A(7)(a) the first £600,000 repaid is taken to have discharged the liability incurred to acquire excluded property. Under

> IHTA84/S175A(7)(b) the next £500,000 is taken to have discharged the liability incurred to acquire agricultural property.
> As the value of the agricultural property is reduced to nil by deducting the liability, there is no agricultural relief. Under IHTA84/S175A(7)(c) the remaining £200,000 of the liability which has been discharged can be taken into account to reduce the value of the chargeable estate.
> The deduction allowable under IHTA84/S175A is therefore £700,000 (£500,000 + £200,000) so the chargeable estate is reduced from £2.9m to £2.2m.

The attribution rule is unfair but it will not bring in any additional revenue to HMRC. In practice, if the issue arose, the PRs would repay the whole debt. If it is anticipated that may not happen, it would be better to take out separate loans, one for each class of property, so the PRs could decide which debt to repay.

80.40 Interaction of s.175A disallowance/spouse exemption

Section 175A(4) IHTA provides:

> Where, by virtue of this section, a liability is not taken into account in determining the value of a person's estate immediately before death, the liability is also not to be taken into account in determining the extent to which the estate of any spouse or civil partner of the person is increased for the purposes of section 18.

The IHT Manual provides:

> **IHTM28030 interaction with spouse or civil partner exemption where liabilities are deducted against the estate on death** [Sep 2018]
> Where a liability is secured on a property that passes to the spouse or civil partner, the value by which the spouse or civil partner's estate is increased (being the net value of the property) could result in a charge arising against property that passes to the spouse or civil partner. This is because if the liability is not repaid, no deduction is allowed against the estate, but the spouse or civil partner's estate is only increased by the net value of the property.
> To be clear that spouse or civil partner exemption should continue to apply to the full value of the property that the spouse or civil partner receives, IHTA84/S175A(4) provides that where a liability is not taken into account in determining the value of a person's estate, the liability is also not to be taken into account in determining the extent to which the spouse or civil partner's estate is increased.

That seems misconceived. Section 18(1) IHTA provides:

> A transfer of value is an exempt transfer to the extent that the value

> transferred
> [a] is attributable to property which becomes comprised in the estate of the transferor's spouse or civil partner
> [b] or, so far as the value transferred is not so attributable, to the extent that that estate is increased.

It is correct that the spouse's estate is only increased by the net value of the property, which restricts the exemption under [b]. But the IHT spouse exemption would still apply under [a]. If that is right, s.175A(4) is unnecessary, though it does no harm.

> *Example* (James)
> J makes of loan of £25,000 to his father to help with living expenses, secured on his parent's £500,000 house. The loan is interest-free and repayable on demand. On the father's death, the loan is not repaid as the son is content for it to remain outstanding until his mother's death. The property passes to his mother under his father's Will.
> An arm's length creditor would not leave the loan outstanding so the liability cannot be taken into account by virtue of IHTA84/S175A(2)(a). The liability is disallowed as a deduction against the estate so the chargeable value of the house is £500,000 rather than £475,000. But the liability is also not taken into account when considering spouse exemption. So even though the spouse actually receives the £500,000 subject to the £25,000 liability, spouse exemption applies to the full £500,000 value of the property.

If on the same facts the father had left the estate to charity, the debt would be disallowed; would the charity exemption be restricted to the net value? J should have purchased a share in the father's house. Then the debt would not be disallowed.

80.41 When must debt be discharged?

80.41.1 *The strict position*

A debt may be discharged after the time that an IHT account is delivered or after IHT is paid. The strict position is that:

(1) If at the time of payment of the IHT the debt has not been discharged, it is disallowed in computing the amount of IHT due.
(2) If the debt is subsequently discharged, IHT is recomputed if a claim is made under s.241 IHTA; note the 4 year time limit.

PRs cannot obtain probate until tax is paid but often cannot pay liabilities until they have probate. I doubt if the commercial reason defence was specifically designed to cover this (it is more likely that HMRC overlooked the problem) but it seems to me entirely apt to cover it. So the debt will be deductible as long as there is no tax avoidance purpose.

80.41.2 *HMRC practice*

The IHT Manual provides:

> **IHTM28031 investigation of liabilities deducted against the estate on death** [Sep 2018]
> As the majority of liabilities taken as deductions against an estate will be at arm's length, the starting assumption is that all liabilities will be repaid. So, unless the personal representatives are aware beforehand that a liability is not going to be repaid and it is not otherwise allowable as a deduction, the IHT400 Notes allow the personal representatives to include all the deceased's liabilities when filling in the IHT400. There is no need to make any enquiries to establish that liabilities which are clearly commercial and at arm's length have been repaid, as it is more than likely that the creditor will want to recover the money owed to them. Examples here would be:
>
> - utility bills,
> - credit card bills,
> - council tax,
> - payments due to HMRC,
> - outstanding care fees,
> - professional fees (to the date of death),
> - overpaid pension,
> - payments for goods and services.
>
> If an arm's length liability for which a deduction is included is not actually repaid, form IHT400 would then be incorrect and the taxpayer is obliged to tell us about the adjustment to be made under IHTA84/S217.

Presumably this should be done when it becomes clear that the debt will not be repaid.

> Where, however, liabilities have been deducted which are not due to arm's length creditors, such as family members, family trusts or companies or liabilities deducted in connection with avoidance schemes, you should ask the taxpayer or agent to provide evidence that the money has been repaid. This might be a copy of the letter enclosing a cheque to the creditor or confirmation of receipt of the payment by the creditor. You should also obtain evidence that the liability has been repaid out of the estate; remembering the extended meaning of estate for this purpose

> (IHTM28027). This might be a copy of the bank statement from the personal representatives' bank account, or a ledger entry from the appropriate solicitor's client account.
> Where the personal representatives do not repay a liability during the normal administration of the estate and the exception at IHTM28029 does not apply, you should disallow the deduction and ask for the tax to be paid. If the liability is subsequently repaid, the deduction may then be allowed and the tax repaid, provided the claim for repayment is made within the 4 year period set out in IHTA84/S241. But you do not need to keep the file open to wait to see if the liability is repaid...

80.42 The 2013 disallowances: Critique

FA 2013 made 3 reforms, the excluded property disallowance; the BRP/APR disallowance; and the s.175A disallowance. They raise distinct issues and need to be considered separately.

80.42.1 *s.175A disallowance: purpose*

One purpose (perhaps the only purpose) of the s.175A disallowance is to counter arrangements under which:

(1) an inheritance tax deduction is increased, by making a debt subject to interest; but
(2) the interest is not in fact paid, so there is no liability to income tax on it.

The most common cases will be:

(1) NRB discretionary trusts[103] funded by debt or charge arrangements.
(2) Home loan schemes.[104]

NRB trusts have not (usually) been created since 2007, and home loan schemes have not been created since 2004, but many made before then are still in existence.

The disallowance could apply in relation to other loans from family or family trusts, but I think that would be rather less common.

Taxpayers now have the choice between:

(1) IHT (due if the debt is not repaid) or
(2) income tax on interest, (if the interest is paid).

[103] See Kessler et al, *Drafting Trusts & Will Trusts* (15th ed, 2023), para 19.13 (Winding up NRB trust after death of surviving spouse).

[104] See 83.2.3 (Home loan schemes).

That this is the purpose (or at least one purpose) of the disallowance is supported by the definition of "tax" which includes:

(1) IT (the target here is IT avoidance) and
(2) CGT (the target is CGT avoidance, on the basis that the debts may be a secondhand debt, or a debt on a security, within the charge to CGT).[105]

It is possible that HMRC were concerned that their recent change of view (taking the position that home loan schemes do not work) was not sustainable; and s.175A was partly motivated (or maybe primarily motivated) by the desire to find an effective means of attacking pre-2004 home loan schemes.[106] Such schemes were avoidance, but the POAT regime offered taxpayers the option of keeping the home loan arrangement in exchange for paying POAT: HMRC have withdrawn from their side of the bargain.

There is a case for disallowing a deduction for interest not paid after the death, but it is difficult to see the case for disallowing other debts ("non-interest debts"). HMRC assert that there is scope for avoidance but I cannot see it. It might perhaps be said that if estate debts are not paid the beneficiaries of the estate have a windfall which may fairly be taxed. The way that the HMRC press release expresses it is that if debts are not repaid there is no "real reduction" in the value of the estate. But if debts are not repaid, there is a gift from the *creditor* to the debtor. That is not a gift which passes on death, so should not be subject to IHT.

Even if there were a case for disallowing non-interest debts (and I cannot see what it could be) there is no case for disallowing debts unless paid *out of the estate*. If I am right that the purpose of the rules is to ensure that IT (or CGT) on pre-death debts is not avoided by non-payment, all that matters is that the interest is paid. It does not matter whether it is paid out of the estate or not.

80.42.2 *Excluded property disallowance: purpose*

HMRC say:

> 5.1 The principle behind disallowing any deduction for a liability which has been incurred to acquire excluded property is that a deduction

[105] See 80.38.2 (Tax motive rule).

[106] The law in this area is now a mess, following *Shelford v HMRC* [2020] UKFTT 53 (TC)

should only be allowed if the acquired asset is chargeable to IHT. If the acquired asset is excluded property, there is already in effect a deduction for that asset from the value of the estate subject to IHT so HMRC does not believe that any further deduction should be made for the liability.[107]

80.42.3 *BPR/APR disallowance: purpose*

HMRC say:

> 2.4 If a liability is incurred to acquire certain business assets or agricultural property and the loan is secured against those assets, the liability is deducted from the value of those assets and only the net value qualifies for relief. However, if the loan is secured on other assets in the estate, the liability is deducted from the value of the estate and relief is also given on the full value of the assets. The resulting tax advantage creates an incentive for loans to be secured against non-business assets, provides a basis for certain types of avoidance schemes, and discriminates against those businesses that borrow and secure the liability against their business assets.
>
> 2.5 The new provisions remove that tax advantage and ensure that all liabilities incurred to acquire property that qualifies for a relief are treated in the same way regardless of the nature of the property or how the loan has been secured. This consistent treatment eliminates the current discrimination, the basis for avoidance, the incentive to structure borrowing in a certain way, and the resulting distortion to borrowing arrangements.
>
> 7.2 The intention of the new proposals is not to prevent or deter individuals from starting a business or investing in one, but to remove the current difference in treatment for different types of qualifying assets and to close avoidance opportunities. HMRC does not believe that the changes will disrupt business activity or that they will prevent a business from securing a loan. The majority of business loans and overdrafts are unsecured or are secured against business assets, and are repaid before death, so most estates that have business liabilities and claim reliefs will be unaffected by the changes. Estates will continue to get a deduction for liabilities provided they are not used to acquire assets which are not chargeable to IHT and they are repaid after death (unless there are commercial reasons for the non-repayment and the non-repayment does not give rise to a tax advantage).
>
> 7.3 Reliefs such as APR and BPR are available so that farms and

[107] HMRC, “Treatment of liabilities for inheritance tax: HMRC response to comments on schedule 36 FA 2013” (September 2013).

> businesses do not have to be sold or broken up, thereby undermining their economic potential, to meet IHT bills. They are not intended to incentivise loans to be structured or secured in a certain way, so that those arrangements obtain a further tax advantage in addition to the relief. The Government understands that investment decisions are made on the basis of a variety of factors, and believes that the inheritance tax system should neither penalise nor favour particular borrowing arrangements. The changes introduced by FA2013 are in line with this key principle and remove the current difference in treatment.[108]

80.42.4 *Non-debt financing: comparison*

HMRC say:

> 7.4 Stakeholders also commented that the new provisions will give a different result for those who borrow funds to acquire relievable property compared to those that realise their existing assets, and therefore the new rules will discourage borrowing. If two people invest the same amount in business assets but one sells some of their existing assets to fund the investment and the other borrows the necessary funds, the borrower's taxable estate will be greater than the seller's by the amount of the loan even though both of them have the same investment in the business, net wealth and net equity.
>
> 7.5 Although their overall position appears to be very similar at first glance, it is unlikely to be case in practice. The seller will have had to sell some of their assets to fund the investment, which would constitute an equity investment. They will no longer have access to those assets as they will no longer be in their estate; they will have incurred costs and possibly paid other tax charges as well, such as capital gains tax and/or stamp duty. On the other hand, the borrower can keep and continue to benefit from and enjoy all their assets whilst also investing in the business through securing loan finance. The two have quite different circumstances. HMRC acknowledges that the IHT position will be different for the seller and the borrower as a result of the new provisions, with the equity investment by the seller now more advantageous than a debt financed investment by the borrower from an IHT perspective. However, there is also an inconsistency in the current rules in how liabilities are treated for IHT purposes, which the new provisions address, as explained in paragraphs 2.4 and 7.3. The Government considers that it is more important to ensure that the tax

[108] HMRC, "Treatment of liabilities for inheritance tax: HMRC response to comments on schedule 36 FA 2013" (September 2013).

system neither penalises nor encourages particular borrowing arrangements than continuing the previous position of treating investments by borrowers and sellers the same. [109]

80.42.5 *How it seemed to HMRC*

I quote the press release announcing the 2013 changes at some length as:

(1) It illustrates the state of UK tax policy formation, at least as at 2013.

(2) It illustrates the difficulties which may arise if one looks to a press release to identify the policy of tax provisions.

The FA 2013 introduced 3 reforms, but the press release treats all three as a single item of reform.

I insert question marks at the more startling half-truths: no further elaboration is needed.

> **Inheritance tax: limiting the deduction for liabilities**
> **Who is likely to be affected?**
> Users and promoters of avoidance schemes and participators in arrangements which take advantage of the current IHT treatment of liabilities to reduce the value of an estate. (?)
> **General description of the measure**
> For most estates, liabilities owed by the deceased in the normal course of events where the debt has been repaid after death will continue to be deducted as they are now. (?)
> **Policy objective**
> The measure will remove the tax advantage that these schemes and arrangements seek to achieve, and ensure that the value of an estate subject to IHT reflects the normal economic consequences of incurring a liability. (?)
> **Background to the measure**
> The measure is a response to avoidance schemes and arrangements which exploit the current rules that allow a deduction for liabilities owed by the deceased against the value of an estate regardless of whether or not the debt is paid after death. Some arrangements involve contrived debts which are subsequently not repaid so there is no real reduction in the value of the estate; others involve loans used to acquire assets which are not chargeable to IHT, or which qualify for a relief, so that the value of the estate is doubly reduced.

[109] HMRC, "Treatment of liabilities for inheritance tax: HMRC response to comments on schedule 36 FA 2013" (September 2013).

> The measure has not been previously announced. There has been no consultation on the measure.
>
> **Summary of impacts**[110]
>
> | 2013-14 | 2014-15 | 2015-16 | 2016-17 | 2017-18 |
> |---|---|---|---|---|
> | +5 | +20 | +15 | +15 | +15 |
>
> **Impact on individuals and households**
>
> This measure will only (?) affect individuals entering into avoidance schemes involving debts to artificially reduce the value of an estate.
>
> The administrative impact of this measure is not on the deceased individual but rather on those acting as executors or administrators of the estate. (?) Personal representatives will need to ensure that any outstanding loans are repaid in order to claim the deduction against the value of the estate.
>
> This measure will affect only a small number of individuals and households (?) as the base of estates that fall within the charge to IHT is fairly small (it is estimated for 2010-11 that there will have been approximately 17,000 estates left on death paying IHT, representing less than 4 per cent of the total). Of the estates left on death a few hundred are likely to be using one of these schemes. (?)
>
> **Impact on business including civil society organisations**
>
> There is unlikely to be any impact on most businesses because normal commercial debts will be unaffected. (?)[111]

No doubt the press release does not fully represent HMRC's thinking and motivation; every law reform proposal has to be "sold" to its target audience(s). Subject to that, Hanlon's razor suggests it should be taken at face value. If this press release is taken as typical, the court's policy of not having regard to press releases in the construction of statutes, or in the ascertainment of the policy of tax provisions, is a wise one.

80.42.6 *Critique*

HMRC are wrong to classify the arrangements caught by the provisions as avoidance, or principally avoidance, except in the debased sense that anything one dislikes in tax involves avoidance.

[110] Author's footnote: These figures seem to me to be a significant underestimate; but that is a matter of impression rather than knowledge or research.

[111] HMRC & HM Treasury budget announcement, "Overview of Tax Legislation and Rates" (2013) *https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/207419/022_fb20013_ootlar.pdf*

The idea of a disallowance of (effectively) a double deduction is an understandable policy; though so far as the provisions go beyond preventing a double deduction they are difficult to justify; and it is open to question whether the problem justifies the complication of the provisions. The cure is worse than the disease.

These issues should have been debated before enactment; but in the UK provisions brought in under a tax avoidance banner are exempt from the Tax Consultation Framework; the tax avoidance siren drowns out the sound of reasoned argument, and we are faced with the more familiar process of legislate first and think later. Had the matter been dealt with in accordance with the Tax Consultation Framework, it seems safe to say that different rules would have resulted.

In the 2014/15 edition of this work, I said: "I expect another round of amendments will follow eventually". But that now seems less likely to happen.

80.43 GAAR: Debt reduces 10 year charge

The GAAR guidance is confused; but it is worth studying as the confusion is itself revealing.

> **D28 Excluded property trust and debt**
> D28.2 ***The arrangements***
> D28.2.1 The trustees of an excluded property settlement buy a property in the UK and hold it directly. At the ten year anniversary, the UK property (in the absence of any other arrangements) will be subject to inheritance tax at a maximum of 6%.

The tax problem anticipated by the trustees is the 10-year charge. What do the trustees do?

> Shortly before the ten-year anniversary, the trustees borrow funds from a bank and secure the debt on the property.

At this stage - while the borrowed funds are still held by the trustees - there is no IHT saving, though the exact IHT analysis depends on whether the borrowed funds are excluded property or relevant (ie chargeable) property.

If the borrowed funds are UK situate at the time of the 10-year charge, the debt is deductible but the borrowed funds are chargeable property: the IHT ten year charge is unchanged by the borrowing, as the net value of the trust fund is the same.

Before 2013, the trustees could have carried out the following arrangements:

(1) The trustees borrow charged on the property.
(2) The trustees hold the borrowed funds offshore on the ten year anniversary (so the funds would be excluded property),
(3) The trustees repaid the debt later.

This worked as the debt was then deductible but the borrowed funds were not chargeable. I refer to this as "**pre-2013 debt planning**". But of course this planning no longer works from 2013 because of the excluded property disallowance.

My guess is that this is the scheme which the author of the example had in mind. But they realised that pre-2013 debt planning no longer worked, so they proposed a further step:

> The cash is paid out to the settlor[112] on the understanding[113] that the money will be returned.

The guidance does not specify the timing here, but it is envisaged that the payment to the settlor is made before the 10-year anniversary and the payment back from the settlor is made afterwards.[114] I refer to this as "**post-2013 debt planning**".

The post-2013 debt planning does not save any IHT:

(1) If the trustees held the borrowed funds in the UK at the time the borrowed cash is paid to the settlor, there would be an IHT exit charge.
(2) If the borrowed cash was not UK situate at that time, the there would be no exit charge, but the trust debt would be disallowed under the excluded property disallowance; so there is a 10-year charge.

> Shortly after the ten-year anniversary, the settlor adds the funds back to the trust and the trustees use it to repay the loan, freeing the UK

[112] Author's footnote: Although the example specifies that funds are paid to the settlor, it does not matter for present purposes whether it is paid to the settlor or any other beneficiary.

[113] Author's footnote: It is envisaged that this is a non-binding understanding. If the arrangement involved a legally binding promise by the settlor to return the funds, then the promise is trust property

[114] This is clear on first principles, but for completeness, it is confirmed later in the guidance ("... it is always intended to use the cash borrowed to repay the debt as soon as the anniversary has passed ...").

> property from its charge...

The payment from the settlor to the trust has many tax consequences, of which IHT in principle due on the payment is the most obvious.[115]

The guidance next considers the taxpayer's tax analysis. It does so in a paragraph of 3 sentences; it is convenient to consider the middle sentence first, as it makes a distinct point:

> D28.4 ***The taxpayer's tax analysis***
> D28.4.1 ...
> [2] The cash borrowed by the trustees is excluded property at the time of the ten-year charge and not subject to tax.

Sentence [2] is inconsistent with the given facts, which are that the borrowed cash has been paid out to the settlor before the 10-year anniversary. The borrowed cash is outside the scope of the 10 year charge because once it has been paid out to the settlor it is no longer settled property (in the statutory terminology, it is not relevant property). It is wrong to describe it as excluded property. I guess that what has gone wrong is that the author of the guidance here has in mind the pre-2013 planning (which does not involve any payment to the settlor) and has forgotten that the given example was altogether different.

The rest of the section "taxpayer's tax analysis" concerns deduction for the trustees debt:

> [1] The value of the UK property that will be subject to tax on the ten-year anniversary is reduced to nil as a result of the debt secured against it, so no tax will be payable in respect of the UK property...
> [3] The taxpayer claims that he has effected the scheme in such a way that the new anti-avoidance legislation in Sch 36 FA 2013 introducing the excluded property disallowance does not apply.

We move on to the HMRC analysis:

> D28.5 ***What is the GAAR analysis under s207(2) FA 2013?***
> D28.5.1 Are the substantive results of the arrangements consistent with any principles on which the relevant tax provisions are based (whether express or implied) and the policy objectives of those provisions?

[115] One can avoid this IHT problem if one is allowed to hypothesise that the settlor is not UK domiciled at the time of the transfer and the funds are not UK situate at that time, so the property is excluded property. The example does not specify that, but it not inconsistent with the given facts.

> The relevant property regime applies to excluded property settlements only if UK property is owned by the trustees directly on the relevant date such as on the ten year anniversary.
>
> By charging the UK property with debt and paying the cash out to the settlor abroad, the trustees have tried to avoid the ten-year charge.
>
> Even if the taxpayer has found a way to circumvent the specific provisions of FA 2013 [the excluded property disallowance] it is clear that the policy intent expressed there is to prevent a deduction against UK property except where the loan was taken out to acquire the UK property. Using contrived borrowing that is not genuinely used to acquire UK property is clearly against the intent of the legislation.

Sentence [3] of the taxpayer's analysis, and the last paragraph of HMRC's analysis is lazy and inadequate. It is not satisfactory to say "*even if* the taxpayer has found a way to circumvent" the excluded property disallowance then the GAAR applies:

(1) If the taxpayer has *not* found a way to circumvent the excluded property disallowance, there is no tax saving and the GAAR does not apply.

(2) If the taxpayer *has* found a way to circumvent the excluded property disallowance, it is necessary to know how and why. One cannot carry out a GAAR analysis unless one knows what is the technical tax analysis in the absence of the GAAR.

The drafter of the guidance has not taken the trouble to identify and to answer these questions. It seems a safe inference that they reached the answer first, and the analysis (such as it is) came later. That is of course always a risk, particularly in policy-based adjudication such as the GAAR.

> D28.5.2 *Do the means of achieving the substantive tax results involve one or more contrived or abnormal steps?*
>
> Borrowing with the intention of removing the cash from charge and then repaying the loan shortly thereafter is not a normal transaction. Borrowing taken out simply to avoid tax may in this context be regarded as a contrived step.
>
> D28.5.3 *Are the arrangements intended to exploit any shortcomings in the relevant tax provisions?*
>
> The ten-year charge is based on a 'snapshot' of the assets and liabilities of the settlement at the time of the charge. Until FA 2013 there was no specific provision dealing with the deduction of liabilities against settled property, nor could regard be had to the reasons behind borrowing the money. FA 2013 makes it clear that the general intention of the

> legislation is to grant inheritance tax deductions only in respect of borrowing taken out to acquire the particular property, with only limited exceptions, for example, where the value of the property acquired with the borrowings at the relevant time of charge is less than the amount borrowed (and not artificially devalued) in which case the excess may be set against other property.
>
> If the UK property was sold just before the ten year anniversary, HMRC accepts that the sale proceeds (if retained abroad) would not be subject to inheritance tax. Similarly, if the trustees had borrowed and lost the money on a poor investment the liability could be deducted against the house.
>
> However in this case the UK property continues to be owned before and after the ten year anniversary and one would therefore expect inheritance tax to be due on its value. The real economic value of the UK property has not been reduced; it is always intended to use the cash borrowed to repay the debt as soon as the anniversary has passed and the cash has been paid out of the trust in an attempt to circumvent the provisions but with the parties agreeing in advance that the monies will be resettled shortly thereafter. FA 2013 makes the regime for deduction of liabilities clear and attempts to circumvent this through insertion of more abnormal steps will be caught by the GAAR. In looking at the application of the GAAR it is appropriate to look at the wider context of the transaction before and after the ten year anniversary and in the light of FA 2013 to consider the context in which liabilities have been incurred.
>
> D28.5.4 *Do the tax arrangements accord with established practice and has HMRC indicated its acceptance of that practice?*
>
> HMRC has not indicated its acceptance of this practice and in the light of FA 2013 it is clear that liabilities may be deducted only if certain principles are satisfied.
>
> D28.6 ***Conclusion***
>
> D28.6.1 On the facts given, the arrangements are abusive arrangements to which HMRC would seek to apply the GAAR.
>
> D28.7 ***Proposed counteraction***
>
> D28.7.1 The liabilities would be ignored in calculating the tax due on the house and the transaction counteracted on this basis.[116]

Assuming for a moment that the post-2013 scheme could have worked,

[116] HMRC GAAR Guidance Part D (Examples) (2015) *https://www.gov.uk/government/publications/tax-avoidance-general-anti-abuse-rules*

that is, ignoring the actual IHT legislation, a similar result could have been defended on *Ramsay* grounds even without the GAAR. Though one point of the GAAR, I think, is that HMRC should no longer have to rely on the *Ramsay* principle, which is (to say the least) a tool of uncertain application.

Perhaps a moral to draw is that HMRC dislike circular arrangements involving short term borrowing and repayment; the borrower should not return the borrowed money back to the trust to allow the trustees to repay the loan very shortly after the ten year anniversary.

It seems safe to predict that GAAR guidance example D28 will be withdrawn in due course.

80.44 GAAR: Debt against UK residence

This section considers GAAR guidance para D31 (Lending to fund UK real estate by foreign domiciliary).

GAAR guidance provides:

> *This example illustrates how standard tax planning may have increasing levels of abnormality attached to it. A number of the alternatives are, nonetheless, clearly on the non-abusive side of the GAAR boundary. However, the example aims to illustrate at approximately what point that boundary is crossed, although – given the condensed nature of the illustration – this will always be highly fact dependent. The example also aims to demonstrate a situation (option 7) where the arrangements might fail a single reasonableness test, but be saved by the double reasonableness test. ...*

Para D31 is not one example, but a set of nine examples.

80.44.1 *Nine options*

> **D31.2 The arrangements**
>
> D31.2.1 R is domiciled abroad and wishes to buy a valuable house in the UK for his occupation. He has a number of options:

Example	**GAAR: HMRC view**
1. [*Individual purchase*] R buys the house in his own name, using his own cash resources to fund the purchase.	Not caught
2. [*Trust purchase*] R settles cash from his own resources into a trust that purchases the house. R is a beneficiary of the trust...	Not caught

3. [*Individual borrows 70%from bank*] R even if he could have funded the purchase from his existing resources, chooses to borrow from a bank to fund a large part, say 70%, of the purchase price.[117]	Not caught
4. [*Trust borrows 70% from bank*] R (as in 2. above) partially funds the trust. The trustees (as in 3. above) then borrow the remainder of the purchase price from a bank.[118]	Not caught
5. [*Individual borrows 95% from bank*] R deposits foreign investments with a bank thereby enabling the bank to lend a greater amount (say 95%) to fund the purchase of the property. The borrowing is again secured on the property.	Not caught
6. [*Trust borrows 95%from bank*] R having funded a trust to the value of, say, 5%, of the purchase price of the house, agrees to guarantee the trustees' borrowing. This enables R's trust to borrow the remainder of the purchase price from a bank. The borrowing is again secured on the property.	Not caught
7. [*Existing trust borrows 100%from family offshore company*] R has an existing substantive[119] discretionary trust which he settled many years ago. R is a beneficiary of the trust, but his adult children are also beneficiaries and they have all benefited from the trust over the years. The trustees previously owned a UK house, but sold it a couple of years ago.[120] The trustees previously owned a UK house, but sold it a couple of years ago.[121] The trustees have been looking around for a new UK property suitable for R and his children to use as each of them visit the UK for a few weeks a year.[122]	Not caught

[117] It is assumed that R charges the debt on the property.

[118] It is assumed that the trustees charge the debt on the property.

[119] Author's footnote: The term "substantive" is here used in a non-technical, layman's sense; see below.

[120] Author's footnote: The ownership of a previous house should be irrelevant, but it does illustrate the existence of the trust over an earlier period.

[121] Author's footnote: The ownership of a previous house should be irrelevant, but it does illustrate the existence of the trust over an earlier period.

[122] Author's footnote: I think the facts in this sentence are irrelevant to the example.

The trustees could afford to buy the new house using existing resources but instead they accept an offer from R to lend them the purchase price via an offshore company that is wholly owned by R. The loan is interest free and repayable on demand. The company owned by R secures the loan on the house.	
8. [*Gift to trust and loan back to settlor*] R settles cash from his overseas resources into a newly established trust which then lends it back to him via an underlying company for the purchase of the house in his own name.	Caught
9. [*Loan trust lends to property trust*] R adds cash from his overseas resources to a trust, known as the Loan Trust, where he is settlor and beneficiary. His spouse or other relative sets up another trust, known as the Property Trust, which is funded with, say, £1000 cash. R adds no funds to the Property Trust. The Loan Trust forms an overseas company into which the cash is transferred and the company lends the cash to the Property Trustees who acquire the UK property that R wishes to occupy. The loan is repayable on demand and may be interest-free, interest-bearing or index-linked. The Property Trustees incur no personal liability as the lender may have recourse to the house only...[123]	Caught

Examples 7-9 are now affected by the 2017 IHT residence-property rules. Those rules represent a more satisfactory way of dealing with the IHT issues, and may reflect an HMRC understanding that the guidance is not in all respects correct or beyond challenge. The guidance has not yet been updated[124] and I set it out here for the light it may shed on the GAAR, and the GAAR guidance.

80.44.2 *GAAR sub-issues*

The GAAR raises two distinct sub-issues. In short:

(1) Tax advantage purpose issue: Is obtaining a tax advantage one of the main purposes of the arrangement.

[123] It is not clear whether HMRC regard this fact as significant to the outcome; it seems to me irrelevant.

[124] Of course the GAAR guidance should be kept up to date. But that is a formidable task, given the pace of change, and some readers may doubt whether that will happen.

(2) Abuse issue: can the arrangement reasonably be regarded as a reasonable course of action.

80.44.3 *Options 1 and 2*

Options 1 and 2 are straightforward. GAAR guidance provides:

> D31.4.1 In options 1 and 2 [individual purchase and trust purchase] above there is no tax advantage and indeed additional ten year charges arise in relation to option 2. These options are included to illustrate the range of alternatives which R has and by way of contrast with the following options.

More analytically, to identify a tax advantage requires a comparator, and options 1 and 2 are the comparators for the options which follow.

In fact option 2 (trust purchase) may have an IHT advantage of a settlement created by a foreign domiciled settlor. That would be important if the individual was about to become deemed domiciled. If it did not have that advantage, then it is unlikely that a well advised person would create a trust. Elsewhere HMRC do suggest that option 2 may be tax motivated:

> The reasons for using a trust may be *partially* non-tax related and may include a desire for confidentiality, to avoid complex probate procedures, or to provide an automatic succession plan on R's death.

80.44.4 *IHT debt deduction advantage*

GAAR guidance provides:

> **D31.4 *The taxpayer's tax analysis***
> D31.4.2 In options 3 and 4 [70% bank borrowing] the borrowing provides a clear inheritance tax advantage compared to options 1 and 2. As R is not domiciled in the UK the cash he retains personally abroad is not subject to inheritance tax and the UK property is devalued by commercial borrowing.
> D31.4.3 The same tax advantage, albeit to a greater extent, is claimed to apply in options 5 to 9.

80.44.5 *GWR*

GAAR guidance provides:

> D31.4.4 The reservation of benefit rules do not apply to options 1, 3, 5 and 8 because R owns the property.

More analytically, GWR does not apply in options 1 [individual purchase], or 3 and 5 [individual purchase with 70% or 95% borrowing], because R does not make a disposal by way of gift. GWR does not apply in option 8 [gift to trust and loan back to settlor] because the property in R's trust is excluded property.

> There is a reservation of benefit in options 2, 4, 6 and 7, but the taxpayer argues that [in cases 4, 6, & 7 where the trust borrows] this is only on the net value of the property...

HMRC do not agree:

> D31.4.9 HMRC does not accept R's analysis of the legislation and in particular the deductibility of loans against UK property in which he reserves a benefit under options
> 2 [trust purchase],[125]
> 4 and 6 [trust borrows 70%/95% from bank], and
> 7 [trust borrows from family offshore company].
> The GAAR analysis below should be read with this point in mind.

The reader may think it unsatisfactory that HMRC do not state what their analysis is, or why the taxpayer's analysis is wrong. The GAAR analysis should only be carried out after one knows the general tax analysis.

Of course the tax analysis raises complex issues, but HMRC are primarily responsible for that complexity.

If HMRC were right about non-deductibility, the point would be of general importance. I cannot myself see a basis of an argument, and suspect HMRC wanted to avoid giving a hostage to fortune by saying anything at all. HMRC say the same later, in relation to examples 7-9:

> D31.6.5 With all the options (but particularly options 7, 8 and 9) HMRC would consider whether other legislative means at their disposal should be used to challenge the claimed tax treatment.[126]

Turning to option 9:

> D31.4.6 In option 9, there is no [GWR] charge on the death of R because he has not gifted any property to the Property Trust (so the

[125] The reference to option 2 is mistaken here, because that option did not involve a loan.

[126] A reference to *Lear* seems apposite: ("I will do such things – What they are, yet I know not...").

> reservation of benefit provisions do not apply) and he is a beneficiary only of the Loan Trust that holds excluded property. As he has made no gift to the Property Trust, s102 and para 5(4) Sch 20 FA 1986 are not in point.
>
> If he has made such a gift then it is argued that the UK property is devalued by the loan taken out to acquire it.

80.44.6 *s.103 disallowance*

GAAR guidance provides:

> D31.4.5 In option 8, the liability is not, it is claimed, caught by s103 FA 1986 as a self-generated liability due to it being funded with excluded property (see s103(4) FA 1986).[127]

80.44.7 *Pre-owned assets*

GAAR guidance provides:

> D31.4.7 Pre-owned assets charge does not apply to options 1, 3, 5 and 8 since R has made no disposal of the property and does not satisfy the contribution condition since the property has been acquired by him and not a third person.
>
> It does not apply to the other options on the basis that even if the contribution condition is satisfied, the loan in which R reserves a benefit (or in the case of option 2 the house itself) derives its value from the house and therefore protection under para 11(3) Sch 15 is available.[128]

80.44.8 *Excluded property disallowance*

GAAR guidance provides:

> D31.4.8 The liabilities are incurred to buy the UK property and therefore on the face of it are not disallowed by Sch 36 FA 2013.

That seems straightforward.

80.44.9 *Other tax issues*

GAAR guidance section headed “taxpayers analysis” is limited to IHT. But in the cases involving a trust (assuming the trust is non-resident) it is necessary to consider s.87 and (in example 7, where the children occupy, s.731). It is also necessary to consider sch 4B. In short, there is a capital

[127] The taxpayers analysis is correct: See 80.12.10 (Section 103(4) exception).

[128] HMRC seem to accept here the views set out in 83.16.2 (Derived property: Loan).

payment which would come into charge in the event of trust gains. All this may impact on whether the GAAR applies.

80.44.10 *GAAR analysis: tax advantage purpose*

GAAR guidance provides:

> D31.5 ***What is the GAAR analysis under s.207(2) FA 2013?***
> D31.5.1 *Are the substantive results of the arrangements consistent with any principles on which the relevant tax provisions are based (whether express or implied) and the policy objectives of those provisions?*
> D31.5.2 *Do the means of achieving the substantive tax results involve one or more contrived or abnormal steps?*
> It is reasonable to conclude that the obtaining of a tax advantage was the main purpose or one of the main purposes of options 7 to 9.

This is correct for options 8 (Gift to trust and loan back to settlor) and 9 (Loan trust lends to property trust).

It is not correct for option 7 (Existing trust borrows 100% from family offshore company); this is in fact recognised in a passage which follows ("In the above example the loan may not be mainly tax motivated anyway...").

> This may not be so in relation to options 3 to 6. R might prefer to borrow from a bank to allow him more flexibility to make other investments with his cash or to preserve his liquidity.
> The intention behind the inheritance tax legislation is to tax UK assets and UK domiciliaries. The foreign assets of foreign domiciliaries are excluded property being outside the territorial scope of inheritance tax in the first place, whereas any UK assets they own are subject to tax.
> Options 3 and 4 [70% bank borrowing] are an application of the rules whereby IHT is chargeable on the net value of UK assets. The fact that R or his trustees could have funded the purchase using foreign investments is irrelevant: R is not compelled to turn assets which are outside the territorial scope of the tax into assets which are subject to tax, whatever his motivation for the borrowing. R's or the trustees' borrowing is a normal commercial transaction and is not contrived or abnormal. While reservation of benefit may be in point in relation to option 4 the GAAR is not thought to apply to option 3 or option 4.
> Options 5 and 6, [95% bank borrowing] similarly, represent a commercial decision by R or his trustees. R or his trustees take the commercial risks associated with the additional borrowing and R takes the economic downsides of depositing funds in support of the

> borrowing/guarantee. Choosing to borrow a higher amount is similarly neither contrived nor abnormal. R takes the economic consequences of borrowing commercially. He may lose the cash he has chosen to place elsewhere. It can reasonably be regarded as a reasonable course of action.

More analytically, the arrangement is not abusive.

80.44.11 *Option 7: loan from family co*

> In option 7 [existing trust borrows 100% from family offshore company] loans to trusts do occur for all sorts of non-tax reasons and therefore cannot be considered in themselves to be necessarily abnormal or contrived. Even though the loan is tax-motivated and (in some senses) self-generated, it involves a single straightforward step.

The passage then goes on to consider variants of example 7:

> The position might well be different, however, if
> [1] the trust were not established for some time already or
> [2] [if the trust were not] substantive; for instance if R were the sole or principal beneficiary or able to direct the trustees or revoke the trust.[129]
> A loan to such a newly created trust might be considered a contrivance.

This is not clearly expressed, but I think the guidance is that the GAAR might apply if the trust is both newly created *and* settlor-interested. I do not see why it matters that the trust is settlor-interested.[130] But the conclusion, that the position "may well" be different because the arrangement "might be" considered a contrivance, is so vague that the passage is not worth much scrutiny: it is scarcely to be called guidance.

> In the above example the loan may not be mainly tax motivated anyway e.g. the trustees may wish to preserve cash for liquidity purposes, but even if it were the arrangement is still not necessarily abusive.

[129] A note on terminology: We need a term to describe a trust where the settlor is principal beneficiary, or which is revocable. I use the term "settlor-interested"; a trust lawyer would not use the expression "not substantive". I have wondered whether the author was thinking (perhaps confusedly) of sham or illusory trusts, but those would not be settlements for IHT purposes.

[130] I suspect that the author disapproved of settlor-interested trusts generally, and regarded any use of them as an indicative of contrivance. If that is right, there is a wide gap between HMRC's perception and that of most private client practitioners.

Another set of questions arises if the loan is from an individual rather from a family company. Does it make a difference if the trust owns the family company? The guidance does not consider those possibilities.

The 2017 IHT residence-property rules would now need consideration.

80.44.12 *Option 8: Gift to trust & loan back*

The guidance then turns to option 8 (Gift to trust and loan back to settlor):

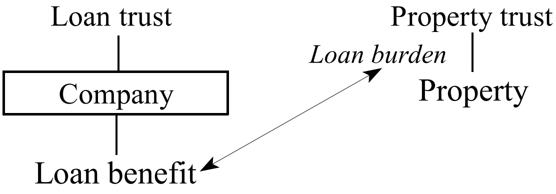
> In option 8, the cash goes in a circle back to the settlor via a trust and loan arrangement. The position might be different under the GAAR if the trust had been in existence for some time so the gift was not made in contemplation of a loan back. The settlor sets up a trust as a vehicle to lend to himself. The setting up of the trust and company is done simply to enable a loan to be made back to the settlor and this is a contrived step. S103 FA 1986 was designed to stop assets being given away that are then lent back by the donee and it may be thought that option 8 is using a possible loophole in s103 to circumvent the intended policy.

"It may be thought" is not much guidance but I suspect it is intended to represent the HMRC/GAAR panel view. It is just as arguable that s.103(4) is a rational policy-based exemption for foreign domiciliaries. The circularity of example 8 is no doubt avoidance; whether it passes the stricter test of abuse is more arguable. HMRC's example gives a more objectionable version of the facts as the trust is specified as "newly-established." If it were established some time previously, there would be no abuse and indeed no avoidance.

The 2017 IHT residence-property rules would now need consideration.

80.44.13 *Option 9: loan between trusts*

The guidance then turns to option 9 (Loan trust lends to property trust):



> In option 9 the combination of a nominal-value settlement specifically set up to own the property coupled with the establishment of a separate

> loan trust and a corporate vehicle underlying it which is then used to make a loan which is on a non-recourse basis is on these facts set up only to achieve an artificial tax deduction. And, while taken individually, the steps may be considered normal, when taken in combination they may be considered abnormal.

The guidance then considers some variants of option 9:

> However, each case would be taken on its own facts and a situation where, for instance,
> [1] both trusts were substantial and existing trusts or
> [2] where the loan was on fully commercial terms or
> [3] where the property trust was established for a different beneficiary apart from the settlor
> might be considered differently (see option 7 above).

"Might be" is not much guidance.

> D31.5.3 *Do the tax arrangements accord with established practice and has HMRC indicated its acceptance of that practice?*
> Neither of the last two options accord with established practice and HMRC has not indicated acceptance of the interpretation that foreign domiciliaries are not caught by s103 as a matter of principle.

Section 207(5) FA 2013 provides:

> The fact that tax arrangements accord with established practice, and HMRC had, at the time the arrangements were entered into, indicated its acceptance of that practice, is an example of something which might indicate that the arrangements are not abusive.

This refers to "the fact" (in the singular) but it goes on to refer to *two* facts, namely (1) the fact that tax arrangements accord with established practice, and (2) the fact that HMRC indicated its acceptance of that practice.

If *both* facts are present, then that is obviously "something which might indicate that the arrangements are not abusive." (At first sight, that seems over-tentative. It is difficult to imagine anything that HMRC publically accept, but which is not reasonable tax planning: that could only arise if HMRC's acceptance of the planning is unreasonable. Perhaps HMRC were concerned at the possibility of a maverick inspector, whose views HMRC later wanted to disavow.)

Contrary to the statement in the GAAR guidance, in option 9, my experience is that *one* of the facts is present, namely, the arrangement has been an established practice for a few years now. However it is not an arrangement about which HMRC has indicated a view. Is that solitary fact "something which might indicate that the arrangements are not abusive"? It is suggested that it should be taken as an indication to that effect (though not of course decisive).

> D31.6 ***Conclusion***
>
> ...
>
> D31.6.2 Options 3 and 4 are straightforward applications of the legislation and would not be caught by the GAAR. Similarly, options 5 and 6 involve commercial arrangements which are neither contrived nor abnormal and HMRC would not seek to invoke the GAAR against them.
>
> D31.6.3 With option 7, while economically the liability appears to be self-generated, the trust is of substance and the arrangements are not necessarily contrived or abnormal.
>
> Thus, although some observers might consider this to be unreasonable, it is possible to see that other reasonable observers might reach a different view. As such these particular facts may well not be caught by the GAAR. However, it is important to realise that this is a borderline case and one where, for the purposes of illustration, the facts are inevitably condensed. Each case would have to be considered on its own facts and a subtly different set of facts might result in a different conclusion.
>
> D31.6.4 Options 8 and 9, on these particular facts, would be caught by GAAR. The liabilities would be ignored in calculating the tax due on the house and the transaction counteracted on this basis. However, as with option 7, each case would have to be considered on its full facts and it is not impossible that different scenarios might potentially be saved from the GAAR by the double-reasonableness test.

The passage is no doubt correct to say "it is not impossible that different scenarios might potentially be saved from the GAAR by the double-reasonableness test." But the reader may doubt whether a statement which is so qualified should be called "guidance".

One might of course set up the option 9 loan trust/property trust structure with a view to replacing the internal loan with bank borrowing at a later date.

If the loan is disallowed for IHT, the property trust will be insolvent after IHT falls due. If the trust loan is secured on the property, there will be no value left in the trust for IHT to be paid.

The IHT residential-property code would now need consideration.

80.45 Funeral expenses

Funeral expenses are not, in principle, a debt of the deceased, but there is a relief as if they were. Section 172 IHTA provides:

> In determining the value of a person's estate immediately before his death, allowance shall be made for reasonable funeral expenses.

The IHT Manual provides:

> **IHTM10376 Overseas funerals of non-domiciled deceased** [Jun 2016]
> You should allow overseas funeral expenses as a deduction against the UK estate, even if the deceased was not domiciled in the UK for IHT purposes.
> Although s.162(5) IHTA 1984 might seem to justify the deduction of such expenses from the non-UK estate, that sub-section cannot apply as funeral expenses are not a liability for the purposes of s.5 IHTA 1984 or s.162 IHTA 1984.

80.46 Foreign administration expenses

There is in general no IHT deduction on death for the cost of the subsequent administration of the deceased's estate.[131]

Section 173 IHTA provides a limited exception:

> In determining the value of a person's estate immediately before his death, an allowance against the value of property situated outside the UK shall be made for any expense incurred in administering or realising the property which is shown to be attributable to the situation of the property, but the allowance shall not exceed 5 per cent of the value of the property.

The IHT Manual provides:

> **IHTM27050: deduction for administration of non-UK assets** [Sep 2018]
> ... The allowance is for additional expenses only. So it is only allowed on the excess of the expenditure over and above which it would have cost to deal with the property in the UK. The cost of obtaining a foreign

[131] Unless the residuary estate is given to charity. That can be important for estates giving substantial amounts to charity; see Kessler, Wong & Shah, *Taxation of Charities and Nonprofit Organisations*, (14th ed., 2024-25), para 26.13 (Cost of administration).

> grant is allowed but not the cost of reporting the death of a deceased shareholder with a foreign company.
>
> If worthwhile you must ask for details of the expenses and point out, if necessary, that the allowance is for additional expenses only and restricted to 5 per cent of the value. When the deduction is agreed, calculate the net value of the asset. If the value is shown in non-Sterling currency use one of the many currency conversion websites available on the internet to convert it to Sterling.

The deduction is not the additional expense "over and above which it would have cost to deal with the property in the UK"; it is for the expense "attributable to the situation of the property" but that arguably comes to the same thing.

Non-deductibility of administration expenses may be regarded as unfair, but it is consistent with the principle that IHT is a tax on estates, not donees, and (perhaps more importantly) it is simpler, because only on completion of administration of an estate is it clear what the expenses will be. On the basis of simplicity and consistency it is suggested that s.173 should be repealed.

CHAPTER EIGHTY ONE

IHT CLOSE-COMPANY CODE

81.1 Close-co code: Introduction
81.1.1 "Close company"
81.2 Transfer of value by close co
81.3 Close company terminology

81.9 Deferred shares
81.10 Alteration: Estate IIP trust
81.11 Close-co IHT: Liability

81.1 Close-co code: Introduction

This chapter considers the IHT consequences of:

(1) Transfers of value by close companies
(2) Alteration of share capital of close companies

The provisions are in Part 4 IHTA, which I call the **"IHT close-company code"**. I go beyond the themes of this book and address the topic as a whole, except for the specialist topic of a company holding an interest in possession in settled property.

81.1.1 *"Close company"*

Section 102(1) IHTA provides the definition one would expect:[1]

[1] See 104.29.1 (Non-resident close company).

> In this Part of this Act [Part 4 Close Companies] "close company" means a company within the meaning of the Corporation Tax Acts which is (or would be if resident in the UK) a close company for the purposes of those Acts.

81.2 Transfer of value by close co

A company has an estate, and may make a transfer of value.[2] That transfer of value is not a chargeable transfer, as that expression means a transfer of value made by an individual.[3] However, a transfer of value made by a close company is attributed to participators, who may be taxable.

The IHT close-company code does not apply to a company in liquidation, as it is not beneficial owner of its assets[4] and so does not have an estate and cannot make a transfer of value. But the point is not likely to arise.

81.3 Close company terminology

81.3.1 *"Participator"*

Section 102(1) IHTA provides a slightly cut down version of the standard definition of "participator":

> [a] "participator", in relation to any company, means any person who is (or would be if the company were resident in the UK) a participator in relation to that company within the meaning given by section 454 of the Corporation Tax Act 2010,[5]
>
> [b] other than a person who would be such a participator by reason only of being a loan creditor

The point of para [b] may be to avoid the problem of overlapping participators which arises in the context of apportioning s.3 gains to participators.[6]

81.3.2 *Right/interest in company*

Section 102(2) IHTA provides:

> References in this Part of this Act to a person's rights and interests in

[2] See 74.2 ("Estate"); 74.3 (Transfer of value/value transferred).

[3] See 74.6 ("Chargeable transfer").

[4] See 98.5.2 (Co in liquidation not beneficial owner).

[5] See 104.22 (Definitions of participator).

[6] See 64.8 (Participators overlap: Loan creditors).

> a company include references to rights and interests in the assets of the company available for distribution among the participators in the event of a winding-up or in any other circumstances.

For discussion, see 82.3.3 (Residence-company Interest).

81.3.3 *Foundations*

The analysis adopted in this book is that in principle:

(1) A Foundation is an IHT-settlement.
(2) A Foundation is not a company.[7]

On this analysis, the IHT close-company code does not apply to a Foundation. However some commentators take the view that a Foundation is a company. In that case a Foundation is a hybrid settlement/company, in the sense that it is both an IHT settlement and a company. For completeness I consider here the IHT issues which would arise if that view were correct.

As a general principle, one cannot apply *both* the IHT charges on settlements *and* the IHT close-company code, because of the presumption against double taxation. Either one or the other must apply. Note incidentally that the choice between the two will sometimes favour HMRC and sometimes not; this is not a case where one analysis benefits HMRC and the other the taxpayer. The close-company issues are briefly discussed in the context of s.3 gains; see 64.36 (Foundations). But even if, which is doubtful, the conditions of the IHT close-company code are satisfied, it is suggested that the context shows that the IHT settlement charges should apply, and the IHT close-company code should not apply.

Different considerations apply to a Foundation with Founder's Rights. That is a company and not an IHT-settlement. The IHT close-company code will apply.[8]

81.4 Individual participators

81.4.1 *Charge on individuals*

Section 94(1) IHTA provides:

> [a] Subject to the following provisions of this Part of this Act [Part 4 Close Companies], where a close company makes a transfer of value,

[7] See 90.14 (Stiftung/Foundation). A Dutch stichting needs further consideration.

[8] See 90.14.10 (Founder's Rights: a company).

> tax shall be charged as if each individual to whom an amount is apportioned under this section had made a transfer of value ...

There are three types of transfer of value which may arise here:

(1) The close company makes a transfer of value. This is not a chargeable transfer, but it is the trigger for a s.94 transfer.

(2) Participators are treated as if they had made a transfer of value. I refer to this as a **"s.94 transfer"**.

(3) Participators may make an actual transfer of value (typically, an omission which reduces the value of their estate).

HMRC rely on the s.94 transfer, and do not pursue the possibility of a double charge under heads (2) and (3).[9]

81.4.2 *s.94 amount*

Section 94(1) goes on to specify the amount of the s.94 transfer:

> [b] ... of such amount as after deduction of tax (if any) would be equal to
>
> [i] the amount so apportioned, less
>
> [ii] [A] the amount (if any) by which the value of his estate is more than it would be but for[10] the company's transfer;
>
> [B] but for this purpose his estate shall be treated as not including any rights or interests in the company.

I refer to that as the **"s.94 amount"**.

81.4.3 *Apportionment of s.94 transfer*

Section 94(2) IHTA explains how the s.94 amount is apportioned among the participators:

> For the purposes of subsection (1) above
>
> [a] the value transferred by the company's transfer of value shall be apportioned among the participators according to their respective

[9] See 81.4.4 (No double charge).

[10] "but for" is a slip for "as a result of". (Or alternatively, *more* is a slip for *less*!). The same slip is found in:
- s.95(1) IHTA where the wording is "but for"
- s.93(3) IHTA where the wording is "apart from" (which means the same)

HMRC agree: see the Manual passage cited at 81.5.3 (s.99 amount).
If s.94(1) had been written today, it would have been split into two or three subsections, and that might have exposed the drafting error; but we muddle through.

rights and interests[11] in the company immediately before the transfer, and

[b] any amount so apportioned to a close company shall be further apportioned among its participators, and so on...

Apportionment is on a just and reasonable basis, like s.3 gains.[12]

The IHT Manual gives an example:

> **IHTM16247 Close companies and settled property: example** [Jul 2016]
> Calculating the chargeable value of the property (or part):
> A close company has assets in excess of £3million.
> It transfers cash of £1million to A and B [in equal shares] absolutely.[13]
> The company has 1000 shares in issue.
> The 'participators' are identified under IHTA84/S94 (2). They are:

Person	**Shares**[14]
A (individual)	500
B (individual)	250
C (trustee)	250
Total	1000

The HMRC analysis for the individuals A and B, is as follows:

> The transferred amount of £1,000,000 is apportioned so that A is deemed to have made a transfer of value of (500 ÷ 1,000) × £1,000,000 = £500,000.
> From this figure we must deduct the amount of the transfer remaining in A's estate ('the amount by which his estate is more than it would be apart for[15] the company's transfer' - S94(1)(a)). In this case he has accepted the money. His estate is 'more' by £500,000. So the taxable amount is £500,000 less £500,000 = nil.
> As B is also an individual and has taken the money personally, his calculation follows the same lines.

Presumably A and B are beneficiaries of the trust; otherwise C is in breach

[11] See 81.3.2 (Rights/interest in company).

[12] See 64.6 (Amount attributed to participator).

[13] Author's footnote: It is assumed, perhaps doubtfully, that the transfer is not an income distribution (which would qualify for close co income-receipt relief).

[14] I set this out in tabular form for clarity.

[15] Author's footnote: the statutory wording is "but for" but this is a slip for "as a result of".

of trust. I return to consider the position of C, the trustee, below.

81.4.4 *No double charge*

The IHT Manual continues:

> also, if a company worth £3million gives away £1million as above, the thought might reasonably occur that the value of shares held by the shareholders personally has possibly dropped by about ⅓. You might then wonder about 'loss to the transferor'. You must put such thoughts out of your mind because such a claim does not exist.

Could there be a double charge? Presumably not, because of a presumption against double taxation.

81.4.5 *Non-PET trap*

Section 3A(6) IHTA provides:

> Where, under any provision of this Act, tax is in any circumstances to be charged as if a transfer of value had been made, that transfer shall be taken to be a transfer which is not a potentially exempt transfer.

So a s.94 transfer is immediately chargeable, not a PET. The reason for this rule is unclear, and s.3A(6) ought to be repealed. But IHT is not a rational tax, and fortunately this problem does not often arise.

81.4.6 *Income-receipt relief*

Section 94(2) IHTA sets out two reliefs. Section 94(2)(a) provides:

> so much of that value as is attributable to any payment or transfer of assets to any person which
> [i] falls to be taken into account in computing that person's profits or gains[16] or losses for the purposes of income tax or corporation tax
> [ii] (or would fall to be so taken into account but for section 1285 of the Corporation Tax Act 2009 (exemption for UK company distributions)
> shall not be apportioned...

I refer to this as close-company **"income-receipt relief"**.

This relief might be considered as one of a number of broadly similar income-receipt reliefs:

[16] "Profits or gains" here means income: see14.2 (Income/gains/profits).

Relief (my term)	**IHTA**	**See para**
Close co income-receipt relief	s.94(a)	*Discussed here*
Exit charge income-receipt relief	s.65(5)(b)	76.9.3
Disposition allowable in computing IT	s.12[17]	*Not discussed*

What these reliefs have in common is that they deal with the interaction of IHT and IT: in short, IT has priority and there is no double charge. There are however differences in the wording. Exit charge income-receipt relief is more widely expressed, and s.12 relief is narrower.

81.4.7 *Relief for non-dom individual*

Foreign property of a company is not excluded property, since excluded property means foreign property of an *individual.*[18] Hence there is express exemption for foreign domiciled individuals, which covers the point. Section 94(2)(b) IHTA provides:

> if any amount which would otherwise be apportioned to an individual who is domiciled outside the UK is attributable to the value of any property outside the UK, that amount shall not be apportioned.

Suppose:

(1) The participator is a non-domiciled individual.
(2) (a) *Case 2(a):* The company shares are not UK situate; or
(2) (b) *Case 2(b):* The company shares are UK situate
(3) The company does not hold an interest in UK residential property, so the rules in schA1 IHTA are not relevant.

In case 2(a) the shares are excluded property. It is strange that a gift of the UK assets by the company should give rise to an IHT charge under the IHT close-company code, when a gift of the shares by the shareholder does not. But there it is.

(I address case 2(b) for completeness. In this case, the anomaly works the other way. The shares are not excluded property. It is strange that a gift of foreign assets by the company should not give rise to an IHT charge

[17] The inclusion of s.12 relief in this list might be questioned. This relief requires a payment which is deductible in the hands of the transferor. That is not exactly the same as a requirement that the payment is income of the recipient. But there is a general rule of symmetry under which deductibility for the payor, and taxability for the payee, normally go together.

[18] See 75.2 (Non-settled foreign property).

under the IHT close-company code when a gift of the shares by the shareholder would do so. But the facts of case 2(b) are not likely to happen in practice.)

Property within sch A1 IHTA (where the company asset is a relevant loan or a subsidiary holding UK a residence) may fall within this exemption, as the company property is in general situate outside the UK, even though it is not excluded property).[19]

FOTRA securities of a non-resident company are excluded property since excluded property means FOTRA securities of a non-resident *person*.[20] So if a non-resident company makes a disposition of FOTRA securities, it does not make a transfer of value and there is no s.94 deemed transfer. Section 94(2)(b) is not needed here.

However, in all the above cases, where the close-company IHT charge does not apply, the participator might make a transfer of value (perhaps by omission) which is potentially chargeable under general principles.

UK situate AUTs or OEICs fall into a gap. They are not excluded property, if held by a company, and do not fall within the exemption in s.94(2)(b) IHTA. An HMRC concession would be sensible, and it might be worth asking HMRC in an appropriate case. The issue will not often arise.

81.4.8 *De minimis exemptions*

Section 94(4) IHTA provides a limited exemption:

> Where the amount apportioned to a person under this section is 5 per cent or less of the value transferred by the company's transfer of value then, notwithstanding section 3(4) above,[21] tax chargeable under subsection (1) above shall be left out of account in determining, with respect to any time after the company's transfer, what previous transfers of value he has made.

This provides exemption up to the amount of the available nil rate band.

Section 96 IHTA provides a de minimis relief for preference shares:

> Where
>
> [a] part of a close company's share capital consists of preference shares (within the meaning of section 1023(5) of the Corporation Tax Act

[19] See 82.2.1 (Effect of de-exclusion).

[20] See 75.4 (Non-settled FOTRA securities).

[21] See 74.3.1 (Transfer of value: Extended definitions).

> 2010) and
> [b] a transfer of value made by that or any other close company has only a small effect on the value of those shares, compared with its effect on the value of other parts of the company's share capital,
>
> the preference shares shall be left out of account in determining the respective rights and interests of the participators for the purposes of sections 94 and 95 above.

Section 97 IHTA provides a de minimis group relief, not discussed here.

81.4.9 *Charity and other reliefs*

HMRC say:

> So far as the company's transfer of value relates to property given
> [1] to charity or
> [2] to the national institutions or bodies mentioned above,[22]
>
> then the exemptions for gifts to those bodies extend to the amounts apportioned to the individual participators.[23]

The same would apply to the IHT spouse exemption, business property relief, and other exemptions.

81.4.10 *Inter-company transfer*

Section 95(1) IHTA provides:

> Where—
> (a) the value of the estate of a company ("the transferee company") is increased as the result of a transfer of value made by a close company ("the transferor company"), and
> (b) an individual to whom part of the value transferred is apportioned under section 94 above has an interest in the

[22] I expect this is a reference to bodies within s.25 & sch 3 IHTA (gifts for national purposes).

[23] "The Arts are your Business" (1980) issued by the Association for Business Sponsorship of the Arts in conjunction with the Inland Revenue, referred to in Hansard HC Deb 09 March 1981 vol 1000 cc260-1W
https://api.parliament.uk/historic-hansard/written-answers/1981/mar/09/arts-sponsorship-tax-benefits
The passage is printed in Butterworths Yellow Tax Handbook 2015/16; it is not in later editions, but there is no reason to think that HMRC practice has changed.
The textbook *Taxation of Companies and Company Reconstructions* (looseleaf) formerly took the opposite view, criticised in the 2017/18 ed of this work para 71.13.7, but the passage has been deleted.

> transferee company (or in a company which is a participator of the transferee company or any of its participators, and so on),
>
> subsection (2) below shall apply to the computation, for the purposes of section 94 above, of the amount to be offset, that is to say, the amount by which the value of his estate is more than it would be but for[24] the transfer.

So we move to s.95(2) for the quantum of the relief:

> Where this subsection applies—
>
> (a) the increase in the value of the transferee company's estate shall be taken to be such part of the value transferred as accounts for the increase, and
>
> (b) the increase so computed shall be apportioned among the transferee company's participators according to their respective rights and interests in the company immediately before the transfer (and, where necessary, further apportioned among their participators, and so on),
>
> and the amount so apportioned to the individual shall be taken to be the amount to be offset.

81.5 Trustee participators

Section 94(1) IHTA only applies to individuals. Section 99(1) IHTA confirms that it does not apply to trusts:

> Subsection (1) of section 94 above shall not apply in relation to a person who is a participator in his capacity as trustee of a settlement...

Section 99(1) then makes express provision for trusts:

> but—
>
> (a) the reference in subsection (2) of that section to subsection (1) shall have effect as including a reference to subsection (2) of this section...

Amended as s.99 directs, s.94(2) provides:

> [a] For the purposes of ~~subsection (1) above~~ s.99(2) IHTA the value transferred by the company's transfer of value shall be apportioned among the participators according to their respective rights and interests in the company immediately before the transfer,
>
> [b] and any amount so apportioned to a close company shall be further

[24] "but for" is a slip for "as a result of"; see 81.4.2 (s.94 amount).

> apportioned among its participators, and so on; ...

This takes us to s.99(2) IHTA which slots the close-company charge into the code of rules for (a) estate IIP and (b) non-estate IIP trusts. I refer to this as a **"s.99 trust transfer"**.

81.5.1 *Estate IIP trust*

Section 99(2) IHTA provides:

> Where any part of the value transferred by a close company's transfer of value is apportioned to a trustee of a settlement under section 94 above, then—
>
> (a) if a qualifying [estate] interest in possession[25] subsists in the settled property, a part of that interest corresponding to such part of the property as is of a value equal to

Section 99 goes on to specify the amount of that value (**"the s.99 amount"**):

> [i] the part so apportioned less
> [ii] the amount specified in subsection (3) below
> shall be treated for the purposes of Chapter II of Part III of this Act as having come to an end on the making of the transfer

This activates the rules which apply on a termination of an IIP.[26]

The IHT Manual provides:

> **IHTM16243 Close companies and settled property: the taxable amount** [Sep 2018]
> ... The provisions of IHTA84/Part IV do not provide any special charging section where settled property is concerned. Instead, the system for settled property provides a 'special' framework and then directs the notional transfers to their own existing taxing and rate sections, with the result that the claims produced by this legislation are the familiar IHTA84/S52 (1) for interests in possession ceasing. This basis of claim is artificial because in reality the interest does not cease. As a result such an event, occurring after 16 March 1987, can be a PET (IHTM04057) if it would have been so under a plain IHTA84/S52 (1) claim [i.e. if it was not then becoming held on non-interest in possession trusts]. This contrasts with the treatment of absolute gifts by close

[25] See 74.7 (Qualifying IIP).

[26] See 76.10 (Termination of estate IIP).

companies which, under IHTA84/S98 (3), are never PETs.
In similar vein, annual and other exemptions (IHTM16082) available on a claim under IHTA84/S52 (1) are allowable.

81.5.2 *Non-IIP trust*

Section 99(2) IHTA provides:

> Where any part of the value transferred by a close company's transfer of value is apportioned to a trustee of a settlement under section 94 above, then...
>
> (b) if no qualifying interest in possession [estate IIP] subsists in the settled property, Chapter III of Part III of this Act shall have effect as if on the making of the transfer the trustee had made a disposition as a result of which the value of the settled property had been reduced by

Section 99(2)(b) goes on to specify the amount in the same way as in s.99(2)(a) (**"the s.99 amount"**):

> an amount equal to
> [i] the part so apportioned less
> [ii] the amount specified in subsection (3) below;
> and where a qualifying interest in possession subsists in part only of the settled property paragraphs (a) and (b) above shall apply with the necessary adjustments of the values and amounts referred to there.

This activates the exit charge in s.65 IHTA,[27] which can have some quirky results.

81.5.3 *s.99 amount*

The s.99 amount is computed by reference to the amount apportioned less "the amount specified in subsection (3)".
Section 99(3) IHTA provides:

> The amount referred to in paragraphs (a) and (b) of subsection (2) above is
> [a] the amount (if any) by which the value of the settled property is more than it would be apart from[28] the company's transfer,
> [b] leaving out of account the value of any rights or interests in the

[27] See 76.8.2 (Reduce value of trust property).

[28] "Apart from" is a slip for "as a result of"; see 81.4.2 (s.94 amount).

company.

The IHT Manual gives an example; for the facts of the example see 81.4.3 (Apportionment of s.94 transfer). The HMRC analysis for the trust is as follows:

> But C is also a participator, and (250/1,000) × £1m is apportioned to him under S99 (1)(a) i.e. £250,000.
> The amount to be taxed in relation to C under S99 (2) is £250,000 less the amount by which the settlement in question is 'more' as a result of the company's transfer - S99 (3).
> Thus, as C and his settlement received nothing, the calculation is £250,000 less nil = £250,000 chargeable under S99 (2) above.
> The last part of S99 (3) 'leaving out of account the value of any rights or interests in the company' means that the calculation stops here. S99 (3) prohibits the taking into account of the effects of these transactions by the company on the value of the shares (rights or interests).
> E.g. the value of rights and interests still held by the shareholders as such could nullify the effect of all these provisions if that value were allowed into the above equation

81.5.4 *Excluded property trust exemption*

Section 94(2)(b) IHTA provides exemption from the close company apportionment for a foreign domiciled participator who is an individual.[29] That provision only applies to individuals, so it does not apply to a trustee. But if the trust property is excluded property, there is no charge to IHT so the exemption in s.94(2)(b) is not needed.

Thus there is an interesting distinction between settled and non-settled companies. Where a close company makes a transfer of value:

(1) If a foreign domiciled *individual* is the participator:
  (a) There is no IHT charge if the company property (the property to which the company's transfer of value is attributable) is foreign situate.
  (b) The situs of the company shares does not matter.

(2) If an excluded property *trust* is the participator:
  (a) There is no IHT charge if the company shares are excluded property.
  (b) The situs of the company property does not matter.

[29] See 81.4.7 (Relief for non-dom individual).

The rule for trusts is the sensible rule, and the rule for individuals is anomalous. But there it is.

The IHT Manual provides:

> **IHTM16244 Close companies and settled property: foreign element** [Sep 2018]
> Bearing in mind that claims on settled property in the 'close company' (IHTM14851) regime under IHTA84/Part IV cases arise in their normal context and under normal charging sections it would seem that if the trusts identified above (IHTM16243) would in their own right, satisfy IHTA84/S48 (3), and the close company in question, being 'the property', is incorporated (and therefore situate[30]) outside the UK, then an apportionment will not be made.
> So the trust property takes the benefit of excluded property treatment. IHTA84/S94 (2)(b) achieves this result for lifetime transfers.
> Where a company has the interest in possession as above, the position is more explicit -S48(4). If the trust property is invested in FOTRA securities (IHTM04306), and on looking through the company to the real beneficiaries, it can be seen that those individuals qualify under S48 (4), then exemption will be given.

81.5.5 *Other exemptions*

Of the two exemptions in s.94(2), para (a) still applies (close company income-receipt relief).[31]

Section 99(1)(b) IHTA incorporates two other minor exemptions by reference:

> in relation to tax chargeable by virtue of subsection (2) of this section, sections 94(4)[32] and 95[33] above shall apply with the necessary modifications.

81.6 Dividend: Close-co code analysis

Suppose a company pays a dividend. No-one expects or suggests that would give rise to an IHT charge under the IHT close company code. But the analysis may be helpful when considering other problems of the close-company code. The analysis is not entirely straightforward.

[30] The original erroneously reads: domiciled.

[31] See 81.4.6 (Income-receipt relief).

[32] See 81.4.8 (De minimis exemptions).

[33] See 81.4.10 (Inter-company transfer).

The starting point is that the company's estate is reduced. So in principle, the company makes a transfer of value.[34]

81.6.1 *Dividend to individual*

Suppose a close company pays a dividend to a shareholder who is an individual.

The estate of the shareholder remains (broadly) the same. Apart from tax on the dividend, the sum received by the individual shareholder (broadly) matches the reduction in the value of their shares.[35] So the s.94 amount would be nil.

However the individual may pay tax on the dividend in which case the s.94 amount is not nil.[36] Then close co income-receipt relief prevents a charge.[37] This relief also applies in the case of an alphabet share arrangement,[38] if a controlling shareholder procures dividends are paid to another shareholder.

The shareholder may pay CGT on the dividend. Then s.165 IHTA provides relief.

The shareholder may pay foreign tax on the dividend. In this case one may fall back on the argument that the tax charge on the dividend is too remote and should not be taken into account in computing the s.94 amount.

81.6.2 *Dividend to trust*

Suppose a close company pays a dividend to a shareholder who is a trustee of a discretionary trust.

One might think that the analysis is the same as for an individual. At first glance, the value of the settled property remains broadly the same. The he

[34] A straightforward dividend might qualify for IHT arm's length transaction relief; see 74.13 (Arm's length disposal relief). But if the analysis here is correct it is not necessary to rely on that.

[35] That is not necessarily the case, but in the absence of special circumstances, it is not likely to be necessary to pursue the valuation issues.

[36] Unless one says that a tax charge on the dividend is too remote and should not be taken into account in computing the s.94 amount.

[37] See 81.4.6 (Income-receipt relief). That assumes that the dividend is subject to UK income tax, However that relief would not protect against:

(1) Foreign income tax, or

(2) CGT payable on the dividend, as might happen for a capital dividend of a non-resident company (but see s.165 IHTA).

[38] See 99.20 (Alphabet share arrangement).

sum received by the trustee shareholder matches the reduction in the value of the shares. So applying the computation in s.99(2), the amount of the s.99 trust transfer is nil.

The difficulty with that analysis is that trust income is not settled property until it is accumulated. Even assuming that the trustees have power to accumulate the income, and that they exercise that power, their decision to accumulate may be made after the time of payment. At the time of payment the value of the settled property is reduced. This is why undistributed income is not subject to a 10-year anniversary charge.[39]

The answer is that there is a s.99 transfer, but no exit charge arises because in most cases close company income-receipt relief applies, and where it does not, *exit charge* income-receipt relief applies (the latter relief is somewhat wider).[40] This analysis allows one to reach the intuitively correct result.

For where a company makes a transfer of a UK residence, see 82.15 (Company dividend in specie).

81.7 Change in share capital/rights

81.7.1 *s.98 application conditions*

Section 98(1) IHTA provides:

> Where there is at any time—
> (a) an alteration in so much of a close company's share or loan capital as does not consist of quoted shares or quoted securities
> (b) an alteration in any rights attaching to unquoted shares in or unquoted debentures of a close company,

I refer to this as the **"s.98 application conditions"**.

"Alteration" has an inclusive definition.[41]

References to altering share rights are also found in the context of reorganisations and transactions in securities,[42] so case law/guidance in that area may be relevant here too.

81.7.2 *Share alteration: Consequences*

Assuming either of the s.98 application conditions are met, we move on:

[39] See 76.7.2 (Undistributed trust income).

[40] See 81.4.6 (Income-receipt relief).

[41] Section 98(2) IHTA provides: "In this section "alteration" includes extinguishment."

[42] See 55.3.2 ("Transaction in" securities); 58.1 (Reorganisations: Introduction).

the alteration

[A] shall be treated as having been made by a disposition made at that time by the participators, whether or not it would fall to be so treated apart from this section, and

[B] shall not be taken to have affected the value immediately before that time of the unquoted shares or unquoted debentures.

An alteration of share capital/rights does not cause a loss to the company's estate, so does not give rise to a s.94 transfer or a s.99 trust transfer. If the conditions in para (a) or (b) are met, there are two consequences, in short:

- Para [A]: alteration is a (deemed) disposition
- Para [B]: s.98 valuation rule

I consider these separately below.

Alterations in share capital/rights may raise many other tax issues:

Topic	**See**
Transactions in securities	55.3.2
Reorganisations	58.1
CGT value shifting	s.29-31 TCGA
Identity of settlor	99.40.2
Transfer of assets abroad	49.5
Employment-related shares	Part 7 ITEPA

81.7.3 *Alteration deemed disposition*

Section 98(1) IHTA provides:

> [a] the alteration shall be treated as having been made by a disposition made at that time by the participators,
>
> [b] whether or not it would fall to be so treated apart from this section

This is needed because an alteration is not a disposition in the normal sense of the word.[43]

The significance of the (deemed) disposition is that the alteration:

(1) May constitute a transfer of value, if the participator is an individual

(2) May give rise to an exit charge, if the participator is a trust

This would not be the case if there were no disposition.[44]

I say the alteration *may* constitute a transfer of value/exit charge because

[43] Though an alteration might involve an omission, which is a deemed disposition; this may be what the drafter had in mind in s.98(1)[b].

[44] See 74.4 (Disposition).

there are other requirements to be met. An alteration does not constitute a transfer of value/exit charge if

(1) it does not reduce the value of a shareholding, or

(2) it qualifies for IHT arm's length transaction relief[45]

I refer to a transfer of value within s.98 as a **"s.98 transfer"**.

Section 98(3) IHTA provides:

> The disposition referred to in subsection (1) above shall be taken to be one which is not a potentially exempt transfer.

This is the "non-PET" trap. There is no good reason for the rule, and it ought to be repealed, along with the equivalent s.94 trap.[46]

81.7.4 *Share issue: HMRC example*

Shares & Assets Valuation Manual provides:

> **SVM108280 Alterations in Share Capital** [Nov 2018]
> Section 98 serves to stop avoidance by the alteration of a company's capital or the rights attaching to it. It achieves this by treating the alterations as if they had been effected by dispositions made by the participators (normally the shareholders). To give rise to a liability one is looking for a situation where, after the company has altered its capital or varied share rights, the value of an individual's holding after the event is less than it was before. A common case involves the creation of new classes of shares which are not issued pro rata to existing shareholders.

The Manual gives an example:[47]

> **Example 1 [issue of preference & deferred shares]**
> A company has issued shared capital of 100 Ordinary Shares:[48]

Shareholder	**Ordinary Shares**
A	60
B	20
C	20
Total	100

[45] See 74.13 (Arm's length transaction).

[46] See 81.4.5 (Non-PET trap).

[47] The same example is found in IHTM14855 Transfers By Close Companies: Alterations In Share Capital, Loan Capital Or Rights [Mar 2021], where A, B and C are named Fernando, Filipe & Kimi.

[48] I have altered the layout of the example for clarity.

The company issues two further classes of shares:

- 20 Deferred shares (acquiring rights to votes and to 50% of the income and capital after 5 years) to C.
- 80 20% Preference shares (absorbing much of the current income) to C.

So the position becomes:

Shareholder	Ordinary	Deferred	Preference	Total
A	60			60
B	20			20
C	20	20	80	120
				200

The HMRC analysis is as follows:

> Although control remains with A the value of his holding is substantially diminished and s.98 is in point.

More analytically, the alteration is a deemed disposition and a chargeable transfer. The shareholders have fallen into the non-PET trap. (They might, perhaps, be able to set aside the alteration for mistake.)

Fortunately, the non-PET trap only arises if (as in the example) shares are issued in different proportions to how the exiting shares are held. Suppose:

(1) The new shares were issued to existing shareholders *pari passu*; and
(2) A and B gave their newly acquired shares to C.

In that case the analysis is:

(1) The share issue is not a s.94 transfer.
(2) The gift is a PET, not a chargeable transfer.

As often happens, careful planning can avoid the trap.

The Manual gives 3 further examples, but these do not add much.[49]

[49] For completeness, these examples are:
Example 2 [Rights issue taken up in part]
A company has issued share capital of 100 shares owned as to 70% by X and 30% by Y.
The company makes a 2 for 1 rights issue which is not wholly taken up by the controlling shareholder.
[This is not as clear-cut as example 1 because X's new holding may range from 70% if he takes up almost all his rights to 43% is he takes up none. In addition, when a rights issue is involved there may be an absence of gratuitous intent (which it will be for the taxpayer to prove) so that s.10 may be in point.]

The creation of alphabet shares[50] will give rise to a s.98 charge if the participator's shares are worth less after the alteration than before. Alphabet shares which do not carry control are (more or less) worthless. Everything depends here on how the alteration creating the alphabet shares is carried out.

81.8 s.98 transfer: Value transferred

If the participators are individuals, the value transferred by a s.98 transfer is in principle the reduction in the value of the shareholding as a result of the alteration.

81.8.1 *s.98 valuation rule*

Section 98(1) IHTA provides that the alteration:

> shall not be taken to have affected the value immediately before that time of the unquoted shares or unquoted debentures.

I refer to this as the **"s.98 valuation rule"**

81.8.2 *Death value transferred rule*

On death, IHT is charged on the value of the estate "immediately before" the death.[51] I refer to that as a **"death transfer"**. (One might call it a "s.4 transfer".) This also has a valuation rule. Section 171 IHTA provides:

> (1) In determining the value of a person's estate immediately before his death changes in the value of his estate which
> [a] have occurred by reason of the death and

Example 3 [Related property rules]
A company has issued capital of 100 shares, 60 of which are owned by A, 30 by Mrs A and 10 by B.
100 further shares are issued to B at a nominal price well below market value.
It should be noted that for the purpose of looking at close company transfers, the related property provisions are not in point.
Example 4 [Loss of control]
A company has issued capital of 100 shares, of which W owns 60 and X 40.
30 shares are issued to Y and 30 to Z.
W now has 60 out of 160 issued shares and has lost control.
X now has 40 shares as a 25% holding compared to his former 40 shares as a 40% holding.

[50] See 99.20 (Alphabet share arrangement).

[51] See 76.4 (Death: IHT charge & exemption).

> [b] fall within subsection (2) below
> shall be taken into account as if they had occurred before the death.
> (2) A change falls within this subsection
> [a] if it is an addition to the property comprised in the estate or
> [b] [i] an increase or decrease of the value of any property so comprised,
> [ii] other than a decrease resulting from such an alteration as is mentioned in section 98(1) above;
> [c] but
> [i] the termination on the death of any interest or
> [ii] the passing of any interest by survivorship
> does not fall within this subsection.

I refer to a change within s.171(2) as a **"death-value change"**. Section 171 applies on any death transfer, but I consider it here because it mentions s.98.

The IHT Manual gives four examples where s.171 applies.

> **IHTM04046 changes in value by reason of the death** [Sep 2018]
> ... **Examples**
> [1] Damages payable to the personal representatives under the Law Reform (Miscellaneous Provisions) Act 1934 are included in the death estate.

The 1934 Act provides that (most) claims vested in a living person survive on their death for the benefit of their estate. So this is not an example of an addition to the property comprised in the estate by reason of death, within s.171(2)[a]; though in some cases the value of the claim might be said to change by reason of the death, in which case the claim might be property falling within s.171(2)[b].

There are claims which (as an exception to the 1934 Act) do not survive death of the claimant (such as a claim for defamation). No-one suggests that such a claim should be subject to IHT, and it might perhaps be said that the claim falls within s.171(2)[b], on the grounds that its value reduces (to zero).

The next 3 examples relate to a change in valuation, within s.171(2)[b]:

> [2] A life assurance policy maturing on the death is valued as a sum immediately payable.
> [3] Property that becomes vacant on the death is valued with vacant possession.
> [4] If the deceased's death causes a fall in the value of shares, this is

taken into account.

Death can obviously affect values. It is less clear that the change occurs at the moment of death and not before. Would it not be known immediately before death that the deceased was about to die, and the market value determined accordingly? For instance, in the case of £100 policy maturing on death, is the value any less than £100 immediately before death? Death should be factored into the pre-death valuation. In other words, what matters for valuation is the immanence of death and not the occasion of death. It would be the same as if a policy matured on a fixed date, and the owner gifted it immediately before that date.

If that is right, what is the role of s.171? The answer may be that market value depends on what would be paid by the hypothetical purchaser on a hypothetical sale; and that price depends on what the purchaser hypothetically knows. The concern is an argument that the hypothetical purchaser will not anticipate the immanent death of the deceased, or would not circumstances of sudden, unexpected death; so the policy is valued on the basis of hypothetical life expectancy of a person with the age of the deceased but not with other characteristics. The argument seems tenuous, though it has its supporters. But it is not necessary to pursue that here because if there were anything in the point, s.171 overrides it.

The proviso in s.171(2)[c] suggests that the following would or might otherwise count as a death-value change, within s.171(2):

(1) the termination on the death of any interest or
(2) the passing of any interest by survivorship

Point (1) makes sense on the drafter's assumption that death may not be fully factored into a valuation. Point (2) makes no sense to me; for prior to a death, the value of a joint interest, which passes by survivorship, does not seem to be affected by a subsequent death.

81.8.3 *s.171/s.98 valuation rule: Interaction*

Section 171 does not apply to a decrease in value which:

(1) arises as a result of the death, and
(2) results from "such an alteration as is mentioned in s.98(1)", ie an alteration in share capital/rights of a close company

Thus a death-value change of this kind is not within the rule that it is computed "as if it had occurred before the death". Instead the s.98 valuation rule applies.

Suppose company articles provide that the deceased's shares carry rights to dividends during his or her life and not subsequently. Perhaps the drafter assumed that:

(1) There is an alteration of share rights on the death; and
(2) The alteration decreases the value.

If so, the s.98 valuation rule applies. But are these assumptions correct?

81.9 Deferred shares

HMRC comment on the deferred shares in the example discussed above:[52]

> A further claim under IHTA84/S98 will arise when the deferred shares actually acquire voting and other rights in 5 years' time.

The HMRC's view is that there is an occasion of charge under s.98 when deferred shares come to rank equally with other shares. This view is long standing:

> Following recent legal advice, the Revenue's interpretation of IHTA s.98 has changed.
> Until now the Capital Taxes Offices have taken the view that when deferred shares came to rank equally with another class of shares there would be no alteration in the rights of the shares within the meaning of IHTA s.98(1)(b). But there would be an alteration in the company's share capital within the meaning of IHTA s.98(1)(a).
> The Board of Inland Revenue has now been advised that an alteration of rights, within the meaning of IHTA s.98(1)(b), occurs when deferred shares come to rank equally[53] with another class of shares.
> Accordingly, claims for inheritance tax will be raised where deferred shares, issued after 5 August 1991,[54] subsequently come to rank equally, or become merged, with shares of another class.[55]

The HMRC view rests on the proposition that the occasion where deferred shares come to rank equally is an "alteration" in the company share capital

[52] See 81.7.4 (Share issue: HMRC example).

[53] HMRC are considering a case where deferred shares come to rank equally with other shares, but the same point would apply when deferred share rights change, whether or not they rank equally with other shares.

[54] So there appears to be a concession for pre-1991 share issues. The concession seems illogical, as under HMRC's pre-1991 view, there should still have been an IHT charge under para (a). But the point may not now arise.

[55] *Law Society's Gazette*, 11 September 1991.

or rights. Is that right? It is not an alteration in the strict sense of the word.[56] Time has altered but the share rights have not. They are what they have always been. Thus at first sight it seems that HMRC's position is not correct. However:

(1) It is then difficult to see the purpose of the s.98 valuation rule. That rule assumes that there could be an alteration which affects the value of shares immediately before the time of the alteration. That seems to be referring to a prospective alteration such as deferred shares. That supports the HMRC view.[57]
(2) Alternatively HMRC may say that the occasion when the rights of deferred shares change is an operation, which may be associated with a prior gift or issue of the deferred shares, so there is a transfer of value, at the time the deferred shares come to rank equally, and the value transferred is computed by reference to the value of the shares at that time.[58]

In practice it would be wise to plan on the basis that the HMRC view is correct, because to do otherwise is to invite litigation.

Unfortunately the HMRC example does not consider the application of the s.98 valuation rule, ie how does one approach the valuations required to compute the value transferred? If one ignores the alteration, there would seem to be a double charge to tax, for there was already one charge on issue of the deferred shares.

The s.98 transfer (assuming HMRC are right to say there is one) might be avoided in various ways, for instance:

(1) Draft share rights so that there is no occasion where deferred shares come to rank equally.
(2) Give non-deferred shares to charity before the deferred shares come to rank equally.[59]

81.10 Alteration: Estate IIP trust

Section 100(1) IHTA provides:

[56] See *Unilever (UK) Holdings v Smith* [2002] EWCA Civ 1787.

[57] It is relevant to note that deferred shares were used in pre 1974 Estate Duty planning, so the drafter of the current provisions may be taken to have them in mind.

[58] See 74.16 (Transfer of value by 2 operations).

[59] See Kessler, Wong & Shah, *Taxation of Charities and Nonprofit Organisations*, (14th ed., 2024-25), para 24.34 (Deferred shares) online version *https://www.taxationofcharities.co.uk*

> This section applies where, by virtue of section 98 above, an alteration in a close company's share or loan capital or of any rights attaching to shares in or debentures of a close company is treated as a disposition made by the participators, and—
>
> (a) a person is a participator in his capacity as trustee of a settlement, and
>
> (b) the disposition would, if the trustee were beneficially entitled to the settled property, be a transfer of value made by him, and
>
> (c) at the time of the alteration an individual is beneficially entitled to an interest in possession[60] in the whole or part of so much of the settled property as consists of unquoted shares in or unquoted securities of the close company.

Assuming these conditions are satisfied, we move on to the rule in s.100(2) IHTA:

> Where this section applies, such part of the individual's interest shall be treated for the purposes of Chapter II of Part III of this Act as having come to an end at the time of the alteration as corresponds to the relevant decrease of the value of the property in which the interest subsists, that is to say the decrease caused by the alteration.

This echoes the position for a s.94 transfer.[61]

What about a relevant property trust? The deemed disposition may give rise to an exit charge as a depreciatory transaction.

The relief for excluded property will work in the same way as for a s.94 transfer.

81.11 Close-co IHT: Liability

Section 202 IHTA provides:

> (1) The persons liable for tax chargeable by virtue of section 94(1) or section 99(2) above are—

[60] Section 100(1A) IHTA restricts the rule to an estate IIP:

"Where the interest in possession is one to which the individual became beneficially entitled on or after 22nd March 2006, this section applies only if the interest in possession is—

(a) an immediate post-death interest,

(b) a disabled person's interest, or

(c) a transitional serial interest

or falls within section 5(1B) above."

[61] See 81.5.1 (Estate IIP trust).

(a) the company making the transfer of value concerned, and
(b) so far as the tax remains unpaid after it ought to have been paid,
  [i] the persons to whom any amounts have been apportioned under section 94 above and
  [ii] any individual (whether such a person or not) the value of whose estate is increased by the company's transfer.

(2) A person to whom not more than 5 per cent of the value transferred by the company's transfer is apportioned shall not as such be liable for any of the tax; and each of the other persons to whom any part of that value has been apportioned shall be so liable only for such part of the tax as corresponds to that part of that value.

(3) A person the value of whose estate is increased by the company's transfer shall not as such be liable for a greater amount than the amount of the increase.

(4) No person other than those liable under this section shall be liable for any tax chargeable by virtue of section 94(1) or section 99(2) above.

CHAPTER EIGHTY TWO

IHT RESIDENTIAL-PROPERTY CODE

82.1 IHT residential-property code
82.2 De-exclusion of sch A1 property
  82.2.1 Effect of de-exclusion
82.3 Residence-company

Cross references

The following topics are considered elsewhere:
131.10.1 (Underlying co has UK residence) - trust registration
125.18.1 (IHT residential-property code) - Inland Revenue charge

82.1 IHT residential-property code

This chapter considers:

(1) The IHT rules for residential property, which I call the **"residential-property code"**.

(2) A general discussion of some planning issues for the family home, in the light of this and previous chapters.

The development of the residential-property code can be traced through consultation papers, but these are now of historical interest only:

- Technical Briefing on Non Dom/IHT Residential property changes ("**the 2015 residential-property paper**")[1]
- Reforms to the taxation of non-domiciles: further consultation ("**the 2016 consultation paper**")[2]
- Reforms to the taxation of non-domiciles: response to further consultation[3]
- Finance Bill March 2017
- Draft clauses and EN July 2017

The IHT Manual has a short entry-level discussion of the topic.

HMRC have answered a set of questions from the professional bodies

[1] HMRC, "Technical Briefing on Non-Dom changes announced at Summer Budget 2015" (2015).

[2] *https://www.gov.uk/government/consultations/reforms-to-the-taxation-of-non-domiciles-further-consultation* (August 2016)

[3] *https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/574450/non_doms_consultation_response_final.pdf* (December 2016)

("Sch A1 Q&As").[4]

82.2 De-exclusion of sch A1 property

Para 1 sch A1 IHTA provides:

> Property is not excluded property by virtue of section 6(1) or 48(3)(a) [non-UK situate property][5] if and to the extent that paragraph 2 or 3 applies to it.

The property (which I call sch A1 property) is chargeable (non-excluded) property, even if not UK situate. Adopting HMRC's neologism, para 1 sch A1 IHTA *de-excludes* the property.

Paragraphs 2 and 3 apply to four categories of property:

Para	My term	Typical case	See para
2	Residence-company	Interest (shares/loan) in close co holding UK residence	82.3
2	Residence-partnership	Interest in partnership holding UK residence	82.4
3(a)	Relevant loan	Loan to individual/trust to purchase UK residence	82.7
3(b)	Residence-security	Property charged as security for relevant loan	82.9

I refer to these together as **"Sch A1 property"**.

These are not transparent labels, but there are no short labels which neatly encapsulate these four categories of property.

Until 2017, property was either excluded or chargeable (not excluded). Sch A1 property may be excluded to an extent. If property is excluded to an extent, can one make a gift of the excluded part separately from the de-excluded part? Presumably not. But one could divide a company into A and B shares, in such a manner that the A shares are excluded property and B shares are chargeable. Likewise for a relevant loan.

[4] *https://assets-eu-01.kc-usercontent.com/220a4c02-94bf-019b-9bac-51cdc7bf0d99/fd698038-572f-4043-a0c2-c0d192dc0757/NonDomsQnA.pdf*
This comes with the following disclaimer:
"The Q&As do not constitute advice and are not a substitute for professional consideration of the issues by the professional adviser in each client's specific context. Furthermore, these Q&As should be read in conjunction with HMRC's comments and advisers should consider the position to take for themselves."
There is also advice for those who disagree with HMRC views:
"Where an adviser adopts a position contrary to that of HMRC the fundamental principles and standards set out in PCRT (with particular reference to paragraph 2.21 et seq) should be considered in terms of communication with the client and any reporting and disclosure required." See 122.9.2 (Disclosure that HMRC disagree).

[5] See 75.2 (Non-settled foreign property); 75.8 (Trusts: Foreign situate property).

82.2.1 *Effect of de-exclusion*

If sch A1 applies, the de-excluded property becomes subject to IHT, not the land to which that property relates. To put it another way, schA1 does not disregard the company or make it transparent for IHT purposes. This sometimes matters, eg for valuation.[6] The property is not deemed to be UK situate.

82.3 Residence-company

Para 2(1) sch A1 IHTA provides:

> This paragraph applies to an interest in a close company or in a partnership, if and to the extent that the interest meets the condition in sub-paragraph (2).

Para 2 deals with companies and partnerships together, but it is convenient to consider them separately.

I refer to a company within para 2(1) as a **"Residence-company"**.

82.3.1 *Attribution condition*

Para 2(2) sch A1 IHTA provides:

> The condition is that the value of the interest is—
> (a) directly attributable to a UK residential property interest,[7] or
> (b) attributable to a UK residential property interest by virtue only of one or more of the following—
> (i) an interest in a close company;
> (ii) an interest in a partnership;
> (iii) property to which paragraph 3 (loans) applies[8].

I refer to this as the **"attribution condition"**. There are 4 ways that the attribution condition may be satisfied. I refer to attribution condition **"limb (a) and limb (b)(i), (ii) and (iii)"**.

Attribution condition limb (a) is straightforward. It applies where the company owns the residential property interest.

Attribution condition limb (b) is more complicated. The value of the interest in the company must be:

[6] See too 131.10.1 (Underlying co has UK residence).

[7] See 82.17 ("Residential property interest").

[8] See 82.7 (Relevant loan: Definition); 82.9 (Residence-security).

(1) Not directly attributable to a UK residential property interest (because the company does not own UK residential property directly)
(2) Indirectly attributable to a UK residential property interest by virtue of the company owning items (i) to (iii)

It is possible that the value of an interest in a company may be:
(1) indirectly attributable to a UK residential property interest, but
(2) not by virtue of items (i) to (iii).

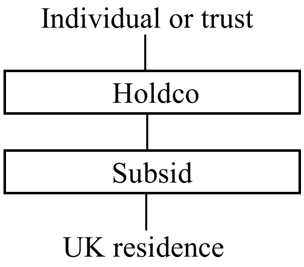
An example is if the company owns the benefit of a loan, secured on UK residential property, which is not a relevant loan. This does not fall witin limb (b) and the interest in the company is not sch A1 (de-excluded) property.

82.3.2 *Chain of companies*

Attribution condition limb (b)(i) applies where:

> the value of the interest [in a close company] is—
> (b) attributable to a UK residential property interest by virtue ... of ...
> (i) an interest in a close company

Suppose a chain of companies, thus:

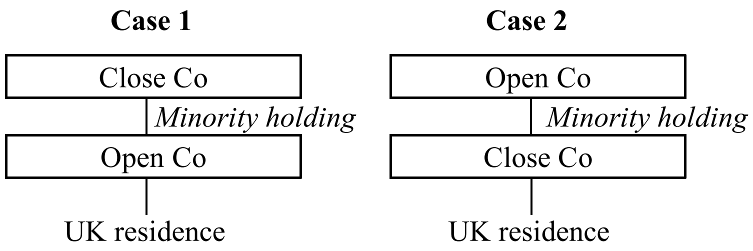


Attribution condition (b)(i) is met, and so the Holdco shares are chargeable (de-excluded) property, because their value is attributable to the residence, by virtue of Holdco's interest in Subsid (a close company).

The shares in Subsid are also chargeable property, but that does not matter.[9]

Suppose:

[9] Unless Holdco makes a transfer of value, see 81.2 (Transfer of value by close co), but that is not likely to happen.



In case 1, a close company holds an interest in an open company. Some of the value of the close co is attributable to the residence. But it is not attributable by virtue of an interest in a close company, so the attribution condition is not satisfied.

In case 2, an open (non-close) company holds land through a subsidiary. The *open* company is not within para 2, even if its value is attributable to the residence by virtue of its interest in the close company.

82.3.3 *Residence-company Interest*

Para 9 sch A1 IHTA provides the expected definition of close company; the term includes a non-resident close company.[10]

Para 9 provides a wide definition of "interest in a company":

> (1) In this Schedule ...
> references to an interest in a close company are to the rights and interests that a participator[11] in a close company has in that company.
> (2) In this paragraph...
> references to rights and interests in a close company include references to rights and interests in the assets of the company available for distribution among the participators in the event of a winding-up or in any other circumstances.

[10] Para 9(1) sch A1 IHTA provides:

> "In this Schedule "close company" means a company within the meaning of the Corporation Tax Acts which is (or would be if resident in the UK) a close company for the purposes of those Acts".

See 104.29.1 (Non-resident close company).

[11] Para 9(2) sch A1 IHTA incorporates the standard definition, though by slightly non-standard wording:

> "In this paragraph "participator", in relation to a close company, means any person who is (or would be if the company were resident in the UK) a participator in relation to that company within the meaning given by section 454 of the Corporation Tax Act 2010."

This will include a loan to the company, if the lender is a loan creditor (and so a participator).[12] A creditor does not have an interest in a company, in the normal sense: they have a claim against the company. But in the event of a winding-up, a creditor has an interest in the assets of the company.[13]

I refer to an interest in a residence-company, in this wide sense, as **"Residence-company Interest"** with initial capitals to reflect the technical nature of the expression. (Note this term is different from the statutory term "*residential-property* interest" which means an interest in UK land.)

82.3.4 *Company owns relevant loan*

Attribution condition limb (b)(iii) applies where:

> the value of the interest [in a close company] is ... attributable to a UK residential property interest by virtue ... of ... (iii) property to which paragraph 3 (loans) applies.

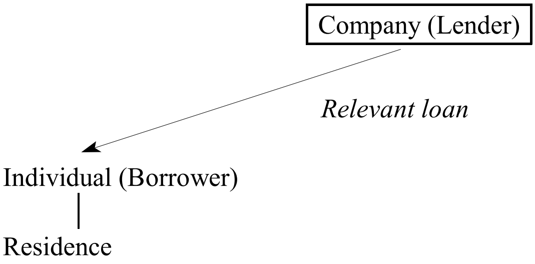
Para 3 applies to (1) relevant loans and (2) residence-security.[14] It is helpful to consider these separately.

One might have expected the legislation to say:

> *the value of the interest [in a close company] is ... attributable to property to which paragraph 3 (loans) applies [ie value is attributable to a relevant loan or residence-security]*

But that is not what it says.

Suppose a company has lent to an individual to finance acquisition of a UK residence. The company holds the benefit of the loan (a relevant loan, ie a loan to which para 3 applies):



The value of the company is attributable to the relevant loan. But is the value attributable to a *UK residential property interest* (ie the UK

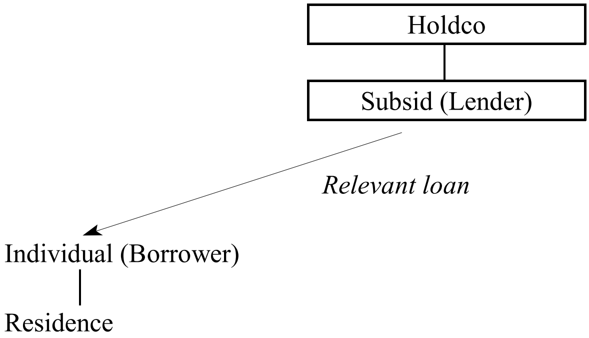
[12] See 104.25.2 ("Loan creditor").

[13] I think that is clear on first principles, but if further authority is needed, see 104.28 (Close co winding-up test).

[14] See 82.7 (Relevant loan: Definition); 82.9 (Residence-security).

residence[15])? That will depend on the facts.[16]

Similarly, suppose a company subsidiary has lent to an individual to finance acquisition of a UK residence:



Holdco
Subsid (Lender)
Relevant loan
Individual (Borrower)
Residence

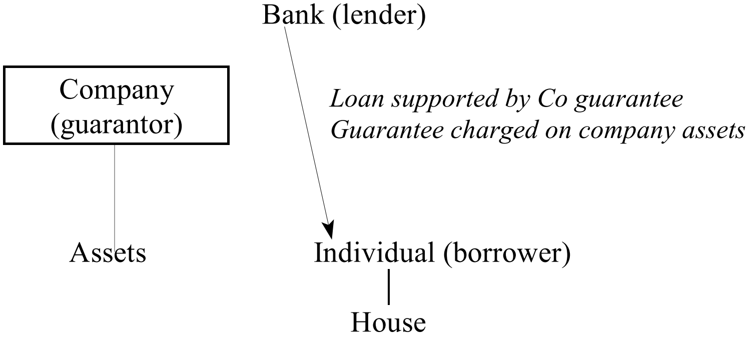
The value of Subsid is attributable to the relevant loan. The value of Holdco is also attributable to the relevant loan, by virtue of its interest in Subsid. But the question is whether the value of Holdco is attributable to the *UK residential property interest*. As in the previous example, that will depend on the facts.

82.3.5 *Company owns residence-security*

Attribution condition limb (b)(iii) applies where:

> the value of the interest [in a close company] is ... attributable to a UK residential property interest by virtue ... of ... (iii) property to which paragraph 3 (loans) applies.

Suppose a company has guaranteed a relevant loan and secured that guarantee by a charge on its assets. Diagrammatically:



Bank (lender)
Company (guarantor)
Loan supported by Co guarantee
Guarantee charged on company assets
Assets
Individual (borrower)
House

[15] See 82.17 ("Residential property interest").

[16] See 83.16.2 (Derived property: Loan).

The assets of the company are a residence-security, and not excluded property. The value of the company is attributable to the value of the assets. But the value of the company is not attributable to a UK residential property interest, so the attribution condition is not met, and the company shares are not sch A1 (de-excluded) property.

82.4 Residence-partnership

Para 2(1) sch A1 IHTA provides:

> This paragraph applies to an interest ... in a partnership, if and to the extent that the interest meets the condition in sub-paragraph (2).

The attribution condition is the same as for a Residence-company.[17]

I refer to this as a **"Residence-partnership"**.

An interest in a partnership set up specifically to hold a UK home is likely to be UK situate property on general principles.[18] Perhaps HMRC took a different view; or perhaps they just wanted to put it beyond doubt. The issue is not now likely to be tested.

I do not consider partnerships in detail, as partnerships do not commonly hold residential property.

82.4.1 *"Partnership": Definition*

Para 10 sch A1 IHTA provides the definition:

> In this Schedule "partnership" means—
> (a) a partnership within the Partnership Act 1890,
> (b) a limited partnership registered under the Limited Partnerships Act 1907,
> (c) a limited liability partnership formed under the Limited Liability Partnerships Act 2000 or the Limited Liability Partnerships Act (Northern Ireland) 2002, or
> (d) a firm or entity of a similar character to either of those mentioned in paragraph (a) or (b) formed under the law of a country or territory outside the UK.

This definition is similar to the SDLT/ATED definition,[19] but not identical: a foreign LLP is an SDLT/ATED-partnership, but it is classified as a company, not a partnership for the purposes of the IHT residential-

[17] See 82.3.1 (Attribution condition).

[18] See 102.35.2 (Partnership holding land).

[19] See 98.2.1 ("Partnership" for SDLT/ATED).

property code. That is sensible, and presumably deliberate. A general or limited partnership would be within the IHT residential-property code, even if the partnership is large and would not be a close company if it were corporate. But in practice large investment partnerships are usually structured as foreign LLPs, which do not count as partnerships for the purpose of the IHT residential-property code, they count as companies. They will be classified as open companies and so fall outside the IHT residential-property code.

82.5 5% exemption

Para 2(3) sch A1 IHTA provides:

> For the purposes of sub-paragraphs (1) and (2) disregard—
>
> (a) an interest in a close company, if the value of the interest is less than 5% of the total value of all the interests in the close company...

I refer to this as the **"5% exemption"**.

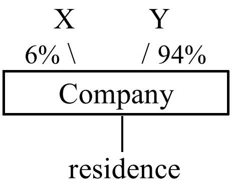
82.5.1 *The 5% test*

The test is whether "the *value* of the interest is less than 5% of the *total value* of all the interests in the close company"; not whether the interest is less than 5% of the shares.

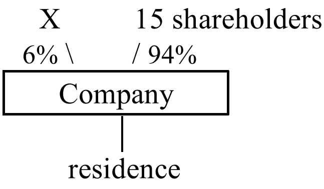
The total value of all the interests in the company includes the value of the interest which may qualify under the 5% test. The section refers to *all* the interests in the company, not all the other interests.

It is not clear whether one values the interests separately, or brings them together and values them as one item. It is suggested that one values them separately.[20]

Case 1



Case 2



[20] That is consistent with the connected person aggregation rule in para 2(4) which directs the value of a person's interest to be increased by the value of connected person interests (ie it requires separate valuations of each interest); see 82.5.3 (Connected persons). A similar issue arose in *Short v Treasury Commissioners* [1948] AC 534 and received the same answer.

In case 1:

(1) X has a 6% shareholding

(2) Y (not connected) has the rest of the shares.

X's holding is likely to satisfy the 5% test. Even a 10% holding is likely to do so because the discount for a 10% holding is likely to reduce its value to less than 5% of the value of all the interests (the 94% and the 6% interests, valued separately or even if valued together).

In case 2:

(1) X has a 6% shareholding.

(2) 15 other shareholders (not connected with X) have an equal share in the rest (approximately 6% each).[21]

What is "total value of all the interests in the company"? Is it the value of the 16 minority holdings, valued separately? Or the value of a 100% shareholding? The application of the 5% test depends on the answer to this question. It is suggested that the former is the case, so the 5% test is not met.

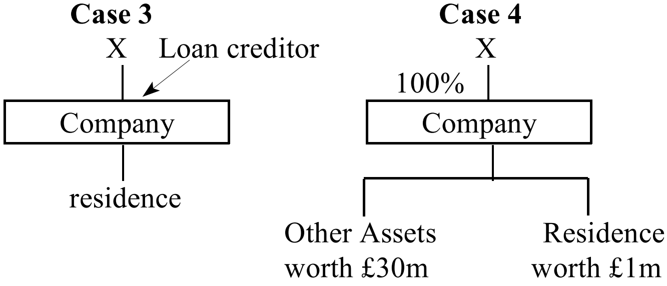
Sch A1 Q&As provide:

> **Question 3: Para 2(3): de minimis provisions**
> ... Curiously this de minimis provision does not value the minority shareholding and then compare it with the value of the company as a whole or look at how much value in the company is derived from residential property. Instead it compares the value of each participator's interest with the value of total participators' interests in the company. Does HMRC agree that this will lead to different results depending on whether the shareholder interests in a company comprise one majority shareholding or many small shareholdings and the extent to which the company is funded by borrowings?
> *Example 1*
> Newco is owned by two unconnected people, one of whom holds 80 per cent and the other 20 per cent. That 20 per cent interest might well be worth less than 5 per cent of the aggregate value of the 20% interest and the 80% interest.
> If on the other hand five unconnected people own 20 per cent each then it is unlikely the de minimis exemption will apply.
> If Newco is funded with a loan from an unconnected third party of, say,

[21] It is assumed that some of the 15 shareholders are associates, so the company is close.

> 70% of the value of the property, the de minimis exemption is likely to apply to a 20% shareholding in both of the above patterns of shareholdings.
>
> *Suggested answer*
>
> We broadly agree with the above analysis. The alternative option that the draftsperson could have adopted is to compare the value of the relevant person's interest with the value of 100% of the share capital but that is not the approach here.

HMRC agree.



The "interests in the company" include the interest of a loan creditor.[22] So in case 3, even a 100% shareholding may meet the 5% test, if the loan to the loan creditor is sufficiently large. But the loan is a Residence-company Interest, and so not excluded property.

In case 4, the value of the residence is less than 5% of the value of the company assets. But the test depends on the value of the *interests* in the company, not the value of the *assets* of the company; so the 5% test is not met.[23]

82.5.2 *One person holds 2 interests*

One person may have 2 interests in a company, eg shares and a loan. If the loan is small, the value of the loan may be less than 5% of the combined value of shares and loan. If the loan is large, the value of the shares may be less than 5% of the combined value of the shares and loan. Contexts suggests that one values the two assets together, so they do not qualify for the 5% exemption. But that is not a literal reading.

[22] See 82.3.3 (Residence-company Interest).

[23] Sch A1 Q&As agrees: "Note that there is no de minimis exemption just because the company only owns a very small amount of residential property."

82.5.3 *Connected persons*

Connected persons interests are aggregated. Para 2(4) sch A1 IHTA provides:

> In determining under sub-paragraph (3) whether to disregard a person's interest in a close company or partnership, treat the value of the person's interest as increased by the value of any connected person's[24] interest in the close company or partnership.

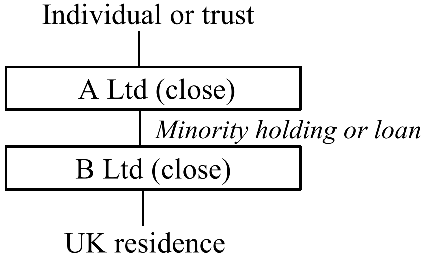
Sch A1 Q&As provide:

> **Question 4: Connected party interests and de minimis provisions**
> ... Para 2(4) says that one is to treat the value of the person's interest as increased by the value of any connected person's interest in the close company or partnership. This seems to differ from valuing the aggregate of the interests of the relevant person and all those connected with him.
> *Example 2*
> Adam and his son and daughter each has a 3% shareholding in a close company where each 3% is only worth 1.5% of the total value of all the interests in the company. As worded do HMRC agree that the value of Adam's interest is increased by the value of his children's interests - to 4.5% of the total value of all the interests in the company. If instead one valued the aggregate of the interests of Adam and his children, Adam's enlarged interest might then be worth 5% or more of the total value of all the interests in the company.
> *Suggested answer*: The first approach should be taken so that Adam's interest is increased to 4.5% of the total value of all interests in the company.

HMRC agree. No other answer is possible.

82.5.4 *Chain of companies*

Suppose:



[24] See 104.12.2 (Connected: IHT definition).

In the absence of para 2(2), the attribution condition would be met. But if the minority holding or loan is valued at less than 5%, it is in principle disregarded for the purposes of para 2.

Sch A1 Q&As provides:

> It should also be borne in mind that if a shareholder owns a company X Ltd which in turn owns a small interest of Y Ltd which holds the residential property, the de minimis provisions must be applied through all levels upwards. The value of the interest of X Ltd may be less than 5% of the total value of all the interests in Y Ltd.

82.5.5 *Partnership 5% exemption*

Para 2(3) sch A1 IHTA provides:

> For the purposes of sub-paragraphs (1) and (2) disregard—
> (b) an interest in a partnership, if the value of the interest is less than 5% of the total value of all the interests in the partnership.

Since partners are in general connected persons,[25] members of a partnership holding a Residence-company will not qualify for the 5% exemption, even if the partner holds less than 5% of the partnership. But the issue will not often arise.

82.6 Liabilities of Residence-company

Para 2(5) sch A1 IHTA provides:

> [a] In determining whether or to what extent the value of an interest in a close company or in a partnership is attributable to a UK residential property interest for the purposes of sub-paragraph (1),
> [b] liabilities of a close company or partnership are to be attributed rateably to all of its property, whether or not they would otherwise be attributed to any particular property.

This is relevant if (in short) the company
(1) holds UK residential property and other property and
(2) has a liability

So it will not arise very often. It could be avoided by using separate companies for the two classes of asset.

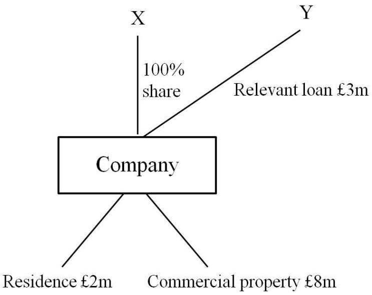
It is not entirely clear how para 2(5) applies to liabilities which are also

[25] See 104.18 (Connected: Partners).

an interest (loan-participation) in a residence-company. For instance suppose:

(1) A company owns £2m residential property and £8m non-residential property.

(2) The company was funded with £7m of shares (owned by X) and £3m of loan-notes (owned by Y). Diagrammatically:



If Y dies, how much of the value of Y's loan is attributable to residential property? The obvious answer is 20% of £3m = £600k. But para 2(5) suggests that one first attributes the £3m liability rateably against the residential and commercial property - reducing the value of the residential property from £2m to £1.4m.

Is the answer then that value of Y's loan-notes are only 30% of £1.4m = £420k? Value has been lost in this process (and in a company highly-geared with shareholder loan it would then seem, on this logic, to be possible to eliminate a large proportion of value for IHT purposes).

The fallacy in the above argument seems to be in confusing the value, post attribution of liabilities, of the company's assets, with the value of the participations in that company. The rateable attribution of liabilities under para 2(5) is there merely to establish the proportions (where they would otherwise actually fall differently). But para 2(5) does not reduce the value of the participations - unlike a third-party loan which would. On the above example the 20/80 proportions are preserved both before and after the para 2(5) exercise and Y must therefore apply 20% × £3m = £600k.[26]

82.6.1 *Liability: Residence-partnership*

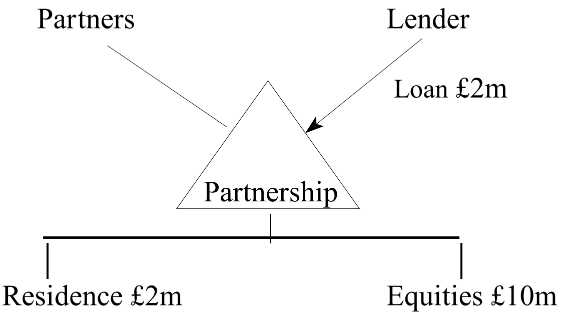
A liability of a Residence-partnership raises the question of the interaction of this debt allocation rule and relevant loan rules. Sch A1 Q&As

[26] I am grateful to John Barnett for this observation.

discusses this:

> **Question 6: Corporate liabilities**
> The position is reasonably clear for companies as loans to companies cannot be relevant loans and the purpose for which the loan is taken out is irrelevant. However, a loan to a partnership can be a relevant loan within para 4 if used to finance the acquisition of UK residential property.
> **Example 3**
> A partnership holds a UK residential property worth £2 million and borrows £10 million from X (a foreign dom) to invest in equities.

Diagrammatically:



The Q&A analysis is as follows:

> This is not a relevant loan.
> However, the loan reduces the value of the UK residential property pro rata.
> The same is true if a company borrows to buy equities. The loan is still in part deductible against the value of the residential property.

More analytically:

(1) The loan reduces the value of the partnership interest.
(2) The partnership interest is chargeable (de-excluded) property to the extent that the value of the partnership interest is attributable to the residence.
(3) In making that attribution, the partnership liability is attributed across the partnership property as a whole.

But it comes to the same thing.

In the above example, the loan was made for the purchase of the equities. Consider the same structure but suppose the loan was made for the purchase of the property:

> If the partnership borrows £2m to purchase residential property but also owns other assets of £10m,
> [1] only one sixth of the borrowing reduces the value of the residential property for the purposes of calculating tax on the partnership interest but
> [2] the entire loan is a relevant loan and therefore a non-excluded asset and fully chargeable to IHT...

There is potentially double taxation here.

> By contrast if the loan is to a company
> [1] that [the loan] is a para 2 participator interest [in my terminology, a Residence-company Interest] not a relevant loan and
> [2] only a proportion of it will be [chargeable property under para 2] as only a proportion will be attributable to residential property.

HMRC agree.

In practice, partnerships do not usually hold a UK residence, so this issue will not often arise.

82.7 Why relevant loans matter

Para 3 sch A1 IHTA provides:

> This paragraph applies to—
> (a) the rights of a creditor in respect of a loan which is a relevant loan (see paragraph 4) and
> (b) money or money's worth held or otherwise made available as security, collateral or guarantee for a loan which is a relevant loan, to the extent that it does not exceed the value of the relevant loan.

In short, the significance of a relevant loan is that:
(a) the benefit of the loan and
(b) security for the loan
are chargeable (de-excluded) property even if not UK situate.[27]

82.8 Relevant loan: Definition

82.8.1 *"Loan"*

Para 6(6) sch A1 IHTA provides a wide definition:

[27] See 82.2 (De-exclusion of sch A1 property).

> [a] In this Schedule, references to a loan include
> [i] an acknowledgment of debt by a person or
> [ii] any other arrangement under which a debt arises;
> [b] and in such a case references to money or money's worth made available under the loan are to the amount of the debt.

This includes a sale at market value where the purchase price is left outstanding.

Why did the drafter not just say that "loan" includes a debt?

82.8.2 *Relevant loan*

Para 4(1) sch A1 IHTA provides:

> For the purposes of this Schedule a loan is a relevant loan if and to the extent that money or money's worth made available under the loan is used to finance, directly or indirectly—
> (a) the acquisition by an individual, a partnership or the trustees of a settlement of—
> (i) a UK residential property interest, or
> (ii) property to which paragraph 2 to any extent applies [Residence-company/partnership]

I have considered referring to a relevant loan as a **"residence-loan"**, which would be a more transparent term, but it is better to adopt the statutory terminology. It may sometimes be helpful to gloss the term and say "relevant (de-excluded) loan".

It does not matter who makes the loan: a relevant loan may be made by an individual, partnership, trust or company.

The concept of "relevant loan" here must not be confused with "relevant debt" as defined for the purposes of remittances.

It does not matter whether the loan is on commercial terms or made at arm's length.

82.8.3 *Loan to company*

If a person lends to a *company* for the company to acquire a UK residence, the loan not a relevant loan: the requirement of para (a) is not met. But the benefit of the loan is in principle a Residence-company Interest and chargeable (de-excluded) property under para 2 sch A1 IHTA.[28]

If a close company (A Ltd) lends to another close company (B Ltd), the

[28] See 82.3.3 (Residence-company Interest).

benefit of the loan may be a Residence-company Interest (being an interest in B Ltd). So the shares of A Ltd may not be excluded property so far as their value was attributable to a UK residential property interest, by virtue of the loan.

If T (an individual or trust) borrows from an outside lender, and lends on to a company, there are two loans:

(1) The loan from the outside lender to T: This is a relevant loan as it is used to finance the acquisition of the Residence-company Interest.

(2) The loan from T to the company: This is not a relevant loan, but it is a Residence-company Interest.

82.8.4 *Bank loan*

A loan from a bank to a company is not a relevant loan; and the benefit of the loan is not a Residence-company Interest, because the bank is not a loan creditor[29].

A loan from a bank to an individual/partnership/trust for the purpose of acquiring a UK residence is a relevant loan. That does not matter if the lender is an open company. But it could affect a bank which is a close company as (subject to the 5% exemption) its shares could be chargeable (de-excluded) property.[30] Fortunately BPR would normally be available.[31]

82.8.5 *Acquisition by intermediary*

Para 4(1) sch A1 IHTA continues:

> For the purposes of this Schedule a loan is a relevant loan if and to the extent that money or money's worth made available under the loan is used to finance, directly or indirectly ...
>
> (b) [i] the acquisition by an individual, a partnership or the trustees of a settlement of an interest in a close company or a partnership ("the intermediary") and
>
> [ii] the acquisition by the intermediary of property within paragraph (a)(i) or (ii) [UK residential property interest/ Residence-company/partnership]

I refer to this as the **"intermediary rule"**.

[29] See 104.25.11 (Bank creditor).

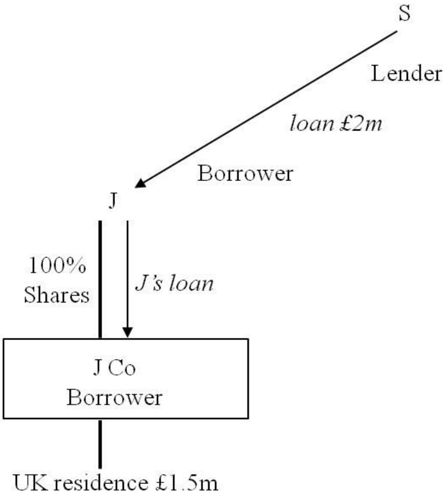
[30] To the extent that the value of the shares is attributable to a UK residence; but this may not be the case, it depends on the facts; see 82.3.4 (Company owns relevant loan).

[31] See 82.16.1 (APR/BPR).

The IHT Manual provides this example:

> **IHTM04313 Relevant Loans** [Jan 2020]
> Example 7 (John and Seamus)
> J is domiciled in the Republic of Ireland. He owns all of the shares in a Jersey Company (J Co) that owns foreign assets worth £10m.
> J's brother S, who is also domiciled in the Republic of Ireland lends J £2m in order to fund J Co (by way of loan)
> and then J Co purchases UK residential properties worth £12m.

Diagrammatically:



The HMRC analysis is as follows:

> J's interest in J Co is no longer excluded property because the value of J's stake in that company is now attributable to UKRPI [a UK residential property interest].
> S has made a relevant loan, which is not excluded property. While his loan did not fund the acquisition of a UKRPI by an individual, partnership or trustee it was used by J to acquire an interest (as a loan creditor) in J Co and J Co as an intermediary has acquired a UKRPI.

But one does not need the intermediary rule (para 4(1)(b) IHTA) to reach the conclusion that S's loan is a relevant loan. The loan falls within para 4(1)(a)(ii).[32] So it is not clear what the intermediary rule is for. It seems

[32] See 82.8.3 (Loan to company).

to be otiose.

> Note that if the loan to J Co was made by another close company K Co then that loan would not be a relevant loan. Instead the participators in K Co would have an interest in J Co. and therefore an indirect interest in the UKRPI, subject to the de minimis rule (IHTM04312).

82.8.6 *Finance indirectly*

The wording is based on s.162A/162B IHTA, on which there is extensive HMRC guidance.[33]

Para 4(2) sch A1 IHTA provides an inclusive definition:

> [A] In this paragraph references to
> [i] money or money's worth made available under a loan or
> [ii] sale proceeds[34]
> being used "indirectly" to finance the acquisition of something include
> [B] the money or money's worth or sale proceeds being used to finance—
> (a) the acquisition of any property the proceeds of sale of which are used directly or indirectly to finance the acquisition of that thing, or
> (b) the making, or repayment, of a loan to finance the acquisition of that thing.

Para (a) would cover the case where:
(1) T borrows to acquire an asset.
(2) T sells the asset.
(3) T uses the sale proceeds to acquire a residence.

Para (b) would cover the case where:
(1) T borrows to purchase an residence ("debt 1").
(2) T borrows to repay debt 1 ("debt 2").

That might not be caught otherwise.[35]

Suppose:
(1) Year 1: A loan is made to an individual/trust.
(2) The individual/trust uses the proceeds to subscribe for shares in a

[33] See 80.18 (Excluded property disallowance).

[34] The expression sale proceeds (or rather, proceeds of sale) is in fact used only in para 4(2)[B](a).

[35] See 80.21 ("Indirectly" financing).

close company.

(3) Year 3: The company acquires a residence.

The loan becomes a relevant loan in year 3.

Sch A1 Q&As provides:

> **Question 18: Meaning of "indirectly finances"**
> ... Clearly ... there must be some limits to the meaning of "indirect". If A lends to B who buys a car, which he sells 4 years later; and then gives the proceeds of sale to his children; and those children 3 years after that unexpectedly buy a UK residential property, then it would be difficult to argue that A has indirectly financed the acquisition of a UK residential property interest.
> However, it is unclear whether what breaks the chain is (a) the purpose of the loan (b) the intention of the borrower (c) the proximate use of the proceeds (d) the unexpectedness of the residential property purchase (e) the passage of time (f) a new actor in the chain (g) some other factor or (h) some combination of the above.
> *Suggested answer*
> The use of the verb "to finance" is important here. In relation to similar language in s162A IHTA 1984, HMRC has confirmed (for instance) that a person borrowing to buy a UK house (and thereby not using non-UK monies which they would otherwise have used to effect that purchase) cannot be said to be "financing" the maintenance of the non-UK monies; rather they are "financing" the purchase of the UK house.[36]
> It is not possible to give hard and fast guidance covering every case. However, in interpreting whether a loan "indirectly finances", one needs to examine - using a realistic assessment of the facts and a credible view of the parties' intentions - what the purpose of the loan was and what it was contemplated would be done with the proceeds.
> Para 4(2) makes it plain that one cannot get out of the relevant loan provisions simply by inserting an intervening asset or an intervening person in the chain. But if the loan is intended for one purpose which is fulfilled then an unexpected subsequent use of the monies, such as in the example above, would not constitute the indirect financing of a UK residential property interest.

I suggest the matter should depend on what is the arrangement. HMRC say:

[36] Author's footnote: Is this a good analogy?

> We agree that there could be cases where a factual link between a loan and an acquisition is too remote for it to be a relevant loan.

This is no doubt correct, but it is not exactly guidance.

82.8.7 *Lender unaware of use of loan*

The lender may not know what money lent is indirectly used for. Sch A1 Q&As provides:

> **Question 19: Lender unsure what a borrower has done with the proceeds of a loan**
> Lenders may not always know what a borrower has done with the proceeds of a loan. How, in such a case, are lenders to assess whether some or all of their loan is a relevant loan?
> **Example 11**
> Mr J is a wealthy individual with many different investments and interests worth hundreds of millions. Many of these investments are illiquid and, from time to time Mr J has cash-flow difficulties. At such times he borrows from a family trust set up, many years ago, by his (non-domiciled and non-resident) mother. Mr J is clearly good for the money and the trustees do not impose any particular restrictions on the use to which he puts the borrowed-monies: they are simply for his general lifestyle needs.
> Mr J spends the money on a variety of things including school fees, holidays, living expenses and (potentially) in maintaining one or more of his homes around the world (including the UK). Mr J also uses the monies to make payments to his ex-wife under their divorce settlement. His ex-wife spends those payments on a similar range of things which may include enhancing or maintaining her UK property.
> The family trust, which until now has been an excluded property trust, has a 10 year anniversary approaching and needs to know what proportion of the loans to Mr J may be "relevant loans". However, the loans all predate the 2017 provisions (in some cases by up to 20 years), and it is impossible for either the trustees or Mr J to reconstruct what Mr J did with the loans.
> *Suggested answer*
> As in the previous question the use of the verb "to finance" is important here. The trustees and Mr J should make as detailed enquiries as they can and if it is clear that a particular residential property interest - for instance a new purchase or a major refurbishment or extension of an existing property - was clearly what the loan was spent on, then they should report accordingly. However, where it is clear that the purpose

> of the loan was to "finance" general living expenses, then the fact that some of those living expenses might have included everyday repairs and other low-level property expenses would not be what the loan "financed".
> Similarly, on these particular facts, a loan used to finance a divorce settlement which the ex-wife unexpectedly spends on UK property may be thought to be sufficiently distant not to be caught (the position might be different if the divorce settlement specifically contemplated the purchase of a UK house, for instance).
> HMRC will take a pragmatic view.
> Lenders should make appropriate enquiries and report obvious use of loan-funding, but low-level use which cannot be quantified and more distant use by third parties will not be caught by these provisions.

An "arrangement" analysis makes the position clearer for the lender.

HMRC say:

> We agree that there is a practical issue here and that HMRC will take a pragmatic view.

This is not exactly guidance, but the reader may infer tacit agreement with the Q&A view.

The question also considers the position of a close-company bank lender:

> The position is even more difficult in relation to a closely controlled foreign bank which may have made many 100s of loans without inquiring in all cases how such borrowings are used. On the death of a shareholder or partner how can the executors proceed?

HMRC comment on this:

> The position for the bank may be more difficult but BPR may often assist on the death of a shareholder.

82.8.8 *Acquisition*

Para 4(3) sch A1 IHTA provides an artificial definition:

> [A] In this paragraph references to the acquisition of a UK residential property interest by an individual, a partnership, the trustees of a settlement or a close company[37] include

[37] The words "or close company" relate to the reference to the acquisition by an intermediary, in para 4(1).

[B] the maintenance, or an enhancement, of the value of a UK residential property interest which is (as the case may be) the property of the individual, property comprised in the settlement or property of the partnership or close company.

82.8.9 *Loan to pay rent*

Sch A1 Q&As provide:

> **Question 10: scope of relevant loans (3)**
> Where funds are borrowed, so an individual can pay his or her rent in relation to a UK residential property does this create a "relevant loan"?
> *Suggested answer*
> Such a loan would be a relevant loan as a tenancy agreement is sufficient to create an interest in residential property.[38]

HMRC agree.

82.8.10 *Incidental acquisition costs*

Sch A1 Q&As provides:

> **Question 8: scope of relevant loans (1)**
> Where funds are borrowed to pay the SDLT or other related legal and other expenses (not being expenses relating to the enhancement or maintenance of the value of the UK residential property interest) on the acquisition of UK residential property interest, would this be a "relevant loan"?
> *Suggested answer:* [The definition of relevant loan] is not intended to include borrowed funds which are used to pay
> [1] SDLT, and
> [2] other incidental costs of acquisition within the meaning of s38(2) TCGA 1992[39]

[38] The example continues: "The exception to this would be where the specific legislation (paragraph 8) defining "UK residential property interest" excludes the interest from the definition. For example, purpose built student accommodation meeting the conditions set down at [what is now para 5(4) sch 1B TCGA] does not come within the definition of "UK residential property interest" and so a loan to allow an individual to pay their rent on qualifying purpose built student accommodation would not be a "relevant loan"."

[39] Section 38(2) TCGA refers to:
"[1] fees, commission or remuneration paid for the professional services of any surveyor or valuer, or auctioneer, or accountant, or agent or legal adviser and

> provided such expenses do not relate to the enhancement or maintenance of the value of the UK residential property interest.

That seems right, and HMRC agree. It is an important point, given current rates of SDLT.

82.8.11 *Interest on loan*

Suppose a lender has lent to an individual to finance the purchase of a residence. I refer to this as the first loan, and it is a relevant loan.

As far as interest is concerned, there are three possibilities:

(1) **An additional loan**: the borrower borrows, by a separate loan, to pay interest on the first loan

(2) **Simple unpaid interest:** Interest on the first loan rolls up unpaid

(3) **Capitalised interest:** Interest on the first loan is capitalised

One would expect the IHT position to be the same in each case.

Sch A1 Q&As considers the position of an additional loan:

> **Question 9: scope of relevant loans**
> Where funds are borrowed to service [ie to pay] the interest on a "relevant loan" is this additional borrowing also a "relevant loan"?
> *Suggested answer*
> Servicing the interest on a relevant loan does not result in the acquisition of a UK residential property interest and neither does the expense relate to the enhancement or maintenance of the value of the UK residential property interest. As such, there is no "relevant loan".

HMRC say:

> We do not agree. If the interest is part and parcel of financing the purchase price of the UK residential property then the making of an additional loan to service that interest will be a relevant loan, whether directly or indirectly.

When is interest "part and parcel" of financing the purchase price? That is layman's language. Interest is always part and parcel of financing. So HMRC seem to be saying that if there is a relevant loan (eg to purchase a

[2] costs of transfer or conveyance (including stamp duty or stamp duty land tax)
[3] together... in the case of the acquisition of an asset, with costs of advertising to find a seller".

UK property), then the additional loan to pay interest on the first loan is also a relevant loan.

The question here is whether the additional loan could be described as "indirectly financing" the acquisition; if so it is also a relevant loan. "Indirectly" is wide enough to cover this, unless the context suggests otherwise.

Turning to unpaid interest: Suppose a loan of £100 and £2 interest has accrued but is unpaid. The lender owns a single debt, I think, and so a "loan", of £102. The question here is to what extent the money or money's worth made available under the loan is used to finance the acquisition. It can be argued that the £2 is"money's worth made available under the loan" and not so used; so to the extent of the £2, the simple unpaid interest, the loan is not a relevant loan. But HMRC will argue that it is so used, at least indirectly; or else that the £2 is not "money or money's worth made available under the loan".[40] On either analysis, the loan of £102 is entirely a relevant loan.

It is difficult to see that capitalisation of the interest can alter the IHT position.

These points are untested, but it is suggested the HMRC view is to be preferred. It seems strange that the first loan is de-excluded property, subject to IHT, but the additional loan, or interest (unpaid or capitalised), is not.

82.8.12 *Disposal of residence*

Para 4(4) sch A1 IHTA provides:

> Where the UK residential property interest by virtue of which a loan is a relevant loan is disposed of, the loan ceases to be a relevant loan.

Sch A1 Q&As provides:

> **Question 20: Relevant loan not repaid but company sold**
> Consider an individual, partnership or trust borrowing to fund[41] a close company which uses the funds to acquire UK residential property.

[40] I am grateful to John Barnett for his comments on this point.

[41] "Funding" a company may mean subscribing for shares or making a loan to the company. In the diagram I assume a share subscription. Similar points arise if there is a loan to the company instead, but the position is slightly more complex to follow.

Diagram 1 (Q20)

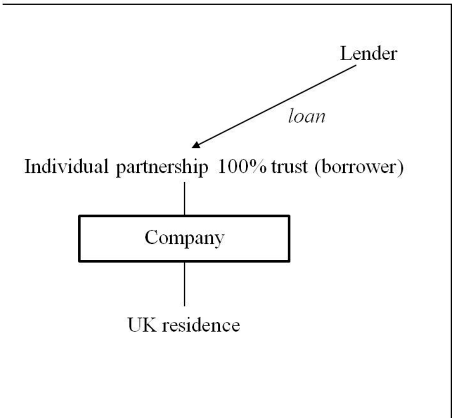


Diagram 2 (Q21)

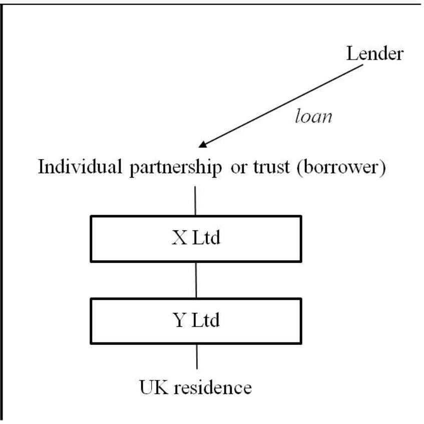


> The relevant loan remains outstanding but the individual, partnership or trust borrower disposes of the company holding the UK residential property rather than selling the house itself and the loan is not repaid? Does the loan remain a relevant loan indefinitely even though no house is in the structure? There seems no provision in the legislation to remove the relevant loan from schedule A1. Para 5 only has a two year rule if the loan is repaid.
>
> *Suggested answer*: We would take the view that the loan remains a relevant loan and only when repaid does the two year rule apply.

HMRC agree.

> **Question 21: Loan to company (non-relevant loan) remains outstanding or is repaid where property or subsidiary holding property is sold**
>
> If there is a loan by an individual or trust to a company X Limited which has acquired another company Y Limited which holds residential property and that Y Limited subsidiary is sold, even if the loan to X Limited remains outstanding, as X Limited is no longer schedule A1 property the loan ceases to be chargeable property immediately and repayment is irrelevant. [See diagram 2]. Do HMRC agree?

HMRC agree. But is this view correct? It is true that X Ltd is not sch A1 property, after the sale of Y Ltd; but one might have thought that it was sufficient if the loan was used to finance the acquisition of property which was sch A1 property at the time of acquisition or subsequently. If Q21 is correct then the same reasoning should apply in Q20.

Maybe this situation will not happen much.

Para 4(5) sch A1 IHTA deals with part-disposals:

> Where a proportion of the UK residential property interest by virtue of which a loan is a relevant loan is disposed of, the loan ceases to be a relevant loan by the same proportion.

82.9 Deductibility of relevant loan

In simple cases, borrowing is neutral for IHT. If A lends £100 to B:

(1) The value of the estate of A is unaffected, as before the transaction A held the £100, and after the loan is made, A holds the benefit of the debt worth £100

(2) The value of the estate of B is unaffected, as after the loan is made, B has the £100 and a liability of £100 deductible from the estate of B.

This section considers problems which arise where:

(1) The benefit of a debt is within the charge to IHT, ie
   (a) it is chargeable (non excluded) property; or
   (b) it is held by a company whose shares are chargeable (non excluded property) and

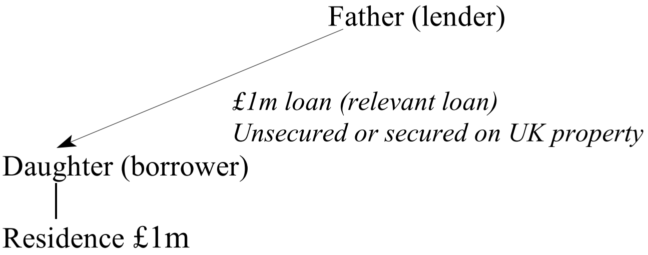
(2) The burden of the debt (the liability) is not deductible in the estate of the borrower, ie
   (a) it is disallowed under one of the many rules which disallow deduction for liabilities; or
   (b) it is notionally deductible but set against excluded property, not chargeable property, so the deduction is wasted.

In these circumstances there is (effectively) a double charge to IHT. This has always been a possible consequence of disallowed debts. However the scope of the problem has increased as a result of the IHT residential-property code, since relevant loans, which were in general excluded property under the pre-2017 rules, have now become chargeable. In other words, there is an element of unfairness or overkill in the legislation, as is common in anti-avoidance rules.

Sch A1 Q&As provides a simple example:

> **Example 4**
> Father and daughter are both domiciled in France.
> Daughter lives in the UK and father lends her £1m to buy a London flat.
> He takes as security her Paris property or maybe makes the loan unsecured.

Diagrammatically:



Father (lender)

£1m loan (relevant loan)
Unsecured or secured on UK property

Daughter (borrower)

Residence £1m

The Q&A analysis is as follows:

> a. Father has made a "relevant loan" which is not excluded property. It will therefore be subject to IHT on his death.
> Indeed as daughter is UK resident the loan is likely to be a UK situated asset anyway unless made a specialty debt or secured on non-UK property;
> b. Daughter owns a UK situs asset (worth £1m) and the debt that she owes her father is owed to a non resident and will be discharged in France "so far as possible" thus reducing the value of daughter's property outside the UK (see IHTA 1984 s162(5)).
> c. The result is that both the loan (which will be set against daughter's non-UK assets) and the full value of the London property are brought within the IHT net.
> If father releases the loan he will make a PET.

The suggested answer recommends tax planning to ensure the debt is deductible:

> We agree with the above analysis although double tax treaty relief in both cases should be considered.[42]
> Otherwise the loan should expressly be charged on the UK property so that it comes within the terms of s162(4).

HMRC agree:

> We agree with your analysis of SchA1 and we also agree that the liability will have to be deducted from foreign assets to the extent that IHTA/s162(5) applies.

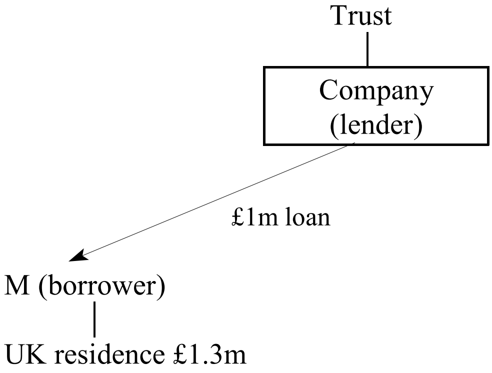
[42] Author's footnote: On the facts of the example, the France IHT DTA should provide relief for IHT on the father's asset (the debt) on the death of the father (even if the debt is UK situate): see 115.10.2 (Treaty-situs: France/ Italy).
DTA relief would not apply to IHT on the daughter's assets (the residence) on the death of the daughter.

> However, the eventual outcome may be mitigated by the effect of a double taxation convention or IHTA/s159 [foreign IHT credit relief].

Sch A1 Q&As provides another example, where the lender is a family trust rather than the father:

> **Question 14: ROB and s103 - borrowing issues**
> *Example 8* (M)
> M is resident but not domiciled (or deemed domiciled) in the UK. She has established a non-UK settlement which holds its assets through a non-UK company owned by the trustees. M is a beneficiary of the trust.
> In order to purchase a property in the UK for £1 million, M borrows £1 million from the company paying an arm's length rate of interest.[43]
> On M's death, the property is worth £1.3 million.

Diagrammatically:



> The debt may be deductible from the value of the property assuming the loan is repaid leaving a net value subject to inheritance tax of £300,000. It is however possible as a result of sections 162(5)/175A IHTA or (in some circumstances), section 103 Finance Act 1986 that the debt will not be deductible in which case the full £1.3 million value of the property will be within the scope of UK inheritance tax.[44]
> In addition, as the property held by the trust is subject to a reservation of benefit (as M is a beneficiary), the value of the shares in the company owned by the trust will, to the extent that their value is attributable to the loan[45] to M (£1 million) be subject to inheritance tax on M's death

[43] Author's footnote: But interest is not relevant for the IHT analysis.

[44] But section 162(5)/175A will not apply if the advisers are paying attention.

[45] This is not correct. It should read: to the extent that their value is attributable to the *house*. See 82.3.4 (Company owns relevant loan).

> as non-excluded property.
>
> The total amount on which inheritance tax is payable will therefore either be £1.3 million or £2.3 million. This takes no account of ten yearly charges to which the trustees will be subject by virtue of holding a company within para 2.
>
> *Suggested answer* We agree that, depending on the circumstances, the total amount subject to inheritance tax on M's death could be £2.3 million.

HMRC agree.

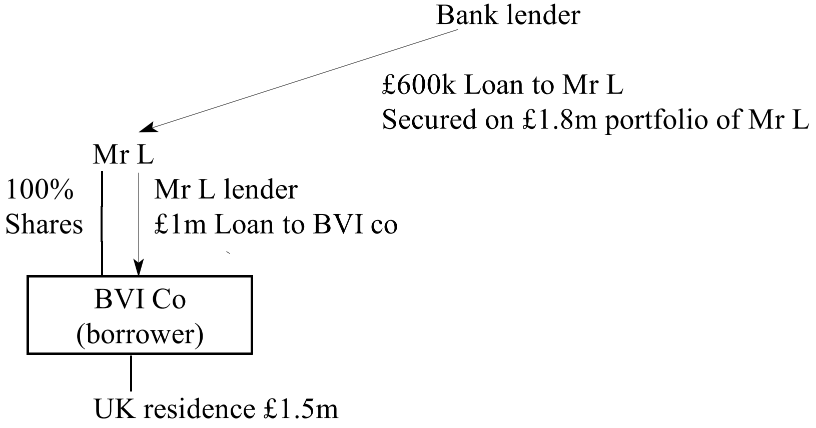
Perhaps the point of the example is to shame HMRC into seeing how unfair the law can be. But double taxation frequently arises when a debt is disallowed for IHT purposes, and double taxation is always an issue if a trust is within GWR and 10 year charges.

82.9.1 *Debt set against collateral*

Sch A1 Q&As provides:

> **Example 5**
>
> Mr L, who is resident and domiciled in Malaysia, purchases a buy to let flat in Battersea for £1 million through a wholly owned BVI company. The BVI company owns no other assets. He borrows £600,000 of the purchase price from his bank in Malaysia which he then lends to the company together with £400,000 from his own money. The bank loan is formally secured on a portfolio of investments belonging to Mr L and held by the Malaysian bank worth £1.8 million.

Diagrammatically:



> On Mr L's death, the UK property is worth £1.5 million.

Mr L's interests in the BVI company include the loans of £1 million and the equity in the company which is now worth £500,000. These interests will be subject to inheritance tax on his death. (£1.5m). This is comprised of his interest as a participator by reason of being a loan creditor, and the equity in the property [ie in the company].

In addition, the loan from the bank is a relevant loan as it is a loan to an individual which has been used to acquire an interest (in this case the onward loan to the company) in a close company which in turn uses the money to acquire a UK residential property interest. Inheritance tax will therefore potentially also be payable on the value of the collateral up to the amount of the loan (£600,000). The total potential value subject to inheritance tax on Mr L's death is therefore £2.1m (£1.5m plus £600k).

The loan from the bank of £600,000 is in principle deductible from the collateral. However, is it deductible in its entirety only from the value of the collateral which is within the scope of inheritance tax or might the deduction be taken pro rata against the whole of the £1.8 million of collateral? If the latter, only

£200,000 (£600,000 × £600,000/1,800,000)

of the loan would be deducted from the £600,000 of collateral which is taxable. S162(5) IHTA offers no express answer to this point.

The position would be different if the bank lent direct to the BVI company and Mr L offered personal investments as collateral for this loan. In that case as the collateral is not to secure a relevant loan the personal investments are not chargeable. See example 9 later for further details.

Suggested answer

In practice we will accept that the loan is deductible only from the collateral that is within the scope to IHT. Therefore, all the £600,000 is deducted from £600,000 of the £1.8m collateral which is chargeable. The total amount subject to inheritance tax on Mr L's death will be £1.5m and for this purpose the collateral is effectively ignored. This is because the collateral is only chargeable up to the value of the amount lent and therefore the loan should be deductible against that part of the collateral. The policy intention is not to impose a double charge but simply ensure that the full value of the house is chargeable to IHT when the loan has been secured by means of other collateral.

HMRC original answer was in sch A1 Q&As version 2:

We disagree. There is no relevant loan in this scenario. The (de-excluded) property within the scope of IHT on Mr L's death is the interest in the BVI Company consisting of his interest as a loan

> *creditor and the balance of the equity. Here, that is broadly equivalent to the value of the UK RPI.*

The professional bodies noted tactfully that they were unclear as to the basis of the HMRC analysis that there is no relevant loan. Version 3 now provides:

> **HMRC:** We agree that the value of the property in Mr L's estate would be £2.1m and the question is how to take account of an allowable liability (of £600,000) which is an incumbrance on property (£1,800,000) that it partly chargeable (£600,000) and partly excluded (£1,200,000). Like you, we take the view that for the purposes of SchA1 the liability should be set off against the value in the UK estate so that the value chargeable to IHT is £1,500,000. This view is confined to SchA1 and should not be taken as applying to other similar situations that may be covered elsewhere in the IHTA 1984.

82.10 Residence-security

Para 3 sch A1 IHTA provides:

> This paragraph applies to ...
> (b) [i] money or money's worth
> [ii] held or otherwise made available as security, collateral or guarantee
> [iii] for a loan which is a relevant loan,
> [iv] to the extent that it does not exceed the value of the relevant loan.

I refer to property within para (b) as a **"Residence-security"**. That is not an ideal label, but there is no short term which summarises this paragraph.

The significance is that the property is chargeable (de-excluded) property.

The wording is novel.

"Money or money's worth" is usually used in the phrase "consideration in money or money's worth" where it has a technical meaning.[46] Here it is just a long-winded way to say "property".

[46] A security over the property is said to be "collateral" to the personal obligation. Hence the property is itself (elliptically) referred to as "collateral". The word "collateral" in this sense is possibly more common in America, but it is also established in UK legal English, eg s.263C TCGA (from 2009) and it can be traced back at least to FA 1995.

82.10.1 *Security/collateral*

Snell explains the legal meaning of “security”:[47]

> In a technical sense, a security interest gives the interest holder a right in respect of the property of another person which can be used to satisfy ... the payment of a debt or other obligation owed to the holder of the security interest. In this technical sense there are only four kinds of consensual security known to English law: (i) pledge (ii) contractual lien; (iii) equitable charge and (iv) mortgage.

It is considered that the word is used with this meaning here.

“Security” can refer to:

(1) the security interest held by the security holder, or
(2) the underlying property subject to that interest (usually held by the debtor)

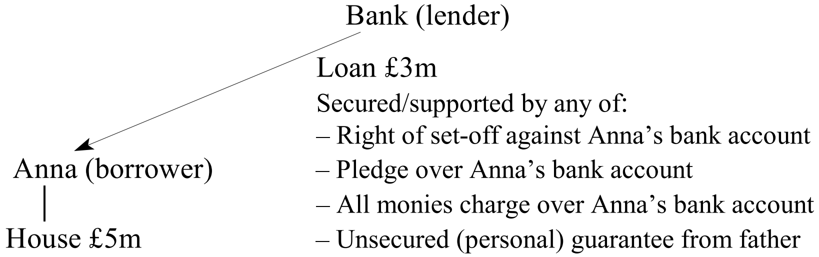
Here we are concerned with property “held or otherwise made available as security” ie the underlying property.

“Collateral” is just a synonym of security,[48] so I refer below to security rather than “security or collateral”.

The meaning of security is debated in a STEP[49] submission to HMRC. Its comments are based on this straightforward example:

> Anna, who is not resident[50] or domiciled (and not deemed domiciled) in the UK, purchases a house in London for £5 million.
> She takes a £3 million loan from her bank in Jersey to help purchase the property. The loan is secured over the property …

Diagrammatically:



Secured/supported by any of:
– Right of set-off against Anna’s bank account
– Pledge over Anna’s bank account
– All monies charge over Anna’s bank account
– Unsecured (personal) guarantee from father

[47] Snell's Equity (34th ed., 2020) para. 36-001.

[48] See 18.24.3 (HMRC pre–2014 view).

[49] together with TACT and BBA, but for brevity I refer only to STEP.

[50] A’s residence is not relevant for IHT purposes, but perhaps it is stated in order that the separate topic of remittances does not arise.

The starting point is that the debt is deductible for IHT, so that A's UK situate property is valued at £2m.

82.10.2 *Is set-off right "security"*

STEP say:

> Under English law, a bank in certain circumstances has the right to apply credit balances held by a customer in satisfying liabilities due to the bank. There are similar rules in many other countries.
> In most cases, any common law or statutory rights of set off are supplemented by specific contractual rights of set off contained in the bank's standard terms and conditions.
> In our example, assume A held £1 million of cash in an account with the same bank. As a result of the bank's right of set off, the bank could use this cash to satisfy A's liability under the loan.
> If the £1 million of cash is treated as "money or money's worth held or otherwise made available as security, collateral or guarantee" for the loan, the £1 million will be subject to inheritance tax as well as the net £2 million value of the UK residential property. …
> We do not however think that this is the correct interpretation of the draft legislation.

That is correct, because a right of set-off is not a security interest[51] (and, obviously, it is not a guarantee).

HMRC did not reply to STEP, and sch A1 Q&As repeats the question:

> **Question 7: Paragraph 3 - collateral and relevant loans**
> The wording of paragraph 3(b) of Schedule A1 is not entirely clear but presumably includes only
> [1] assets pledged or charged in support of a relevant loan or
> [2] money made available as support for a guarantee for a relevant loan.
> It is not entirely clear whether the asset in question has to be formally pledged or charged or needs simply to be available by way of set-off for the lender. We assume the former is required. i.e. that the assets must be put in a position that they cannot be withdrawn by the guarantor

[51] See Law Commission Consultation Paper, "Registration of Security Interests: Company Charges and Property Other Than Land" (2002) para 6.48: "A contractual set-off is not a security interest as it gives no right over the debtor's property, merely an entitlement to set-off one personal obligation against another".
http://www.lawcom.gov.uk/app/uploads/2015/03/cp164_Company_Security_Interests_Consultation.pdf

> without the consent of the lender and are in that sense formally held by the bank or made available as security.
>
> Do HMRC agree?
>
> *Suggested answer*
>
> [1] We agree that
>
> [a] general rights of set off in a bank's standard terms and conditions or arising under general law or
>
> [b] a general pledge (for example arising under the bank's standard terms and conditions)
>
> will not be caught by the collateral rules. The assets are not "held or otherwise made available" as security for the relevant loan.

HMRC appear to disagree:

> If the lender has the power to set off credits from another financial account to secure the loan then the lender can properly be said to have hold such funds and that it has been made available by the collateral provider in accordance with the contractual arrangements.

More analytically, the question is whether property subject to a right of set-off constitutes property "held or otherwise made available as security or collateral", and I think it does not, because the right of set off is not a security interest, and not, in the true sense, a security.

STEP reaches the same conclusion, but by a different and, I think, less convincing, argument:

> In order to be caught by paragraph 3(b), the property has to be "held or otherwise made available" as security for the loan. This implies that there must be some connection between the asset in question (in this case the £1 million deposit) and the loan taken out to purchase the property.
>
> This might, for example, be the case if specific security is given over the asset or if the terms of the loan make some reference to the asset such as an ability to demand repayment of the loan if the asset is no longer held by the bank.
>
> On the other hand, it is difficult to see that the mere existence of a right of set off (whether arising under general law or under the bank's terms and conditions) can be said to result in the property being held or otherwise made available as security or collateral for the loan.

HMRC returned to the question in version 3 of the sch A1 Q&As, where the question has been rephrased. I think it is necessary to consider a right of set-off and a pledge separately, as they are different types of right. A pledge is a security interest and a right of set-off is not. But the Q&As address them together:

> **Question 7 – Sch A1 para 3 – Collateral and Relevant Loans**
> 1. There are a number of different approaches to determining whether assets are "held or otherwise made available as security, collateral or guarantee" for a relevant loan within the meaning of paragraph 3(b) of schedule A1.
> 2. The policy was to secure that property given as security for a loan is, in appropriate circumstances, brought within the scope of inheritance tax.
> 3. Bearing this in mind, it would normally be expected that property given as security will fall within paragraph 3(b) of schedule A1, unless (what would otherwise be) the security, collateral or (property standing behind a) guarantee is too remote from the relevant loan.
> 4. What would otherwise be the security may well be too remote where the lender has some sort of generic security over assets held by a lender on behalf of the borrower. This would include, for example,
> [a1] a right of set-off or a general pledge contained in a bank's standard terms and conditions or
> [b] a right of set-off which arises under common law or the law of the jurisdiction in which the lender is based.
> A right of set-off or general pledge does not "incumber" the assets over which it subsists provided that the customer is free (in the absence of a default) to withdraw those assets at any time. In that sense the lender can only "be secure" (in the sense of having confidence) that those assets are available to it once a default has happened. Until such a default the position is inchoate: the security can be thought of as not yet formed.
> 5. Such an interpretation also provides symmetry with the phrase "incumbrance on any property" in s162(4) IHTA.[52]
> 6. There may be other situations where it can be shown that assets which are held as security by the lender have no connection with the relevant loan (for example they may be security for a different liability) but this would need to be considered on a case by case basis taking into

[52] See 79.5.2 (Incumbrance-debt). The argument here is:
(1) "Incumbrance" in s.162(4) has the same meaning as security in the present context: the two words are synonymous.
(2) "Incumbrance" in s.162(4) does not include a right of set-off or pledge.
But I think the argument fails at point (2) as while "incumbrance" does not include a right of set-off, it does include a pledge, which is a security-interest.

> account all of the relevant facts.
>
> **HMRC:** HMRC agrees that the legislation was not intended to interfere with normal banking arrangements. Therefore, HMRC agrees with the analysis set out above subject to the following comments.
> One point to bear in mind however is that there is a cap on the security which can be taken into account for the purpose of paragraph 3(b) so HMRC would expect that the distinctions above would only be of relevance if the value of the non – UK property held as security – that was specifically given in relation to the loan and that was therefore clearly within the definition – was less than the value of the loan.
> Para 4: In some instances, the examples given may fall within paragraph 3(b) depending on the facts of a particular case.

That is not exactly guidance.

82.10.3 *Is a pledge "security"*

STEP say:

> The standard terms and conditions of some banks contain not only rights of set off but also a specific pledge over any of the customer's assets held by the bank so that those assets can be used by the bank to meet any liability the customer may have to the bank at any time during the relationship. In the case of some international banks, the pledge is wide enough to enable assets held by one group company to be used to satisfy a customer's liability to another group company. ...
> In our example, there could therefore be a problem if A had a £10 million portfolio with the bank's sister company in Switzerland. If the portfolio is treated as being "held or otherwise made available" as security for the loan from the Jersey bank as a result of the general pledge in the standard terms and conditions, £3 million of the portfolio would be within the scope of inheritance tax ...
> For the same reasons as described above in relation to rights of set off, we do not think that assets are "held or otherwise made available" as security for a loan as a result of a general pledge which has nothing to do with the loan in question.

This is an implausible construction even if one can assume that the security "has nothing to do with the loan" (which is far from self-evident). A pledge confers a security-interest on the lender, so if an asset is pledged for a debt, it is made available as security, whether a general pledge or not.

It appears that HMRC would agree: see 82.10.2 (Is set-off right security).

82.10.4 *Is all-monies charge "security"*

STEP say:

> An all monies charge may arise where the customer has entered into a completely unconnected transaction with the bank under which the bank has been given security over specific assets but where the security documentation provides that the assets can be used to meet not only the obligation in question but also any other liability which the customer may have to the bank.
>
> In this case, the position is very similar to general rights of set off or general pledges in that, although the bank has security over the assets, there is no connection between the granting of the security and the making of the loan which is used to purchase the property. On this basis, the analysis should be the same - i.e. that the assets in question are not held or otherwise made available as security for the loan to purchase the property as there has been no positive act to link the security with the loan.

I would agree that the analysis should be the same: there is no difference between a pledge and an all-monies charge. An all-monies charge confers a security-interest on the lender, so if an asset is subject to such a charge, it is made available as security, whether a charge of specific property or an all-monies charge.

82.10.5 *Guarantees*

Para 3 sch A1 IHTA provides (so far as relevant):

> This paragraph applies to ...
>
> (b) money or money's worth held or otherwise made available as ... guarantee for a loan which is a relevant loan,

A guarantee is a promise by one person to meet the debt of another person, if the other person is in default. In principle no property need be "held" or "made available" as a guarantee, that is, a guarantee may simply be an unsecured promise to make a payment; but the promise may be secured on property, so that the lender has a security interest in the property; and the reference is to security of that kind.

STEP say:

> Where a loan is made by a bank to an entity (for example a trust or a company), it is standard practice for a bank to require a related

> individual to give a personal guarantee in respect of the liability in question. Typically, such a guarantee would be unsecured ...
> It might be argued that, as a result of the guarantee, all of the assets of the guarantor are available as "guarantee" for the loan which the bank has made to enable the related entity to purchase the property. However, we do not think that this is how paragraph 3(b) should be interpreted.

That is correct, because (unless the guarantee is secured) no money or money's worth is held or otherwise made available as guarantee.

STEP reaches the same conclusion, but by its different argument:

> What is caught is property which is "made available as security, collateral or guarantee" for the loan. This suggests to us that property held by a guarantor would only fall within the relevant paragraph if it has been given [the legal term is charged] specifically as security for the guarantee in question.

HMRC did not reply to STEP, but provide an answer in sch A1 Q&As version 3. HMRC (grudgingly) agree:

> **Question 7 – Sch A1 para 3 – Collateral and Relevant Loans**
> 7. As far as guarantees are concerned, it must be borne in mind that the way in which schedule A1 operates is to "de-exclude" property which is in some way supporting the relevant loan. A guarantee is not itself property of the guarantor. This means that where a guarantee is completely unsecured (in the sense above) and so is not connected with any particular property of the guarantor, the guarantor's assets remains excluded property. On the other hand, if the guarantor has provided some form of security or collateral for their obligations under the guarantee, the assets in question will fall within paragraph 3(b) of schedule A1.
> **HMRC reply**
> Para 7: Again, as to what extent the funds of the guarantor are made available, would be viewed by HMRC as a question of degree and fact. If the creditor's only recourse to the guarantor for the failure of the primary debtor to repay is the guarantee and there is not an additional connection to any particular property of the guarantor then we would be inclined to agree.

"Be inclined to agree" is not exactly guidance, but at least HMRC appear to accept that an unsecured guarantee is not caught.

82.10.6 *Multiple security*

One debt may be secured on more than one asset. Suppose a relevant loan (say £10m) is secured on:
(a) a house in Spain (worth £11m) and
(b) a floating charge over a portfolio (worth say £20m).

CIOT say:

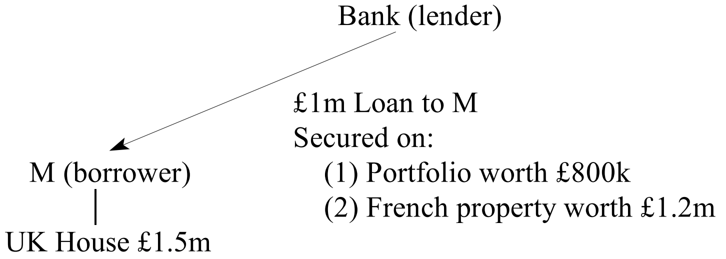
> it is unclear whether the additional wording at the end of paragraph 3(b)
> [1] restricts the overall collateral to £10m (but if so how does one apportion this?) or
> [2] whether it simply restricts each item of collateral to £10m.

I would have thought the answer was [1], with an apportionment by value (in the absence of express priority in the charge or charges).

Sch A1 Q&As provides:

> **Question 12: Collateral or security exceeding amount of borrowing: s162**
> *Example 6* (Mrs M)
> M, a French resident, borrows £1m from a French bank to buy a house in the UK worth £1.5m. Her personal investment is £0.5m. She offers a portfolio of non-UK shares worth £800,000 and a property in France worth £1.2m. i.e. total non-UK security charged is £2m for a property worth £1.5m and a loan of £1m.

Diagrammatically:



> Could HMRC confirm the following:
> 1.That the reference to the "extent to which it does not exceed the relevant loan" in para 3 refers to the totality of the collateral. i.e. that only £1.0m of the combined collateral will fail to be excluded property rather than the whole of the value of the shares (being less than the £1 million loan) and £1 million of the value of the French house (i.e. £1.8 million in total) being within the charge to IHT?
> *Suggested answer:* This is confirmed

That is clearly correct, and HMRC agree.

> 2. What would the position be if the bank could only enforce against the foreign assets once the UK house was found to be insufficient to meet the borrowing and there was a formal charge against the UK house? In that event under s162(4) the borrowing reduces the value of the house for IHT purposes. Does this mean £500K of the equity in the house is chargeable and £1m of the overseas collateral? i.e total of £1.5m.
> *Suggested Answer*: We agree a total of £1.5m is charged to IHT on death even though the loan is deductible under s162 against the value of the house (the net £500K value of the UK house and £1 million of the non-UK collateral).

HMRC agree.

> 3. The position will be particularly important to resolve as M might leave the UK property and the shares and French property subject to IHT but to different people under her Will. Matters get more complicated where perhaps some collateral is provided by the borrower and other collateral is provided by another person such as the parent of the borrower.

82.10.7 *Security for non-relevant loan*

Sch A1 Q&As provides:

> **Question 16: Collateral and loans to companies**
> Do HMRC agree that collateral provided for a loan to a close company is not caught as it is only collateral made to support relevant loans that is within the scope of the charge.
> So, for example, if a company borrows from a bank to purchase residential property and that is backed by collateral from the shareholder, such collateral is not subject to IHT. The bank loan is not a relevant loan as it is not taken out to purchase UK residential property by an individual, trust or partnership and the bank is a loan participator but outside the scope of inheritance tax (if not close).

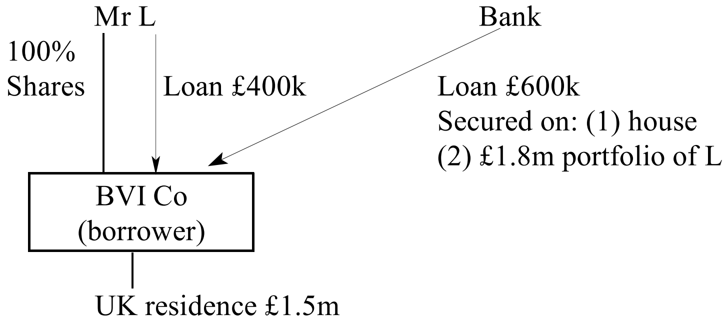
This is self-evident, and HMRC agree. The Q&As provide an example to hammer the point home:

> **Example 9**
> The facts are the same as in Example 5 above[53] except that the bank has

[53] See 82.9.1 (Debt set against collateral).

> made the loan direct to the BVI company (but still secured on Mr L's portfolio).

Diagrammatically:



The Q&A analysis is as follows:

> The loan to the BVI company is not a relevant loan as it is not made to an individual, a partnership or the trustees of the settlement. Mr L's collateral is not therefore subject to inheritance tax on his death. In addition, the loan is deductible from the value of the property in calculating the value of Mr L's interest in the BVI company. The value of his interest in the BVI company is therefore £900,000 (£1.5 million minus £600,000). The total amount on which inheritance tax is payable on Mr L's death is £900,000.
> *Suggested answer*: We agree that, in this situation, the only liability to inheritance tax on Mr L's death is on the net value of Mr L's interest in the BVI company which will be £900,000. This assumes the BVI company holds no other assets.

HMRC agree.

82.11 Residence-security: Double IHT issues

I discussed above the problem of double inheritance taxation where:

(1) the benefit of a debt was a chargeable asset in the hands of the creditor and

(2) the burden of the debt (the liability) was not deductible in the hands of the debtor.[54]

The same issue arises where residence-security is made a chargeable asset under the residence-security rules.

Suppose:

[54] See 82.9 (Deductibility of relevant loan),

(1) T (an individual or trust) borrows from a 3rd party (non-close) bank to buy a residence. The loan (owned by the bank) is a relevant loan, and so not excluded property, but that raises no IHT problem. The bank shares are not sch A1 property because that is an open company.

(2) T charges property as security for the loan. This property is chargeable (de-excluded) property up to the value of the loan.

The purpose of the residence-security rule is presumably to fill this gap, or perceived gap. That leads to the same double taxation as for relevant loans. But if the loan is from an individual, trust or close company, then there is potentially triple taxation: on the property, the debt and the security.

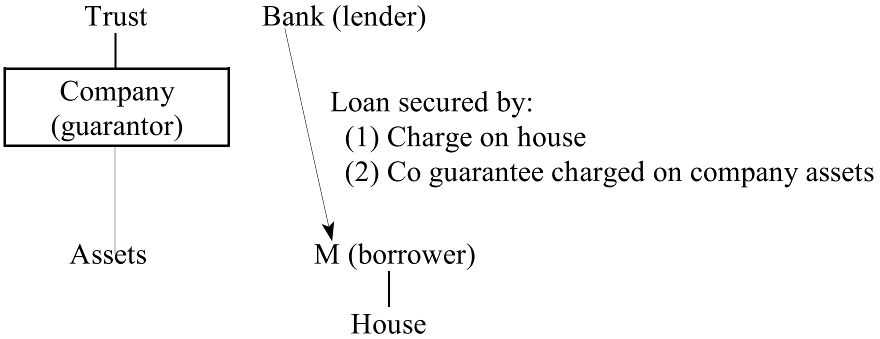
Depending on the facts, the liability for the loan may be disallowed, or it may be deducted from the residence or from the security (but since both are chargeable (de-excluded) property, that may not make any difference as far as the total IHT liability is concerned).

Careful tax planning is needed here to avoid unfairness.

Sch A1 Q&As provides:

> **Question 15: ROB - further queries**
> Instead of M borrowing from the company, she borrows from a UK bank which takes security over the house but also is given a guarantee by the company secured over its assets.

Diagrammatically:



> [1] In these circumstances, the debt to the bank is deductible (subject to section 175A IHTA).[55]

[55] But s.175A will not apply in practice, assuming the advisers of M's PRs are reasonably alert.

> [2] However, the value of the shares in the company owned by the trust will be within the scope of inheritance tax but capped at the amount of the loan.

Point [2] is very doubtful.[56]

> The likelihood therefore is that the total amount subject to inheritance tax on M's death will be the £300,000 net value of the house and the value of the shares in the company owned by the trust up to £1 million - i.e. £1.3 million in total.
> *Suggested answer*: We agree that the tax charge in this situation will be on £1.3 million as long as a deduction for the debt is not denied by section 175A.

HMRC agree.

82.12 Residence-tail

82.12.1 *Residence-tail rule*

Para 5(2) sch A1 IHTA provides the rule:

> If and to the extent that this paragraph applies to any property—
> (a) for the two-year period it is not excluded property by virtue of
> [i] section 6(1), (1A) or (2) or
> [ii] 48(3)(a), (3A) or (4),[57] and
> (b) if it is held in a qualifying foreign currency account within the meaning of section 157 (non-residents' bank accounts),[58] that section does not apply to it for the two-year period.

The property (which I call residence-tail property) is chargeable (non-excluded) property, even if not UK situate. In the same manner as para 1, para 5(2) sch A1 IHTA *de-excludes* the property.

82.12.2 *The two-year period*

Para 5(3) sch A1 IHTA defines the two-year period:

> The two-year period is the period of two years beginning with the date of—
> (a) the disposal referred to in sub-paragraph (1)(a), or

[56] See 82.3.5 (Company owns residence-security).

[57] For s.43(3)(a), see 75.8 (Trusts: Foreign situate property); for s.43(3A)(a), see 75.10 (Trusts: UK funds).

[58] See 76.13 (Foreign currency account).

> (b) the payment referred to in sub-paragraph (1)(b).

In short, residence-tail property has a two year "tail" during which it remains chargeable (de-excluded) property. This is intended to prevent planning shortly before death or other occasion of charge.

Sch A1 Q&As provides:

> **Question 26: Two year rule and contract/completion**
> It is assumed that the two years runs from the date of the completed disposal or loan repayment not from contract. The CGT rule that the date of contract is the date of disposal is not in point. This raises similar issues to questions 1 and 2.[59]
> *Suggested answer* The two years runs from actual receipt of sale proceeds - whether this is from exchange or completion does not matter.

That must be right. HMRC agree.

82.13 Residence-tail Property

Para 5(1) sch A1 IHTA provides:

> This paragraph applies to—

There follows 3 or 4 categories of property. I refer to property within para 5(1) as **"Residence-tail Property"**. That is not a transparent label, but there is no short term which can summarise this paragraph.

82.13.1 *Residence-tail: Share proceeds*

The first category of Residence-tail Property is:

> (a) property which constitutes consideration in money or money's worth for the disposal of property to which paragraph 2 [Residence-company/partnership] ... applies;

The paradigm case is the proceeds of sale of a residence-company.

82.13.2 *Residence-tail: Loan proceeds*

The next category of Residence-tail Property is:

> (a) property which constitutes consideration in money or money's worth for the disposal of property to which ... paragraph 3(a) [relevant loan] applies;

[59] See 82.19.2 (Contract of sale).

> (b) any money or money's worth paid in respect of a creditor's rights falling within paragraph 3(a) [relevant loan] ...

The paradigm case is the proceeds of repayment or sale of a relevant loan.

82.13.3 *Residence-tail: Derived property*

The next category of Residence-tail Property is:

> (c) any property directly or indirectly representing[60] property within paragraph (a) or (b).

I refer to that as **"derived Residence-tail Property"**.

82.13.4 *Proceeds of sale of land*

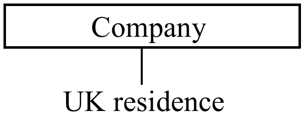
The definition of Residence-tail Property does not include proceeds of sale of UK land. Where a UK residence held directly, there is no two-year tail, so IHT can be avoided by a sale shortly before death or other occasion of charge. That is deliberate:

> Disposal of shares is caught under the two-year rule quite deliberately because it avoids other taxes such as SDLT and nonresidents CGT.[61] A sale of shares cannot therefore be done as a deathbed measure. Disposal of property itself does not avoid other taxes and therefore the two-year run off does not apply.[62]

The definition of Residence-tail Property does not include proceeds of a liquidation of a company holding UK land.[63]

82.13.5 *Examples*

Suppose a company owns a UK residence:



The company is within para 2. The proceeds of sale of the company are Residence-tail Property under para (a).

[60] See App 2.9 ("Representing" assets).

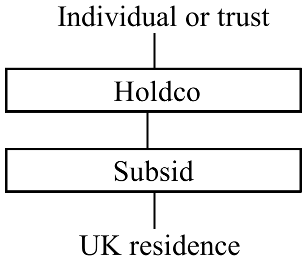
[61] The CGT position changed after the date of this statement.

[62] *https://www.step.org/system/files/media/files/2020-03/Briefing_note_non_doms_and_offshore_trusts.pdf*

[63] See App 4.5 (Transfer on liquidation).

Suppose the company sells the residence. The proceeds of sale are not Residence-tail Property, and the company is not Residence-tail Property.

Suppose a chain of companies, thus:

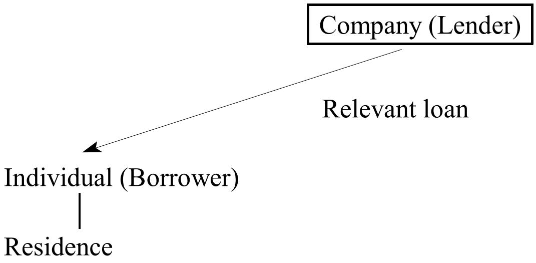


Holdco and Subsid are both within para 2.

Suppose the individual or trust sells Holdco. The proceeds of sale are residence-tail property under para (a).

Suppose Holdco sells Subsid. The proceeds of sale are Residence-tail Property in the hands of Holdco, but that does not matter.[64] Are the shares in Holdco Residence-tail Property? The strict answer is no.[65] But a purposive construction suggests the opposite conclusion. A Court may well feel that there ought to be a charge on these facts. The residence-tail rule would apply on a sale of Holdco, so why should it be different on a sale of the subsidiary? And what would the position be if Holdco was wound up, so that the trustees received the transaction proceeds?

Suppose a company has lent to an individual to finance acquisition of a UK residence. The company holds the benefit of the loan:



The loan is within para 3 (a relevant loan). The shares in the company may be within para 2, though that depends on the facts.[66]

[64] Unless Holdco makes a transfer of value, see 81.2 (Transfer of value by close co), but that is not likely to happen.

[65] See App.2.9.6 (Do shares represent co assets).

[66] See 82.3.4 (Company owns relevant loan).

Suppose the loan is repaid. The proceeds of the loan are Residence-tail Property, but that does not matter. Are the shares in Holdco Residence-tail Property? This raises the same question as when Holdco sells Subsid, discussed above.

82.13.6 *Residence-tail Property in mixed fund*

Sch A1 Q&As provides:

> **Question 24: Para 5 - disposals and repayments: sales of shares**
> ... paragraph 5 does not deal very comprehensively with what happens in the event that the sale proceeds are mixed with other funds.

That is something of an understatement.

> *Example 12*
> A father sells his company shares (the company's only asset being a UK residential property) to his son[67] and puts the proceeds of £1m on deposit in a separate bank account. He then spends the money buying a house in Hong Kong.
> The Hong Kong house is not excluded property for two years. If the house increases in value only the original sale price is taxed. If the HK property falls in value the lower value is taken.

That is straightforward. The Hong Kong house is derived Residence-tail Property. HMRC agree. The point is to introduce the question which follows:

> **Question 25: Mixing of funds from sale caught by para 5**
> What would be the position if the funds are mixed with other funds and then some funds are withdrawn and spent. For example, £1m represents the sale proceeds in example 12 above and the balance of the bank account represents £500K which is from an art sale. A withdrawal of £500K occurs. Do HMRC consider that the withdrawal removes the funds pro rata one third from the account so that the £1m is reduced by £333,333 or would HMRC accept that the rule in *Devaynes v Noble* 1816 35 ER 781 better known as the rule in *Clayton's Case* applies such that the withdrawal is on a first in first out basis?
> *Suggested answer*: Our preference is that a FIFO basis is used. However, pro rata is acceptable if a FIFO basis is not possible due (for example) to lack of records.

HMRC say:

[67] The identity of the purchaser is not relevant to the residence-tail rule.

> If there is no evidence to the contrary[68] then the FIFO basis is acceptable (so that the withdrawal, here, is not property representing the proceeds).

It would be better not to mix residence-tail property and other funds.

82.13.7 *Proceeds of UK situate relevant loan*

Para 2/3 sch A1 apply to property whether UK situate or not. So the proceeds of a UK situate relevant loan are Residence-tail Property.[69]

A UK situate relevant loan is not excluded property, and so not affected by the de-exclusion rule in para 1. But the residence-tail rule may still apply to it, which could matter if (say) a UK situate relevant loan was repaid and the proceeds held abroad.

82.13.8 *Loan repaid then property sold*

Sch A1 Q&As provides:

> **Question 13: What is the position where loans are refinanced and then the property is sold?**
> *Example 7*
> A lends to B who purchases a UK property. A has a relevant loan but then B repays A and borrows from a bank. The repayment of the loan received by A is within the IHT net for two years under para 5.
> Shortly after refinancing and within the two years B sells the property. HMRC seem to assume at IHTM 04314 Example 3 that the repayment proceeds received by A will then be excluded property.[70] However, para 5 does not treat the repayment proceeds as a relevant loan and so para 4(4) is inapplicable. The two years continues to run even though if B had sold the property and only then repaid A no two year rule would operate.
> We assume also it is right that if B had sold the property and not repaid A but left the loan outstanding it would cease to be a relevant loan and the two year rule in para 5 does not apply.
> *Suggested answer*: We agree with the above analysis.

HMRC agree. That must be right.

[68] Author's footnote: It is clear from *Clayton's Case* that the customer and banker may agree some other basis: FIFO is the presumed position subject to any agreement to the contrary. See App.2.10 (Withdrawing from mixed funds).

[69] The proceeds of a UK situate Residence-company are also residence-tail property (though that is less likely to happen in practice).

[70] I cannot see that in the HMRC example.

82.13.9 *Residence-securities*

Para 5(1) does not apply to residence-securities: in my terminology, residence-securities are not Residence-tail Property.

Sch A1 Q&As provides:

> **Question 17: Collateral and the two year rule**
> Please confirm that the two year rule does not apply to collateral, whether or not such collateral is provided in respect of relevant loans or loans to companies
> *Example 10*
> Father provides collateral for bank borrowings taken out by his son to purchase residential property; if that collateral is released the father is immediately outside the scope of IHT.

HMRC agree. That is the only possible answer.

82.13.10 *Cap on residence-tail*

Para 5 sch A1 IHTA provides:

> (4) The value of any property within sub-paragraph (1)(c) [derived property] is to be treated as not exceeding the relevant amount.
> (5) The relevant amount is—
> (a) where the property within sub-paragraph (1)(c) directly or indirectly represents property within sub-paragraph (1)(a) ("the consideration"), the value of the consideration at the time of the disposal referred to in that sub-paragraph, and
> (b) where the property within sub-paragraph (1)(c) directly or indirectly represents property within sub-paragraph (1)(b), the amount of the money or money's worth paid as mentioned in that sub-paragraph.

82.14 Residence exit-charge reliefs

The residential-property code provides two exemptions to the IHT exit charge.[71]

Section 65(7C) IHTA provides:

> Tax shall not be charged under this section by reason only that property comprised in a settlement
> [a] ceases to any extent to be property to which paragraph 2 or 3 of Schedule A1 applies [Sch A1 property]
> [b] and thereby becomes excluded property by virtue of section

[71] See 76.8 (Exit charge).

48(3)(a) above.

This would apply if:

(1) A trust owns a company which holds a UK residence (the shares are non- excluded property).
(2) The company sells the property and acquires other property (not a UK residence) so the shares become excluded property and cease to be relevant property.

There is no exit charge at step (2). SDLT on the sale is considered to be sufficient tax.

Section 65(7D) IHTA provides:

> Tax shall not be charged under this section where property comprised in a settlement or any part of that property—
> (a) is, by virtue of paragraph 5(2)(a) of Schedule A1 [residence-tail], not excluded property for the two year period referred to in that paragraph, but
> (b) becomes excluded property at the end of that period.

This would apply if:

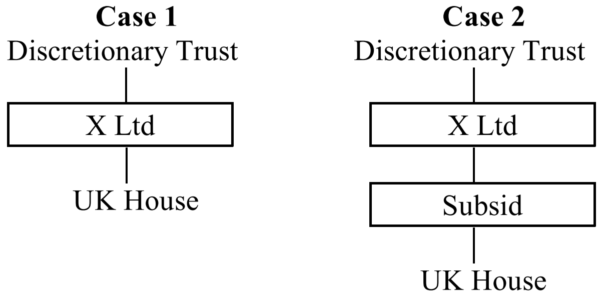
(1) A trust owns a company which holds a UK residence (the shares are non- excluded property).
(2) The trust sells the shares and acquires other property (not UK situate); for two years the property remains chargeable (de-excluded) property.
(3) After two years the property becomes excluded property and ceases to be relevant property.

There is no exit charge at stage (3).

Planning is needed more than 2 years before the date of a 10-year anniversary or exit charge.

82.15 Company dividend in specie

Suppose:



Case 1

Case 2

Suppose:

(1) X Ltd declares a dividend in specie (in case 1, a dividend of the house; in case 2, a dividend of the shares in Subsid).

(2) s.624/720 do not apply (this may be because settlor is non-resident, deceased, excluded, or because the trust is a protected trust).

The dividend is income of the trustees but no IT charge arises.

X Ltd makes a transfer of value and this transfer is apportioned to the trustees.[72]

As the dividend is trust income, it is not settled property.[73] So the amount apportioned to the trustees is equal to the amount of the dividend.

The trustees are deemed to have made a disposition as a result of which the value of the settled property is reduced.[74]

The trust fund, ie the shares in X Ltd, is not excluded property. *Close-company* income-receipt relief does not apply, unless the trust is UK resident.[75] At first sight, there is therefore an exit charge on the distribution by the company. But it is considered that *exit-charge* income-receipt relief applies: the IHT charge would be "in respect of" a payment which would be income of the person if he were UK resident.[76]

Suppose instead of a dividend, X Ltd makes a gift to a third party which is a capital receipt of the recipient. Exit-charge income receipt relief would not apply. Would the residence exit charge relief in s.65(7C) IHTA apply? It is suggested that this relief would not apply. It is the case that:

(a) the shares in X Ltd cease to Sch A1 property; and

(b) the shares become excluded property by virtue of s.48(3)(a).

However it is not the case that the exit charge arises *by reason only* of those facts. It arises because the shares reduce in value. That view better fits the scheme of the Act.

82.16 Spouse and other exemptions

Apart from the excluded property rules, all the usual IHT exemptions still apply for sch A1 property and residence-tail property. The 2015

[72] See 81.2 (Transfer of value by close co); 81.5 (Trustee participators).

[73] Unless immediately accumulated by the trustees and so turned into settled property. See 87.6.1 (Undistributed trust income).

[74] See 81.5.2 (IHT close-company code/Non-IIP trust).

[75] See 81.4.6 (Income-receipt relief).

[76] See 81.6 (Dividend: Close-co code analysis); 76.9.3 (Income-receipt relief).

residential-property paper provides:

> 16. It is intended that the same reliefs and charges will apply as if the property was held directly by the owner of the company. Hence a deceased individual who owned the company shares directly will have the benefit of spouse exemption if the company shares are left to a spouse.

Pre-2017 wills need to be reviewed in the light of the residence–property code. But everything needs to be reviewed in the light of the rules.

82.16.1 *BPR/APR*

Sch A1 property may qualify for business or agricultural property relief, if the relevant conditions are satisfied. Pre-2017 arrangements may require review, and in some cases reorganisation, because where property was formerly excluded property, no attention will have been given to the requirements of these reliefs.

Sch A1 Q&As provides:

> **Question 22: Banks and BPR (1)**
> It has been pointed out that private closely controlled banks (whether companies or partnerships) that lend to investors in UK residential property can inadvertently be caught by schedule A1. Such loans will often be relevant loans or the bank will be loan participators in the borrowing company. In these circumstances the [foreign] shareholders of / partners in the bank may only be able to rely on business property relief (BPR) to prevent an IHT charge.
> We assume that if the bank is carrying on a trade of money lending HMRC will accept that in the normal course of events BPR will be available on any value attributable to relevant loans and that HMRC will apply the relief by looking at the bank's operations as a whole first in determining whether the shareholder is eligible for relief on the transfer of value attributable to non-excluded property.
> *Suggested answer*
> We confirm that banks with a banking licence (or sufficient authorisation to act under its governing law) taking deposits and lending will generally qualify for BPR although of course each case must be looked at on its facts.
> There will be no special provisions here so new shareholders and partners will have a UK inheritance tax exposure until the two year holding requirement has been met.

HMRC agree. That is the only possible answer. The usual BPR rules will apply.

82.16.2 *Excepted assets*

Suppose a company qualifies for BPR and its assets are:

Asset	**Value**
UK residential property (a business asset)	30
Non-residential property (business assets)	65
Non-residential property not used for business (excepted asset)	5

The relevant provisions are:
Section 104(1) IHTA:

> Where the whole or part of the value transferred by a transfer of value is attributable to the value of any relevant business property, the whole or that part of the value transferred shall be treated as reduced ... by 100%; but subject to the following provisions of this Chapter.

Section 112 IHTA:

> In determining for the purposes of this Chapter what part of the value transferred by a transfer of value is attributable to the value of any relevant business property so much of the last-mentioned value as is attributable to any excepted assets within the meaning of subsection (2) below shall be left out of account.

Sch A1 para 1 & 2:

> Property is not excluded property ... if and to the extent that ... the value of the interest is... attributable to a UK residential property interest

Let us assume a tax charge on death of the shareholder, in which case s.5IHTA provides that the estate of the individual does not include excluded property.

The deceased's estate is therefore 30 as is the transfer of value he makes on death under s4 as is the value transferred by that transfer of value.

The value transferred (30) is reduced by s104 to the extent that it is attributable to the value of business property. The value of the business property, having by s.112 left out of account 5, is therefore 95.

Does one in this case say that the 30 is attributable solely to the 95 and therefore entirely exempted by BPR? Or does one say that 95% of the 30 is attributable to the value of relevant business property? It is suggested that the former view is the better one, viewing the legislation purposively. Obviously the opposite would apply if the excepted asset were itself residential property.[77]

82.16.3 *Excepted subsidiary*

Similar questions arise if there is an excepted subsidiary in the group under s111 IHTA 1984.

> **Question 23: Banks and BPR (2)**
> A foreign bank may be closely controlled and hold (usually through subsidiaries) relevant loans to third parties to facilitate the latter's purchase of UK residential properties. If the bank would otherwise qualify for BPR on such lending activities, is full relief given even though the bank may separately own an investment subsidiary holding foreign investment property on which BPR would normally not be available by virtue of s111 IHTA. In other words does BPR have to be tested only by reference to the holding company and the value attributable to the relevant loans or more generally throughout the whole group?
> *Suggested answer*: We would first ascertain whether the holding company qualifies for relief looked at in the round taking into account s105(3) and then only look at the offending subsidiary in applying BPR rather than examine each separate subsidiary or group activity.

HMRC agree.

82.17 Sch A1 TAAR

Para 6(1) sch A1 IHTA provides:

> In determining whether or to what extent property situated outside the UK is excluded property, no regard is to be had to any arrangements[78] the purpose or one of the main purposes of which is to secure a tax advantage[79] by avoiding or minimising the effect of paragraph 1 or 5.

I refer to that as the **"Sch A1 TAAR"**. In my terminology, this is a disregard-style TAAR; see 3.2.3 (Consequence of TAAR).

This must be approached in 3 stages:

[77] I am grateful to John Barnett for this observation.

[78] Para 6(2) provides the standard (unnecessary) IHT definition: see App 2.2.3 (Definitions of "arrangement"). I use the singular as there is no difference between arrangement and arrangements.

[79] Para 6(2) incorporates the GAAR definition of tax advantage by reference: "In this paragraph ... "tax advantage" has the meaning given in section 208 of the Finance Act 2013". See 3.19.1 (Tax advantage: Definitions).

(1) Identify the arrangement.
(2) Ascertain whether a main purpose of the arrangement is to secure a tax advantage by avoiding/minimising the effect of para 1 or 5 ("avoiding para 1 or 5").
(3) If caught, ascertain the effect of disregarding the arrangement ("the TAAR disregard").

I refer to that as the **"TAAR analysis"**.

82.17.1 *Setup arrangements*

Suppose:
(1) A close company was minded to acquire UK residential property.
(2) The company was told of the IHT consequences (the effect of para 1 is that the shares become chargeable property).
(3) In order to avoid that, the company decided to buy non-residential property or foreign residential property.

One would not expect this to be caught. Applying the TAAR analysis:

Identify the arrangement: That is the purchase of non-residential property.

Is a main purpose to avoid para 1? I would say not. In the old (but valid) cliché, the tax tail would be wagging the commercial dog. A diluted concept of tax avoidance infiltrates into this kind of TAAR, in order to reach the intuitively right result.

If caught, what is the effect of the disregard? One disregards the purchase of the non-UK property. But fiction does not require one to go so far as to deem a purchase of UK residential property (which property? what values would it reach?).

So the TAAR will not apply.

A similar analysis should apply if:
(1) An individual or trust was minded to borrow from a close company or family trust to acquire UK residential property
(2) The person was told of the IHT consequences (the effect of para 1 is that a trust loan is chargeable trust property or in the case of a company loan, the shares may become chargeable property)
(3) In order to avoid that, the person decided to borrow from a 3rd party open company.

Applying the TAAR analysis:

Identify the arrangement: That is the loan from the 3rd party.

Is a main purpose to avoid para 1? I would say not. That is less evident if the terms of the 3rd party loan would be the same as the terms of the trust or close company loan. But a diluted concept of tax avoidance infiltrates into this kind of TAAR, in order to reach the intuitively right result.

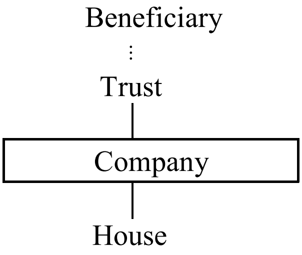
If caught, what is the effect of the disregard? One disregards the 3rd party loan. But the disregard does not require one to go so far as to deem a UK loan (which does not exist, and could not be taxed).

I have considered whether the effect of the TAAR could be that the shares in the open company may be chargeable (de-excluded) property. That would surprise the third party lender.[80] But that is not done by disregarding the arrangement, but by disregarding one of the effects of the arrangement.

82.17.2 *Unwinding arrangements*

Suppose:

(1) An existing trust holds a company which holds a residence, thus:



(2) The trust was told of the IHT consequences (the effect of para 1 is that the company is chargeable trust property within the scope of 10-year charges[81]).

(3) The trust appoints the company to a beneficiary and pays a small exit charge.

Applying the TAAR analysis:

Identify the arrangement: That is the appointment.

Is a main purpose to avoid para 1? One would expect not. That is less than self-evident. But a diluted concept of tax avoidance infiltrates into this kind of TAAR, in order to reach the intuitively right result.

[80] The 5% exemption does not help, as that applies to close companies; see 82.5 (5% exemption).

[81] And, potentially, within GWR on death of the settlor (in the case of a settlor-interested trust).

If caught, what is the effect of the disregard? One disregards the appointment. But that only applies "In determining whether or to what extent property situated outside the UK is excluded property". The trust has no property. So nothing is taxable. It would be remarkable to seek to tax on trustees who had made an absolute appointment and had no assets.

Suppose steps (1)(2) were the same, but a different step (3):

(3) The trust sells the company to a beneficiary. The trust keeps the proceeds as excluded property (once the 2 year tail expires).

Applying the TAAR analysis:

Identify the arrangement: That is the sale.

Is a main purpose to avoid para 1? One would expect not. That is less than self-evident. But a diluted concept of tax avoidance infiltrates into this kind of TAAR, in order to reach the intuitively right result.

If caught, what is the effect of the disregard? One disregards the sale. But that only applies "In determining whether or to what extent property situated outside the UK is excluded property". Does one say the trust property (the proceeds of sale) is then treated as chargeable property? That is not consistent with disregarding the sale, as if one disregards the sale the trust does not hold the proceeds of sale. Does one say that the trust is treated as holding shares which it does not hold? But as it does not hold shares, it is not necessary to "determine whether or to what extent the shares (property situated outside the UK) are excluded property".

Suppose:

(1) A person has borrowed from a family company or trust to acquire UK residential property
(2) Having regard to the IHT consequences, the person repaid the loan and replaced it by a loan from a 3rd party open company.

The same approach should apply.

What about a gift to a spouse or to charity, made with the purpose of qualifying for IHT spouse or charity relief? That is not affected, as the TAAR only applies "in determining whether or to what extent property situated outside the UK is excluded property".

Sch A1 Q&As provides:

> **Question 27: Tax avoidance arrangements (TAAR)**
> ... It is assumed this would not catch "ordinary" arrangements such as an individual choosing to borrow from a bank to purchase UK property rather than using their own cash resources.
> *Suggested answer*: Confirmed

It is correct that this arrangement is not within the scope of the TAAR. But the reason is not that it is an "ordinary" arrangement (whatever that may mean); but because there is no excluded property to which the disregard might apply.

HMRC say:

> ...without more we would say that in your example the liability is deductible depending upon IHTA s162(5) and the lender has made a relevant loan

82.18 DTA override

Sch A1 property is chargeable (de-excluded) property. However the property is normally movable rather than immovable property, and it can in principle qualify for IHT DTA relief.

Para 7(1) sch A1 IHTA provides a treaty override:

> [A] Nothing in any double taxation relief arrangements[82] made with the government of a territory outside the UK is to be read as preventing a person from being liable for any amount of inheritance tax by virtue of paragraph 1 [Sch A1 property] or 5 [residence-tail] in relation to any chargeable transfer
>
> [B] if under the law of that territory—
>
> (a) no tax of a character similar to inheritance tax is charged on that chargeable transfer, or
>
> (b) a tax of a character similar to inheritance tax is charged in relation to that chargeable transfer at an effective rate[83] of 0% (otherwise than by virtue of a relief or exemption).

I refer to this as **"treaty-override"**. It is a breach of the IHT treaties. But parliament is supreme and can breach treaties. But the section should be narrowly construed, to minimise the breach.

The provision distinguishes between cases where:

(a) No tax is charged

(b) Tax is charged but at a rate of 0%.

I would have thought that if tax is charged at 0% then no tax is charged. But it does not matter.

[82] Para (2) provides the standard IHT definition: "In this paragraph "double taxation relief arrangements" means arrangements having effect under section 158(1)".

[83] Para 7 (2) sch A1 IHTA provides a commonsense definition: "In this paragraph "effective rate" means the rate found by expressing the tax chargeable as a percentage of the amount by reference to which it is charged."

82.18.1 *>0% rate or relief*

Sch A1 Q&As provides:

> **Question 30: Zero rate and DTT**
> Where a DTT is applicable but the rate of tax is nil because of say spouse exemption (as with the USA on transfers between US citizens) we assume that para 7 is not intended to disapply relief. IHT is not as such charged at all in these circumstances rather than at an effective rate of zero. The words in para 7(1)(b) could be taken to mean that unless IHT is actually charged but at zero percent DTT does not apply where a chargeable transfer is (say) spouse exempt. In many cases there will just be an exemption and no IHT.
> *Suggested answer*: We agree that para 7 does not disapply relief in these circumstances.

HMRC agree. No other answer is possible.

If property falls within a foreign equivalent of the nil-rate band, the effective rate will be nil, but that does not matter if the band is a relief or exemption. IHT Manual provides:

> **IHTM04315 Double Taxation Arrangements** [Sep 2018]
> ***...Example 2*** (Nadine)
> N is a farmer and is domiciled in Iowa. She is not a UK national. Her £1m house in the Scottish highlands is held via an offshore company. She dies in the USA.
> The USA has taxing rights but the value of her estate is below the threshold and there is no tax paid in the USA. The UK charges IHT on the full £1m value attributable to the UK property.
> However, if her estate were charged to US Federal Estate Tax then the UK's charge to IHT is denied by the UK/US Convention. This would also be the case where there was no US tax payable because of a specific relief, such as the special land use valuation for farm assets

HMRC assume that the nil-rate threshold is not a relief or exemption, but is that right?

Sometimes planning may be possible to arrange that a foreign inheritance tax is paid at a rate which is above nil, but less than the IHT rate.

82.18.2 *Scope of treaty override*

Suppose there is UK situate sch A1 property. Some DTAs provide relief for these assets even though UK situate. In such a case DT relief continues to apply. The treaty override does not apply, because there is no liability "by virtue of paragraph 1 or 5".

Suppose a deemed domiciled individual holds sch A1 property. The treaty override does not apply as the shares are not excluded property and so there is no liability "by virtue of paragraph 1 or 5". Bizarrely, the treaty override does apply before the individual became deemed domiciled, since the non-UK situs shares would be excluded property at that time, but the treaty override ceases to apply on the deemed domicile start date.

Sch A1 Q&As agrees:

> **Question 29: Double tax treaty override and deemed domiciliary**
> The double tax treaty override in para 7 only applies to the extent a person is liable to IHT by virtue of para 1 or para 5. We assume ... that in relation to a person who is already deemed domiciled here and whose interests in foreign companies are not excluded property irrespective of schedule A1, that para 7 has no relevance. The excluded property rules are not disapplied by virtue of paras 1 or 5 but simply do not apply in the first place.
>
> *Example 14*
> Two brothers Jeremy and John are both foreign domiciled. John is deemed domiciled for UK tax purposes. Both are domiciled in India under common law. Both hold UK residential properties through offshore companies. They are killed in an accident and their non-UK estates are dealt with under Indian Wills. In these circumstances:
>
> - on the death of John (who is deemed domiciled) treaty relief is available to exempt the company shares from IHT because the treaty override in para 7 is not effective for a deemed domiciliary as his interests in foreign companies are not excluded property so Sch A1 is not applicable;
> - in the case of Jeremy (who is not deemed domiciled) nothing in the treaty prevents Sch A1 from applying to his interests in the offshore companies since for UK inheritance tax purposes the shares are otherwise excluded property.
>
> Please confirm that HMRC agrees with the above analysis.
> *Suggested answer*: Confirmed.

That is the only possible answer. HMRC agree.

82.19 "Residential property interest"

The IHT residential-property code is aimed at residential property. We therefore need a definition of the residential property to which it applies.

Para 8 sch A1 IHTA provides:

> (1) In this Schedule "UK residential property interest" means an interest in UK land[84]—
>
> (a) where the land consists of a dwelling,[85]
>
> (b) where and to the extent that the land includes a dwelling, or
>
> (c) where the interest subsists under a contract for an off-plan purchase.[86]
>
> (2) For the purposes of sub-paragraph (1)(b), the extent to which land includes a dwelling is to be determined on a just and reasonable basis.

IHT adopts CGT definitions of "interest in UK land" and "dwelling".

What matters is the state of the land and other facts as at the time of the IHT charge.

82.19.1 *Easement/restrictive covenant*

Para 8(3) sch A1 IHTA provides:

> In this paragraph... "the land", in relation to an interest in UK land which is an interest subsisting for the benefit of land, is a reference to the land for the benefit of which the interest subsists".

This refers to easements (such as a right of way) or covenants (eg a promise not to build on land): these are interests in land which subsist for the benefit of other land.

Expanded as para 8(3) requires, para 8(1) sch A1 IHTA provides, in relation to easements etc, "UK residential property interest" includes an interest in UK land:

> (a) where the land for the benefit of which the interest subsists consists of a dwelling,
>
> (b) where and to the extent that the land for the benefit of which the

[84] Para 8(3) sch A1 IHTA provides:
"In this paragraph "interest in UK land" has the same meaning as it has for the purposes of section 1A(3)(b) of the 1992 Act (see section 1C of that Act)".
See App 2.21 (Interest in land/chargeable interest).

[85] Para 8(3) sch A1 IHTA provides:
"In this paragraph ... "dwelling" has the same meaning as it has for the purposes of Schedule 1B to the 1992 Act".
See App 2.22 (Dwelling/residential property).

[86] Para 8(3) sch A1 IHTA provides:
"In this paragraph ... "contract for an off-plan purchase" means a contract for the acquisition of land consisting of, or including, a building, or part of a building, that is to be constructed or adapted for use as a dwelling."

interest subsists includes a dwelling, or

(c) where the interest subsists under a contract for an off-plan purchase.

82.19.2 *Contract to buy/sell asset*

In English law, buyer and seller both hold interests in land, between contract and completion.[87] Both interests are therefore within the scope of the IHT residential-property code. The same applies to a sale of shares or of a relevant loan.

Assuming a sale at market value, and assuming values do not change during the life of the contract, the value of the buyer's interest is equal to the deposit paid; and the value of the seller's interest is equal to the market value less the value of the deposit received.

HMRC agree. The answer to sch A1 Q&As Question 1 provides:

> HMRC: We agree that the value of the purchaser's right would be subject to the obligation to pay the consideration.

A loan to an individual/trust buyer, which funds the payment of the deposit, is a relevant loan.

A loan to an individual/trust seller, which was used to fund the purchase of the property, remains a relevant loan between contract and completion; though if a deposit is received, it is considered that part disposal relief applies, so the loan ceases to be a relevant loan to that extent.[88]

It appears that HMRC agree. The answer to sch A1 Q&As Question 2 provides:

> There must be a loan and that would occur when it is drawn down and that loan becomes a relevant loan when the interest in UK land is acquired.

If that is right, the analysis in sch A1 Q&As Questions 1 and 2 (not set out here) may be slightly imprecise, but its conclusions are broadly correct.

82.20 Residence co: Share value

What is taxed, and valued, is the sch A1 property, not the land.

The 2016 consultation paper provides an example:

[87] Further thought would be required for land in Scotland/Northern Ireland. See too 102.31 (Land subject to contract of sale).

[88] See 82.8.12 (Disposal of residence).

> ... a non-dom is the sole shareholder of an overseas company whose sole assets consist of a UK residential property. The company has no liabilities.
> At the individual's death, their estate will consist of the overseas shares which have an open market value of £950,000.
> At the same time, the UK property has an open market value of £1 million.

The HMRC analysis is as follows:

> In such a situation, the value of the estate is £950,000, and this is derived wholly from the UK residential property. This would mean that IHT would be charged on the entire estate which has an open market value of £950,000. This is broadly the treatment which would apply in the case of an individual who is domiciled in the UK.

Valuation of a company holding a residence is not straightforward. From a purchaser's viewpoint:

(1) There should be a discount on net asset value to reflect liabilities for:
  (a) CT on the gain (contingent on a disposal)
  (b) ATED
  (c) Administration costs
  (d) The risk of undisclosed corporate liabilities/due diligence cost
  (e) The risk of future tax changes

(2) There should be a premium to reflect SDLT advantages achievable by a sale of the shares rather than the company

A purchaser who will be within ATED (in short, intending to use the property as a home) would prefer to purchase the property, not the company; and may want a discount to reflect the disadvantages of holding through a company. But the purchaser may still save SDLT by purchasing the company and then promptly winding it up.

On the other hand, a purchaser for long term investment, who can qualify for ATED rental relief,[89] and who is prepared to undertake corporate due diligence, is likely to prefer to purchase the company. But that purchaser will bear in mind the difficulties and costs when selling the shares in the future.

Perhaps HMRC will adopt a pragmatic practice of allowing a 5% discount from net asset value, which accords with the approach of the

[89] See 98.18 (ATED rental relief).

example.[90] But if supported by valuation evidence, taxpayers may argue for a greater discount. Valuation is a question of fact, on which a share valuer would be needed to advise (though the valuer would need to be aware of the tax background, ie the current advantages and disadvantages of holding a property through a company, and would probably need to be briefed on that). While comparables of earlier company sales may be relevant, the tax background has constantly changed,[91] and earlier data would need to be reviewed in the light of that.

82.21 Home of non-dom: Planning

The starting point is that an individual may own the property directly. This is the benchmark against which other proposals may be assessed.

The property is in the individual's estate and in principle within the scope of IHT on his death. An individual who is married may provide by will that the property should pass to the individual's surviving spouse, or to a trust under which the spouse has an interest in possession. That in principle postpones IHT until the occasion of the death of the survivor of the individual and spouse.[92]

The risk of IHT may quite cheaply be covered by insurance. Watch that the insurance policy is not subject to IHT on the death of the individual:

(1) Arrange that the policy is not UK situate[93] (so the policy is excluded property); or

(2) transfer the policy to a trust (under which the individual is excluded) but possible IHT charges on the trust make this unattractive for a UK situate policy.

The amount to be insured will need to be reviewed from time to time in line with house inflation and possible changes in the rate of IHT.

It would be possible to take steps to avoid IHT even at short notice, if the death of a non-domiciled owner became imminent, by a sale.[94]

[90] Though the example was looking at the position in 2016, before the introduction of CGT on shares in land-rich companies; that change should increase the discount.

[91] In particular, company sales at an earlier time would have had additional advantages over property sales, relating to CGT and IHT. So whatever discounts may have existed in the past ought to increase. For this purpose what matters is not the date of implementation of the changes, but the date of the announcement of the changes.

[92] See 78.19 (GWR on death: Spouse exemption).

[93] See 102.25 (Insurance policy).

[94] The sale must be completed: an uncompleted contract of sale is not sufficient.

So in practice tax exposure should be limited to:

(1) SDLT, not insubstantial, of course, and CGT (if any); and
(2) the risk of IHT in the event of the sudden death of the individual (or sudden joint deaths of individual and spouse).

There will be no CGT on the sale of property if main private residence relief applies. If the individual has another residence inside or outside the UK, it may be appropriate to make a MPR election.

There is in principle a taxable remittance, if the purchase price is paid out of foreign income or chargeable gains within the scope of the remittance basis.

Loans from open companies may be used to reduce the IHT exposure.[95] That needs to be considered when the property is purchased, not later.

Similar points apply to chattels in the home except there is no CGT exemption (apart from the exemption for chattels under £6,000),[96] no SDLT, and the IHT residential-property code does not apply.

82.21.1 *Ownership: Non-tax aspects*

The property may be held by a nominee for the individual. This may give an element of confidentiality, as it avoids the name of the beneficial owner being published on the land registry, though the bare trust would need to be registered under TRS. In addition an English grant of probate would still be needed in the event of the death of the individual.

Trust or company ownership avoids the need for an English grant of probate after the death of the individual.

Personal ownership may be necessary, or at least desirable, in order to secure that the owner of a long lease acquires the right to enfranchisement.

Further consideration will be needed for property in Scotland and Northern Ireland.

82.21.2 *Home in estate IIP trust*

This option only arises if there is a suitable estate IIP trust in existence, which will not now be so common.

The IHT position is broadly the same as absolute ownership by the life tenant.

This course is more attractive for estate IIP trusts where:

[95] See 80.44 (GAAR: Debt against UK residence).

[96] See 65.10 (Chattels).

(1) the life tenant is the settlor;
(2) the settlor is dead;
(3) the settlor is, or can be, excluded from the trust (or from a sub-fund which will hold the UK home); or
(4) the settlement was made before 18 March 1986.

Otherwise there is potentially a charge on the death of the settlor under the GWR rules.[97]

In the case of a non-resident trust, the occupation of the property is a capital payment received in the UK, giving a possible s.87 charge if chargeable gains accrue to the trust. Chargeable gains may accrue on a disposal of the house, if the private residence exemption is not fully available, for instance if:
(1) the grounds exceed the "permitted area"
(2) there is another private residence which qualifies for the relief
(3) in relation to chattels which do not qualify for exemption

82.21.3 *Home in discretionary trust*

In principle a discretionary trust or non-estate IIP trust could hold the UK home between ten year anniversaries. This might be a convenient short or medium term way to hold a family home. This course is more attractive where:
(1) the settlor is dead;
(2) the settlor is, or can be, excluded from the trust (or from a sub-fund which will hold the UK home); or
(3) the settlement was made before 18 March 1986.

Otherwise there is a risk of a charge on the death of the settlor, under the GWR rules.[98]

82.21.4 *Home in non-resident company*

Holding the UK home of a foreign domiciliary in a non-resident company, formerly the standard course, is not usually attractive.

For inheritance tax, the shares in the company are chargeable (de-excluded) property, and the proceeds of sale of the shares are also caught for two years under the residence-tail rule.

[97] See 78.9 (Gift of excluded property).
[98] See 78.9 (Gift of excluded property).

The company will be subject to CT if it sells the property. A non-resident shareholder will also in principle be subject to CGT.

Purchase by a company has the advantages of SDLT saving on a sale of the company. However, the general rule will be not to purchase by a company because of ATED and ATED-SDLT. A corporate purchase may however still be attractive where ATED rental relief will apply (property let to an unconnected person), for SDLT and for IT reasons. But the company will need to register under the Register of Overseas Entities[99]

A corporate purchase of a property worth under £500k is outside ATED, but it does not seem worthwhile, bearing in mind:

(1) The possibility that the property will sooner or later become worth more than £500k and fall within ATED; or that the ATED bands may be lowered again

(2) Administrative costs

82.22 IHT residence code: Critique

82.22.1 *Restriction to residential property & stability*

Why is the IHT residential-property code limited to residential property? This is speculation as the policy reasons have never been discussed publically, and may never have been considered, even privately; but various possible justifications come to mind:

(1) Perhaps the rules reflect an unexamined assumption that tax planning involving residential property is more objectionable than other tax planning.

(2) Perhaps the aim is an economic one: not to affect the commercial property market, while accepting, or perhaps welcoming, a dampening effect on residential property. It seems to me questionable whether IHT has a significant effect on the residential property market, though I am not aware of any serious studies on the topic. To disentangle IHT from other tax factors, such as SDLT and broader economic considerations of supply and demand, would be difficult and perhaps impossible. But that does not mean that IHT has no effect. There may be an effect at the top end of the market if not elsewhere.

(3) Perhaps the aim is a social or political one, to discourage foreign investment in residential property, or to tax it more heavily, or at least

[99] See 130.1 (CRS & other information sources).

to ensure that it is not taxed any less heavily.

There may of course be more than one of these reasons in play.

This may be seen in the context of other rules which tax non-residents more heavily on UK residential property.[100]

Is the law stable? The 2015 residential-property paper provides:

> 9. The government does not intend to change the IHT position for non doms or excluded property trusts in relation to UK assets other than residential property, or for non-UK assets.[101]

Experience shows that statements like this cannot be relied on. So (even without a change of government) it is possible that the rules may be extended to non-residential property; this happened with the former NRCGT, a CGT charge on residential property introduced in 2015 and extended to non-residential property in 2019.[102]

The drafting of the provisions is in some respects inadequate. Resources permitting, amendment on points of detail seems likely if and when that is appreciated.

But these changes may not happen soon, or at all.

82.22.2 *Replace residence-code with ATED*

Will the IHT residential-property code produce a significant yield, proportionate to its complexity, which is enormous? That seems unlikely. But simple repeal would face the objection to rules under which UK property was chargeable but the charge could quite simply be avoided by use of a company (The fact that this was the law from the inception of CTT/IHT in 1975 until 2017 is not a full answer).

There is a relatively simple solution. This is to abolish the IHT residential-property code, and replace it with an ATED charge, ie ATED rates should reflect the IHT lost by holding UK residential property in companies. Adopting the approach of the IHT relevant property regime,

[100] See 59.3 (Non-residents PRR disallowance), and the SDLT non-UK resident surcharge to be introduced in the FA 2021. This is an international trend in taxation: see Ti, "Politics and Policy: Chinese money and its impact on the Regulation of Residential Property in the West" [2019] The Conveyancer 371.

[101] The paper continues: "Nor will these reforms affect people who are domiciled in the UK." That is incorrect, as the reforms affect settlements made by foreign domiciled settlors who have later become UK domiciled.

[102] See 57.1 (UK property held by non-residents: Introduction).

that would equate to roughly 0.6% p/a for more valuable property (say above £1m).

This could be criticised as:

(1) It is a rough and ready solution, in that the same rate is payable regardless of the IHT exposure of a direct owner; and
(2) It is harsh by some comparison to the IHT cost of direct ownership.

But the same is true of the IHT relevant property trust regime generally; and individuals may chose not to hold UK residential property via companies if they wish.

The reader may think it a pity that the manner in which UK tax reform is conducted precluded serious policy discussion of this kind when the rules were introduced.

CHAPTER EIGHTY THREE

PRE-OWNED ASSETS

83.1 Pre-owned assets: Introduction
83.2 Purpose of POA rules
83.2.1 Eversden schemes
83.2.2 Ingram schemes

83.39 Critique
83.39.1 Nature of POA charge
83.39.2 Retrospectivity
83.39.3 Assessment

83.1 Pre-owned assets: Introduction

This chapter considers the provisions in schedule 15 FA 2004 ("**POA provisions**"). A full discussion of this topic needs a book to itself. This chapter focuses on the matters closest to the themes of this book, but it is necessary to review the general rules to understand these matters in their context.

The supplementary regulations (whose title is so long it cannot sensibly be used)[1] are referred to as the "**POA Regulations 2005**".

"**CIOT Statement**" gives HMRC answers to a number of questions raised by tax practitioner bodies.[2]

The label "pre-owned assets" is inaccurate since the charge may apply to property not previously owned by the taxpayer; but no short label could do justice to the complexities.

The provisions impose three charges to income tax which I call:

(1) "**POA land charge**"
(2) "**POA chattel charge**"
(3) "**POA intangible property charge**"

[1] The Charge to Income Tax by Reference to Enjoyment of Property Previously Owned Regulations 2005.

[2] *https://www.kessler.co.uk/wp-content/uploads/2018/12/CIOT-Statement-Matters-on-which-HMRC-view-is-sought-in-relation-to-pre-owned-assets-income.pdf* The current version of the statement is dated 31 August 2006; earlier versions were dated October 2005 and March 2006.

Land, chattel and intangible property are given commonsense definitions.[3]

83.2 Purpose of POA rules

The POA rules were designed to counter three distinct IHT avoidance schemes:

(1) Eversden schemes
(2) Ingram schemes
(3) Home loan schemes

In order to understand the provisions it is necessary to understand the schemes at which they were addressed.

83.2.1 *Eversden schemes*

There was only one scheme, but the analysis now depends on whether the asset involved was land or not.

In relation to land, the IHT Manual explains:

> **IHTM44101 land - settlement on IIP trusts** [Jun 2016]
> This scheme, known as an 'Eversden' scheme, involved a spouse putting their marital home into a trust under which the other spouse had a life interest. ... The transaction is exempt from Inheritance Tax and excluded from the reservation of benefit provisions.
> The life interest(s) are then terminated in most of the fund so that each spouse is treated as making a transfer at that later time. The termination of the life interest meant that the spouse(s) make a PET; but it was not a gift so that it was not caught by the reservation of benefit provisions. The spouses continued to occupy the property through their life interests in the parts of the property retained by the trustees.
> HMRC challenged the scheme and lost in the case of *Eversden v IRC.*[4]
> Consequently, legislation was introduced with effect from 20 June 2003 to reverse the decision (IHTM14318). ...

The HMRC analysis is as follows:

> - where the scheme was effected on or after 20 June 2003:
>
> the property will be subject to a reservation of benefit for Inheritance Tax purposes by reason of FA86/S102(5A).[5]
> As a result the [POA GWR] exemption under FA04/Sch15/Para11(3)

[3] Para 1 sch 15 FA 2004.

[4] *IRC v Eversden (Greenstock's Executors)* 75 TC 340 [2003] STC 822.

[5] See 78.10.2 (Spouse exemption restricted).

> will apply to the settlor.[6]
>
> There may be a separate reservation of benefit when the spouse's interest in possession terminates and which is treated as a gift under FA86/S102ZA.[7]

This is all somewhat theoretical since the scheme would not be done after 20 June 2003.

> - where the scheme was effected before 20 June 2003, the arrangement succeeds in avoiding the reservation of benefit provisions. However, provided the spouse's life interest continues until their death, there will be no POA charge because the transaction is an excluded transaction under FA04/Sch15/Para(10)(1)[8]
> - if, however, the spouse's life interest comes to an end during their lifetime, the transaction will not longer be an excluded transaction by virtue of FA04/Sch15/Para10(3) so the POA charge will arise from that point on the settlor, assuming the settlor occupies of the property.
>
> If the spouse's qualifying interest in possession ends after 18 March 2006, she may also be subject to a separate inheritance tax charge on her death under FA86/S102ZA if she still benefits from the property. But as she did not, herself, dispose of this interest in the property, she is not subject to the POA charge.

The scheme could also be used for property other than a dwelling house:

> **IHTM44110 intangibles - settlement on interest in possession trusts**
> [Jun 2016]
> Intangible property may also be settled using an Eversden scheme, where the chargeable person settles cash on interest in possession trusts for their spouse or civil partner, which the trustees then invest in, say, a bond. If the terms of the settlement fall within the definition in FA04/Sch15/Para8 similar results to the scheme involving land apply. For example, if the spouse or civil partner's interest in possession ends during their lifetime and the property is now held on discretionary trusts of which the settlor is one of the potential beneficiaries, the POA charge will apply where the settlement was effected before 20 June 2003.
>
> However, the excluded transaction provisions have no application with regard to intangible property so FA04/Sch15/Para10(1)(c), which may have a bearing in respect of schemes involving land, has no relevance.

[6] See 83.19 (GWR exemptions).

[7] See 78.18.1 (Termination of IIP: GWR).

[8] See 83.10.4 (Trust where spouse has IIP).

> If the settlement was effected on or after 20 June 2003 the property is subject to a reservation of benefit by virtue of FA86/S102(5A) and the POA charge will not apply.

83.2.2 *Ingram schemes*

There were two varieties of these schemes; I describe both as "**Ingram schemes**". The IHT Manual explains:

> **IHTM44100 land - lease carve-out scheme** [Jun 2016]
> This scheme, known as an 'Ingram' scheme, involved a nominee structure where an individual gives their home to nominees who then grant the individual a lease to occupy the house. The lease is usually for 21 years or less at a peppercorn rent. The nominee then gives the property, subject to the lease, away to (usually) the individual's children. The individual continues to occupy the property under the lease.

The HMRC analysis is as follows:

> There is no loss to the transferor's estate when the property is given to the nominees and the individual does not reserve a benefit in the property that was given away - the freehold reversion - although they continue to occupy the property.
> HMRC challenged the scheme and lost in the case of *Ingram v IRC* [1999] STC 37. Consequently, legislation was introduced with effect from 8 March 1999 to reverse the decision (IHTM14360). The impact of this legislation on the POA charge is as follows
>
> - where the scheme was effected on or after 9 March 1999, the property will be subject to a reservation of benefit for Inheritance Tax purposes by reason of FA86/S102A. As a result the exemption under FA04/Sch15/Para11(3) will apply,
> - where the scheme was effected before 9 March 1999, the arrangement succeeds in avoiding the reservation of benefit provisions and will be subject to the POA charge under FA04/Sch15/Para3(2).
>
> ...
>
> **IHTM44102 land - reversionary leases** [Jan 2020]
> This scheme is an arrangement where a donor grants a long lease of their property for say 999 years to the proposed donee, and the lease does not take effect until some future date.
> *Example (Victor)*
> V, who has owned his house since 1990, grants a 999-year lease to his daughter ... in 1998 but it is not to take effect until 2018. V continues to occupy the property.

The HMRC analysis is as follows:

> The effect of this transaction is that
>
> - Victor has made a PET (IHTM04057) of the lease. The loss to his estate (IHTM04054) will be the difference between the unencumbered freehold and the freehold subject to the lease,
> - Victor continues to occupy the property as the freeholder, and
> - the value of the freehold interest remaining in Victor's estate will decline as the time for the lease to commence approaches.
>
> Where the scheme is subject to the POA charge, the value subject to the charge will be calculated in accordance with FA04/Sch15/Para4(2) (IHTM44010). You will need to obtain three values to correctly assess the POA charge
>
> - the rental value (R), say, £25,000,
> - the value at the valuation date (IHTM44011) of the interest that was disposed of (DV); in this case, the value of the lease (that is to take effect in 20 years), say, £100,000, and
> - the value of the property at the valuation date (V), say, £800,000.
>
> Following the formula at IHTM44010, the amount subject to the POA charge is
>
> 25,000 × 100,000 ÷ 800,000 = £3,125 - which would be covered by the de minimis rule (IHTM44056).
>
> But note that as the date for the lease to start gets nearer, so the value of the interest that was disposed of (DV) will increase. The initial value will apply for the first five years of the POA charge, but on revaluation (IHTM44011) the portion of the rental value that is subject to the POA charge is likely to be higher.
>
> Reservation of Benefit Provisions
>
> The gift of the reversionary lease will be property subject to a reservation of benefit under FA86/S102 where there are covenants within the terms of the lease that are beneficial to the donor, such as covenants by the lessee to, say, maintain the property and keep it in repair. This was confirmed at the Court of Appeal in *Viscount Hood (executor of Lady Hood v HMRC* [2018] EWCA Civ 2405.
>
> If there are no covenants within the terms of the lease then the reservation of benefit provisions are still capable of applying where the scheme was established on or after 9 March 1999. FA86/S102A(5) is capable of applying where the freehold interest was acquired less than 7 years before the gift (this is the significance of the date Victor acquired his house in the example above). If the freehold was acquired within 7 years the continued occupation of the property by the donor would be a significant right in relation to the land in view of FA86/S102A(5) dependent upon how the remaining provisions of the

section apply – for example, if the donor pays full consideration for the right to occupy or enjoy the land, that would not a significant right in view of FA86/S102(3).

An exemption from the POA charge will be available under FA04/Sch15/Para 11 where the gifted lease is subject to a reservation of benefit. Where the gifted reversionary lease is not property subject to a reservation of benefit, the POA charge would then arise instead.

IHTM44108 chattels - lease carve-out scheme [Jun 2016]

Although the use of a lease to carve out an interest in property is more commonly used with land (IHTM44100) it can also apply to chattels. In effect, the owner of the chattels carves out a lease for themselves and then makes a gift of the chattels. Although FA86/S102A is aimed at ensuring such a transaction with land is now subject to the reservation of benefit provisions, that section only applies to interests in land and so does not apply to similar transactions involving chattels.

The transaction is a disposal by the chargeable person and they will be liable to the POA charge under FA04/Sch15/Para6(2)....

83.2.3 *Home loan schemes*

The IHT Manual explains:

IHTM44103 land - home loan or double trust scheme [Sep 2018]

This is a scheme whereby the individual seeks to put the value of their home outside their estate and avoid the reservation of benefit provisions, whilst still continuing to occupy the property. The steps in a typical scheme were:

- the individual creates an interest in possession trust under which they are the life tenant; the trustees have the power to allow the life tenant to use the trust property,
- the individual then sells their house to the trust, usually at the open market value; but because the trustees have no funds, they agree to leave the purchase price outstanding by way of loan,
- the individual creates a second interest in possession trust under which (usually) their children are the life tenants and excludes the taxpayer from any benefit,
- the individual transfers the benefit of the loan to the trustees of the second trust.

The HMRC analysis is as follows:

The Inheritance Tax consequences are intended to be as follows

- there is no loss to the estate on the sale of the property to the first trust as the individual enjoys a life interest in the trust property. On their

> death, the trust fund forms part of their estate, but the value of the property is largely or wholly covered by the debt now owed to the trustees,
>
> - the transfer of the debt to the second trust is a PET (since the taxpayer is wholly excluded from benefiting under this trust), so that on survival for 7 years, the value of their home is not charged to Inheritance Tax.
>
> [The Manual comments on SDLT aspects and continues] The requirements of FA04/Sch15/Para3 are met in that the individual is occupying land which they owned and has now disposed of, so the POA charge applies. However, the property still forms part of their estate as the life tenant of an interest in possession trust, and so the exemption in FA04/Sch15/Para11(1) applies. To bring this scheme within the POA charge, the concept of excluded liabilities is contained in FA04/Sch15/Para11(6) which states that only the value of the property in excess of an excluded liability is treated as forming part of the individual's estate and therefore qualifies for the exemption under FA04/Sch15/Para11(1).
>
> ...
>
> But, this assumes that the scheme succeeds in avoiding the reservation of benefit provisions. HMRC does not accept that the scheme succeeds and is litigating the point. A brief analysis of HMRC's view and the consequences for the POA charge are at IHTM44104 onwards.

The GWR aspect of home loan schemes is an interesting story, but is not discussed here. The position here will need to be reviewed *Shelford v HMRC* [2020] UKFTT 53 (TC) is final.

83.2.4 *Width of POA provisions*

The POA provisions are widely drafted. This may be because they are aimed at three distinct schemes with nothing in common. Alternatively, with hindsight, one might see the provisions as adopting a style of anti-avoidance provisions under which:

(1) The gateway conditions for the operation of the rules are extremely wide and it is only a slight exaggeration to say that they potentially catch (more or less) everything.

(2) There are a large number of exemptions to the provisions some of which are also very wide.[9]

[9] A good example of this style of drafting is the disguised remuneration rules (not discussed in this book, but I hope to do so in a future edition).

So the POA provisions apply in situations which have nothing to do with the three schemes at which they were targeted. They need consideration whenever one person provides funds to another to purchase a home, which includes any case where a home is held by a trust or a company. This will often be the case for the home of foreign domiciliaries; my guess is that any effect on foreign domiciliaries is entirely accidental; no-one had worked it out as the provisions were frantically amended and re-amended in the short time available as the FA 2004 passed through parliament.

83.3 POA land charge

Para 3(1) sch 15 FA 2004 provides:

> This paragraph applies where—
> (a) an individual ("the chargeable person") occupies any land ("the relevant land"), whether alone or together with other persons, and
> (b) the disposal condition or the contribution condition is met as respects the land.

In the discussion below the "chargeable person" is called "T" and the land T occupies is called "land occupied by T" (rather than "the relevant land").

83.3.1 *"Occupation"*

"Occupation" is a technical legal concept extensively discussed in rating cases. The IHT Manual provides:

> **IHTM44003 property in charge: land** [Aug 2016]
> ...
> The meaning of the word 'occupies' should be taken quite widely. It goes wider than the chargeable person being physically present at the property concerned. Case law suggests that the word 'occupy' requires some element of control. So a visitor may not be in occupation (even someone who stays for an extended period of time due to illness) but someone who has a key and can freely enter and leave premises as they please is more likely to be in occupation; even if they are absent for significant periods. It does not necessarily mean the place you reside which implies a greater level of permanence so a lower threshold is required to satisfy the occupation condition.
> A person may be in occupation if they are storing possessions in a property - but only if they also had the right of access to the property to use it as they wished - or if they were the only person with the means of access and used the property from time to time. Storing possessions on its own is not occupation, but may be evidence of occupation. The

> chargeable person would not be regarded as occupying a property from which they were receiving rental payments from the person(s) actually in occupation.
>
> If the chargeable person's use of the property is only very limited in its nature or duration, they may not be in 'occupation' for the purposes of the POA charge. Each case should be decided on the facts and circumstances relating to it. The guidance at IHTM14333 contains some examples where limited use or occupation of land does not gives rise to a reservation of benefit and are unlikely, on their own, to be 'occupation' for the POA charge.
>
> Where the chargeable person was occupying part of their former property and was entitled to, and did, use the rest of the property from time to time, you should regard them as being in occupation of the whole of the property for the POA charge. On the other hand, if the chargeable person occupies a self-contained part of their former property and has no access to the remainder which is occupied by others, you should regard the relevant land as limited to the self-contained part. You should consider occasional visits to the remainder of the property in the same manner as social visits mentioned in example 2 at IHTM14333.[10]

83.4 Disposal conditions

Para 3(2) sch 15 FA 2004 provides:

> The disposal condition is that—
>
> (a) at any time after 17 March 1986 the chargeable person owned an interest—
>
> (i) in the relevant land, or
>
> (ii) in other property the proceeds of the disposal of which were (directly or indirectly) applied by another person towards the acquisition of an interest in the relevant land, and
>
> (b) the chargeable person has disposed[11] of all, or part of, his interest in the relevant land or the other property, otherwise than by an excluded transaction.

This is best regarded as two conditions depending on whether (a) (i) or (ii) applies. I call them "**disposal conditions (i) and (ii)**". Only one of them needs to be satisfied for the "disposal condition" to be met.

83.4.1 *Disposal condition (i)*

The essence of disposal condition (i) is that:

[10] See 78.6.4 ("Virtually" to the entire exclusion).

[11] "Disposal" is defined in para 3(4) sch 15 FA 2004.

> (a) T owned an interest in the land occupied by him.... and
> (b) T has disposed of all, or part of, his interest in the land ...

What if T enters into a contract to purchase land and then assigns that contract to a trust or company? The contract is an interest in land. However, on completion the contract ceases to exist. That will normally be before the valuation date. Since the asset cannot be valued on the valuation date, it is tentatively suggested that disposal condition (i) does not apply in this situation.

The disposal condition is satisfied by a disposal of land for full consideration. However, in such a case the exclusion for arm's length transactions may apply.

83.4.2 *Disposal condition (ii)*

The essence of disposal condition (ii) is that:

> (a) T owned ... other property the proceeds of the disposal of which were (directly or indirectly) applied by another person towards the acquisition of an interest in the land occupied by T, and
> (b) T has disposed of all, or part of, his interest in the ... other property ...

Disposal condition (ii) is probably intended to deal with the situation where:

(1) T disposes of land to A.
(2) A sells the land and uses the proceeds to purchase other land occupied by T.

However, it may apply where:

(1) T disposes of any property (not land or cash) to A; and
(2) A disposes of that property and uses the proceeds to purchase land occupied by T.

This overlaps with the contribution conditions. The overlap matters because the excluded transaction defences to the contribution and disposal conditions are not the same.

The IHT Manual provides:

> **IHTM44004 the disposal condition - land** [Aug 2016]
> ...
> **Example** (Trevor and Paul)
> T gives The Paddocks to P. P then sells The Paddocks and buys Whiteacre with the proceeds. T then occupies Whiteacre. The disposal

> condition is met.
>
> So the disposal condition will apply to the chargeable person's occupation or use of the property even if that property was never actually owned by them. If they give away other property (it does not have to be land, but see the contribution condition IHTM44005) if the gift is of cash) to another person who then sells such property and uses the proceeds to buy the relevant land, the disposal condition is satisfied, unless it qualifies as an excluded transaction.
>
> A disposition that creates a new interest in land out of an existing interest is taken to be a disposal of part of the existing interest, FA04/Sch15/Para 3(4).
>
> The disposal condition will be met whether the sale or gift is of the whole or part of land and whether or not the sale is at less than the full market value. See IHTM44031 where the disposal is of the whole of the land for full consideration.
>
> FA04/Sch15/Para 3(2)(a)(ii) applies where the proceeds of sale are used to acquire land that is subsequently occupied by the chargeable person. So, in the example above, if P exchanged The Paddocks for Whiteacre, on the face of it the disposal condition is not met; but see IHTM44005

83.5 Contribution conditions

Para 3(3) sch 15 FA 2004 provides:

> The contribution condition is that at any time after 17 March 1986 the chargeable person has directly or indirectly provided, otherwise than by an excluded transaction, any of the consideration given by another person for the acquisition of—
>
> (a) an interest in the relevant land, or
>
> (b) an interest in any other property the proceeds of the disposal of which were (directly or indirectly) applied by another person towards the acquisition of an interest in the relevant land.

This is best regarded as two conditions, depending on whether (a) or (b) applies. I call them "**contribution conditions (a) and (b)**". Only one of them need be satisfied for the "contribution condition" to be met.

83.5.1 *Contribution condition (a)*

The essence of contribution condition (a) is that:

> T has directly or indirectly provided…any of the consideration given by another person for the acquisition of ... the land occupied by T …

This envisages that:

(1) "another person" (which may be a company or trust) acquires for consideration land occupied by T; and
(2) T has provided that consideration directly or indirectly.

83.5.2 *Contribution condition (b)*

The essence of contribution condition (b) is that:

> T has directly or indirectly provided … any of the consideration given by another person for the acquisition of … any other property the proceeds of the disposal of which were (directly or indirectly) applied by another person towards the acquisition of ... the land occupied by T.

This applies where:
(1) "another person" ("A") acquires "other property" for consideration.
(2) T has provided that consideration directly or indirectly.
(3) A disposes of the other property.
(4) The proceeds are (directly or indirectly) applied by "another person" (presumably either A or another person, "B") towards the acquisition of the land occupied by T.

The drafter may be considering a situation where:
(a) T transfers funds to A, who purchases a property; and
(b) A sells that property and uses the proceeds to buy another property occupied by T.

or

(a) T transfers funds to A (eg a trust);
(b) A transfers the funds to B (eg a company held by A);
(c) B uses the funds to purchase a property occupied by T.

In both those cases I would have said that T had indirectly provided consideration given for the land and contribution condition (a) was already satisfied. I cannot think of a situation which falls within condition (b) and which does not fall within condition (a). But it does not much matter.

83.5.3 *Provision of funds for acquisition*

What is the position if T provides funds, but not for the purpose of the acquisition of the land? Suppose:
(1) In 1987 T created a trust. At the time T had no plans to move to the UK.
(2) In 2005 the trustees make an interest-free loan to a company which purchases a property which T occupies.

The foreign domiciled individual has directly provided the property for the purposes of the trust. They are probably to be regarded as having indirectly provided the consideration given for the acquisition of the land under the principle that a trust appointment merely fills in blanks left by the settlor.[12] So contribution condition (a) is satisfied.

But if T gives funds to A, an individual, and A later uses those funds to buy a property, it is suggested that T has not provided the consideration, unless the two steps form a single arrangement.

The IHT Manual provides:

> **IHTM44005 the contribution condition - land** [Aug 2016]
> ...
> **Example** (Trevor and Paul)
> T gives P the funds to buy Blackacre.
> P then sells Blackacre and buys The Paddocks with the proceeds.
> T then occupies The Paddocks.

The HMRC analysis is as follows:

> The contribution condition is met.
> You do not need to show that when the contribution was made, the individual intended to occupy the land purchased by another; if the chargeable person occupies land that they have, as a matter of fact, indirectly contributed to the purchase of, the contribution condition is met.
> The contribution condition does not only apply to cash contributions. So in the example at IHTM44004, where P exchanges The Paddocks for Whiteacre, the gift of The Paddocks from T to P is a contribution to the acquisition of the property that T subsequently occupied and so the contribution condition is met.

83.5.4 *Width of contribution conditions*

The contributions conditions apply whenever one person gives funds to another for the purchase of a home. For instance, if H gives funds to W so H and W can purchase a home jointly; but if H and W are spouses, the POA spouse exemption may apply;[13] if H and W jointly occupy the property, the GWR exemption may apply.[14]

[12] See 87.5.7 (Trust appointment: Filling blanks).

[13] See 83.10.3 (Inter-spouse transfer).

[14] See 83.19 (GWR exemptions).

83.5.5 *Purpose of contribution conditions*

It is hard to see the purpose of the contribution conditions. *Ingram*, *Eversden* and home loan schemes would be caught by the disposal conditions. Perhaps it was meant to catch schemes set up on the occasion of purchase of a new property where the settlor would provide cash to a trust. But this was never done in the past; it would have been better to frame more targeted anti-avoidance provisions than this blunderbuss approach.

83.6 "Provide"

"Providing" is the fundamental concept in the contribution conditions and it is not an easy one. Some guidance can be found in cases on the meaning of "settlor" where the statutory language is similar.[15]

It is considered that "provide" implies an element of bounty. So if T lends money on arm's length terms to A, who uses the money lent to buy the property, T has not "provided" the consideration and the contribution condition is not satisfied.

What if T lends interest-free to A, who uses the money lent to buy the property? At first sight T has provided the consideration. But it might be argued that A provides the consideration (by A's promise to repay T) and that T provides nothing.[16] In practice HMRC now[17] accept this. The IHT

[15] Some guidance ought to be found from comparable wording in Stamp Duty and SDLT group relief: s.27 FA 1967; para 2(2) sch 7 FA 2003. Unfortunately the SD/SDLT position is even more obscure than the POA: SP 3/98; Tax Bulletin 70.

[16] One might say that T has provided the interest foregone on the loan, but (1) interest foregone does not exist, and it is difficult to see how one could provide something which does not exist; see 99.26 (Loans); (2) the interest foregone is not the consideration given for the acquisition of the land.

[17] This reverses the view taken in CIOT Statement:

> "6.2 The meaning of the 'provision' of 'consideration' in the context of the contribution condition needs to be clarified. On the basis of the case law the word provided suggests some element of bounty.
>
> On this basis our view is that if there is a transfer of Whiteacre by A (or another asset) to his son at full market value which is then sold by son and the sale proceeds used to purchase Blackacre for A to occupy this is a breach of the disposal but not the contribution condition because it lacks the necessary element of bounty.
>
> Similarly the provision of a loan on commercial terms by A to his son to enable son to purchase a house which A then occupies in our view does not fall within the contribution condition.

Manual provides:

> **IHTM44005 the contribution condition - land** [Aug 2016]
> ... However, the contribution condition is not met where the chargeable person resides in property purchased by another with money loaned by the chargeable person. This is because the outstanding debt will form part of the lender's estate for Inheritance Tax purposes, and the lender cannot be said to have provided a contribution to the purchase of that property when that money has to be repaid to them, even if the loan was interest free. It follows that the 'lender', in such an arrangement, is not subject to a POA charge.

What if:

(1) T lends interest-free to A,
(2) A purchases the property, and
(3) T later releases the loan (or makes a gift to A which A uses to repay

---

Question 32
Do HMRC agree with this analysis?
HMRC answer to question 32
In our view, it is arguable that the contribution condition does not depend on a degree of bounty for its application. If, on the contrary, a degree of bounty was necessary, might not the operation of the contribution condition provisions in paras 3(3) and 6(3) of Schedule 15 be circumvented by the relatively simple expedient of A, in your example, providing the wherewithal for the purchase of a house by his son by way of a loan, ostensibly on commercial terms, which is then left outstanding indefinitely?
Having said that, we have considered further the sort of case where a loan is made **and operated** on commercial terms eg a commercial rate of interest is specified and paid and there are provisions for repayment of the loan over the sort of period one would expect to find in a truly commercial loan. Having regard to paras 4(2)(c) or 7(2)(c) of Schedule 15, the chargeable amount would depend on the value of DV in R (or N)×DV/V: that's to say on 'such part of the value of the land/chattel as can reasonably be attributed to the consideration provided by the chargeable person'. In the case where the loan is on truly commercial terms and conducted in a truly commercial way, we would accept that the attributable amount is nil or de minimis.
In determining 'reasonable attribution' for the purposes of para 4(2)(c), it is the terms on which the loan is made and operated that are relevant, as indicated above. In that context, the period over which the loan is repaid as well as whether a commercial rate of interest is charged is relevant.
Thus, where an interest-free loan is repaid over a typical 'commercial' period, it would be reasonable to regard the interest foregone as attributable to the consideration provided by the chargeable person. In cases where the principal of the loan was left outstanding indefinitely, such principal could reasonably be regarded as attributable to the consideration provided."

the loan, which comes to the same thing)?

Alternatively, more simply, what if:
(1) A purchases the property
(2) T makes a gift to A, or reimburses A for the expense (without being obliged to do so).

If T has not provided the consideration at the time that A purchases the property, T cannot provide it later. However if the steps form part of a single arrangement, it can probably be said that A has provided the consideration indirectly, even if belatedly.

What if T subscribes for shares on arm's length terms? Probably T has provided funds to the company

83.6.1 *Arrangement with 3rd parties*

The position becomes more complex where more than two persons are involved.

Suppose:
(1) T provides funds to A, an individual
(2) A gives them to B, an individual
(3) B purchases the property.

It is suggested that T has not provided the consideration if the "clean break" test is satisfied.[18]

Suppose:
(1) T provides funds to a trust
(2) The trust lends them to a company owned by the trust
(3) The company purchases the property.

It is suggested that T has provided the consideration because the "clean break" test is not satisfied.

What if T gives funds to A, and A borrows from a third party on the security of those funds, and uses the borrowed funds to buy the property? It is considered that T has not provided the consideration.

If T provides fund X to a company or trust, which borrows fund Y from a third party, and the company or trust uses both funds to acquire the property, then T has provided fund X but not fund Y.

Commonplace arrangements for a foreign domiciliary's residence will often satisfy the contribution condition, for instance where:

[18] See 99.7.1 (Is A an indirect settlor?).

(1) an individual gives to a trust which purchases the home (without a company); or
(2) a foreign domiciliary gifts funds to a trust which lends interest-free to the company which acquires the home.

In most cases one exemption or another will apply but it is possible to fall between the gaps.

83.6.2 *Guarantees*

Para 17 sch 15 FA 2004 provides:

> Where a person ("A") acts as guarantor in respect of a loan made to another person ("B") by a third party in connection with B's acquisition of any property, the mere giving of the guarantee is not to be regarded as the provision by A of consideration for B's acquisition of the property.

It is suggested that this applies even if A provides security for A's guarantee or deposits funds with a bank as a back-to-back loan.

What if:
(1) B borrows to purchase property (perhaps with a guarantee by T); and
(2) T later gives funds to B who repays?

If the steps are independent, it is considered that T has not provided the consideration. If, however, the steps form part of a single arrangement, it is suggested that T can be said to have provided the consideration indirectly.

83.6.3 *Secondhand company*

The contribution condition will not be satisfied where:
(1) A has provided funds to a company to purchase a house.
(2) A sells the company to B who occupies the house.

B has not provided the funds for the purchase (unless the two steps form a single arrangement).[19]

83.7 POA chattel charge

Para 6 sch 15 FA 2004 provides:

> (1) This paragraph applies where—

[19] See 48.10.1 (Individual purchases secondhand co).

(a) an individual ("the chargeable person") is in possession of, or has the use of, a chattel, whether alone or together with other persons, and

(b) the disposal condition or the contribution condition is met as respects the chattel.

(2) The disposal condition is that—

(a) at any time after 17 March 1986 the chargeable person had (whether alone or jointly with others) owned—

(i) the chattel, or

(ii) any other property the proceeds of the disposal of which were (directly or indirectly) applied by another person towards the acquisition of the chattel, and

(b) the chargeable person disposed[20] of all or part of his interest in the chattel or other property otherwise than by an excluded transaction.

(3) The contribution condition is that at any time after 17 March 1986 the chargeable person had directly or indirectly provided, otherwise than by an excluded transaction, any of the consideration given by another person for the acquisition of—

(a) the chattel, or

(b) any other property the proceeds of the disposal of which were (directly or indirectly) applied by another person towards the acquisition of the chattel.

This follows the form of the POA land charge.

The IHT Manual provides:

> **IHTM44007 the disposal condition- chattels** [Aug 2016]
>
> ...
>
> **Example** (Trevor and Paul)
>
> T gives a painting to P. P then sells the painting and buys a violin with the proceeds, which T then plays. The disposal condition is met.
>
> So the disposal condition will apply to the chargeable person's enjoyment or use of a chattel even if it was never actually owned by them. If they give away another asset (it does not have to be another chattel, but see the contribution condition (IHTM44008) if the gift is of cash) to another person who sells the asset and uses the proceeds to purchase the chattel concerned, the disposal condition is satisfied, unless it qualifies as an excluded transaction.
>
> A disposition that creates a new interest in a chattel out of an existing

[20] "Disposal" is further defined in para 6(4) sch 15 FA 2004.

interest is taken to be a disposal of part of the existing interest, FA04/Sch15/Para 6(4).

The disposal condition will be met whether the sale or gift is of the whole or part of the chattel and whether or not the sale is at less than the market price. See IHTM44031 where the disposal is of the whole of the chattel for full consideration.

FA04/Sch15/Para 6(2)(a)(ii) applies where the proceeds of sale are used to acquire a chattel that is subsequently used or enjoyed by the chargeable person. So, in the example above, if P exchanged the painting for the violin, on the face of it, the disposal condition is not met; but see IHTM44008.

IHTM44008 the contribution condition - chattels [/Aug 2016]

...

The contribution condition applies not only where the contribution provided by the chargeable person is directly used to purchase the chattel but also where the contribution is indirect. If the chargeable person provided all or part of the consideration for the purchase of an asset by another person, who then sold that asset and used the proceeds to purchase the chattel used or enjoyed by the chargeable person, the contribution condition is satisfied.

Example (Trevor and Paul)

T gives P the funds to buy a painting. P then sells the painting and buys a violin with the sale proceeds which T then plays. The contribution condition is met.

You do not need to show that when the contribution was made, the individual intended to use or enjoy the chattel purchased by another; if the chargeable person uses or enjoys a chattel that they have, as a matter of fact, indirectly contributed to the purchase of, the contribution condition is met.

The contribution condition does not only apply to cash contributions. So in the example at IHTM44007, where P exchanges a painting for a violin, the gift of the painting from T to P is a contribution to the acquisition of the chattel that T subsequently used or enjoyed and so the contribution condition is met.

However, the contribution condition is not met where the chargeable person uses or enjoys a chattel purchased by another with money loaned by the chargeable person. This is because the outstanding debt will form part of the lender's estate for Inheritance Tax purposes, and the lender cannot be said to have provided a contribution to the purchase of the chattel when that money has to be repaid to them, even if the loan was interest free. It follows that the 'lender', in such an arrangement, is not subject to a POA charge.

83.8 POA intangible property charge

Para 8 sch 15 FA 2004 provides:

> (1) This paragraph applies where—
>
> (a) the terms of a settlement, as they affect any property comprised in the settlement, are such that any income arising from the property would be treated by virtue of section 624 of ITTOIA (income arising under settlement where settlor retains an interest) as income of a person ("the chargeable person") who is for the purposes of Chapter 5 of Part 5 of that Act the settlor,
>
> (b) any such income would be so treated even if section 625(1) of ITTOIA (settlor's retained interest) did not include any reference to the spouse or civil partner of the settlor, and
>
> (c) that property includes any property as respects which the condition in sub-para (2) is met ("the relevant property").
>
> (2) The condition mentioned in sub-para (1)(c) is that the property is intangible property which is or represents property which the chargeable person settled, or added to the settlement, after 17 March 1986.

In common form settlor-interested discretionary trusts the GWR exemption will apply.

If S lends on favourable terms to a trust from which S is excluded, s.624 applies[21] but para 8 does not apply.[22]

In common form trusts where the settlor has an IIP, the GWR exemption (or for an estate IIP, the estate exemption) will apply.

Accordingly, the POA intangible property charge will not usually affect foreign domiciliaries.

The charge does not apply to intangible property held by a company held by a trust, since that is not property comprised in a settlement, and not caught by s.624, but the shares in the company will be intangible property.

The charge is intended to catch *Eversden* schemes (which will not normally have been carried out by foreign domiciliaries). But it is much wider than that. It applies (in short) to (almost) any settlor-interested trust unless GWR also applies. If A creates a trust to A for life remainder to B absolutely, or to B for life remainder to A absolutely, the charge applies. However, if there is a power of appointment in favour of A, the charge

[21] See 47.6.2 ("Settlor-interested" for s.624).

[22] Because s.624 only applies because of the loan, and not because of the terms of the settlement (in the IHT sense).

does not apply as in this case there is a GWR. There is no sense in this and in practice HMRC do not take the point. Since s.102ZA FA 1986 stops the *Eversden* schemes, the intangible property charge is an anti-avoidance provision that has lost its purpose[23] and only remains as clutter in the tax system which will occasionally trap the unwary (if anyone notices or cares). It should be repealed (except for pre-2003 disposals).

The IHT Manual provides:

> **IHTM44009 intangible property** [Aug 2016]
>
> ...
>
> Note that under FA04/Sch15/Para 8(1)(a), income arising from the assets concerned (and not the settlement generally) must be treated as income of the chargeable person. So, if the settled property is partitioned so that the settlor cannot benefit from one part of the fund, the POA charge will only apply to the part of the fund that the settlor can benefit from. If the part the settlor can benefit from contains land - but the settlor does not occupy it - the POA charge on land IHTM44004) cannot apply, and will not apply to the part the settlor cannot benefit from, even if that part contains intangibles.
>
> You should also note the fact that the settled property may not actually produce any income does not matter, as long as any income that might arise would be treated as income of the settlor, a charge under FA04/Sch15/Para 8 will arise.
>
> ...
>
> Note that the intangibles charge does not apply to intangible property which is owned by a company which is in turn owned by a trust since the property owned by the company is not settled property. On the other hand, the shares of the company itself will be settled property and potentially caught by the POA charge subject to any exclusions (IHTM44030).
>
> **Example** (Andrew and Joan)
>
> A sets up a trust for his wife J on their marriage in 2005 and as he is excluded from all benefit there is no possibility of a charge under FA04/Sch15/Para 8 arising.
>
> If, however, he sets up a trust where J receives the income but he can benefit under, say, an overriding power of appointment or perhaps a remainder interest (although see IHTM44112 in this regard), then a charge under FA04/Sch15/Para 8 arises subject to any relevant exemptions IHTM44040), even though the property forms part of J's estate (being a pre-March 2006 interest in possession).

[23] Except for *Eversden* schemes carried out before 2003.

83.8.1 *"Settlement"*

"Settlement" here has the IHT meaning, not the settlement-arrangement meaning: para 1 sch 15 FA 2004. See 87.1 (Definitions of "settlement").

The IHT Manual provides:

> **IHTM44009 property in charge: intangible property** [Aug 2016]
>
> ...
>
> In this context 'settlement' has the same meaning as it does for Inheritance Tax purposes. The definition of 'settlement' is in IHTA84/S43(2) (IHTM16042). Unlike the requirement for Income Tax, the fact that there is no element of bounty does not prevent a trust being a 'settlement' for Inheritance Tax - although the legislation does still require the chargeable person to have 'settled' or 'added' property to the settlement. So an arms length sale at full market value to the trust would not be a settlement or addition by the vendor.
>
> ...
>
> **IHTM44112 insurance based products: discounted gift trust** [Jun 2016]
>
> A discounted gift trust or plan is where the settlor makes a gift into settlement with certain 'rights' being retained by them. The retained rights may, for example, be a series of single premium policies maturing (usually) on successive anniversaries of the initial investment or on survival, reverting to the settlor, if they are alive on the maturity date; or the settlor carves out the right to receive future capital payments if they are alive at each prospective payment date. The gift with reservation provisions do not apply.
>
> In the straightforward case where the settlor has retained a right to an annual income or to a reversion under arrangements, that right is not property within FA04/Sch15/Para8 as the trustees hold it on bare trust for the settlor. A bare trust is not a settlement for inheritance tax purposes (IHTM16030). The settlor is excluded from other benefits under the policy and so the POA charge does not apply.
>
> There may be more complex cases where the settlor's retained rights or interests are themselves held on trust. But that would normally be construed as being a separate trust of those benefits in which the settlor had an interest in possession. No POA charge will arise where the interest in possession arose before 22 March 2006 by virtue of FA04/Sch15/Para11(1) (IHTM44041).
>
> Where, however, the POA charge does arise, it will be by reference to the value of the rights held on trust for the settlor, not by reference to the value of the underlying life policy. An open market value of those rights will need to be obtained in order to calculate the charge (IHTM44025).

83.8.2 *POA/protected trusts interaction*

Para 8(4) sch 15 FA 2004 provides:

> For the purpose of deciding whether the condition in subparagraph (1)(a) is met, ignore section 628A of ITTOIA 2005 (which provides for section 624 of that Act not to apply to certain foreign income arising under a settlement).

In short, the 2017 protected trust regime[24] does not affect the operation of POAT.

83.9 Excluded transactions

A disposal of property by an excluded transaction is ignored for the disposal conditions; and the provision of property by an excluded transaction is ignored for the contribution conditions. Para 10(1) sch 15 FA 2004 defines "excluded transaction" for the disposal conditions and para 10(2) sch 15 FA 2004 defines it for the contribution conditions. Each sub-paragraph contains five categories of excluded transaction, making 10 in all. Simplicity was evidently not an important consideration to the drafter of the POA rules.

Excluded transactions are not a defence to the POA intangible property charge.

83.10 Excluded transactions: Disposals

The concept of excluded transaction matters because the disposal conditions do not apply if the disposal is "by an excluded transaction".[25]

83.10.1 *Arm's length disposal of whole*

Para 10(1) sch 15 FA 2004 provides:

> For the purposes of ... [the disposal condition], the disposal of any property is an "excluded transaction" in relation to any person ("the chargeable person") if—
>
> (a) it was a disposal of his whole interest in the property, except for any right expressly reserved by him over the property, either—
>
> (i) by a transaction made at arm's length with a person not connected with him, or
>
> (ii) by a transaction such as might be expected to be made at

[24] See 92.10 (Protected trust: s.624 relief).

[25] See 83.4 (Disposal conditions).

> arm's length between persons not connected with each other.

There are two requirements here:

(1) A disposal of the whole interest (except for any rights expressly reserved).

(2) The disposal[26] falls within para (i) or (ii), ie it is (in short) on arm's length terms.

There is no equivalent of this category of excluded transaction for the purposes of the contribution conditions. The reason is that a disposal at arm's length is not likely to amount to "providing" consideration.

The IHT Manual provides two examples. The first concerns a sale:

> **IHTM44031 excluded transactions: the disposal condition - sale of entire interest** [Aug 2016]
> **Example** (George and Robert)
> G sells his house to his son R for full consideration, but continues to live in the property.

The HMRC analysis is as follows:

> As he has not made a gift, there is no reservation of benefit (IHTM14301)

That is correct.

> and provided the sale falls within FA04/Sch15/Para 10(1)(a)(ii), [ie provided it is on arm's length terms] there will be no POA charge either.

That is correct.

> The position would be different if G had given R money in the past (IHTM44005).

This is not correct. HMRC should say, the position would be different if G had provided the consideration for the purchase, directly or indirectly, but perhaps that is what is meant.

The second example concerns an *Ingram* scheme:

> **IHTM44031 excluded transactions: the disposal condition - sale of entire interest** [Aug 2016]
> **Example** (Robert and James)
> R executes an 'Ingram' (IHTM44100) scheme and sells the freehold

[26] Not the reservation of rights.

reversion to J.

That is:
(1) R grants a lease to a nominee
(2) R sells the property to J subject to the lease

The HMRC analysis is as follows:

> This would be an excluded transaction, provided that the sale was at arm's length or such as might be expected to be made at arm's length between persons not connected with each other. The reversion is a distinct item of property and R has sold his entire interest in it; he continues to occupy the property by virtue of his leasehold interest which is a separate item of property.

HMRC go on to comment on what may constitute arm's length terms in this case:

> There will be a 'marriage' value for the two interests and a truly arm's length transaction must reflect this. In practice, this is likely to be difficult for the taxpayer to show since an independent purchaser would not normally want to pay for marriage value unless he was certain of getting the leasehold interest.

That is not right. If an independent purchaser would not want to pay anything, or anything much, for marriage value, then arm's length terms would simply reflect that. But what constitutes arm's length terms is a question of fact.

83.10.2 *Arm's length part-disposal*

Reg. 5(1) POA Regulations 2005 provide a further relief for part-disposals:

> Para 3 (land) and para 6 (chattels) do not apply to a person in relation to a disposal of part of an interest in any property if—
> (a) the disposal was by a transaction made at arm's length with a person not connected with him;
> (b) the disposal was by a transaction such as might be expected to be made at arm's length between persons not connected with each other, and
> (i) the disposal was for a consideration not in money or in the form of readily convertible assets[27], or

[27] Defined in reg.5(2).

(ii) the disposal was made before 7 March 2005.

This is wider than Para 10(1) sch 15 FA 2004 in that it provides relief from the POA land and chattel charges, not just relief where the disposal conditions apply. But it is narrower in that its requirements are more restrictive.

In particular, one might think the word "not" is included accidentally in reg.5(1)(b)(i) but it was deliberate. A written ministerial statement of Hansard 7 March 2005 provides:

> We do not in general think it is appropriate to provide exemption for sales of a part interest which are made otherwise than at arm's length. If one member of a family needs to raise cash, and another member of the family is willing and able to provide it, there are other and more straightforward ways of structuring this than adopting the form of an equity release transaction.

Very few readers will find that satisfactory. But there it is. The statement continues:

> The point was however made in consultation that some intra-family part disposals can arise from patterns of behaviour adopted for good family or business reasons, for example where a child moves in to care for an aged parent and acquires an equitable interest in their shared home as a corollary of that, or where younger members of a family take over the active role in a family partnership, and in doing so acquire an interest from the partners who preceded them.

What is notable is that the drafter seems to have assumed that these are "transactions such as might be expected to be made at arm's length between persons not connected with each other".

The IHT Manual provides:

> **IHTM44059. Sale of part share** [Jun 2016]
> Regulation 5(1)(b)(i))... may also apply where someone acquires their interest in a property by way of an equitable arrangement, rather than for cash, for example where the person has given up work to care for the owner of the property on the understanding that they will acquire a share of the property in return.

The guidance formerly published on the HMRC website was more helpful:

> If Miss B acquired her interest in the property by way of an equitable arrangement rather than for cash – for example, she had given up work to care for Mr A on the understanding that she would receive a share of

> the property in return – the income tax charge will not apply: Regulation 5
>
> In considering whether the conditions were satisfied, we would need information about how the essential elements of the transaction had been arrived at. We do recognise that there is a substantial body of case law dealing with the circumstances in which an interest in a house is acquired in consequence of a person acting to his detriment. The Ministerial Statement had these sorts of situations in mind and we would interpret Regulation 5 accordingly. In particular, we accept that the requirement that "the disposal was by a transaction such as might be expected to be made at arm's length between persons not connected with each other" would be interpreted with such cases in mind. Where the parties had sought separate advice and acted upon it or had obtained a court order confirming the property entitlement, that would reinforce the claim that the conditions were satisfied. But we would not expect parties to such an arrangement to have done this. We recognise that detriment that the acquirer can demonstrate he has suffered can provide consideration for the acquisition of the interest and prevent the transaction from being gratuitous.

It is straining credulity to describe this as a transaction that may have been expected to have been made at arm's length. But the legislation was not intended to catch this, and HMRC avoid the problem by informal concession dressed up as a statement of practice.

83.10.3 *Inter-spouse transfer*

The second category of excluded transaction is in para 10(1)(b) sch 15 FA 2004:

> Para 3 (land) and para 6 (chattels) do not apply to a person in relation to a disposal of part of an interest in any property if ...
>
> (b) the property was transferred to his spouse or civil partner (or where the transfer has been ordered by a court, to his former spouse or civil partner),

This applies whether or not the IHT spouse exemption applies on the transfer. The transfer to the spouse need not be by way of gift.

83.10.4 *Trust where spouse has IIP*

The third category of excluded transaction is in para 10(1)(c) sch 15 FA 2004:

> Para 3 (land) and para 6 (chattels) do not apply to a person in relation to

> a disposal of part of an interest in any property if ...
>
> (c) it was a disposal by way of gift (or, where the transfer is for the benefit of his former spouse or civil partner, in accordance with a court order), by virtue of which the property became settled property in which his spouse or civil partner or former spouse or civil partner is beneficially entitled to an interest in possession.[28]

This applies whether or not the IHT spouse exemption applies on the transfer. The disposal to a trust under which a spouse has an interest in possession must be by way of gift if the disposal is to be an excluded transaction. Perhaps the reason is to stop some variants of the home loan scheme, which involves a sale of a house to an interest in possession trust for consideration.

This seems to apply even after 2006, when the interest in possession may not be an estate interest.

The IHT Manual provides:

> **IHTM44032 excluded transactions: the disposal condition - transfer to spouse or civil partner** [Aug 2016]
>
> ...
>
> The spouse or civil partner must take an interest in possession from the outset, but note that this does not have to be a qualifying interest in possession under IHTA84/S49(1A). The transaction will remain an excluded transaction provided the interest in possession remains in place until the death of the spouse or civil partner. If the interest in possession ends during their lifetime, the transaction ceases to be an excluded transaction, FA04/Sch15/Para 10(3), so the POA charge will arise in the normal way from that point onwards. However, if the spouse or civil partner (or former spouse or civil partner) has become absolutely entitled to the property, you can accept that the benefit of the exclusion is not lost.

[28] This is restricted by para 10(3) sch 15 FA 2004:

> "A disposal is not an excluded transaction by virtue of sub-para (1)(c) or (2)(b), if the interest in possession of the spouse or civil partner or former spouse or civil partner has come to an end otherwise than on the death of the spouse or civil partner or former spouse or civil partner."

The former HMRC Website Guidance provided at 1.3.1:

> "In cases where the spouse or civil partner or former spouse or civil partner has become absolutely entitled to the property, we would accept that the benefit of the exclusion is not lost."

> **Example** (Paul and Susan)
> In 2005, P settles his house on qualifying interest in possession trusts for himself for life, then to his wife S with remainders to their children. Both occupy the property. In 2009, the trustees terminate P's life interest; so that S now has a non-qualifying interest in possession, but P continues to occupy the property.
> Initially there would have been no POA charge as the transaction would have been exempt from the charge (IHTM44041). On the termination of the P's life interest, S's interest in possession is **not** an excluded transaction because there is no disposal by way of gift by virtue of which the property becomes settled property in which S has a life interest. So the exclusion under FA04/Sch15/Para 10(1)(c) does not apply and as the exemption no longer applies either, a POA charge arises.
> However, as P continues to occupy the property and the termination of his qualifying life interest is deemed to be a gift by the life tenant, FA86/S102ZA IHTM14391), the exclusion under FA04/Sch15/Para 11(3) applies and no POA charge arises.

83.10.5 *Family maintenance*

The fourth category of excluded transaction is in para 10(1)(d) sch 15 FA 2004:

> Para 3 (land) and para 6 (chattels) do not apply to a person in relation to a disposal of part of an interest in any property if ...
> (d) the disposal was a disposition falling within section 11 of IHTA (dispositions for maintenance of family).

83.10.6 *Annual exemption/small gifts*

The fifth category of excluded transaction is in para 10(1)(e) sch 15 FA 2004:

> Para 3 (land) and para 6 (chattels) do not apply to a person in relation to a disposal of part of an interest in any property if ...
> (e) the disposal is an outright gift[29] to an individual and is for the purposes of IHTA a transfer of value that is wholly exempt by virtue of section 19 (annual exemption) or section 20 (small gifts).

This will include substantial gifts which qualify for 100% BPR or APR.

[29] See 83.12 ("Outright gift").

83.11 Excluded transaction: Contributions

The concept of excluded transaction matters because the contribution conditions do not apply if the consideration for the acquisition is provided "by an excluded transaction".[30]

83.11.1 *Four exclusions*

Para 10(2) sch 15 FA 2004 provides:

> For the purposes of ... (the contribution condition) the provision by a person ("the chargeable person") of consideration for another's acquisition of any property is an "excluded transaction" in relation to the chargeable person if—
>
> (a) the other person was his spouse or civil partner (or, where the transfer has been ordered by the court, his former spouse or civil partner),
>
> (b) on its acquisition the property became settled property in which his spouse or civil partner or former spouse or civil partner is beneficially entitled to an interest in possession.

These are the equivalent of the exclusions discussed above, see 83.10.3 (Inter-spouse transfer). The spouse trust exclusion here is wider than the spouse trust exclusion for the disposal condition, as the words "by way of gift" do not appear.

The last two exclusions in para 10(2) sch 15 FA 2004 are:

> (d) the provision of the consideration is a disposition falling within section 11 of IHTA (dispositions for maintenance of family), or
>
> (e) the provision of the consideration is an outright gift to an individual and is for the purposes of IHTA a transfer of value that is wholly exempt by virtue of section 19 (annual exemption) or section 20 (small gifts).

These are the equivalent of 83.10.5 (Family maintenance) and 83.10.6 (Annual exemption/small gifts).

The IHT Manual provides:

> **IHTM44035 excluded transactions: the contribution condition - transfer to spouse or civil partner** [Aug 2016]
>
> ...
>
> The spouse or civil partner must take an interest in possession from the

[30] See 83.5 (Contribution conditions).

outset, but note that this does not have to be a qualifying interest in possession under IHTA84/S49(1A). The transaction will remain an excluded transaction provided the interest in possession remains in place until the death of the spouse or civil partner. If the interest in possession ends during their lifetime, the transaction ceases to be an excluded transaction, FA04/Sch15/Para 10(3), so the POA charge will arise in the normal way from that point onwards. However, if the spouse or civil partner (or former spouse or civil partner) has become absolutely entitled to the property, you can accept that the benefit of the exclusion is not lost.

Example (Jane and Edward)

J has an interest in possession in a trust with remainders to her children. In 2003 her husband E adds £300,000 to the trust. The transfer is exempt from IHT, although it will initially be subject to the POA intangibles charge if E is a beneficiary (IHTM44009). The trustees purchase a house that J and E occupy. Since, on its acquisition, the property becomes settled property and would otherwise meet the conditions of FA04/Sch15/Para 3(3), the POA charge is excluded by FA04/Sch15/Para 10(2)(b).

If J's interest is terminated during her lifetime, then FA04/Sch15/Para 10(3) prevents the exclusion under FA04/Sch15/Para 10(2)(b) from applying, so the POA charge will arise in the normal way, unless J becomes absolutely entitled to the property, when you can accept that the benefit of the exclusion is not lost. In the event that J's interest comes to an end with her death and E continues to occupy the property, the exclusion will continue to apply.

The timing of such transactions can give rise to very complicated outcomes due to the interaction of FA86/S.102(5A)-(5C) (IHTM14318); FA86/S102ZA (IHTM14391) and changes to the treatment of interest in possession trusts from 18 March 2006 (IHTM16061). Any cases where this mix of circumstances arises should be referred to Technical for advice.

83.11.2 *Outright gift of money*

The remaining exclusion is in para 10(2)(c) sch 15 FA 2004 where:

(c) the provision of the consideration constituted an outright gift[31] of money (in sterling or any other currency) by the chargeable person to the other person and was made at least seven years before the earliest date on which the chargeable person met the condition in

[31] See 83.12 ("Outright gift").

para 3(1)(a)[32] or, as the case may be, 6(1)(a).[33]

Para (c) applies only to the contribution conditions.

The exemption only applies to gifts of money. I am unable to see the reason for that.

The IHT Manual provides:

> **IHTM44049 cash gifts and exclusion of reservation of benefit provisions** [Aug 2016]
> **Example** (Andrew)
> A gives his daughter £150,000 in 2006.
> In 2008, they decide to buy a property together worth £300,000.

For the HMRC analysis, see 83.19.3 (Tracing rules). HMRC add:

> If the daughter had purchased the property in her own name and A had given his daughter the money before 6 April 1998, or if he had not moved into the property within 7 years of the gift being made, the exclusion for outright gifts of money (IHTM44036) will apply.

83.12 "Outright gift"

The expression "outright gift" is used in three of the ten categories of excluded transaction:

(1) Outright gifts to individuals within s.19 (annual exemption) or s.20 (small gifts) are excluded transactions for the disposal and contribution conditions.[34]

(2) Outright gifts of money (whether or not to an individual) are excluded for the disposal condition.[35]

"Outright gift" is not defined.[36] Clearly a loan and a subscription for shares is not an outright gift. It is suggested that a gift to a trust from which the settlor is excluded is in principle an outright gift.

It is tentatively suggested that a gift to an irrevocable discretionary trust of which the donor is merely a discretionary beneficiary is an outright gift. It must be envisaged that the donor occupies the land given or the

[32] ie, T occupies the relevant land.

[33] ie, T has possession of the chattels.

[34] See 83.10.6 (Annual exemption/small gifts); 83.11.1 (Four exclusions).

[35] See 83.11.2 (Outright gift of money).

[36] The term "outright gift" is partially defined in s.626 ITTOIA; see 93.14 (Marriage of dom/non-dom or resident/non-resident: IT planning), but that definition does not apply here.

exclusion will not apply.

83.13 POA exemptions

Para 11 sch 15 FA 2004 provides a set of exemptions from the POA charges which (in my terminology) are as follows:

(1) Estate exemptions
(2) GWR exemptions
(3) Para 11(5)(b) sch 15 FA 2004 exemptions (charities and other specialist areas) not discussed here
(4) Para 11(5)(c) sch 15 FA 2004 exemption (jointly occupied property) not discussed here
(5) Full consideration exemption

83.14 "Relevant property"

A key concept in the POA exemptions is "relevant property" defined in para 11(9) sch 15 FA 2004. The expression has three possible meanings.

In relation to the POA land and chattel charges, "relevant property" means:

> (i) where the disposal condition ... is met, the property disposed of,
> (ii) where the contribution condition ... is met, the property representing the consideration directly or indirectly provided.

In a contribution condition case, the relevant property is the property representing the consideration directly or indirectly provided. Since "provided" is a difficult concept,[37] this is also difficult.

If T gives money to A, who uses it to buy a house, the house represents the consideration provided.

What if T subscribes for shares in A Ltd which purchases the house. Is it the shares or the house which represent the property provided? It is suggested that the relevant property is the house, but the shares may be derived property.[38]

What if T lends money to A interest-free, who purchases a house? Is it the house or the benefit of the loan which represents the consideration provided? In this case HMRC accept that T does not provide the consideration so the contribution condition is not satisfied; but if it mattered, it is suggested that the relevant property is the house and the

[37] See 83.6 ("Provide").

[38] See 83.16.1 (Derived property: Shares).

loan may be derived property.

In relation to the POA intangible property charge, "relevant property" has the meaning given in para 8 sch 15 FA 2004 (in short, the settled property).[39]

83.15 Estate exemptions

83.15.1 *Full estate exemption*

Para 11(1) sch 15 FA 2004 provides that the POA charges:

> do not apply to a person at a time when his estate for the purposes of IHTA includes—
> (a) the relevant property, or
> (b) other property—
> (i) which derives its value from the relevant property, and
> (ii) whose value, so far as attributable to the relevant property, is not substantially less than the value of the relevant property.

I refer to this as the "**estate exemption**" (or "**full** estate exemption" if necessary to distinguish it from the partial exemption discussed below).

If T transfers funds to a trust under which T has an estate interest in possession, the estate exemption will apply. Transfers after 2006 will not normally give rise to an estate IIP, so the exemption is of less importance to post-2006 trusts.

The IHT Manual provides:

> **IHTM44042 examples where relevant property remains part of the Inheritance Tax estate** [Aug 2016]
> **Example** (Brian and Julie)
> In 2005, B transfers his house to an interest in possession trust with a life interest for himself and then for his wife, J, with remainders to his children. B continues to occupy the house.
> The disposal condition (IHTM44004) is met and none of the exclusions (IHTM44030) apply.
> The property continues to form part of B's estate under IHTA84/S5(1) and so is exempt from the POA charge under FA04/Sch15/Para11(1) whilst his interest in possession exists.
> Note that exemption still applies even though on B's death, the property is exempt from Inheritance Tax as the life interest passes to J. However,

[39] See 83.8 (POA intangible property charge).

should the trustees bring B's life interest to an end during his lifetime, the charge under FA04/Sch15/Para3(2) will apply unless B ceases to occupy the property, another exemption applies or he becomes absolutely entitled to the property.

If the trustees brought B's life interest to an end after 22 March 2006, he will be treated as making a PET under IHTA84/S52(1); but - assuming he continues to occupy the property - he will also be treated as reserving a benefit (IHTM14391) in the property in which his life interest ceased by virtue of FA86/S102ZA(2). Because B is treated as reserving a benefit in the property, he continues to be exempt from the POA charge, but under a different exemption (IHTM44044).

Example

If, in the example above, B had made the transfer in 2009, the position would have been quite different, as outlined below.

The transfer into the trust is an immediately chargeable transfer (IHTM04067) and tax would be payable at 20% if the value transferred exceeded the nil-rate band. The trust will also be subject to the normal relevant property trust charges (IHTM42070). B's interest in possession is not part of his estate, so the exemption under FA04/Sch15/Para11(1) (IHTM44041) does not apply. The POA charge will therefore apply, unless B reserves a benefit in the property when a different exemption will apply.

B has made a gift of land to the trust, so the provisions of FA86/S102A (IHTM14360) must be considered. If B has retained a significant right or interest that entitles him to occupy the land, he will be treated as reserving a benefit in the property, FA86/S102A(2). Although the property does not form part of B's estate for Inheritance Tax purposes, his interest under the trust does entitle him to occupy the property and so he will be exempt from the POA charge under FA04/Sch15/Para11(5) (IHTM44044).

83.15.2 *Partial estate exemption*

Para 11(2) sch 15 FA 2004 provides:

Where the estate for the purposes of IHTA of a person to whom para 3, 6 or 8 applies includes property—

(a) which derives its value from the relevant property, and

(b) whose value, so far as attributable to the relevant property, is substantially less than the value of the relevant property,

the appropriate rental value in para 4, the appropriate amount in para 7 or the chargeable amount in para 9 (as the case may be) is to be reduced by such proportion as is reasonable to take account of the inclusion of the property in his estate.

I refer to this as the "**partial estate exemption**".

The concluding words "such proportion as is reasonable to take into account of the inclusion of the property in his estate" are somewhat incoherent. One can speak of "a proportion of a property", but not "a proportion of an inclusion". Presumably it means: "such proportion as is reasonable to take into account of the property which is included in his estate".

83.16 Derived property

In the following discussion:

(1) "**Fully-derived property**" is property falling within para 11(1)(b) sch 15 FA 2004.[40] That is property:

- (i) which derives its value from the relevant property, and
- (ii) whose value, so far as attributable to the relevant property, is not substantially less than the value of the relevant property.

(2) "**Partly-derived property**" is property falling within para 11(2) sch 15 FA 2004. That is property:

- (a) which derives its value from the relevant property, and
- (b) whose value, so far as attributable to the relevant property, is substantially less than the value of the relevant property.

Thus there are three steps to decide whether property is "derived property":

(1) Is its value derived from the relevant property (the house)? If so:
(2) Ascertain how far its value is attributable to the house.
(3) Is that value (the value attributable to the house) "substantially[41] less" than the value of the house?

83.16.1 *Derived property: Shares*

Suppose T subscribes for shares in a company which buys a house and has

[40] In para 11 sch 15 FA 2004 this is simply called "derived property".

[41] "Substantially" is, obviously, not a precise word. The IHT Manual provides:

> **"IHTM44043. Property in a person's estate that derives its value from the relevant property** [Aug 2016]
>
> ... You should normally regard the value of the derivative property as being 'substantially less' than that of the relevant property where the difference in value is more than 20%. Any case where you consider the exemption should apply (or not apply) in full and there is a reduction of more (or less) than 20% should be referred to Technical."

no other assets. The shares are fully-derived property since:
(1) the shares derive their value from the house (the relevant property); and
(2) the value of the shares is attributable to the house; and
(3) that value is not substantially less than the value of the house.

Suppose the company owns a house and other assets. The context shows that the shares are still to be regarded as fully-derived property since:
(1) they derive their value from the house;
(2) their value is to some extent attributable to the house;
(3) their value to that extent is not substantially less than the value of the house.

One might question whether it is the case that the shares derive their value from the house. They derive their value in part from the house and in part from other assets. However, the context shows that that satisfies the condition of para 11(1)(b)(i) sch 15 FA 2004. Otherwise the condition in para 11(1)(b)(ii) sch 15 FA 2004 is never satisfied.

Suppose the company owns only the house and is subject to a substantial liability. The shares are not fully-derived property as their value is substantially less than the house. The shares are partly-derived property.

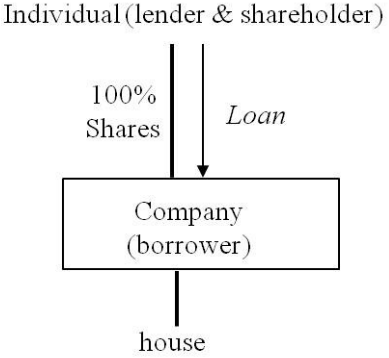
Suppose the company owns the house and other assets, and is subject to a debt. It is suggested that the shares are fully-derived property so long as the amount of the debt is less than the value of the other assets.

The estate exemption applies so long as T retains the shares in T's estate. If T gifts half the shares to T's spouse the estate exemption ceases to apply and POA land charge is due (but with some relief under the partial estate exemption). HMRC agree. The IHT Manual provides:

> **IHTM44043 - Property in a person's estate that derives its value from the relevant property** [Aug 2016]
>
> *Example (Bruce)*
>
> B transfers his house to a company wholly owned by him. The value of the shares in the company which are included in B's estate is fully derived from the value of the house and so the exemption in FA04/Sch15/Para 11(1) applies.
>
> But if B gave the house to a company which was owned 25% by his civil partner then the value of the 75% shares he holds would be 'substantially less' than the value of the house, so although the POA charge would apply, the appropriate rental value should be reduced by a reasonable proportion, perhaps 75%, to reflect the value of the shares in B's estate.

83.16.2 *Derived property: Loan*

Suppose T lends interest-free to a company which purchases the house and has no other assets.



Initially the loan is fully-derived property as the shares have no value. The loan derives its value from the house because, if the loan is called in, it could only be paid by the company:

(1) selling the house and using the proceeds of sale, or
(2) borrowing on the strength of the house (in the sense that no lender would lend if the company did not hold the house) and repaying out of that loan.

Can HMRC argue that:

(1) the loan derives its value from the contractual undertaking that obliges the company to repay; and so
(2) the loan does not derive its value from the underlying property (the house).

Point (1) is correct but point (2) does not follow and is not correct. It is the existence of the house which gives value to the contractual obligation to repay.

If the value of the house increases substantially, the shares and loan (taken together) are fully-derived property and taken separately they are partly-derived property.

Unfortunately HMRC may disagree. CIOT Statement provides:

> 6.3 Clarification is requested on the position where a house is owned by a company but the company is funded by way of loan. The concern is over paras 11(1)(b) and 11(3)(b).

> **Example 9**
>
> [1] B owns 100 £1 shares in X Limited and otherwise funds it by shareholder loan.
>
> [2] (Or the house is owned by a company held within an interest in possession trust for B and again the funding for the purchase comes by way of loan from trustees to company.)
>
> X Limited buys the house in which B lives. B *prima facie* falls within the para 3 charge.

In fact HMRC accept that case [1] does not fall within the POA land charge because the interest-free loan is not providing consideration.[42] CIOT Statement continues:

> It would appear that para 11(1) protects him. The shares are not themselves property which derive much value from the house because they are worth substantially less than the house (see para 11(1)(b)(ii)) but the shares and the loan together are comprised in B's estate and between them indirectly derive their value from the house. On that basis para 11(1) does offer full protection.
>
> **Question 33**
>
> Do HMRC agree with this analysis or do they consider that the loan derives its value from the contractual undertakings that oblige the borrowing company to repay?
>
> It would be odd if there is a POA problem when the company is funded by way of loan but not if it is funded by way of share capital.
>
> *HMRC*
>
> In our view, the loan, albeit an asset of B's estate, is not property that derives its value from the relevant property. However, our response to Q32 above[43] would no doubt be applicable here in appropriate circumstances.

This is plainly wrong and I would be surprised if HMRC try to defend it if challenged.[44] It is also inconsistent with GAAR guidance.[45] But in the context of the IHT residential-property code it may suit the taxpayer to argue that this view is correct.[46]

[42] See 83.6 ("Provide").

[43] See 83.6 ("Provide").

[44] But one could avoid the issue by avoiding loans, eg subscribe for redeemable shares, which are commercially equivalent to loans.

[45] See 80.44 (GAAR: Debt against UK residence).

[46] See 82.3.4 (Company owns relevant loan).

The position is more complicated if T lends to a company which purchases the house and has other assets. Suppose, for example, the company's assets and liabilities consist of a house worth £1m, investments of £1m, and a debt of £1m. It is still plainly the case that the benefit of the debt and the shares taken together are fully-derived property. It is suggested that if the debt is charged on the house it derives its value from the house, and if it is not charged then it does not do so (but the shares do derive their value from the house).

What if T lends to a trust which purchases a house? If the loan is on limited recourse terms[47] the loan is fully-derived property. It is suggested that the same applies even if the trustees are personally liable for the loan.

83.16.3 *Equitable interest*

If T transfers property to a trust for A for life, remainder to T, T has a reversionary interest which is derived property. The interest is part of T's estate so the full (or partial) estate exemptions apply (depending on whether the value of the reversionary interest is equal to 80% or more of the value of the trust fund).

If T transfers property to a trust for T for life, remainder to A, T's life interest is derived property but it does not form part of T's estate (after 2006) so the estate exemption does not apply.

83.17 Excluded liability rule

Para 11(6) sch 15 FA 2004 provides a restriction on the estate exemptions:

> Where at any time the value of a person's estate for the purposes of IHTA is reduced by an excluded liability affecting any property...

I call this the "**excluded liability rule**". The effect of the rule if it applies is:

> ... that property is not to be treated for the purposes of sub-para (1) or (2) as comprised in his estate except to the extent that the value of the property exceeds the amount of the excluded liability.

The excluded liability rule disallows the estate and partial estate exemptions. It does not disallow the GWR exemption even if the debt reduces the GWR charge.[48]

[47] ie the trustees' liability to repay is restricted to the trust assets or their value.

[48] See 80.6 (GWR property subject to debt).

83.17.1 *"Excluded liability"*

The term "excluded liability" is defined in para 11(7) sch 15 FA 2004:

> For the purposes of sub-para (6) a liability is an excluded liability if—
> (a) the creation of the liability, and
> (b) any transaction
> [i] by virtue of which the person's estate came to include
> [A] the relevant property or
> [B] property which derives its value from the relevant property or
> [ii] by virtue of which the value of property in his estate came to be derived from the relevant property,
> were associated operations, as defined by section 268 of IHTA.[49]

This is odd. The liability within (a) must relate to the acquisition of the property within (b). It appears at first sight that every liability is an excluded liability. It is suggested that a liability is an excluded liability only if the creation of the liability and the acquisition of the property form part of a single scheme or arrangement.[50]

83.17.2 *"Affecting" property*

The rule only applies to a liability which "affects" property. It is suggested that a liability of an individual or company does not affect property of the individual or company unless secured on that property. A liability of a company does not affect the shares of the company (even if it may reduce their value). A liability of a trust does affect the trust property since the trustees have a lien over the trust fund to meet the liability.

83.18 Estate "reduced" by liability

The excluded liability rule only applies if the value of a person's estate is "reduced" by the liability. In what circumstances does a liability reduce the value of an estate? Plainly it does not do so if it is disallowed for IHT.[51]

83.18.1 *Trustees borrow from trust co*

Suppose:

[49] See 74.12 ("Associated operation").
[50] See *Reynaud v IRC* [1999] STC (SCD) 185.
[51] See 80.9 (Disallowed debts: Introduction).

(1) T is the life tenant of an estate IIP trust.
(2) The trustees borrow from a company held by the trust and purchase land occupied by T.

It is considered that the debt does not reduce the life tenant's estate since the benefit of the debt increases the value of the company's shares: the two cancel each other out. So the debt is not an excluded liability. (In addition, if T is the settlor, the GWR exemption will usually apply.)

83.18.2 *Bank borrowing*

Suppose:
(1) T is the life tenant of an estate IIP trust.
(2) The trustees borrow from a bank or third party, and purchase land occupied by T.

It is considered that T's estate is not "reduced" by the liability, since T's estate is not reduced by the transaction: the liability is matched by the receipt of the borrowed money.[52]

Otherwise the excluded liability rule would apply whenever anyone borrows on the security of T's house, which would be absurd.

CIOT Statement provides:

> 2.5 A common scenario (both for foreign and UK domiciliaries) is where cash is settled into an interest in possession trust for the donor life tenant. The trustees then buy a house for the donor to live in using the gifted cash plus third party barrowings. Although not a home loan scheme, the legislation appears to affect such arrangements.
> **Example 4**
> E settles cash of £200,000 into an interest in possession trust for himself in 2003. The trustees purchase a property worth £500,000, borrowing £300,000 from a bank. There are other assets in the trust which can fund the interest but the borrowing is secured on the house which E then occupies.
> In these circumstances, one would not expect a POA charge. There is no inheritance tax scheme since the property is part of E's estate and the borrowing is not internal. One would argue that E's estate still includes the house and therefore protection is available under para 11(1). The difficulty is that on one view the loan is an excluded liability within para

[52] Admittedly s.162(5) IHTA applies and uses the word "reduced" in connection with the same liability. But the question is not whether the value of an *asset* is reduced, but whether the value of the *estate* is reduced.

> 11(7) reducing E's estate, albeit it is a loan on commercial terms with a bank.
>
> We would argue that the relevant property for the purposes of para 11 is simply the value of the property net of the commercial borrowing. As this is part of E's estate there is no POA charge.
>
> **Question 13**
>
> Is the above analysis correct?
>
> **HMRC**
>
> We agree with your analysis in para 2.5.

It is correct that one would not expect a POA charge, as there is no IHT saving. However, what is the correct analysis of the provisions in this situation? It is wrong to say that the *property* for the purposes of para 11 sch 15 FA 2004 is its *value* net of the liability, because that confuses two different things: property and the value of property. It is also wrong to say that the asset for the purposes of para 11 sch 15 FA 2004 is the asset net of the liability; if one said that, the legislation would not work at all. The solution is to say that the liability does not reduce the estate of the individual, E, because E's estate is increased by the proceeds of the loan (as well as being reduced by the liability; the two cancel each other out). So the loan is not an excluded liability.

83.18.3 *Co borrows from individual*

Suppose:

(1) T lends to a company (owned by T).

(2) The company purchases a property occupied by T.

The liability is an excluded liability as defined, but so long as T retains the benefit of the debt the excluded liability rule does not apply because the debt does not reduce T's estate. What if T gives away the debt? The excluded liability rule does not apply unless the debt is secured because the debt does not affect the property.

83.18.4 *Home loan schemes*

The excluded liability rule was intended to catch home loan schemes. Suppose:

(1) T sells T's home to a trust under which T has an interest in possession in return for a debt.

At this point the excluded liability rule does not apply. The liability is an excluded liability as defined.[53] However, the benefit of the debt is in T's estate. It is considered that the value of T's estate is not "reduced" by the liability.

(2) T gives the benefit of the debt to T's children or to a trust for their benefit.

Is the value of T's estate is now reduced by the liability? One can argue that it is reduced by the gift of the debt, not by the liability. But a purposive construction suggests that this cannot be right.

The provision works as intended.

The IHT Manual provides:

> **IHTM44051 relevant property remains part of the Inheritance Tax estate: excluded liabilities** [Aug 2016]
>
> ...
>
> **Example** (Duncan)
>
> D sets up a home loan scheme in 2004 where the property is sold to the trust for £500,000. In April 2005, the property is worth £650,000 and the amount of the loan, together with interest accrued at the same date is £550,000. Exemption under FA04/Sch15/Para11(5)(a) applies to the excess of £100,000 and the proportion of the annual rental value that is referable to £550,000 is subject to the POA charge. If the annual rental value was £20,000, the POA charge is 20,000 × (550,000 ÷ 650,000) = £16,923
>
> At the next revaluation date (IHTM44011), the loan should be quantified at that time, taking into account the interest/indexation that has accrued to that date and adding it to the amount of the loan. In the event that part of the loan has been repaid (this is unlikely with a home loan scheme), the reduced amount of the loan - plus accrued interest/indexation - may be taken into account when it occurs and the POA liability recalculated for the tax year in question and subsequently.
>
> It is possible that the property concerned may be sold, some of the proceeds reinvested in a smaller replacement property and the balance retained in the trust as intangibles. This then raises the question of how the loan, which is a general debt of the trust, should be treated. For the sake of simplicity, you should apportion the amount of the loan, at the date the trust assets change, between the two categories of asset and then work out the POA charges in the normal way - although it may now be

[53] The transaction by which the person's estate included the house was its purchase not the sale to the trust. The creation of the liability is an associated operation because it affects the same property even if the purchase was many years earlier.

the case, with a smaller property and smaller annual rental that the amount of the POA charge is below the de minimis limit (IHTM44056).

83.19 GWR exemptions

83.19.1 *Full GWR exemption*

Para 11(3) sch 15 FA 2004 provides:

> Paras 3, 6 and 8 do not apply to a person at a time when—
> (a) the relevant property, or
> (b) any other property—
> (i) which derives its value from the relevant property, and
> (ii) whose value, so far as attributable to the relevant property, is not substantially less than the value of the relevant property,
>
> falls within sub-para (5) in relation to him.
>
> ...

There are four circumstances, or sets of circumstances, where property falls within sub-para (5). The first, and most important, is GWR property. Para 11(5) sch 15 FA 2004 provides:

> Property falls within this sub-paragraph in relation to a person at a time when it—
> (a) would fall to be treated by virtue of any provision of Part 5 of the 1986 Act (inheritance tax) as property which in relation to him is property subject to a reservation

In short, the POA charges do not apply to property subject to a reservation. ("**GWR property**"). I refer to this as the "**full GWR exemption**".

Thus in this context it is in the taxpayer's interest to argue that property *is* GWR property, and HMRC's interest is to argue that it is not! The question of whether property is GWR property (subject to a reservation) is considered at 78.4 (GWR terminology).

Note that property may be GWR property even though it is excluded property. Suppose:

(1) T transfers funds to a discretionary trust under which T is a beneficiary (a GWR).[54]

(2) The trustees lend the funds to a company which purchases a house occupied by T.

[54] The position is the same for a non-estate IIP trust, if T is the object of a power of appointment (so there is a GWR).

The shares and the benefit of the loan are derived property, and are subject to a reservation. This is so even if they are excluded property. So the GWR exemption applies.

A complication arises if T becomes UK domiciled: see 83.25 (Former non-dom).

The other sub-para (5) cases arise where property would be GWR property but for one of nine sets of exemptions. Para 11(5) sch 15 FA 2004 provides:

> Property falls within this sub-paragraph in relation to a person at a time when it ...
>
> (b) would fall to be so treated but for any of paras (d) to (i) of subsection (5) of section 102 of the 1986 Act (certain cases where disposal by way of gift is an exempt transfer for purposes of inheritance tax),
>
> (c) would fall to be so treated but for subsection (4) of section 102B of the 1986 Act (gifts with reservation: share of interest in land), or would have fallen to be so treated but for that subsection if the disposal by way of gift of an undivided share of an interest in land had been made on or after 9 March 1999, or
>
> (d) would fall to be so treated but for section 102C(3) of, and para 6 of Schedule 20 to, the 1986 Act (exclusion of benefit).

83.19.2 *Partial GWR exemption*

Para 11(4) sch 15 FA 2004 provides:

> Where any property which falls within sub-para (5) in relation to a person includes property—
>
> (a) which derives its value from the relevant property, and
>
> (b) whose value, so far as attributable to the relevant property, is substantially less than the value of the relevant property,
>
> the appropriate rental value in para 4, the appropriate amount in para 7 or the chargeable amount in para 9 (as the case may be) is to be reduced by such proportion as is reasonable to take account of that fact.

I refer to this as the "**partial GWR exemption**". It is the equivalent of the partial estate exemption discussed above (except that the words at the end of the subsection are grammatical).

83.19.3 *Tracing rules*

For this purpose para 11(8) sch 15 FA 2004 tinkers with the GWR tracing rules:

> In determining whether any property falls within sub-para (5)(b), (c) or (d) in a case where the contribution condition in para 3(3) or 6(3) is met, para 2(2)(b) of Schedule 20 [FA 1986] (exclusion of gifts of money) is to be disregarded.

This extends the GWR tracing rules[55] and so extends the scope of the POA GWR exemption.

The IHT Manual provides:

> **IHTM44049 cash gifts and exclusion of reservation of benefit provisions** [Aug 2016]
> **Example** (Andrew)
> A gives his daughter £150,000 in 2006.
> In 2008, they decide to buy a property together worth £300,000.

The HMRC analysis is as follows:

> The contribution condition (IHTM44005) will be met[56] and A has not made a gift with reservation as the gift was of cash.
> A has not made a gift of an undivided share of land, so the exemption at IHTM44047 does not apply.
> So on the face of it, A is subject to the POA charge.
> However, the effect of FA04/Sch15/Para 11(8) is to allow the normal tracing rules that apply to substitutions for the reservation of benefit provisions to apply. Therefore the property the donee acquired with cash is treated as being comprised in the original gift. So, as the original gift is treated as a gift of an undivided share of land, the exemption from the POA charge for such gifts (IHTM44047) does apply.
> One consequence of this will be that if the donee ceases to occupy the property, the exemption from the POA charge will cease.
> If the daughter had purchased the property in her own name and A had given his daughter the money before 6 April 1998, or if he had not moved into the property within 7 years of the gift being made, the exclusion for outright gifts of money (IHTM44036) will apply.

83.20 Reverter to settlor restriction

83.20.1 *Purpose of rule*

Para 11(11)(12) sch 15 FA 2004 set out a restriction to the estate and

[55] See 78.21 (Substitution of gifted property).

[56] It is assumed that the daughter used the £150k to purchase the property.

GWR exemptions which I call the “**reverter to settlor restriction**”. It is helpful first to explain the problem which the reverter to settlor restriction is intended to address.

EN FB 2006 explains:

> 17. [The POA] income tax charge was designed to discourage disposals done in a contrived way to avoid IHT. The income tax charge does not therefore apply
> [a] when the original owner has the property back in their estate for IHT purposes (para 11(1) Schedule 15 – for example, because it has been given back to them), or
> [b] when it is treated as back in their estate (para 11(5) – for example, because the original transaction is caught by the IHT “gift with reservation” rules).

This explanation of the estate exemption is correct.

The explanation of the GWR exemption is in essence correct, though strictly speaking, GWR property is not in the individual’s estate; it is however taxed as though it is. I stress this point as it will be relevant in the discussion below. The EN continues:

> 18. There is a mismatch between this relief and an existing IHT exemption for the settled property in “reverter-to-settlor” trusts. The property in such a trust is treated as part of the trust beneficiary’s [ie life tenant’s] estate for IHT purposes, but it is not actually charged when their interest ends.
> 19. In particular, section 54(1) IHTA provides that, when a person who is beneficially entitled to an interest in possession in settled property dies while the settlor is still living, and the property reverts to the settlor, its value is left out of account in determining the value of the person’s estate. [The EN summarises ss.53 and 54 IHTA and continues:]
> 20. This can be used to side-step both IHT and the pre-owned asset income tax charge. For example:
> - B owns an asset, say a house, which he wants to carry on using. B gives it to S, who would otherwise inherit on B’s death;
> - S then settles an interest in possession in the house back on B for life, with the condition that it reverts to S on B’s death [ie S settles the property on B for life with remainder to S];[57]
> - for IHT purposes, B is therefore treated as owning the house by virtue of section 49 IHTA and so para 11(1) Schedule 15 disapplies the “pre-

[57] Author’s footnote: This is not generally possible after 2006.

owned asset" charge;

- however, although the house is part of B's estate for IHT purposes, there is no IHT charge on B's death by virtue of the exemption in section 54(1) IHTA.

Avoidance of this kind was in fact quite common between 2004 and 2006, and clearly something had to be done.

> 21. This clause is aimed at blocking such avoidance by ensuring that the income tax exemption [POA estate and GWR exemptions] does not apply where the property in question (or any derived property) is back in the chargeable person's estate for IHT purposes by virtue of their being beneficially entitled to an interest in possession in it.
> 22. However, the clause also provides that, if the chargeable person does not wish to be subject to the income tax charge, they can elect (like other former owners otherwise liable to the "pre-owned asset" charge) that the property should fall back into their estate for IHT purposes. Thus the clause ensures an effective IHT charge in these circumstances by providing that the [reverter to settlor] exemptions in sections 53(3), 53(4) and 54 IHTA will not apply.

83.20.2 *Reverter to settlor restriction*

Para 11(11) sch 15 FA 2004 sets out the circumstances in which the reverter to settlor restriction applies:

> Sub-para (12) applies where at any time—
> [i] (a) the relevant property has ceased to be comprised in a person's estate ... , or
> (b) he has directly or indirectly provided any consideration for the acquisition of the relevant property,
>
> and
>
> [ii] at any subsequent time the relevant property or any derived[58] property is comprised in his estate ... as a result of section 49(1) IHTA.

In these circumstances, para 11(12) sch 15 FA 2004 disapplies the estate exemptions and the GWR exemptions:

> Where this sub-paragraph applies, the relevant property and any derived property—
> (a) are not to be treated for the purposes of sub-paras (1) and (2) as

[58] Para 11(13) sch 15 FA 2004 defines "derived property" in terms which repeat the wording of para 11(1)(b) sch 15 FA 2004 verbatim.

comprised in his estate at that subsequent time, and

(b) are not to be treated as falling within sub-para (5) in relation to him at that subsequent time.

83.20.3 *IIP trust for settlor from outset*

The condition in para 11[i](b) is a paraphrase of the contribution condition. At first sight, wherever the contribution condition applies, the estate exemption is disapplied. For instance, suppose:

(1) T transfers cash to an estate IIP trust; and
(2) the trustees acquire a UK residence.

The condition in para 11(12)[i](b) is met. At first sight the condition in para 11(12)[ii]) is also met: one might think that at *any subsequent time ... derived property is comprised in his estate ... as a result of section 49(1) IHTA*. So the reverter to settlor restriction applies (even though the reverter to settlor exemption does not apply). So it appears that the POA charge applies. But HMRC do not agree. They say that the condition in para 11(12)[ii] is not met. Published correspondence between STEP and HMRC provides:

> **STEP letter**
> Are the following cases caught by POAT ...
> 1. In 1987, A sets up an interest in possession trust for himself into which he gifts his house. If the house is still held by the trustees now there is no POAT charge because nothing has left his estate.

More accurately, there is no POAT charge as the conditions of para 11(11) are not satisfied.

> However assume that the house has since been sold but he retains an interest in possession. The trust holds a mixture of investments and another house that A occupies. Is para 11(11)(b) satisfied on the basis that A has provided consideration for the acquisition of the land which land has subsequently become comprised in his estate. ...
> 3. In June 2006, C, a disabled person, sets up a trust for himself that qualifies as a disabled person's interest within s89B IHTA. C puts in cash and the trustees invest in equities or a house that C occupies. C will pay POAT. ...

These two examples raise the same point: they are both estate IIP trusts (though after 2006 a trust of that kind can only be made for a disabled beneficiary). But HMRC say that the reverter to settlor restriction does not apply, as the condition in para 11(11)[ii] is not met. That provides:

> [ii] at any subsequent time the relevant property or any derived property is comprised in his estate ... as a result of section 49(1) IHTA.

The HMRC response is as follows:

> As I understand your concern, it is that the new para 11(11)(b) in Schedule 15 FA 2004 will catch someone who has settled, say, cash on interest in possession trusts for themselves (either before 22 March 2006, or afterwards if it is a "disabled person's interest") and subsequently occupies property bought by the trustees; or where the property they settled initially has been sold and replaced by other property, while the settlor has retained their interest in possession.
> ... In our view, the words "at any subsequent time" should be read as meaning that a POA charge will arise where
> [1] the consideration leaves the donor's estate, as a result of which that estate is reduced, and
> [2] later property acquired with such consideration becomes comprised in it again because of their interest in possession. This is consistent with the reasons for Schedule 15.
> We do not, therefore, consider that there will be a charge in the scenarios numbered 1 and 3 in your letters, because the assets transferred into trust and any derived assets have always been in the settlor's estate for IHT purposes. We believe that also applies if, in your second scenario,[59] B set up an interest in possession trust from the outset before Budget Day [2006]. The taxpayer should self-assess on the basis that no POAT is due and there is therefore no need to put anything about POAT on the tax return or for him to make the election where the settlor has retained an interest in possession throughout and settled the cash or property directly into trust himself (rather than through any other funding vehicle such as another trust). This is because no POAT charge arises under s80 FA 2006 [which inserted para 11(11) - (13) Sch 15 FA 2004].
> In summary we do not consider that s.80 FA 2006 has any implications for:
>
> - a settlement of cash on interest in possession trusts for onself made before 22 March 2006, or made by a disabled person on or after that date, after which the trustees purchase a property in which the settlor resides; or
> - the settlement of a house in the same way, which is subsequently sold by the trustees and replaced by other investments or another property.

[59] See 83.20.4 (Trust becomes settlor - IIP).

> That remains our view, on the basis that the words "at any subsequent time" mean that new para 11(11)(b) Schedule 15 FA 2004 will only be relevant where:
>
> - the consideration in question leaves the donor's estate, as a result of which that estate is reduced; and
> - later, property acquired with such consideration becomes comprised in the estate once more by virtue of an interest in possession.
>
> We do not agree that this interpretation makes para 11(11)(a) redundant,[60] since that relates to cases where the disposal condition is met and para 11(11)(b) to cases where the contribution condition is met.

This is a purposive construction, but taxpayers will not object.

83.20.4 *Trust becomes settlor - IIP*

The STEP letter sets out one other example:

> Are the following cases caught by POAT ...
>
> 2. B is a foreign domiciliary who before 22 March 2006 set up a discretionary trust into which he transferred cash. He remains a beneficiary of the trust. The trust then funds a company which buys a house or possibly holds UK investments (and B will pay income tax under [s720 ITA] in respect of any UK income). The trust was before 22 March 2006 converted into an interest in possession trust. If there are any UK intangibles or UK property occupied by A which are held by the trustees within the interest in possession structure he is now subject to POAT. Even if one reads "subsequent time" to mean some time must elapse between the date when the gift is made and the date the property comes back into B's estate this would still not protect B in this example because the trust was originally discretionary.

[60] This paragraph addresses a point made in the STEP letter in these words: "The potential difficulty with paras 11(11) and 11(12) is that they do not distinguish between reverter to settlor trusts and any trust set up between March 1986 and 22 March 2006 where the settlor has a qualifying interest in possession and would in that event be subject to inheritance tax on his death.
These difficulties arise because paras 11(11) and 11(12) catch not only those transactions where land has been given away and ceased to be comprised in the settlor's estate and then comes back into his estate (condition a above). They also catch transactions where a settlor contributed funds or property to a trust and the trust (or an underlying company) has then used those funds or property representing them to buy the relevant property i.e. the land now occupied (condition b above). There is nothing in the words about "any subsequent time" which suggests that under (b) the property had first to cease to be comprised in his estate before being caught by this provision. Indeed if that was the case the words in (a) would be redundant."

HMRC comment on this:

> We accept that a POA charge may arise where someone set up a discretionary trust that has subsequently been converted into an interest in possession trust for the benefit of the settlor. (Scenario 2 in your example). However, it remains possible in those circumstances to elect out of the charge. So, take the following example:[61]
>
> - H settles a property on discretionary trusts before 22 March 2006;
> - also before that date, the trust is converted into an interest in possession trust for H's benefit, with remainder to his wife, W;
> - A POA charge therefore arises because of s.80 FA 2006 but H elects.
>
> As we see it, the effects of the election are:
>
> - the chargeable proportion of the property will be treated as subject to a reservation, but only so far as H is not beneficially entitled to an interest in possession in the property (*para 21(2)(b)(i), Schedule 15 FA 2004*) – i.e. not at all;
> - section 102(3) and (4) FA 1986 will apply, but only so far as H is not beneficially entitled to an interest in possession in the property (*para 21(2)(b)(ii)*) – i.e. not at all; and
> - the reverter-to-settlor exemptions in s.53(3) and (4) and s.54 IHTA will not apply to the actual interest in possession (*para 21(2)(b)(iii)*).
>
> We do not, therefore, consider that the election affects the availability of spouse exemption on H's interest in possession on his death – or on its termination during his lifetime. That is because, as we have just noted, the election will not cause s.102(3) and (4) FA 86 to apply because of H's interest in possession, so there will be no deemed PET.

It is absurd to expect taxpayers to make an election in this case. It is considered that the condition in para 11(12)[ii] is not satisfied, just as it is not satisfied in STEP examples 1 and 3. The property is in the estate of the settlor as soon as the settlement was made. (The settlor did not have an interest in possession, but it is property subject to a reservation, and one may (loosely) regard such property as being in the estate of an individual. That was the view of the drafter of the provisions.[62]) The statutory words *at any subsequent time the relevant property or any derived property is comprised in his estate* require that the property becomes comprised in the individual's estate by means of a disposition other than the original transfer to the trust by the individual.

[61] Author's footnote: The HMRC reply simplifies the facts of STEP example 2 by omitting the company: that allows HMRC to ignore various additional complications.

[62] See 83.20.1 (Purpose of rule).

In short, the reverter to settlor restriction can and should be construed purposively, so it only applies in cases where the reverter to settlor restriction is actually in point, because that, unquestionably, was the intention when it was enacted.

The IHT Manual provides:

> **IHTM44050 relevant property remains part of the Inheritance Tax estate: restriction for subsequent ownership** [Aug 2016]
>
> ...
>
> **Example** (Abel and Eve)
>
> In 1990 A gave his widowed mother E the money so that she could buy her council house. E died in 2005 leaving her house in trust to A for life with remainder to her grandson. A lives in the house as life tenant, so does not pay any rent. Despite the house being treated as part of A's estate, A is not exempt under FA04/Sch15/Para11(1) - unless the de minimis (IHTM44056) applies.
>
> **Example** (Adam)
>
> A settled a holiday cottage in trust in 2000 giving his wife an interest in possession only while they are married, with a defeasible life interest for himself thereafter and remainders on discretionary trust for his children. He shares the occupation of the cottage with his wife. The initial transfer is an excluded transaction (IHTM44032) and also exempt from reservation of benefit (IHTM14318).
>
